### **SECTION B2 – WATER USE INFORMATION**

## 1. MANUFACTURING/PROCESSING, FOOD PROCESSING, BEVERAGE PROCESSING

Please attach a detailed description of the water used for all manufacturing, food processing and beverage processing. Identify and explain water used in any of the following areas:

- A. Boiler feed and makeup water
- B. Cleaning and maintenance
- C. Equipment cooling
- D. Emission control
- E. Heat exchangers
- F. Product content
- G. Product mixing and dilution
- H. Product washing
- I. Refrigeration
- J. Any other water uses not listed

#### 2. POWER PLANT

Please attach a detailed description of water uses associated with power generation. Identify and explain water used in any of the following areas:

- A. Boiler feed and makeup water
- B. Cleaning and maintenance
- C. Dilution
- D. Emission control
- E. Equipment cooling
- F. Evaporative cooling
- G. Heat exchangers
- H. Any other water uses not listed

## 3. COOLING / AIR CONDITIONING

|    | Provide a description of water used in any cooling or air conditioning system including, the method of discharge, the number of times water is recirculated prior to being discharged, and where blowdown from the cooling system is discharged. |
|----|--|
|    |  |
|    |  |
| 4. | <b>ZOO / ATTRACTION / AQUARIUM</b> Provide a detailed description of water uses associated with the zoo, attraction or aquarium. Identify and explain all areas of water use. Attach additional sheets if necessary.                             |
|    |  |
|    |  |
|    |  |

### 5. POTABLE SUPPLY

Provide the current and projected number of persons requiring water for potable and sanitary purposes associated with this project in the table below at a minimum of five-year intervals for the requested permit duration.

The number of persons may represent the total number of employees or other persons consuming or using potable water at the facility.

|           | Year    | Number of persons | Per Capita Water Use <sup>1</sup> |
|-----------|---------|-------------------|-----------------------------------|
|           | Current |                   |                                   |
| Projected |         |                   |                                   |

<sup>&</sup>lt;sup>1</sup>The quantity of water used by a single person during a day, expressed in gallons.

#### 6. IRRIGATED LANDSCAPE / RECREATIONAL AREAS

Landscape, golf course and agricultural irrigation are assumed to represent minor amounts of the total industrial/commercial water use. Complete the information below if irrigation is associated with this project.

| Type of Irrigated Area <sup>1</sup> | Number of Acres | Irrigation Method <sup>2</sup> |
|-------------------------------------|-----------------|--------------------------------|
|                                     |                 |                                |
|                                     |                 |                                |

<sup>&</sup>lt;sup>1</sup>Landscape irrigation, golf course irrigation, agricultural irrigation (list crop)

## 7. OTHER

| Provide a detailed description of other commercial or industrial water uses. components of other water uses. Attach additional sheets if necessary. | Identify and explain all |
|---|--------------------------|
|   |                          |
|   |                          |

## **SECTION B3 – WATER BALANCE**

#### 1. WATER BALANCE

Provide a water balance that shows the following information. The tables below may be used to assist in developing the water balance. The water balance must show the annual average and peak month quantities (in gallons per day) for sources, uses, losses and recycled water in a schematic diagram that portrays all steps in the process including those listed in Section B2. The total of all

<sup>&</sup>lt;sup>2</sup> Drip, micro jet, overhead, etc.

sources must equal the total of all uses, and the losses plus recycled water must equal the total of all sources. The water balance must include:

- A. All water sources (groundwater, surface water, rainfall, recycled water, reclaimed water, etc.);
- B. The amount of water entering and leaving each step in the process; and
- C. All water losses (e.g., evaporation, product water content, steam losses, etc.).

### WATER BALANCE WORKSHEET TABLES

## WATER SOURCES

Sources include wells, surface water, recycled water, public supply utilities, reclaimed water from public supply utilities, captured excess storm water (rainfall), etc. Sources total must equal Uses total.

| List Sources:  | Annual Average<br>(gpd) | Peak Month<br>(gpd) |
|----------------|-------------------------|---------------------|
|                |                         |                     |
| SOURCES TOTAL: |                         | Ø.                  |

## WATER USES

Uses are water quantities entering and leaving each step in the process. Uses total must equal sources total.

| List Uses:  | Annual Average<br>(gpd) | Peak Month<br>(gpd) |
|-------------|-------------------------|---------------------|
|             |                         |                     |
|             |                         |                     |
| USES TOTAL: |                         |                     |

#### WATER LOSSES

Losses represent water lost through evaporation (from ponds or cooling towers), product content, pond infiltration, spray disposal, steam losses, waste entrainment, sewage or wastewater, off-site disposal, etc.

| List Losses:  | Annual Average<br>(gpd) | Peak Month<br>(gpd) |
|---------------|-------------------------|---------------------|
|               | ,                       |                     |
| LOSSES TOTAL: |                         |                     |

### RECYCLED WATER SOURCES

Recycled sources includes recycled water sources (see "Water Sources", above) and all reused water such as settling ponds, cooling ponds or water that is a byproduct of the industry.

| List Recycled Sources: | Annual Average<br>(gpd) | Peak Month<br>(gpd) |
|------------------------|-------------------------|---------------------|
|                        |                         |                     |
| RECYCLED TOTAL:        |                         |                     |

## **SECTION B4 - REQUESTED WATER USE**

| complete the requested water use tab  |                            | elow and provide sup<br>ejected water amount t |                |
|---|----------------------------|--|----------------|
| rpe and the water source(s) associate   | ed with the use type.      | •  |                |
|   | Requested A                | mounts and Sources                             | of Water (gpd) |
| Commercial/Industrial Use Type  | Source 1 Name <sup>1</sup> | Source 2 Name                                  | Source 3 Name  |
| Manufacturing/Processing  |                            |  |                |
| Food Processing   |                            |  |                |
| Beverage Processing   |                            |  |                |
| Cooling/Air Conditioning  |                            |  |                |
| Power Plant   |                            |  |                |
| Zoo / Attraction / Aquarium   |                            |  |                |
| Potable Supply  |                            | •  |                |
| Irrigated Landscape / Recreation  |                            |  |                |
| Other   |                            |  |                |
| Total   |                            |  |                |
| Provide the name of the water source. Exam rovide a description of the methodology industrial use listed in the table above | gy used to calculate th    | ne requested amounts                           |                |
|   |                            |  |                |
|   |                            |  |                |
|   |                            |  |                |

Please refer to District specific water conservation requirements, per current rules.
