- 22.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:
- 22.01 Describe the nature and types of business organizations. SY 1.0
- 22.02 Explain the effect of key organizational systems on performance and quality.
- 22.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
- 22.04 Explain the impact of the global economy on business organizations.
- 23.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 23.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
- 23.02 Explain emergency procedures to follow in response to workplace accidents.
- 23.03 Create a disaster and/or emergency response plan. SHE 2.0
- 24.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 24.01 Employ leadership skills to accomplish organizational goals and objectives. LT 1.0
- 24.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT 3.0
- 24.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 24.04 Employ mentoring skills to inspire and teach others. LT 5.0

- 25.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 25.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
  - 25.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
  - 25.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2
  - 25.04 Interpret and explain written organizational policies and procedures. ELR 2.0
- 26.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 26.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
  - 26.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
  - 26.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
  - 26.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
  - 26.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
  - 26.06 Identify and exhibit traits for retaining employment. ECD 7.0
  - 26.07 Identify opportunities and research requirements for career advancement. ECD 8.0
  - 26.08 Research the benefits of ongoing professional development. ECD 9.0
  - 26.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0
- 27.0 Demonstrate personal money-management concepts, procedures, and strategies. – The student will be able to:
- 27.01 Identify and describe the services and legal responsibilities of financial institutions. FL 2.0
  - 27.02 Describe the effect of money management on personal and career goals. FL 3.0
  - 27.03 Develop a personal budget and financial goals. FL 3.1
  - 27.04 Complete financial instruments for making deposits and withdrawals. FL 3.2
  - 27.05 Maintain financial records. FL 3.3
  - 27.06 Read and reconcile financial statements. FL 3.4
  - 27.07 Research, compare and contrast investment opportunities.

**Course: EEV0502****Occupational Completion Point - Data Code - B (150 Hours)****PC Electronics Installer - Level II (SOC 49-2011)**

- 05.0 Demonstrate proficiency in basic laboratory practices. – The student will be able to:
- 05.01 Apply proper Occupational Safety Health Administration (OSHA) safety standards.
  - 05.02 Make electrical/voice/data connections.
  - 05.03 Identify and use hand tools properly.
  - 05.04 Identify and use power tools properly.
  - 05.05 Demonstrate acceptable soldering and desoldering and rework and repair techniques.
  - 05.06 Demonstrate electrostatic discharge (ESD) safety procedures.

06.0 Demonstrate proficiency in electronic fundamentals. – The student will be able to:

- 06.01 06.01 Solve problems utilizing metric prefixes.
- 06.02 06.02 Identify sources of electricity.
- 06.03 06.03 Define voltage, current, resistance, power and energy.
- 06.04 06.04 Apply Ohm's law and power formulas.
- 06.05 06.05 Read and interpret color codes and symbols to identify electrical/electronic components and values.
- 06.06 06.06 Measure properties of a circuit using appropriate test equipment.
- 06.07 06.07 Identify properties of an AC signal.
- 06.08 06.08 Identify AC sources.
- 06.09 06.09 Analyze and measure AC voltages using appropriate test equipment.

07.0 Demonstrate appropriate understanding of basic math. – The student will be able to:

- 07.01 Solve problems for volume, weight, area and circumference and perimeter measurements for rectangles, square and cylinders.
- 07.02 Measure tolerance(s) on horizontal and vertical surfaces using millimeters, centimeters, and feet and inches.
- 07.03 Add, subtract, multiply and divide using fractions, decimals and whole numbers.
- 07.04 Determine the correct purchase price, to include sales tax for a materials list containing a minimum of six items.
- 07.05 Demonstrate an understanding of federal, state and local taxes and their computation.

08.0 Demonstrate appropriate understanding of basic science. – The student will be able to:

- 08.01 Demonstrate an understanding of the effects of temperature extremes and moisture content in regards to computer/network equipment.
- 08.02 Demonstrate an understanding of the impact and effects of electrostatic discharge (ESD), power surges, grounding, and lighting strikes.
- 08.03 Apply the scientific method to draw conclusions or make interferences from data.
- 08.04 Demonstrate deductive reasoning techniques when troubleshooting.
- 08.05 Demonstrate an understanding of the effects of heat load and ventilation in regards to computer/network equipment.
- 08.06 Identify safety and health related issues, including exposure to work related chemicals and hazardous materials, and demonstrate the appropriate precautionary measures.
- 08.07 Demonstrate an understanding of environmental impact and regulations in regards to the appropriate disposal of computer/network equipment.

**Course: EEV0503**

**Occupational Completion Point - C (300 Hours)**

**Computer Support Specialist - LAN Technician (SOC 15-1041)**

09.0 Demonstrate proficiency in computer systems. – The student will be able to:

- 09.01 Interpret and understand computer system diagrams and technical literature.
- 09.02 Perform personal computer system tear-down, cleaning and inspection.
- 09.03 Upgrade and troubleshoot a variety of motherboards.
- 09.04 Demonstrate knowledge of bus systems and processor architecture.

- 09.05 Understand and troubleshoot memory systems.
- 09.06 Understand, troubleshoot and replace power supply systems.
- 09.07 Troubleshoot a microcomputer system.
- 09.08 Demonstrate system upgrading techniques.
- 09.09 Identify form factors: power supplies, motherboards, cases
- 09.10 Demonstrate proficiency in setup, configuring, upgrade and troubleshooting of laptop and mobile data devices.
- 09.11 Apply troubleshooting techniques using operating systems utilities.
- 09.12 Demonstrate the use of diagnostic software.
- 09.13 Install configure and troubleshooting operating systems.
- 09.14 Install configure and troubleshooting commonly used business applications.

10.0 Demonstrate proficiency in peripheral equipment. – The student will be able to:

- 10.01 Demonstrate an understanding of input/output devices.
- 10.02 Demonstrate proficiency installing and troubleshooting serial, parallel, USB, and IEEE 1394 devices.
- 10.03 Demonstrate proficiency installing, configuring, and Troubleshooting video display technology eg projectors, monitors, LCD panels, data displays.
- 10.04 Demonstrate proficiency installing, configuring, and troubleshooting, telecommunications, network, and wireless devices.
- 10.05 Demonstrate proficiency installing, configuring, and troubleshooting, multimedia hardware and software.
- 10.06 Troubleshoot, installing hard drives and CD-R\RW\DVD.
- 10.07 Demonstrate proficiency installing, configuring and troubleshooting tape and other mass data storage devices.
- 10.08 Demonstrate proficiency installing, configuring, and troubleshooting printers.
- 10.09 Demonstrate professional connector assembly procedures.
- 10.10 Demonstrate proficiency in updating devices drivers.

**Course: EEV0506**

**Occupational Completion Point - D (300 HOURS)**

**Field Service Technician/Level I - LAN Technician (SOC 15-1071)**

11.0 Demonstrate proficiency in network fundamentals. – The student will be able to:

- 11.01 Install, connect and maintain network clients and peripherals to various network operating systems.
- 11.02 Demonstrate use of file systems commands and utilities on a network server.
- 11.03 Demonstrate setup configuring and sharing of user security, file, printer and network resources.
- 11.04 Demonstrate setup configuring and troubleshooting network applications on the server.
- 11.05 Demonstrate setup configuring and troubleshoot backup operation on server/clients.
- 11.06 Demonstrate proficiency in performing help desk support for a network environment.
- 11.07 Connect, configure, and troubleshoot devices for network connectivity.
- 11.08 Perform basic network system maintenance.
- 11.09 Describe use and system maintenance of a LAN, WAN and telecommunications system.

- 11.10 Perform procedures related to administration of a secure network.
  - 11.11 Demonstrate knowledge of the Internet/Intranet/Extranet system.
  - 11.12 Demonstrate proficiency installing, configuring and troubleshooting network protocols.
  - 11.13 Demonstrate knowledge of telecommunications services and standards.
  - 11.14 Install, configure and troubleshoot browsers software.
- 12.0 Demonstrate proficiency in network equipment and physical site requirements and considerations. – The student will be able to:
- 12.01 Demonstrate knowledge of data communication test equipment.
  - 12.02 Demonstrate knowledge of telecommunication wiring systems.
  - 12.03 Demonstrate knowledge of cable and LAN topology.
  - 12.04 Demonstrate knowledge of broadband devices, hubs, switches and routers.
  - 12.05 Calculate and determine and UPS requirements for an PC/network environment
  - 12.06 Determine adequate and protected AC requirements for PC/LANs.
  - 12.07 Calculate and determine physical requirements of a networking environment.
  - 12.08 Install, configure and troubleshoot LAN cable systems (twisted pair, coax, or fiber).
  - 12.09 Configure and troubleshoot patch bay and network equipment.

**Course: EEV0508**  
**Occupational Completion Point - E (450 Hours)**  
**Digital Electronics Technician - (SOC 15-1071)**

- 13.0 Demonstrate proficiency in advanced computer concepts. – The student will be able to:
- 13.01 Demonstrate knowledge of the OSI protocol model and the TCP/IP protocol.
  - 13.02 Demonstrate use of utilities in troubleshooting a TCP/IP network
  - 13.03 Demonstrate knowledge of TCP/IP application protocols and services, DNS, DHCP, FTP, HTTP, and LDAP
  - 13.04 Demonstrate knowledge of simple proxy and firewall services.
  - 13.05 Install, configure and troubleshoot the TCP/IP protocol service on a variety of operating systems.
  - 13.06 Demonstrate knowledge of VLANs.
  - 13.07 Install, configure and troubleshoot simple peer to peer networks.
  - 13.08 Demonstrate knowledge of logon and logoff scripts.
  - 13.09 Demonstrate knowledge of VPN and dial-up remote connectivity
  - 13.10 Install and configure remote control software used in Help Desk operations.
- 14.0 Demonstrate proficiency in advanced operating systems. – The student will be able to:
- 14.01 Demonstrate knowledge of directory services in advanced operating systems.
  - 14.02 Demonstrate knowledge of secure file systems used in an advance operating system.
  - 14.03 Demonstrate knowledge of secure file, printer, and resource sharing in advanced operating systems.
  - 14.04 Configure and troubleshoot access issues with secure file systems and secure file and resource sharing using advanced operating systems.
  - 14.05 Install, configure advanced operating systems.

- 14.06 Troubleshoot boot, configuration, registry, and application problems typical in advanced operating systems.
  - 14.07 Configure and troubleshoot network connectivity, protocols, network based printing.
  - 14.08 Configure peer web-services, FTP, and telnet applications on advanced operating systems.
  - 14.09 Schedule various preventative maintenance tasks for automatic execution in advanced operating systems.
  - 14.10 Demonstrate knowledge of advance storage concepts, disk spanning, striping, mirroring, and striping with parity.
  - 14.11 Configure advance storage methods using advanced operating systems.
  - 14.12 Implement, monitor and troubleshoot security in advanced operating systems.
- 15.0 Demonstrate an understanding of entrepreneurship. – The student will be able to:
- 15.01 Identify characteristics of the American Enterprise System.
  - 15.02 Define inflation and deflation.
  - 15.03 Illustrate the basic economic questions facing any society.
  - 15.04 Determine the results and change in demand or a change in supply.
  - 15.05 List factors, which contribute to economic growth.
  - 15.06 Identify characteristics of different types of business ownership.
  - 15.07 Choose appropriate action in a situation requiring application of business ethics.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Computer Systems Technology 1  
**Course Number:** 8732110  
**Course Credit:** 1

- 01.0 Demonstrate proficiency in software/hardware fundamentals. – The student will be able to:
- 01.01 Apply OS commands, syntax usage and parameters.
  - 01.02 Demonstrate knowledge of OS file systems.
  - 01.03 Demonstrate basic command-line/GUI OS navigation
  - 01.04 Demonstrate basic operation and usage of common applications.
  - 01.05 Demonstrate operation and usage of fundamental OS utilities
  - 01.06 Demonstrate operation and usage of virus protection software.
  - 01.07 Demonstrate operation and usage of browser software and the internet.
  - 01.08 Locate and install device drivers.
- 16.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 16.01 Locate, comprehend and evaluate key elements of oral and written information. AF 2.4
  - 16.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF 2.5
  - 16.03 Present information formally and informally for specific purposes and audiences. AF 2.9
- 17.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF 3.0
- 17.01 Demonstrate knowledge of arithmetic operations. AF 3.2
  - 17.02 Analyze and apply data and measurements to solve problems and interpret documents. AF 3.4
  - 17.03 Construct charts/tables/graphs using functions and data. AF 3.5
- 18.0 Demonstrate science knowledge and skills. – The student will be able to: AF 4.0
- 18.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF 4.1
  - 18.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF 4.3

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Computer Systems Technology 2  
**Course Number:** 8732120  
**Course Credit:** 1

- 01.0 Demonstrate proficiency in software/hardware fundamentals. – The student will be able to:
- 01.09 Understand compression technologies.
  - 01.10 Identify PC/server front panel controls, indicators, rear case connectors and indicators.
  - 01.11 Demonstrate an understanding of the boot process.
- 02.0 Demonstrate proficiency in customer relations. – The student will be able to:
- 02.01 Describe and demonstrate appropriate personal hygiene and professional attire.
  - 02.02 Describe and demonstrate effective listening techniques.
  - 02.03 Describe and apply techniques for instilling customer confidence and satisfaction.
  - 02.04 Describe and apply techniques for keeping the customer informed.
  - 02.05 Describe and apply effective follow-up techniques.
  - 02.06 Demonstrate discretion in interacting with customers in field and business environments.
  - 02.07 Demonstrate an understanding of basic conflict resolution.
- 19.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 19.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
  - 19.02 Locate, organize and reference written information from various sources. CM 3.0
  - 19.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
  - 19.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
  - 19.05 Apply active listening skills to obtain and clarify information. CM 7.0
  - 19.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
  - 19.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 20.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 20.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS 1.0
  - 20.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
  - 20.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
  - 20.04 Conduct technical research to gather information necessary for decision-making. PS 4.0

- 21.0 Use information technology tools. – The student will be able to:
- 21.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
  - 21.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
  - 21.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
  - 21.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 22.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:
- 22.01 Describe the nature and types of business organizations. SY 1.0
  - 22.02 Explain the effect of key organizational systems on performance and quality.
  - 22.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
  - 22.04 Explain the impact of the global economy on business organizations.
- 25.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 25.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
  - 25.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR 1.1
  - 25.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR 1.2
  - 25.04 Interpret and explain written organizational policies and procedures. ELR 2.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Computer Systems Technology 3  
**Course Number:** 8732130  
**Course Credit:** 1

- 03.0 Demonstrate appropriate communication skills. – The student will be able to:
- 03.01 Write logical and understandable statements, or phrases, to accurately fill out forms and invoices commonly used in business and industry.
  - 03.02 Read and use graphs, charts, diagrams, tables, parts manuals, and information sources commonly used in this industry/occupational area.
  - 03.03 Read and follow written and oral instructions.
  - 03.04 Answer and ask questions coherently and concisely.
  - 03.05 Read critically by recognizing assumptions and implications and by evaluating ideas.
  - 03.06 Demonstrate appropriate telephone/communication skills.
- 04.0 Demonstrate employability skills. – The student will be able to:
- 04.01 Prepare a resume.
  - 04.02 Conduct a job search.
  - 04.03 Secure information about a job.
  - 04.04 Identify and provide documents, which may be required when interviewing for a job.
  - 04.05 Complete a job application form correctly and completely.
  - 04.06 Demonstrate competence in job interview techniques.
  - 04.07 Identify and demonstrate appropriate responses to criticism from employer, supervisor or other employees.
  - 04.08 Identify and demonstrate acceptable work habits.
  - 04.09 Demonstrate knowledge of how to make job changes appropriately.
  - 04.10 Demonstrate knowledge of employee health issues.
  - 04.11 Demonstrate efficient organizational skills.
  - 04.12 Demonstrate knowledge of the “Right-To-Know Law” as recorded in (29 CFR-1910.1200).
- 23.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 23.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
  - 23.02 Explain emergency procedures to follow in response to workplace accidents.
  - 23.03 Create a disaster and/or emergency response plan. SHE 2.0
- 24.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:

- |       |   |          |
|-------|---|----------|
| 24.01 | Employ leadership skills to accomplish organizational goals and objectives.                                       | LT 1.0   |
| 24.02 | Establish and maintain effective working relationships with others in order to accomplish objectives and tasks.   | LT 3.0   |
| 24.03 | Conduct and participate in meetings to accomplish work tasks.   | LT 4.0   |
| 24.04 | Employ mentoring skills to inspire and teach others.  | LT 5.0   |
| 26.0  | <u>Explain the importance of employability skill and entrepreneurship skills.</u> – The student will be able to:  |          |
| 26.01 | Identify and demonstrate positive work behaviors needed to be employable.   | ECD 1.0  |
| 26.02 | Develop personal career plan that includes goals, objectives, and strategies.                                     | ECD 2.0  |
| 26.03 | Examine licensing, certification, and industry credentialing requirements.  | ECD 3.0  |
| 26.04 | Maintain a career portfolio to document knowledge, skills, and experience.  | ECD 5.0  |
| 26.05 | Evaluate and compare employment opportunities that match career goals.  | ECD 6.0  |
| 26.06 | Identify and exhibit traits for retaining employment.   | ECD 7.0  |
| 26.07 | Identify opportunities and research requirements for career advancement.  | ECD 8.0  |
| 26.08 | Research the benefits of ongoing professional development.  | ECD 9.0  |
| 26.09 | Examine and describe entrepreneurship opportunities as a career planning option.                                  | ECD 10.0 |
| 27.0  | <u>Demonstrate personal money-management concepts, procedures, and strategies.</u> – The student will be able to: |          |
| 27.01 | Identify and describe the services and legal responsibilities of financial institutions.                          | FL 2.0   |
| 27.02 | Describe the effect of money management on personal and career goals.   | FL 3.0   |
| 27.03 | Develop a personal budget and financial goals.  | FL 3.1   |
| 27.04 | Complete financial instruments for making deposits and withdrawals.   | FL 3.2   |
| 27.05 | Maintain financial records.   | FL 3.3   |
| 27.06 | Read and reconcile financial statements.  | FL 3.4   |
| 27.07 | Research, compare and contrast investment opportunities.  |          |

2012 – 2013

10.0 Demonstrate proficiency in peripheral equipment. – The student will be able to:

- 10.01 Demonstrate an understanding of input/output devices.
- 10.02 Demonstrate proficiency installing and troubleshooting serial, parallel, USB, and IEEE 1394 devices.
- 10.03 Demonstrate proficiency installing, configuring, and Troubleshooting video display technology eg projectors, monitors, LCD panels, data displays.
- 10.04 Demonstrate proficiency installing, configuring, and troubleshooting, telecommunications, network, and wireless devices.
- 10.05 Demonstrate proficiency installing, configuring, and troubleshooting, multimedia hardware and software.
- 10.06 Troubleshoot, installing hard drives and CD-R\RW\DVD.
- 10.07 Demonstrate proficiency installing, configuring and troubleshooting tape and other mass data storage devices.
- 10.08 Demonstrate proficiency installing, configuring, and troubleshooting printers.
- 10.09 Demonstrate professional connector assembly procedures.
- 10.10 Demonstrate proficiency in updating devices drivers.

**2012 – 2013**

**Florida Department of Education  
Student Performance Standards**

**Course Title:           Computer Systems Technology 7**  
**Course Number:       8732170**  
**Course Credit:         1**

11.0 Demonstrate proficiency in network fundamentals. – The student will be able to:

- 11.01 Install, connect and maintain network clients and peripherals to various network operating systems.
- 11.02 Demonstrate use of file systems commands and utilities on a network server.
- 11.03 Demonstrate setup configuring and sharing of user security, file, printer and network resources.
- 11.04 Demonstrate setup configuring and troubleshooting network applications on the server.
- 11.05 Demonstrate setup configuring and troubleshoot backup operation on server/clients.
- 11.06 Demonstrate proficiency in performing help desk support for a network environment.
- 11.07 Connect, configure, and troubleshoot devices for network connectivity.
- 11.08 Perform basic network system maintenance.
- 11.09 Describe use and system maintenance of a LAN, WAN and telecommunications system.
- 11.10 Perform procedures related to administration of a secure network.
- 11.11 Demonstrate knowledge of the Internet/Intranet/Extranet system.
- 11.12 Demonstrate proficiency installing, configuring and troubleshooting network protocols.
- 11.13 Demonstrate knowledge of telecommunications services and standards.
- 11.14 Install, configure and troubleshoot browsers software.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Computer Systems Technology 8  
**Course Number:** 8732180  
**Course Credit:** 1

12.0 Demonstrate proficiency in network equipment and physical site requirements and considerations. – The student will be able to:

- 12.01 Demonstrate knowledge of data communication test equipment.
- 12.02 Demonstrate knowledge of telecommunication wiring systems.
- 12.03 Demonstrate knowledge of cable and LAN topology.
- 12.04 Demonstrate knowledge of broadband devices, hubs, switches and routers.
- 12.05 Calculate and determine and UPS requirements for an PC/network environment
- 12.06 Determine adequate and protected AC requirements for PC/LANs.
- 12.07 Calculate and determine physical requirements of a networking environment.
- 12.08 Install, configure and troubleshoot LAN cable systems (twisted pair, coax, or fiber).
- 12.09 Configure and troubleshoot patch bay and network equipment.

**2012 – 2013**

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Computer Systems Technology 9  
**Course Number:** 8732190  
**Course Credit:** 1

13.0 Demonstrate proficiency in advanced computer concepts. – The student will be able to:

- 13.01 Demonstrate knowledge of the OSI protocol model and the TCP/IP protocol.
- 13.02 Demonstrate use of utilities in troubleshooting a TCP/IP network
- 13.03 Demonstrate knowledge of TCP/IP application protocols and services, DNS, DHCP, FTP, HTTP, and LDAP
- 13.04 Demonstrate knowledge of simple proxy and firewall services.
- 13.05 Install, configure and troubleshoot the TCP/IP protocol service on a variety of operating systems.
- 13.06 Demonstrate knowledge of VLANs.
- 13.07 Install, configure and troubleshoot simple peer to peer networks.
- 13.08 Demonstrate knowledge of logon and logoff scripts.
- 13.09 Demonstrate knowledge of VPN and dial-up remote connectivity
- 13.10 Install and configure remote control software used in Help Desk operations.

**2012 – 2013**

**Florida Department of Education  
Student Performance Standards**

**Course Title:           Computer Systems Technology 10**  
**Course Number:       8732191**  
**Course Credit:         1**

14.0 Demonstrate proficiency in advanced operating systems. – The student will be able to:

- 14.01 Demonstrate knowledge of directory services in advanced operating systems.
- 14.02 Demonstrate knowledge of secure file systems used in an advance operating system.
- 14.03 Demonstrate knowledge of secure file, printer, and resource sharing in advanced operating systems.
- 14.04 Configure and troubleshoot access issues with secure file systems and secure file and resource sharing using advanced operating systems.
- 14.05 Install, configure advanced operating systems.
- 14.06 Troubleshoot boot, configuration, registry, and application problems typical in advanced operating systems.
- 14.07 Configure and troubleshoot network connectivity, protocols, network based printing.
- 14.08 Configure peer web-services, FTP, and telnet applications on advanced operating systems.

**2012 – 2013**

**Florida Department of Education  
Student Performance Standards**

**Course Title:           Computer Systems Technology 11**  
**Course Number:       8732192**  
**Course Credit:         1**

14.0 Demonstrate proficiency in advanced operating systems. – The student will be able to:

- 14.09 Schedule various preventative maintenance tasks for automatic execution in advanced operating systems.
- 14.10 Demonstrate knowledge of advance storage concepts, disk spanning, striping, mirroring, and striping with parity.
- 14.11 Configure advance storage methods using advanced operating systems.
- 14.12 Implement, monitor and troubleshoot security in advanced operating systems.

15.0 Demonstrate an understanding of entrepreneurship. – The student will be able to:

- 15.01 Identify characteristics of the American Enterprise System.
- 15.02 Define inflation and deflation.
- 15.03 Illustrate the basic economic questions facing any society.
- 15.04 Determine the results and change in demand or a change in supply.
- 15.05 List factors, which contribute to economic growth.
- 15.06 Identify characteristics of different types of business ownership.
- 15.07 Choose appropriate action in a situation requiring application of business ethics.

2012 - 2013

**Florida Department of Education  
Curriculum Framework**

**Course Title:** Information Technology Directed Study  
**Career Cluster:** Information Technology

<b>Secondary – Career Preparatory</b>	
Course Number	9000100
CIP Number	0511999901
Grade Level	11-12, 30, 31
Standard Length	1 credit - Multiple credits
Teacher Certification	BUS ED 1 @2 INFO TECH 7G WEB DEV 7G COMP PROG 7G CYBER TECH 7G DIGI MEDIA 7G
CTSO	FBLA BPA

### **Purpose**

The purpose of this course is to provide students with learning opportunities in a prescribed program of study within the Information Technology cluster that will enhance opportunities for employment in the career field chosen by the student.

### **Course Structure**

The content is prescribed by the instructor based upon the individual student's assessed needs for directed study.

This course may be taken only by a student who has completed or is currently completing a specific secondary job preparatory program or occupational completion point for additional study in this career cluster. A student may earn multiple credits in this course.

The selected standards and benchmarks, which the student must master to earn credit, must be outlined in an instructional plan developed by the instructor.

### **Laboratory Activities**

A learning laboratory is provided as required to support the educational activities of the student. This laboratory may be in the traditional classroom, in an industry setting, or a virtual learning environment.

### **Special Notes**

## **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular Occupational Completion Point (OCP) or a Modified Occupational Completion Point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate expertise in a specific occupation contained within the career cluster.
- 02.0 Conduct investigative research on a selected topic related to the career cluster using approved research methodology, interpret findings, and prepare presentation to defend results.
- 03.0 Apply enhanced leadership and professional career skills.
- 04.0 Demonstrate higher order critical thinking and reasoning skills appropriate for the selected program of study.

2012 - 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Information Technology Directed Study  
**Course Number:** 9000100  
**Course Credit:** 1

01.0 Demonstrate expertise in a specific occupation within the career cluster.

01.01 The benchmarks will be selected from the appropriate curriculum frameworks and determined by the instructor based upon the individual students assessed needs.

02.0 Conduct investigative research on a selected topic related to the career cluster using approved research methodology, interpret findings, and prepare presentation to defend results. – The student will be able to:

02.01 Select investigative study referencing prior research and knowledge.

02.02 Collect, organize and analyze data accurately and precisely.

02.03 Design procedures to test the research.

02.04 Report, display and defend the results of investigations to audiences that may include professionals and technical experts.

03.0 Apply enhanced leadership and professional career skills. – The student will be able to:

03.01 Develop and present a professional presentation offering potential solutions to a current issue.

03.02 Enhance leadership and career skills through work-based learning including job placement, job shadowing, entrepreneurship, internship, or a virtual experience.

03.03 Participate in leadership development opportunities available through the appropriate student organization and/or other professional organizations.

03.04 Enhance written and oral communications through the development of presentations, public speaking, and live and/or virtual interviews.

04.0 Demonstrate higher order critical thinking and reasoning skills appropriate for the selected program of study. – The student will be able to:

04.01 Use mathematical and/or scientific skills to solve problems encountered in the chosen occupation.

04.02 Read and interpret information relative to the chosen occupation.

04.03 Locate and evaluate key elements of oral and written information.

04.04 Analyze and apply data and/or measurements to solve problems and interpret documents.

04.05 Construct charts/tables/graphs using functions and data.

2012 - 2013

**Florida Department of Education  
Curriculum Framework**

**Course Title:** Information Technology Cooperative Education OJT  
**Course Type:** Career Preparatory  
**Career Cluster:** Information Technology

	<b>Secondary</b>	<b>PSAV</b>

CTSO	FBLA BPA	Phi Beta Lambda BPA

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology cluster.

**Each student job placement must be related to the job preparatory program in which the student is enrolled or has completed.**

The purpose of this course is to provide the on-the-job training component when the **cooperative method of instruction** is appropriate. Whenever the cooperative method is offered, the following is required for each student: a training agreement; a training plan signed by the student, teacher and employer, including instructional objectives; a list of on-the-job and in-school learning experiences; a workstation which reflects equipment, skills and tasks which are relevant to the occupation which the student has chosen as a career goal; and a site supervisor with a working knowledge of the selected occupation. The workstation may be in an industry setting or in a virtual learning environment. The student **must be compensated** for work performed.

The teacher/coordinator must meet with the site supervisor a minimum of once during each grading period for the purpose of evaluating the student's progress in attaining the competencies listed in the training plan.

Information Technology Cooperative OJT may be taken by a student for one or more semesters. A student may earn multiple credits in this course. The specific student performance standards which the student must achieve to earn credit are specified in the Cooperative Education - OJT Training Plan.

### **Special Notes**

There is a **Cooperative Education Manual** available online that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

### **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills for secondary students. For postsecondary students, Phi Beta Lambda and BPA are the appropriate student organizations. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular Occupational Completion Point (OCP) or a Modified Occupational Completion Point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported

accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

### **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Perform designated job skills.
- 02.0 Demonstrate work ethics.

**2012 - 2013**

**Florida Department of Education  
Student Performance Standards**

**Program Title: Information Technology Cooperative OJT**  
**Secondary Number: 9000420**  
**PSAV Number: Y509999**

01.0 Perform designated job skills--The student will be able to:

- 01.01 Perform tasks as outlined in the training plan.
- 01.02 Demonstrate job performance skills.
- 01.03 Demonstrate safety procedures on the job.
- 01.04 Maintain appropriate records.
- 01.05 Attain an acceptable level of productivity.
- 01.06 Demonstrate appropriate dress and grooming habits.

02.0 Demonstrate work ethics--The student will be able to:

- 02.01 Follow directions.
- 02.02 Demonstrate good human relations skills on the job.
- 02.03 Demonstrate good work habits.
- 02.04 Demonstrate acceptable business ethics.

## Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as an Assistant Web Designer, a Web Designer, and Senior Web Designer in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to operating system commands and web document development, design, promotion and scripting.

## Program Structure

This program is a planned sequence of instruction consisting of the Business Technology Education Core and three additional occupational completion points. Secondary or postsecondary students who have previously completed the Business Technology Education Core will not have to repeat the core.

When offered at the post secondary level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44 (3)(b), F.S.

The following table illustrates the **PSAV** program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	OTA0040	Information Technology Assistant *	150	15-1041
B	CTS0070	Web Design Foundations	150	15-1099.04
	CTS0071	Web Interface Design	150	
C	CTS0049	Web Scripting	150	15-1099.04
	CTS0015	Web Media Integration	150	
D	CTS0016	Web E-commerce	150	15-1099.04
	CTS0017	Web Interactivity	150	

\* Note: OTA0040 is a core.

The following table illustrates the **Secondary** program structure:

OCP	Course Number	Course Title	Length	SOC Code	Level
A	8200320	Keyboarding and Business Skills	.5 credit	15-1041	2
		AND			
	8200330	Computer and Business Skills	.5 credit		2
		OR			

OCP	Course Number	Course Title	Length	SOC Code	Level
	8209020	Computing for College and Careers	1 credit		2
		OR			
	8207310	Introduction to Information Technology	1 credit		2
B	9001110	Foundations of Web Design	1 credit	15-1099.04	3
	9001120	User Interface Design	1 credit		3
C	9001130	Web Scripting Fundamentals	1 credit	15-1099.04	3
	9001140	Media Integration Essentials	1 credit		3
D	9001150	E-commerce & Marketing Essentials	1 credit	15-1099.04	3
	9001160	Interactivity Essentials	1 credit		3

### Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

### Academic Alignment

Some or all of the courses in this program have been aligned to the Next Generation Sunshine State Standards contained in specific math and science core academic courses. This alignment resulted from a collaborative review by Career and Technical Education (CTE) teachers and core academic teachers. The table below contains the results of the alignment efforts. Data shown in the table includes the number of academic standards in the CTE course, the total number of math and science standards contained in the academic course, and the percentage of alignment to the CTE course. The following academic courses were included in the alignment (see code for use in table).

Academic Subject Area	Academic Course
Math	Algebra 1 (ALG1) Algebra 2 (ALG2) Geometry (GEO)
Science	Anatomy/Physiology Honors (APH) Astronomy Solar/Galactic Honors (ASGH) Biology 1 (BIO1) Chemistry 1 (CHM1) Earth-Space Science (ESS) Genetics (GEN) Marine Science 1 Honors (MS1H) Physical Science (PS) Physics 1 (PHY1)

Course	Math			Science

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

### **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills for secondary students. For postsecondary students, Phi Beta Lambda and BPA are the appropriate student organizations. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

### **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all

career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. A complete list of Essential Skills and links to instructional resources in support of these Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

### **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 9.0, Language 9.0, and Reading 9.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.) Exemptions from state, national or industry licensure are limited to the certifications listed at <http://www.fldoe.org/workforce/dwdframe/rtf/basicskills-License-exempt.rtf>.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular Occupational Completion Point (OCP) or a Modified Occupational Completion Point (MOCP). If

needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

### **Articulation**

The PSAV component of this program has no statewide articulation agreement approved by the Florida State Board of Education. However, this does not preclude the awarding of credits by any college through local agreements.

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Bright Futures/Gold Seal Scholarship**

Course substitutions as defined in the Comprehensive Course Table for this program area may be used to qualify a student for Florida's Gold Seal Vocational Scholarship, providing all other eligibility requirements are met. Eligibility requirements are available online at [https://www.osfaffelp.org/bfiehs/fnbpcm02\\_CCTMain.aspx](https://www.osfaffelp.org/bfiehs/fnbpcm02_CCTMain.aspx).

### **Fine Arts/Practical Arts Credit**

Many courses in CTE programs meet the Fine Arts/Practical Arts credit for high school graduation. For additional information refer to <http://www.fldoe.org/schools/pdf/ListPracticalArtsCourses.pdf>.

### **Standards**

After successfully completing this program, the student will be able to perform the following:

#### **Keyboarding and Business Skills competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. Apply ergonomic principles applicable to the configuration of computer workstations.
- 02.0 Demonstrate comprehension and communication skills.
- 03.0 Use technology to apply and enhance communication skills in technical reading, writing.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles. Demonstrate initiative, courtesy, loyalty, honesty, cooperation and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong

- learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc.
- 08.0 Demonstrate personal and interpersonal skills appropriate for the workplace.
  - 09.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance.

**AND**

**Computer and Business Skills competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. Apply ergonomic principles applicable to the configuration of computer workstations.
- 02.0 Demonstrate comprehension and communication skills.
- 03.0 Use Technology to apply and enhance communications skills in technical reading, writing.
- 04.0 Practice quality performance in the learning environment and the workplace.
- 05.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 06.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 07.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.
- 08.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc.
- 09.0 Demonstrate human relations/interpersonal skills appropriate for the workplace.
- 10.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance.
- 11.0 Perform e-mail activities.
- 12.0 Demonstrate operating systems.
- 13.0 Develop an awareness of emerging technologies.

**OR**

**Computing for College and Careers competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 04.0 Use computer networks, internet and online databases to facilitate collaborative or individual learning and communication.
- 05.0 Use database and spreadsheet applications.
- 06.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles.

- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 08.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals.
- 09.0 Demonstrate personal and interpersonal skills appropriate for the workplace.
- 10.0 Perform e-mail activities.
- 11.0 Demonstrate proficiency using slide presentation software.

**OR**

**Introduction to IT Competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate Comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles.
- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace.
- 11.0 Participate in work-based learning experiences.
- 12.0 Perform e-mail activities.
- 13.0 Demonstrate knowledge of different operating systems.
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW.
- 15.0 Demonstrate proficiency using HTML commands.
- 16.0 Demonstrate proficiency in page design applicable to the WWW.
- 17.0 Demonstrate proficiency using specialized web design software.
- 18.0 Develop an awareness of the information technology industry.
- 19.0 Develop an awareness of microprocessors and digital computers.
- 20.0 Develop an awareness of programming languages.
- 21.0 Develop an awareness of emerging technologies.
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model.
- 23.0 Demonstrate proficiency using common software applications.
- 24.0 Demonstrate proficiency using specialized software applications.

**Program Standards**

- 25.0 Demonstrate proficiency in website planning and the design process.
- 26.0 Develop markup language structures.
- 27.0 Create basic webpages.
- 28.0 Incorporate images and graphical formatting on a webpage.
- 29.0 Create a basic table structure.
- 30.0 Incorporate form structures in a webpage.
- 31.0 Describe frame structures and their usage.
- 32.0 Use Cascading Style Sheets (CSS).
- 33.0 Examine web design technologies and techniques.
- 34.0 Describe the process for publishing a website.
- 35.0 Describe how website performance is monitored and analyzed.
- 36.0 Create an informational website.
- 37.0 Incorporate Human Computer Interface (HCI) principles of design.
- 38.0 Research and obtain information for use in designing the user interface.
- 39.0 Create an intuitive interface using Cascading Style Sheets (CSS).
- 40.0 Demonstrate proficiency creating a logical website file structure.
- 41.0 Create a CSS formatted informational website.
- 42.0 Demonstrate proficiency publishing, testing, monitoring, and maintaining a website.
- 43.0 Discuss the differences between server-side and client-side scripting.
- 44.0 Compare and contrast client-side scripting languages (JavaScript, VBScript, and ECMAScript).
- 45.0 Demonstrate understanding of the Document Object Model (DOM).
- 46.0 Design, write, debug, and incorporate a JavaScript client-side script into a webpage.
- 47.0 Incorporate basic JavaScript form validation and form handling (using pre-built validation scripts or online libraries).
- 48.0 Use advanced JavaScript techniques.
- 49.0 Demonstrate understanding of JavaScript accessibility issues.
- 50.0 Select and modify appropriate library and pre-built JavaScript to incorporate into webpage.
- 51.0 Incorporate graphics, animations, and video assets into a webpage design using conventional HTML techniques.
- 52.0 Demonstrate understanding of XML vocabularies and documents.
- 53.0 Create and debug an XML Document.
- 54.0 Create and debug compound documents with Namespaces.
- 55.0 Demonstrate ability to validate documents with a Data Type Definition (DTD).
- 56.0 Demonstrate ability to validate documents with XML Schema.
- 57.0 Demonstrate an understanding of Asynchronous JavaScript And XML (AJAX) and its implications for web developers.
- 58.0 Plan and implement a multi-page website that features graphics, pictures, and video galleries using AJAX techniques.
- 59.0 Demonstrate knowledge and skills necessary to setup a secure E-commerce site.
- 60.0 Identify security issues associated with e-commerce and discuss methods to mitigate risks.
- 61.0 Apply skills necessary to setup an E-commerce storefront.
- 62.0 Employ techniques to enhance the value and profitability of an E-commerce website.
- 63.0 Develop an evaluation and performance monitoring framework featuring established metrics and target goals for an E-commerce website.
- 64.0 Demonstrate an understanding of Content Management Systems (CMS) and their implications for web development.
- 65.0 Use CMS features, functions, and extensions/modules to create/enhance a website.
- 66.0 Evaluate the suitability for and system requirements for a content management system.

- 67.0 Demonstrate an understanding of multimedia applications and their implications for web designers.
- 68.0 Create and incorporate interactive website components.
- 69.0 PDF document usage considerations.
- 70.0 Create, format, and manipulate PDF documents.
- 71.0 Display, distribution, and print considerations for PDF documents.
- 72.0 Create and manage PDF forms.
- 73.0 Incorporate PDF security in a PDF document.
- 74.0 Demonstrate proficiency using HTML5 features and functions.
- 74.0 Demonstrate language arts knowledge and skills.
- 75.0 Demonstrate mathematics knowledge and skills.
- 76.0 Demonstrate science knowledge and skills.
- 77.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 78.0 Solve problems using critical thinking skills, creativity and innovation.
- 79.0 Use information technology tools.
- 80.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.
- 81.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- 82.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 83.0 Describe the importance of professional ethics and legal responsibilities.
- 84.0 Explain the importance of employability skill and entrepreneurship skills.
- 85.0 Demonstrate personal money-management concepts, procedures, and strategies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:       Web Development**  
**PSAV Number:       Y700100**

**Course Number: OTA0040**  
**Occupational Completion Point – A**  
**Information Technology Assistant – 150 Hours – SOC Code 15-1041**

**Keyboarding and Business Skills competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. Apply ergonomic principles applicable to the configuration of computer workstations. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Demonstrate basic file management skills.
- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 02.01 Read and comprehend technical and non-technical reading assignments related to course content including trade journals, books, magazines and electronic sources.
  - 02.02 Write clear and well-organized research papers, integrating a variety of information.
  - 02.03 Prepare and deliver an oral report with appropriate materials to the class
  - 02.04 Participate in large group discussions as a member and/or a leader.
  - 02.05 Take notes, organize, summarize, and paraphrase ideas and details.
  - 02.06 Accurately follow written and oral instructions.
  - 02.07 Interpret data on graphs, charts, diagrams, and tables commonly used in this industry/occupation.
- 03.0 Use technology to apply and enhance communication skills in technical reading, writing. – The student will be able to:
- 03.01 Select and use word processing software and accompanying features to enhance written business communications.
  - 03.02 Use the writing process to create/edit business documents appropriate to the subject matter, purpose, and audience.
  - 03.03 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles. Demonstrate initiative, courtesy, loyalty, honesty, cooperation and punctuality as a team member. – The student will be able to:

- 04.01 Explore, design, implement, and evaluate organizational structures and cultures for managing project teams.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
- 05.01 Assess personal, peer, and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 06.01 Demonstrate an awareness of quality service and the personal and professional standards required to establish an effective service-based culture in the workplace, business, or learning environment.
  - 06.02 Identify, analyze, and implement managerial skills necessary for maintaining a high quality work environment, goals, and strategic planning in business settings.
  - 06.03 Follow accepted rules, regulations, policies, procedures, processes, and workplace safety.
- 07.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc. – The student will be able to:
- 07.01 Analyze personal skills and aptitudes in comparison with various business related job and career options.
  - 07.02 Use career resources to develop an information base that reflects local and global business related occupations and opportunities for continuing education and workplace experience.
  - 07.03 Demonstrate job-seeking skills required for entry-level employment (e.g., resume, application, interview, follow up.)
  - 07.04 Design, initiate, refine, and implement a plan to facilitate personal growth and skill development related to anticipated job requirements and career expectations.
- 08.0 Demonstrate personal and interpersonal skills appropriate for the workplace. – The student will be able to:

- 08.01 Accept constructive criticism.
  - 08.02 Apply appropriate strategies to manage and resolve conflict in work situations.
  - 08.03 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, and respect for self and others, professional dress, etc.).
- 09.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 09.01 Perform business tasks (e.g., filing and records management, scheduling, reprographics, mail handling, etc.).
  - 09.02 Demonstrate knowledge of ethical behavior in a business environment (e.g., confidentiality of information, employee right to know, hiring practices, plagiarism, copyright violations, sexual harassment, mission statement, code of ethics, etc.).

**AND**

**Computer and Business Skills competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. Apply ergonomic principles applicable to the configuration of computer workstations. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Demonstrate basic file management skills.
  - 01.06 Troubleshoot problems with computer software, hardware, peripherals, and other office equipment.
  - 01.07 Describe ethical issues and problems associated with computers and information systems.
  - 01.08 Apply ergonomic principles applicable to the configuration of computer workstations.
- 02.0 Use technology to apply and enhance communication skills in technical reading, writing, speaking, listening, and viewing. – The student will be able to:
- 02.01 Take notes, organize, summarize, and paraphrase ideas and details.
  - 02.02 Accurately follow written and oral instructions.
  - 02.03 Interpret data on graphs, charts, diagrams, and tables commonly used in this industry/occupation.
- 03.0 Use technology to apply and enhance communication skills in technical reading, writing.  
– The student will be able to:

- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communications.
  - 03.02 Use computer networks (e.g., Internet, on-line databases, e-mail) to facilitate collaborative or individual learning and communication.
  - 03.03 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
- 04.01 Assess personal, peer, and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving and decision-making skills).
  - 04.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 05.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 05.01 Demonstrate an awareness of quality service and the personal and professional standards required to establish an effective service-based culture in the workplace, business, or learning environment.
  - 05.02 Identify, analyze and implement managerial skills necessary for maintaining a high quality work environment, goals, and strategic planning in business settings.
  - 05.03 Follow accepted rules, regulations, policies, procedures, processes, and workplace safety.
- 06.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace and to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 06.01 Analyze, interpret, compile and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 06.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 06.03 Select and use the correct mathematical processes and tools to solve complex problem settings that are typical of business settings and use formulas when appropriate.
- 07.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 07.01 Assess, analyze, and reassess individual talents, aptitudes, interests, and personal characteristics as they relate to potential future careers in business environments.
  - 07.02 Use personal assessment tools to identify personal strengths and weaknesses

related to learning and work environments.

- 07.03 Analyze job and career requirements and relate career interests to opportunities in the global economy.
  
- 08.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc. – The student will be able to:
  - 08.01 Analyze personal skills and aptitudes in comparison with various business related job and career options.
  - 08.02 Use career resources to develop an information base that reflects local and global business related occupations and opportunities for continuing education and workplace experience.
  - 08.03 Demonstrate job-seeking skills required for entry-level employment (e.g., resume, application, interview, follow-up).
  - 08.04 Design and initiate a plan to facilitate growth and skill development related to anticipated job requirements and career expectations.
  - 08.05 Refine and implement a plan to facilitate personal growth and skill development related to anticipated job requirements and career expectations.
  - 08.06 Demonstrate an awareness of specific job requirements and career paths (e.g., requirements, characteristics needed) in business environments.
  - 08.07 Demonstrate an awareness of the potential impact of local and global trends on career plans and life goals.
  - 08.08 Build mentor relationships with local professionals in the industry.
  
- 09.0 Demonstrate personal and interpersonal skills appropriate for the workplace. – The student will be able to:
  - 09.01 Accept constructive criticism.
  - 09.02 Apply appropriate strategies to manage and resolve conflict in work situations.
  - 09.03 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, and respect for self and others, professional dress, etc.).
  
- 10.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 10.01 Demonstrate knowledge of ethical behavior in a business environment (e.g., confidentiality of information, employee right to know, hiring practices, plagiarism, copyright violations, sexual harassment, mission statement, code of ethics, etc.).
  
- 11.0 Perform e-mail activities. – The student will be able to:
  - 11.01 Describe e-mail capabilities and functions.
  - 11.02 Use the Internet to perform e-mail activities.
  
- 12.0 Demonstrate operating systems. – The student will be able to:
  - 12.01 Identify operating system file naming conventions.

- 12.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
- 12.03 Demonstrate a working knowledge of standard file formats.
- 12.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).

13.0 Develop an awareness of emerging technologies. – The student will be able to:

- 13.01 Compare and contrast various methods of evaluation for emerging technologies.
- 13.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
- 13.03 Compare and contrast emerging technologies (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).

OR

**Computing for College and Careers competencies:**

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Develop keyboarding skills to enter and manipulate text and data.
- 01.02 Describe and use current computer technology and software to perform personal and business related tasks in the workplace by establishing digital calendars, meetings, appointments, and create and manipulate e-mail contacts.
- 01.03 Identify and describe types of file systems and classify common file extensions based on software application programs used in the workplace environment.
- 01.04 Use reference materials such as on-line help, tutorials, and manuals available for application software.
- 01.05 Demonstrate basic computer file management skills and file naming conventions to accurately organize files into hierarchies by labeling file folders for easy accessibility.
- 01.06 Discuss the process of troubleshooting problems with computer hardware peripherals, including input and output devices in the workplace environment.
- 01.07 Describe ethical issues and problems associated with computers and information systems, including federal laws against anti-piracy with computers and PC software security protection.
- 01.08 Apply ergonomic principles and view devices applicable to computer workstation and the workplace environment.

02.0 Demonstrate comprehension and communication skills. – The student will be able to:

- 02.01 Read and comprehend technical and non-technical reading assignments related to course content, including, books, magazines and electronic sources.
- 02.02 Write clear and well-organized research papers using MLA or APA documentation formats, integrating software applications for documentation setup. Demonstrate knowledge of ethical behavior regarding plagiarism and copyright violations.
- 02.03 Prepare and deliver a report using appropriate presentation software.
- 02.04 Select a team leader to facilitate large group discussions with team members.

- 02.05 Take notes, organize, summarize, and paraphrase main ideas and details using various note taking systems and reading strategies.
- 02.06 Interpret data on line graphs, pie charts, diagrams, and tables commonly used in spreadsheet software applications that incorporate industry data.
- 03.0 Use technology to enhance the effectiveness of communication skills. – The student will be able to:
- 03.01 Select and use word processing software and accompanying features to enhance written business communications.
- 03.02 Share and maintain documents by applying different views and protection to a document and manage document versions. Share and save a document and apply a template.
- 03.03 Format content to a document by applying font, paragraph attributes, indent and tab settings to text and paragraphs. Apply spacing settings to text and paragraphs. Navigate and search through a document, create and manipulate tables.
- 03.04 Apply page layout and reusable content by editing and manipulating page setup settings and applying themes. Construct content by using the building blocks tools. Create and manipulate page backgrounds, headers and footers.
- 03.05 Use image design theory and software to create illustrations, shapes, and graphics and include a selection in a document. Insert and format pictures, shapes, and clipart. Apply and manipulate text boxes.
- 03.06 Proofread documents by validating content through the use of spell and grammar check. Configure autocorrect settings, insert and modify comments in a document.
- 03.07 Apply references and hyperlinks, create end and footnotes, and create a table of contents in a document.
- 03.08 Perform various mail merge options.
- 04.0 Use computer networks, internet and online databases to facilitate collaborative or individual learning and communication. The student will be able to:
- 04.01 Demonstrate how to connect to the Internet and use appropriate Internet protocol. Identify and describe web terminology, addresses and how browsers work.
- 04.02 Demonstrate proficiency using basic features of GUI browsers, including: bookmarks, basic configurations, e-mail configurations, and address books. Describe appropriate browser security configurations.
- 04.03 Describe information technology terminology, including Internet, intranet, ethics, copyright laws, and regulatory control.
- 04.04 Demonstrate proficiency using search engines and search tools.
- 04.05 Use various web tools, including: downloading files, transfer of files, telnet, PDF, plug-ins, and data compression. Identify Boolean search strategies.
- 04.06 Use computer networks, including on-line databases and resources to facilitate collaborative or individual learning and communication.
- 04.07 Describe how business transactions and academic applications are supported by interactive web applications, including sharing photos and video clips, messaging, chatting and collaborating.
- 04.08 Describe appropriate use of social networking sites and applications, blogs and collaborative tools for file sharing and using listservers.

- 05.0 Use database and spreadsheet applications. The student will be able to:
- 05.01 Manage the worksheet environment by navigating through and printing a worksheet. Personalize the environment by manipulating the ribbon tabs, group settings, importing data, manipulating properties, files and folders.
  - 05.02 Create cell data, apply auto fill and hyperlinks.
  - 05.03 Format cells and worksheets by applying cell formats, merging and splitting cells, create row and column titles, hide and unhide column titles, rows and columns. Manipulate page set up options. Create and apply cell styles.
  - 05.04 Manage worksheets and workbooks by creating and formatting worksheets and manipulating views.
  - 05.05 Apply formulas and functions by creating formulas, enforcing precedence and cell formula references. Apply conditional formula logic, name and cell ranges.
  - 05.06 Demonstrate data visually by creating and modifying charts and images.
  - 05.07 Share worksheet data through email, changing file type and different versions. Manage comments.
  - 05.08 Analyze and organize data through filters, sorting and applying conditional formatting.
- 06.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
- 06.01 Explore, design, implement, and evaluate organizational structures and cultures for managing project teams.
  - 06.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 06.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 07.01 Analyze, interpret, compile, and demonstrate the ability to present and communicate data in understandable and measurable terms using common statistical procedures using charts and graphs.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas and spreadsheets when appropriate.
- 08.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:

- 08.01 Analyze personal skills and aptitudes in comparison with various business related job and career options.
  - 08.02 Use career resources to develop an information base that reflects local and global business related occupations and opportunities for continuing education and workplace experience.
  - 08.03 Demonstrate job-seeking skills required for entry-level employment, including resume, cover letter, thank you letter, online/hard copy application, mock interview, and follow-up call.
  - 08.04 Design and initiate a plan to facilitate growth and skill development related to anticipated job requirements and career expectations.
  - 08.05 Refine and implement a plan to facilitate personal growth and skill development related to anticipated job requirements and career expectations.
  - 08.06 Demonstrate an awareness of specific job requirements and career paths (e.g., requirements, characteristics needed) in business environments.
  - 08.07 Demonstrate an awareness of the potential impact of local and global trends on career plans and life goals.
  - 08.08 Describe the importance of building community and mentor relationships in a variety of professional and workplace situations.
- 09.0 Demonstrate personal and interpersonal skills appropriate for the workplace. – The student will be able to:
- 09.01 Demonstrate ways of accepting constructive criticism on team projects within the workplace.
  - 09.02 Apply appropriate strategies to manage and resolve conflicts in work situations.
  - 09.03 Demonstrate personal and interpersonal skills appropriate for the workplace, including: responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, and professional dress.
- 10.0 Perform e-mail activities. – The student will be able to:
- 10.01 Describe and perform e-mail capabilities and functions. Create and send messages, manage signature and automated messages. Save, send, schedule, and manage junk mail, e-mail and spam. Configure message sensitivity, security and delivery options.
  - 10.02 Use the Internet to perform e-mail activities, including: attaching external files, saving e-mail attachments, viewing mailbox details, establishing appointments, creating contact groups, and sending a meeting to a contact group to communicate in the workplace.
  - 10.03 Manage tasks and organize information.
- 11.0 Demonstrate proficiency using slide presentation software. – The student will be able to:
- 11.01 Manage and configure the presentation software environment, including: adjusting views, manipulating window, configuring toolbar and file options.
  - 11.02 Create slide presentations utilizing various project development elements, including: adding and removing slides, slide layouts, format slide design, insert or format placeholders.

- 11.03 Locate, create and incorporate graphical and multimedia elements, including: shapes, graphics, images, bullets, hyperlinks, video, and audio into a slide presentation appropriate for the project.
- 11.04 Explore and apply design and color theory to create dynamic and appealing visuals.
- 11.05 Explore various design tools and applications.
- 11.06 Create and manipulate graphical and multimedia elements to improve or develop new contacts appropriate for the project, including: creation of images, color selections, tone, hue and contrast.
- 11.07 Demonstrate various business-related elements that can be created, embedded and manipulated in a slide presentation, including: charts, graphs, tables, spreadsheets, flowcharts, and organizational charts.
- 11.08 Apply slide transitions and create custom animations to slide presentations appropriate for the target audience.
- 11.09 Demonstrate different delivery methods for slide presentations, including: packaging for CD delivery, video projection – on mouse click, rehearsed timings, printing options - outlines, handouts, slides and notes.

OR

**Introduction to Information Technology competencies:**

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Develop keyboarding skills to enter and manipulate text and data.
- 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.03 Identify and describe communications and networking systems used in workplace environments.
- 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.06 Describe ethical issues and problems associated with computers and information systems.

02.0 Demonstrate comprehension and communication skills. – The student will be able to:

- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
- 02.02 Use professional business vocabulary appropriate for information technology environments.
- 02.03 Organize ideas and communicate oral and written messages appropriate for information technology environments.
- 02.04 Collaborate with individuals and teams to complete tasks and solve information technology problems.
- 02.05 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.

- 02.06 Apply the writing process to the creation of appropriate documents following designated business formats.
- 02.07 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).
- 03.0 Use technology to enhance the effectiveness of communication skills. – The student will be able to:
  - 03.01 Use database, spreadsheet, and presentation software, scheduling, and integrated software packages to enhance communication.
  - 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
  - 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
  - 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
  - 08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:
- 09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).
  - 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.

- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:
- 14.01 Identify and describe Web terminology.
  - 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
  - 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
  - 14.08 Identify effective Boolean search strategies.
- 15.0 Demonstrate proficiency using HTML commands. – The student will be able to:
- 15.01 Identify elements of a Webpage.
  - 15.02 Describe individual Webpage layouts and content (e.g., writing for the Web, Web structure).
  - 15.03 Define basic HTML terminology.
  - 15.04 Analyze HTML source code developed by others.

- 15.05 Create Webpages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 15.06 Use storyboarding techniques for subsequent Webpages (e.g., linear, hierarchical).
  - 15.07 Edit and test HTML documents for accuracy and validity.
  - 15.08 Use basic functions of WYSIWYG editors.
  - 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 15.10 Enhance webpages through the addition of images and graphics including animation.
- 16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 16.01 Develop an awareness of acceptable Webpage design, including index pages in relation to the rest of the Web site.
  - 16.02 Describe and apply color theory as it applies to Webpage design (e.g., background and text color).
  - 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 16.04 Use image design software to create and edit images.
  - 16.05 Demonstrate proficiency in publishing to the Internet.
  - 16.06 Demonstrate proficiency in adding downloadable forms to webpages.
  - 16.07 Explain the need for web-based applications.
- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.

- 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.
  - 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).

- 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
- 24.03 Demonstrate the ability to incorporate digital sound.

**Course Number: CTS0070 (Web Design Foundations)**  
**Occupational Completion Point – B**  
**Assistant Web Designer – 300 Hours – SOC Code 15-1099.04**

25.0 Demonstrate proficiency in website planning and the design process. – The student will be able to:

- 25.01 Define information architecture.
- 25.02 Discuss the importance of information architecture to web design and development.
- 25.03 Conduct a client interview to determine the business purpose of the new web site and the primary goals.
- 25.04 Conduct a competitive analysis.
- 25.05 Identify stages in the web design process and describe the activities comprising each stage.
- 25.06 Define the site structure by creating a content map, storyboard, and associated wireframes.
- 25.07 Create a global site map.
- 25.08 Discuss the legal and ethical issues related to web design.
- 25.09 Describe accessibility and its implications on web design.
- 25.10 Create a web site mock-up for client approval.

26.0 Develop markup language structures. – The student will be able to:

- 26.01 Define common markup languages and their usage.
- 26.02 Examine emerging and new markup languages.
- 26.03 Determine browser support and appropriate usage of markup languages (existing and emerging).
- 26.04 Identify common DOCTYPEs (e.g., Strict, Transitional and Frameset) and describe their appropriate use.

27.0 Create basic webpages. – The student will be able to:

- 27.01 Create basic webpage structures using common markup elements and attributes.
- 27.02 Incorporate list structures in a webpage (i.e., ordered, unordered, definition, nested).
- 27.03 Incorporate link structures in a webpage (i.e., external, internal, email).
- 27.04 Research and incorporate web color usage principles in a webpage.
- 27.05 Troubleshoot markup language syntax, elements, and links.

28.0 Incorporate images and graphical formatting on a webpage. – The student will be able to:

- 28.01 Describe usage guidelines (e.g., format types, size, relevance) for integrating images and graphics onto a webpage.

- 28.02 Compare and contrast standard image formats used in webpage design.
  - 28.03 Incorporate graphics into a webpage design.
  - 28.04 Create and incorporate image maps in a webpage.
  - 28.05 Optimize images and graphics for use in a webpage.
- 29.0 Create a basic table structure. – The student will be able to:
- 29.01 Describe how tables are used in web design.
  - 29.02 Discuss the advantages and disadvantages of incorporating tables in a webpage design.
  - 29.03 Define and modify table structures for the presentation of tabular information.
  - 29.04 Create accessible tables using standard table elements and attributes.
- 30.0 Incorporate form structures in a webpage. – The student will be able to:
- 30.01 Create an accessible form using common elements, including form, fieldset, legend, textarea, select, option, button, and input (radio, checkbox, submit, reset, image, password, hidden).
  - 30.02 Describe and diagram the relationship between XHTML forms and server-side technologies.
  - 30.03 Compare and contrast the GET and POST methods for forms handling.
  - 30.04 Define form validation and describe how it is accomplished
  - 30.05 List popular server-side technologies often used to process content sent from XHTML forms.
  - 30.06 Use labels with form elements.
  - 30.07 Connect a XHTML form to a server-side script for processing.
- 31.0 Describe frame structures and their usage. – The student will be able to:
- 31.01 Explore frame and iframe structures and support issues.
  - 31.02 Describe appropriate uses of iframes.
  - 31.03 Incorporate frame structure in a webpage.
- 32.0 Use Cascading Style Sheets (CSS). – The student will be able to:
- 32.01 Define CSS and describe its importance in web design.
  - 32.02 Compare and contrast existing and emerging CSS versions.
  - 32.03 Determine browser support and appropriate usage of CSS (existing and emerging versions).
  - 32.04 Explain "document flow" and describe its implications on web design.
  - 32.05 Recognize and use element selectors, ID selectors, class selectors, pseudo-class selectors, and descendant selectors.
  - 32.06 Explain how inheritance and specificity affect CSS rule conflicts.
  - 32.07 Use inline styles, embedded style sheets, and external style sheets.
  - 32.08 Use the link and import methods to connect to an external style sheet.
  - 32.09 Use CSS shorthand techniques to create efficient and concise style sheets.
  - 32.10 Apply basic CSS properties, including background, border, clear, color, float, font, height, line-height, list-style, margin, overflow, padding, position, text-align, text-indent, width, z-index, padding, et al.
  - 32.11 Use CSS to style tables (e.g., borders, width, spacing, alignment, background).
  - 32.12 Use CSS to enhance the appearance and usability of an XHTML form.

- 33.0 Examine web design technologies and techniques. – The student will be able to:
- 33.01 Compare and contrast common authoring tools.
  - 33.02 Compare and contrast client-side and server-side technologies.
  - 33.03 Define e-commerce types and usage.
  - 33.04 Describe database connectivity relative to websites.
  - 33.05 Identify technologies to enhance user experience.
- 34.0 Describe the process for publishing a website. – The student will be able to:
- 34.01 Explore domain name selection principles.
  - 34.02 Identify process to registering a domain name.
  - 34.03 Compare and contrast hosting providers, features, and selection criteria.
  - 34.04 Describe the various means for uploading website files (e.g., FTP, web-based tools, etc.).
- 35.0 Describe how website performance is monitored and analyzed. – The student will be able to:
- 35.01 Identify issues related to website maintenance.
  - 35.02 Use webpage validation tools.
  - 35.03 Describe website performance metrics (e.g., visits, time-on-page, time-on-site, et al) and discuss their design implications.
  - 35.04 Demonstrate knowledge of accessibility problems and solutions.
  - 35.05 Examine indexing, page ranking, basic Search Engine Optimization techniques.
  - 35.06 Explore common website analytic tools.
- 36.0 Create an informational website. – The student will be able to:
- 36.01 Use GUI (Graphical User Interface) web authoring software to create a multi-page informational website.
  - 36.02 Use image-editing software to enhance website designs with simple graphics.
  - 36.03 Use animation software to enhance website designs.
  - 36.04 Enhance the website using client-side technologies (rollovers, check plug-ins, pop-up windows).
  - 36.05 Demonstrate efficient, consistent web site development practice (use of templates, snippets, etc).
- 74.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 74.01 Locate, comprehend and evaluate key elements of oral and written information. AF 2.4
  - 74.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF 2.5
  - 74.03 Present information formally and informally for specific purposes and audiences. AF 2.9
- 75.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF 3.0
- 75.01 Demonstrate knowledge of arithmetic operations. AF 3.2
  - 75.02 Analyze and apply data and measurements to solve problems and interpret documents. AF 3.4

- 75.03 Construct charts/tables/graphs using functions and data. AF 3.5
- 76.0 Demonstrate science knowledge and skills. – The student will be able to: AF 4.0
- 76.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF 4.1
- 76.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF 4.3

**Course Number: CTS0071 (Web Interface Design)**  
**Occupational Completion Point – B**  
**Assistant Web Designer – 300 Hours – SOC Code 15-1099.04**

- 37.0 Incorporate Human Computer Interface (HCI) principles of design. – The student will be able to:
- 37.01 Describe the fundamental design principles of human computer interface.
- 37.02 Differentiate between computer and human factors in screen/page design.
- 37.03 Describe what is meant by an “intuitive” interface.
- 37.04 Describe how typography, color scheme, and graphic usage are used to set website feel/tone for various types of websites (e.g., educational, entertainment, ecommerce). Identify and use the following design concepts: contrast, repetition, alignment, proximity, writing style.
- 37.05 Identify and use the following design concepts: contrast, repetition, alignment, proximity, writing style.
- 37.06 Define and establish logo, identity, and branding needed for an effective website.
- 37.07 Evaluate the HCI features included on a webpage storyboard.
- 37.08 Create a series of webpage storyboards that incorporate HCI design principles.
- 38.0 Research and obtain information for use in designing the user interface. – The student will be able to:
- 38.01 Identify common user information needs, information gathering models, and methods for gathering user research.
- 38.02 Define the primary audience and customer expectations and develop a rubric for defining user tasks and corresponding functionality.
- 38.03 Describe target audience preferences based on demographics (e.g., gender, age, economic status, culture, et al).
- 38.04 Identify and use web analytic tools to shape an information architecture strategy (determine keywords, etc.).
- 38.05 Apply the results of research and analytics to the design of a user interface.
- 39.0 Create an intuitive interface using Cascading Style Sheets (CSS). – The student will be able to:
- 39.01 Create CSS styles suitable for use on an intuitive webpage interface.
- 39.02 Use element selectors, ID selectors, class selectors, pseudo-class selectors, and descendant selectors to create a table-less webpage design
- 39.03 Create a series of templates formatted exclusively using CSS.

- 39.04 Use CSS syntax to configure and apply style sheets for multiple media displays (e.g., screen display and print).
  - 39.05 Create webpage templates using advanced CSS methods (e.g., create multi-column layouts, mimic client-side technologies, create faux columns, etc.).
  - 39.06 Differentiate among static, relative, absolute, and fixed positioning schemas.
  - 39.07 Use schemas to design a website: fixed, liquid, elastic designs.
  - 39.08 Recognize browser support for static, relative, absolute, and fixed positioning schemas.
  - 39.09 Identify and correct display issues in a web page using multiple browsers.
- 40.0 Demonstrate proficiency creating a logical website file structure. – The student will be able to:
- 40.01 Create an efficient, maintainable directory structure for a website, including the site root and subfolders for assets (e.g., images, templates, CSS, et al.).
  - 40.02 Demonstrate and use correct file paths for relative, site root relative, and absolute links.
- 41.0 Create a CSS formatted informational website. – The student will be able to:
- 41.01 Use GUI (Graphical User Interface) web authoring software to create a multi-page informational website.
  - 41.02 Create documented CSS style sheets for layout and appearance purposes.
  - 41.03 Incorporate methods used to drive traffic to the website, then engage and retain visitors.
  - 41.04 Apply standard optimization practices (e.g., keyword proximity; density; relevance; appropriate page titles, URLs, and headings, alt tags; et al) to enhance search engine performance.
  - 41.05 Use standard design techniques to correctly display a website using multiple browsers (e.g., box model, hasLayout, Internet Explorer Conditional Comments (IECC)).
  - 41.06 Integrate common multimedia and plug-ins as appropriate to enhance a website design.
  - 41.07 Use client-side technologies such as rollovers, check plug-ins, and pop-up windows to enhance the user interface.
- 42.0 Demonstrate proficiency publishing, testing, monitoring, and maintaining a website. – The student will be able to:
- 42.01 Recognize the relationship between local and remote site structure.
  - 42.02 Identify methods of acquiring a domain name, appropriate hosting, and search engine registry.
  - 42.03 Understand and implement strategies to measure website traffic and improve search engine analytics reports.
  - 42.04 Describe the use of standard web marketing technologies (e.g., blogging, podcasting, et al).
  - 42.05 Describe how social media and social networking sites can be used for marketing purposes.
  - 42.06 Test websites using common resolutions, browsers, accessibility, and validation techniques.

- 42.07 Use popular Internet browsers and tools as defined by W3C Browser Statistics (e.g., Mozilla Firefox (Web Developer Toolbar, ColorZilla, MeasureIt, Firebug), Internet Explorer 7/8) to display and troubleshoot websites.
- 42.08 Explore standard practices for feedback and usability testing
- 42.09 Identify and incorporate standard security measures in a website.
- 42.10 Identify and use online validation tools.
- 42.11 Successfully change invalid markup to comply with standards.
- 42.12 Build a webpage that successfully passes the W3C validation test at <http://validator.w3.org>.
- 42.13 Write markup that facilitates accessibility.
- 42.14 Use FTP to transfer files to a server.
- 42.15 Set up an FTP connection to a remote site and reproduce the site structure on the server.
- 77.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 77.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
- 77.02 Locate, organize and reference written information from various sources. CM 3.0
- 77.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
- 77.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
- 77.05 Apply active listening skills to obtain and clarify information. CM 7.0
- 77.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
- 77.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 78.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 78.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS 1.0
- 78.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
- 78.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
- 78.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 79.0 Use information technology tools. – The student will be able to:
- 79.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 79.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 79.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 79.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 80.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:

- 80.01 Describe the nature and types of business organizations. SY 1.0
- 80.02 Explain the effect of key organizational systems on performance and quality.
- 80.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
- 80.04 Explain the impact of the global economy on business organizations.
- 83.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 83.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
- 83.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR 1.1
- 83.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR 1.2
- 83.04 Interpret and explain written organizational policies and procedures. ELR 2.0

**Course Number: CTS0049 (Web Scripting)**  
**Occupational Completion Point – C**  
**Web Designer – 300 Hours – SOC Code 15-1099.04**

- 43.0 Discuss the differences between server-side and client-side scripting. – The student will be able to:
- 43.01 Describe the role scripting languages play in the creation of websites.
- 43.02 Identify and describe the advantages, disadvantages, and primary uses of popular scripting languages (e.g., JavaScript, VBScript, Perl, PHP, JScript, et al).
- 44.0 Compare and contrast client-side scripting languages (JavaScript, VBScript, and ECMAScript). – The student will be able to:
- 44.01 Describe the primary usage and limitations of JavaScript in a web environment.
- 44.02 Describe how JavaScript blends with other web-authoring technologies (i.e., HTML, CSS, Server-side programming, Plug-ins, etc.).
- 44.03 Describe the primary differences between JavaScript and VBScript.
- 44.04 Describe the source, features, and common uses of ECMAScript.
- 44.05 Explain why JavaScript use far exceeds VBScript for client-side scripting.
- 44.06 Research resources available to advance JavaScript knowledge.
- 44.07 Explore emerging trends and upcoming revisions related to JavaScript.
- 45.0 Demonstrate understanding of the Document Object Model (DOM). – The student will be able to:
- 45.01 Describe the purpose of the Document Object Model (layout, objects, properties, and methods).
- 45.02 Describe how JavaScript uses the DOM to detect and manipulate elements on a webpage.
- 46.0 Design, write, debug, and incorporate a JavaScript client-side script into a webpage. – The student will be able to:

- 46.01 Write, analyze and explain JavaScript syntax.
  - 46.02 Describe usage of various data types.
  - 46.03 Describe how the use of decision-making logic (AND, OR) is employed in a JavaScript program.
  - 46.04 Create and use variables, operators, and expressions.
  - 46.05 Use common JavaScript events and event handlers (e.g., click, load, onClick, onLoad) to control program flow, appearance, or functionality.
  - 46.06 Understand and incorporate JavaScript arrays (e.g., array basics, types, usage, methods, sorting).
  - 46.07 Understand and incorporate JavaScript functions (e.g., using the DOM, pass a value, return value, create objects, work with classes and objects).
  - 46.08 Understand and incorporate JavaScript loops and conditions (e.g., loop basics, types, usage).
  - 46.09 Recognize, isolate, and correct common JavaScript errors (e.g., syntax, function errors, reserved word usage, unsupported DOM).
  - 46.10 Identify limitations related to obsolete JavaScript constructs and coding practices (e.g., Document.all, navigator.appName).
  - 46.11 Apply JavaScript best coding practices (i.e., properly documenting scripts, field naming conventions, writing understandable code).
  - 46.12 Use different methods to incorporate JavaScript onto a web page (e.g., <script> element, JavaScript statement block, external scripts).
  - 46.13 Troubleshoot and test incorporated script (i.e., functionality, browser usage, resolve known bugs).
- 47.0 Incorporate basic JavaScript form validation and form handling (using pre-built validation scripts or online libraries). – The student will be able to:
- 47.01 Identify and use form elements to solicit user input.
  - 47.02 Use JavaScript with HTML form controls.
  - 47.03 Validate web forms prior to submission.
  - 47.04 Use output commands to display processed data in an appropriately formatted form.
- 48.0 Use advanced JavaScript techniques. – The student will be able to:
- 48.01 Write JavaScript suitable for plug-in detection, image manipulation, and the creation of custom JavaScript objects.
  - 48.02 Use JavaScript to incorporate, create, update, and delete cookies.
  - 48.03 Describe the common security issues relevant to JavaScript.
- 49.0 Demonstrate understanding of JavaScript accessibility issues. – The student will be able to:
- 49.01 Describe the purpose of the Browser Object Model (BOM) and how it relates to JavaScript.
  - 49.02 Describe how obsolete constructs and coding practices affect browser function.
  - 49.03 Make webpages accessible and functional when JavaScript disabled or unsupported.
  - 49.04 Demonstrate ability to use XHTML, HTML, and CSS instead of JavaScript where appropriate.

- 49.05 Demonstrate ability to determine which version of JavaScript specific browsers support and code program to meet acceptable standards.
- 50.0 Select and modify appropriate library and pre-built JavaScript to incorporate into webpage. – The student will be able to:
- 50.01 Explore common JavaScript libraries and describe the advantages & disadvantages of using libraries.
  - 50.02 Analyze pre-built library items to determine functionality.
  - 50.03 Explain how a library item achieves desired processing.
  - 50.04 Determine if pre-built script provides functionality required in an effective manner.
  - 50.05 Incorporate pre-built library items into web pages.
  - 50.06 Identify the restrictions related to using pre-built scripts (i.e.; copyright, processing, and length of script).
  - 50.07 Modify pre-built scripts to suit functionality requirements.
  - 50.08 Test and troubleshoot pre-built scripts and widgets incorporated into web pages.
- 81.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 81.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
  - 81.02 Explain emergency procedures to follow in response to workplace accidents.
  - 81.03 Create a disaster and/or emergency response plan. SHE 2.0
- 82.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 82.01 Employ leadership skills to accomplish organizational goals and objectives. LT 1.0
  - 82.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT 3.0
  - 82.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
  - 82.04 Employ mentoring skills to inspire and teach others. LT 5.0
- 84.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 84.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
  - 84.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
  - 84.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
  - 84.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
  - 84.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
  - 84.06 Identify and exhibit traits for retaining employment. ECD 7.0
  - 84.07 Identify opportunities and research requirements for career advancement. ECD 8.0
  - 84.08 Research the benefits of ongoing professional development. ECD 9.0
  - 84.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0
- 85.0 Demonstrate personal money-management concepts, procedures, and strategies. – The student will be able to:

85.01	Identify and describe the services and legal responsibilities of financial institutions.	FL 2.0
85.02	Describe the effect of money management on personal and career goals.	FL 3.0
85.03	Develop a personal budget and financial goals.	FL 3.1
85.04	Complete financial instruments for making deposits and withdrawals.	FL 3.2
85.05	Maintain financial records.	FL 3.3
85.06	Read and reconcile financial statements.	FL 3.4
85.07	Research, compare and contrast investment opportunities.	

**Course Number: CTS0015 (Web Media Integration)**  
**Occupational Completion Point – C**  
**Senior Web Designer – 300 Hours – SOC Code 15-1099.04**

- 51.0 Incorporate graphics, animations, and video assets into a webpage design using conventional HTML techniques. – The student will be able to:
- 51.01 Use the HREF tag to integrate a video file displayed in a new window.
  - 51.02 Use the EMBED tag to display a graphic animation or a video file as part of the webpage fabric.
  - 51.03 Discuss the limitations of conventional media integration techniques.
- 52.0 Demonstrate understanding of XML vocabularies and documents. – The student will be able to:
- 52.01 Understand XML vocabularies.
  - 52.02 Define well-formed and valid XML documents.
  - 52.03 Describe the basic structure of an XML document.
- 53.0 Create and debug an XML Document. – The student will be able to:
- 53.01 Create an XML declaration.
  - 53.02 Work with XML comments.
  - 53.03 Create XML elements and attributes.
  - 53.04 Work with character and entity references.
  - 53.05 Describe how XML handles character data, parsed character data, and white space.
  - 53.06 Work with XML parsers.
  - 53.07 Understand how Web browsers work with XML documents.
  - 53.08 Apply a style sheet to an XML document.
  - 53.09 Create an XML processing instruction.
- 54.0 Create and debug compound documents with Namespaces. – The student will be able to:
- 54.01 Understand compound documents and the problem of name collision.
  - 54.02 Declare a namespace for an XML vocabulary.
  - 54.03 Apply a namespace to an element.
  - 54.04 Create a default namespace.
  - 54.05 Apply a namespace to an attribute.

- 54.06 Declare a namespace within a CSS style sheet.
  - 54.07 Apply a namespace to a style selector.
  - 54.08 Use the escape character to apply a namespace to a selector.
  - 54.09 Create a compound document containing XML and XHTML elements and attributes.
- 55.0 Demonstrate ability to validate documents with a Data Type Definition (DTD). – The student will be able to:
- 55.01 Understand the principles of data validation.
  - 55.02 Create a DOCTYPE.
  - 55.03 Specify the content of an XML element.
  - 55.04 Define the structure of child elements.
  - 55.05 Describe how DOCTYPE changed from HTML4.01 to HTML5.
- 56.0 Demonstrate ability to validate documents with XML Schema. – The student will be able to:
- 56.01 Compare schemas and DTDs.
  - 56.02 Explore different schema vocabularies.
  - 56.03 Declare simple type elements and attributes.
  - 56.04 Declare complex type elements.
  - 56.05 Apply a schema to an instance document.
  - 56.06 Work with XML Schema data types.
  - 56.07 Derive new data types for text strings, numeric values, and dates.
  - 56.08 Create data types for patterned data using regular expressions.
  - 56.09 Explore different schema structures.
  - 56.10 Attach a schema to a namespace.
  - 56.11 Validate compound instance documents.
  - 56.12 Import one schema file into another.
- 57.0 Demonstrate an understanding of Asynchronous JavaScript and XML (AJAX) and its implications for web developers. – The student will be able to:
- 57.01 Identify the technologies that comprise AJAX and explain how they interact.
  - 57.02 Describe the purpose, advantages, disadvantages, and functions of AJAX.
  - 57.03 Describe how AJAX works and how it is used in the creation of websites.
  - 57.04 Identify AJAX requirements.
  - 57.05 Install and setup the AJAX Control Toolkit.
  - 57.06 Define appropriate use of AJAX in a web project.
  - 57.07 Identify AJAX Usability and Accessibility issues and their workarounds.
  - 57.08 Describe AJAX related browser compatibility issues and their workarounds.
  - 57.09 Explore popular AJAX applications currently on the Internet (auto-complete (Google), updating user content (Twitter), voting and rating (social bookmarking))
  - 57.10 Describe common security issues associated to AJAX
  - 57.11 Analyze the server-side implications of AJAX applications
  - 57.12 Explore methods for testing and maintaining an AJAX application.
  - 57.13 Explore the future of AJAX and its implementation.
- 58.0 Plan and implement a multi-page website that features graphics, pictures, and video galleries using AJAX techniques. – The student will be able to:

- 58.01 Research AJAX design principles and patterns (e.g., Observer, Command and MVC).
- 58.02 Research and compare popular AJAX frameworks, libraries, and toolkits (e.g., JQuery, DOJO, Prototype, et al).
- 58.03 Identify and implement methods of using AJAX when JavaScript not available (e.g. progressive enhancement).
- 58.04 Update specific areas of a page with data from the server (e.g., server-login updated) without reloading the webpage.
- 58.05 Demonstrate the ability to output results in different formats (e.g., XML, JSON, alternatives to JavaScript).
- 58.06 Use AJAX to create form submission & validation (e.g. password strength check, email/URL validation).
- 58.07 Integrate a basic slideshow via lightbox using AJAX techniques.
- 58.08 Integrate optional video selections displayed using AJAX techniques.

**Course Number: CTS0016 (Web E-commerce)**  
**Occupational Completion Point – D**  
**Senior Web Designer – 300 Hours – SOC Code 15-1099.04**

59.0 Demonstrate knowledge and skills necessary to setup a secure E-commerce site. – The student will be able to:

- 59.01 Compare and contrast popular pre-built shopping cart software (e.g., PrestaShop, Zend Cart).
- 59.02 Compare and contrast hosting options available for use with shopping cart software (i.e., shared hosting or dedicated server).
- 59.03 Discuss shopping cart vulnerabilities and best-practice preventative measures.
- 59.04 Identify hardware and software necessary to install and setup pre-built shopping cart software.
- 59.05 Install and configure necessary software (database, server, etc.) to run pre-built shopping cart software.
- 59.06 Install and configure pre-built shopping cart software.
- 59.07 Verify database and server connectivity.
- 59.08 Test and troubleshoot setup/configuration issues.

60.0 Identify security issues associated with e-commerce and discuss methods to mitigate risks. – The student will be able to:

- 60.01 Describe the differences between Transaction Layer Security (TLS) and its predecessor, Secure Sockets Layer (SSL).
- 60.02 Explain transaction security.
- 60.03 Identify security and payment processing issues involved in developing a site (e.g., SSL, Digital Certificates, SET Protocol, Cyber Cash).
- 60.04 Demonstrate understanding of https and htaccess and their usage.
- 60.05 Explore methods to obtain an SSL certificate and secure transactions.
- 60.06 Compare and contrast the appropriateness of employing a merchant account or a payment gateway to handle online transactions.
- 60.07 Discuss the process, advantages, disadvantages, and costs associated with opening a merchant account.

- 60.08 Describe the process, advantages, disadvantages, and costs associated with using a payment gateway.
- 61.0 Apply skills necessary to setup an E-commerce storefront. – The student will be able to:
- 61.01 Setup and use an FTP (File Transfer Protocol) program to transfer files to a web server.
  - 61.02 Add business specific information to site storefront (e.g., logos, product images, descriptions, et al).
  - 61.03 Setup back-end site administration functions and navigation.
  - 61.04 Setup a schema for incorporating shipping, handling, and processing fees based on carrier, geographical zones, and weight/price range.
  - 61.05 Experiment with various add-ons, themes, and modules available for customization.
  - 61.06 Customize shopping cart to suit client needs (e.g., modify fields, add buttons, etc.).
  - 61.07 Customize forms to accommodate client products and/or services.
  - 61.08 Setup Search preferences and functionality for products and/or services.
  - 61.09 Setup customer contact preferences and email notification functionality.
  - 61.10 Apply Search Engine Optimization (SEO) techniques to shopping cart pages.
  - 61.11 Test operation of shopping cart pages in multiple browsers.
  - 61.12 Troubleshoot issues and errors related to browser display and functionality.
- 62.0 Employ techniques to enhance the value and profitability of an E-commerce website. – The student will be able to:
- 62.01 Determine business goals for the e-commerce site.
  - 62.02 Identify the various types of advertising options in e-commerce (e.g., links, banner ads, affiliate programs, pop-up windows, viral marketing, newsgroup postings, et al).
  - 62.03 Describe affiliate marketing and its implications for e-commerce websites.
  - 62.04 Analyze popular affiliate programs/networks and available payment schemes.
  - 62.05 Explain the differences, advantages, and disadvantages of CPM, PPC, and Pay per Sale/Lead.
  - 62.06 Determine appropriate affiliate program for target audience.
  - 62.07 Identify the method to join an affiliate program/network.
  - 62.08 Identify considerations/ requirements of selecting an affiliate program.
  - 62.09 Determine appropriate number of affiliate programs necessary to suit client site.
  - 62.10 Determine the terms and conditions of sale, including warranties, after-sales service, and privacy assurances.
  - 62.11 Determine customer service options (e.g., e-mail, phone, fax).
  - 62.12 Create a site map.
  - 62.13 Create a Frequently Asked Questions (FAQ) page.
  - 62.14 Create a product/version comparison chart, where appropriate.
  - 62.15 Create feedback, review, survey, and recommendation pages.
- 63.0 Develop evaluation and performance monitoring metrics and target goals for an E-commerce website. – The student will be able to:
- 63.01 Research existing and emerging analytical, usability, SEO tools to improve customer satisfaction and site conversion rates.

- 63.02 Describe web analytics tools and their features/functions.
- 63.03 Use web analytics tools to determine optimum site keywords.
- 63.04 Experiment with using advanced segments to view subsets of data (relating to purchasing habits, website usage, searches).
- 63.05 Customize analytic reports using appropriate metrics (e.g., average per-visit value, bounce rates, time spent on page, et al).
- 63.06 Create more concise reports using advanced filters in web analytics tools.
- 63.07 Use intelligence features of web analytics tools to discover patterns of usage and setup corresponding alerts.
- 63.08 Research popular mobile analytics tools (e.g., Motally, et al) and their features.
- 63.09 Interpret analytic report data and optimize website accordingly, if appropriate.

**Course Number: CTS0017 (Web Interactivity)**  
**Occupational Completion Point – D**  
**Senior Web Designer – 300 Hours – SOC Code 15-1099.04**

64.0 Demonstrate an understanding of Content Management Systems (CMS) and their implications for web development. – The student will be able to:

- 64.01 Describe the fundamental operation of a CMS.
- 64.02 Describe the typical features of a content management system.
- 64.03 Compare and contrast popular CMS applications (e.g., WordPress, Joomla, et al).
- 64.04 Describe how a content management system can be used to enhance website interactivity.
- 64.05 Demonstrate proficiency installing and configuring content management systems and extensions/modules.

65.0 Use CMS features, functions, and extensions/modules to create/enhance a website. – The student will be able to:

- 65.01 Create a basic multipage website using a content management system.
- 65.02 Enhance a webpage by using a content management system to incorporate images, animations, or video segments.
- 65.03 Incorporate a blog feature into a website using a content management system.
- 65.04 Demonstrate proficiency using CMS built-in security for website, password and database backup.
- 65.05 Demonstrate proficiency using add-on modules, or plug-ins.

66.0 Evaluate the suitability for and system requirements for a content management system. – The student will be able to:

- 66.01 Identify business goals and evaluate their suitability for a content management system.
- 66.02 Determine web hosting system requirements.
- 66.03 Create a schema for creating, deleting, and managing users and their permissions.
- 66.04 Discuss the value represented by templates in a content management system development environment.

67.0 Demonstrate an understanding of multimedia applications and their implications for web designers. – The student will be able to:

- 67.01 Compare and contrast the leading multimedia development applications for website development (e.g., Adobe Flash, Microsoft Silverlight, et al).
- 67.02 Describe those circumstances whereby multimedia may be used to add interactivity to a website.
- 67.03 Describe the limitations of multimedia development applications relative to website development.

68.0 Create and incorporate interactive website components. – The student will be able to:

- 68.01 Create buttons, menus, and other components that feature a static, hover, and rollover effect.
- 68.02 Convert original artwork into an interactive component with associated script behavior.
- 68.03 Adjust the component properties including opacity, filter, rotation, and action.
- 68.04 Resize a multi-layer component to ensure uniform resizing of each layer.
- 68.05 Create scrolling images, panels, and lists for incorporating into a web design.
- 68.06 Create and incorporate animated banners, headers, and website introduction pages (e.g., Adobe Flash, Microsoft Silverlight).

69.0 PDF document usage considerations. – The student will be able to:

- 69.01 Discuss the advantages and disadvantages of using PDF documents in a web site.
- 69.02 Research and discuss PDF document usage best practices.
- 69.03 Determine when it is appropriate to use PDF documents (e.g., brochure downloads, large reports, catalogs, interactive forms).
- 69.04 Compare and contrast the functionality of software applications used to create and process PDFs.
- 69.05 Research and describe search engine optimization considerations related to the use of PDF documents.
- 69.06 Research and discuss security issues related to PDF document usage in a web site (viruses, auto-open).
- 69.07 Identify accessibility issues related to using PDF documents in a web site.

70.0 Create, format, and manipulate PDF documents. – The student will be able to:

- 70.01 List and describe the methods available for creating PDF documents.
- 70.02 Create a PDF using a variety of software applications, multiple files, and web pages.
- 70.03 Demonstrate ability to format, modify and enhance a PDF document.
- 70.04 Describe the differences in PDF standards for document prepress data interchange and long-term archiving.
- 70.05 Embed images, text, audio, video, and Flash content into a PDF document.
- 70.06 Create and modify automatically generated & manual bookmarks in a PDF document.

- 70.07 Add clickable links to a PDF document.
  - 70.08 Incorporate Find and Search methods to locate specific text in a PDF document.
  - 70.09 Describe the method used to search scanned documents (optical character recognition).
  - 70.10 Understand and correct color separation issues.
  - 70.11 Create and modify PDF documents using available tools to meet accessibility requirements (e.g., tags, reading order, forms, supplemental content for multimedia, text-to-speech).
  - 70.12 Export a PDF document in a different format.
- 71.0 Display, distribution, and print considerations for PDF documents. – The student will be able to:
- 71.01 Define file specifications use to generate smaller files for electronic distribution and on-screen display.
  - 71.02 Specify image downsampling and compression settings to generate a PDF file with a smaller file size.
  - 71.03 Identify and correct potential printing issues in a PDF document.
  - 71.04 Ensure a PDF document meets appropriate criteria for print or electronic distribution.
  - 71.05 Demonstrate ability to control flattening of a transparent PDF document and misregistration.
  - 71.06 Demonstrate color management techniques that affect on-screen display and printing.
  - 71.07 Discuss methods and tools used to review a PDF document (email, shared, tracking).
- 72.0 Create and manage PDF forms. – The student will be able to:
- 72.01 Create an interactive form using fields, form objects, and distribution methods.
  - 72.02 Distribute a form electronically and manage distributed forms.
  - 72.03 Demonstrate ability to redact content in a form to protect sensitive information.
  - 72.04 Preview, test, and modify an interactive form.
- 73.0 Incorporate PDF security in a PDF document. – The student will be able to:
- 73.01 Secure a PDF document using passwords, encryption, digital IDs and signatures.
  - 73.02 Creating Security Policies and Certificates for a PDF document.
  - 73.03 Enable usage rights for Adobe Readers.
- 74.0 Demonstrate proficiency using HTML5 features and functions. – The student will be able to:
- 74.01 Apply HTML5 APIs in web pages for interactivity (e.g., audio/video, drag & drop, drawing canvas).
  - 74.02 Apply HTML5 interactivity elements into web pages (i.e., <canvas>, <embed>, <audio>, <video>, <details> <input>).

- 74.03 Utilize HTML5 fallback strategies to address browser support issues.
- 74.04 Utilize HTML5 to define dynamic behaviors using JavaScript.
- 74.05 Use HTML5 specification to manipulate text & images.
- 74.06 Use HTML5 to create persistent data and single session storage (HTML 5 Local Offline Storage & Session Storage).
- 74.07 Use HTML5 for media event handling (audio, video, embed, image).
- 74.08 Use HTML5 event handling for window, mouse, and form events.
- 74.09 Use CSS3 to style HTML5 (e.g., transitions, typography enhancements, etc).

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:**            **Keyboarding and Business Skills**  
**Course Number:**       **8200320**  
**Course Credit:**         **.5**

**Course Description:**

This course is designed to provide a basic overview of current business and information systems and trends and to introduce students to the basics and foundations required for today's business environments. Emphasis is placed on developing proficiency with touch keyboarding and fundamental word processing applications, so that they may be used as communication tools for enhancing personal and work place proficiency in an information-based society.

This course, along with Computer and Business Skills is equivalent to Computing for College and Careers. Students should complete this course before enrolling in Computer and Business Skills.

10.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. Apply ergonomic principles applicable to the configuration of computer workstations. – The student will be able to:

- 10.01 Develop keyboarding skills to enter and manipulate text and data.
- 10.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 10.03 Demonstrate basic file management skills.

11.0 Demonstrate comprehension and communication skills. – The student will be able to:

- 11.01 Read and comprehend technical and non-technical reading assignments related to course content including trade journals, books, magazines and electronic sources.
- 11.02 Write clear and well-organized research papers, integrating a variety of information.
- 11.03 Prepare and deliver an oral report with appropriate materials to the class
- 11.04 Participate in large group discussions as a member and/or a leader.
- 11.05 Take notes, organize, summarize, and paraphrase ideas and details.
- 11.06 Accurately follow written and oral instructions.
- 11.07 Interpret data on graphs, charts, diagrams, and tables commonly used in this industry/occupation.

12.0 Use technology to apply and enhance communication skills in technical reading, writing. – The student will be able to:

- 12.01 Select and use word processing software and accompanying features to enhance written business communications.
- 12.02 Use the writing process to create/edit business documents appropriate to the subject matter, purpose, and audience.

- 12.03 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 13.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles. Demonstrate initiative, courtesy, loyalty, honesty, cooperation and punctuality as a team member. – The student will be able to:
- 13.01 Explore, design, implement, and evaluate organizational structures and cultures for managing project teams.
  - 13.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 13.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 14.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
- 14.01 Assess personal, peer, and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving and decision-making skills).
  - 14.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 15.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 15.01 Demonstrate an awareness of quality service and the personal and professional standards required to establish an effective service-based culture in the workplace, business, or learning environment.
  - 15.02 Identify, analyze, and implement managerial skills necessary for maintaining a high quality work environment, goals, and strategic planning in business settings.
  - 15.03 Follow accepted rules, regulations, policies, procedures, processes, and workplace safety.
- 16.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc. – The student will be able to:
- 16.01 Analyze personal skills and aptitudes in comparison with various business related job and career options.
  - 16.02 Use career resources to develop an information base that reflects local and global business related occupations and opportunities for continuing education and workplace experience.

- 16.03 Demonstrate job-seeking skills required for entry-level employment (e.g., resume, application, interview, follow up.)
- 16.04 Design, initiate, refine, and implement a plan to facilitate personal growth and skill development related to anticipated job requirements and career expectations.
- 17.0 Demonstrate personal and interpersonal skills appropriate for the workplace. – The student will be able to:
  - 17.01 Accept constructive criticism.
  - 17.02 Apply appropriate strategies to manage and resolve conflict in work situations.
  - 17.03 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, and respect for self and others, professional dress, etc.).
- 18.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 18.01 Perform business tasks (e.g., filing and records management, scheduling, reprographics, mail handling, etc.).
  - 18.02 Demonstrate knowledge of ethical behavior in a business environment (e.g., confidentiality of information, employee right to know, hiring practices, plagiarism, copyright violations, sexual harassment, mission statement, code of ethics, etc.).

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Computer and Business Skills  
**Course Number:** 8200330  
**Course Credit:** .5

**Course Description:**

This course is designed to introduce students to the basic skills and foundations required for today's business environments. Emphasis is placed on developing proficiency with touch keyboarding and fundamental computer applications using databases, spreadsheets, presentation applications, and the integration of these programs using software that meets industry standards.

This course, along with Keyboarding and Business Skills is equivalent to Computing for College and Careers. Students should complete Keyboarding and Business Skills before enrolling in this course.

- 14.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. Apply ergonomic principles applicable to the configuration of computer workstations. – The student will be able to:
- 14.01 Develop keyboarding skills to enter and manipulate text and data.
  - 14.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 14.03 Identify and describe communications and networking systems used in workplace environments.
  - 14.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 14.05 Demonstrate basic file management skills.
  - 14.06 Troubleshoot problems with computer software, hardware, peripherals, and other office equipment.
  - 14.07 Describe ethical issues and problems associated with computers and information systems.
  - 14.08 Apply ergonomic principles applicable to the configuration of computer workstations.
- 15.0 Use technology to apply and enhance communication skills in technical reading, writing, speaking, listening, and viewing. – The student will be able to:
- 15.01 Take notes, organize, summarize, and paraphrase ideas and details.
  - 15.02 Accurately follow written and oral instructions.
  - 15.03 Interpret data on graphs, charts, diagrams, and tables commonly used in this industry/occupation.
- 16.0 Use technology to apply and enhance communication skills in technical reading, writing. – The student will be able to:

- 16.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communications.
  - 16.02 Use computer networks (e.g., Internet, on-line databases, e-mail) to facilitate collaborative or individual learning and communication.
  - 16.03 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 17.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
- 17.01 Assess personal, peer, and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving and decision-making skills).
  - 17.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 18.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 18.01 Demonstrate an awareness of quality service and the personal and professional standards required to establish an effective service-based culture in the workplace, business, or learning environment.
  - 18.02 Identify, analyze and implement managerial skills necessary for maintaining a high quality work environment, goals, and strategic planning in business settings.
  - 18.03 Follow accepted rules, regulations, policies, procedures, processes, and workplace safety.
- 19.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace and to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 19.01 Analyze, interpret, compile and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 19.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 19.03 Select and use the correct mathematical processes and tools to solve complex problem settings that are typical of business settings and use formulas when appropriate.
- 20.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 20.01 Assess, analyze, and reassess individual talents, aptitudes, interests, and personal characteristics as they relate to potential future careers in business environments.
  - 20.02 Use personal assessment tools to identify personal strengths and weaknesses

related to learning and work environments.

- 20.03 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 21.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc. – The student will be able to:
- 21.01 Analyze personal skills and aptitudes in comparison with various business related job and career options.
  - 21.02 Use career resources to develop an information base that reflects local and global business related occupations and opportunities for continuing education and workplace experience.
  - 21.03 Demonstrate job-seeking skills required for entry-level employment (e.g., resume, application, interview, follow-up).
  - 21.04 Design and initiate a plan to facilitate growth and skill development related to anticipated job requirements and career expectations.
  - 21.05 Refine and implement a plan to facilitate personal growth and skill development related to anticipated job requirements and career expectations.
  - 21.06 Demonstrate an awareness of specific job requirements and career paths (e.g., requirements, characteristics needed) in business environments.
  - 21.07 Demonstrate an awareness of the potential impact of local and global trends on career plans and life goals.
  - 21.08 Build mentor relationships with local professionals in the industry.
- 22.0 Demonstrate personal and interpersonal skills appropriate for the workplace. – The student will be able to:
- 22.01 Accept constructive criticism.
  - 22.02 Apply appropriate strategies to manage and resolve conflict in work situations.
  - 22.03 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, and respect for self and others, professional dress, etc.).
- 23.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 23.01 Demonstrate knowledge of ethical behavior in a business environment (e.g., confidentiality of information, employee right to know, hiring practices, plagiarism, copyright violations, sexual harassment, mission statement, code of ethics, etc.).
- 24.0 Perform e-mail activities. – The student will be able to:
- 24.01 Describe e-mail capabilities and functions.
  - 24.02 Use the Internet to perform e-mail activities.
- 25.0 Demonstrate operating systems. – The student will be able to:
- 25.01 Identify operating system file naming conventions.

- 25.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 25.03 Demonstrate a working knowledge of standard file formats.
  - 25.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 26.0 Develop an awareness of emerging technologies. – The student will be able to:
- 26.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 26.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 26.03 Compare and contrast emerging technologies (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:**            **Computing for College and Careers**  
**Course Number:**       **8209020**  
**Course Credit:**         **1**

**Course Description:**

This course is designed to provide a basic overview of current business and information systems and trends, and to introduce students to fundamental skills required for today's business and academic environments. Emphasis is placed on developing proficient fundamental computer skills. The intention of this course is to prepare students to be successful both personally and professionally in an information based society. Computing for College and Careers includes proficiency with computers in the exploration and use of: databases, the internet, spreadsheets, presentation applications, management of personal information and email, word processing and document manipulation, and the integration of these programs using software that meets industry standards.

- 12.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 12.01 Develop keyboarding skills to enter and manipulate text and data.
  - 12.02 Describe and use current computer technology and software to perform personal and business related tasks in the workplace by establishing digital calendars, meetings, appointments, and create and manipulate e-mail contacts.
  - 12.03 Identify and describe types of file systems and classify common file extensions based on software application programs used in the workplace environment.
  - 12.04 Use reference materials such as on-line help, tutorials, and manuals available for application software.
  - 12.05 Demonstrate basic computer file management skills and file naming conventions to accurately organize files into hierarchies by labeling file folders for easy accessibility.
  - 12.06 Discuss the process of troubleshooting problems with computer hardware peripherals, including input and output devices in the workplace environment.
  - 12.07 Describe ethical issues and problems associated with computers and information systems, including federal laws against anti-piracy with computers and PC software security protection.
  - 12.08 Apply ergonomic principles and view devices applicable to computer workstation and the workplace environment.
- 13.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 13.01 Read and comprehend technical and non-technical reading assignments related to course content, including, books, magazines and electronic sources.
  - 13.02 Write clear and well-organized research papers using MLA or APA documentation formats, integrating software applications for documentation setup. Demonstrate knowledge of ethical behavior regarding plagiarism and copyright violations.
  - 13.03 Prepare and deliver a report using appropriate presentation software.

- 13.04 Select a team leader to facilitate large group discussions with team members.
  - 13.05 Take notes, organize, summarize, and paraphrase main ideas and details using various note taking systems and reading strategies.
  - 13.06 Interpret data on line graphs, pie charts, diagrams, and tables commonly used in spreadsheet software applications that incorporate industry data.
- 14.0 Use technology to enhance the effectiveness of communication skills. – The student will be able to:
- 14.01 Select and use word processing software and accompanying features to enhance written business communications.
  - 14.02 Share and maintain documents by applying different views and protection to a document and manage document versions. Share and save a document and apply a template.
  - 14.03 Format content to a document by applying font, paragraph attributes, indent and tab settings to text and paragraphs. Apply spacing settings to text and paragraphs. Navigate and search through a document, create and manipulate tables.
  - 14.04 Apply page layout and reusable content by editing and manipulating page setup settings and applying themes. Construct content by using the building blocks tools. Create and manipulate page backgrounds, headers and footers.
  - 14.05 Use image design theory and software to create illustrations, shapes, and graphics and include a selection in a document. Insert and format pictures, shapes, and clipart. Apply and manipulate text boxes.
  - 14.06 Proofread documents by validating content through the use of spell and grammar check. Configure autocorrect settings, insert and modify comments in a document.
  - 14.07 Apply references and hyperlinks, create end and footnotes, and create a table of contents in a document.
  - 14.08 Perform various mail merge options.
- 15.0 Use computer networks, internet and online databases to facilitate collaborative or individual learning and communication. The student will be able to:
- 15.01 Demonstrate how to connect to the Internet and use appropriate Internet protocol. Identify and describe web terminology, addresses and how browsers work.
  - 15.02 Demonstrate proficiency using basic features of GUI browsers, including: bookmarks, basic configurations, e-mail configurations, and address books. Describe appropriate browser security configurations.
  - 15.03 Describe information technology terminology, including Internet, intranet, ethics, copyright laws, and regulatory control.
  - 15.04 Demonstrate proficiency using search engines and search tools.
  - 15.05 Use various web tools, including: downloading files, transfer of files, telnet, PDF, plug-ins, and data compression. Identify Boolean search strategies.
  - 15.06 Use computer networks, including on-line databases and resources to facilitate collaborative or individual learning and communication.
  - 15.07 Describe how business transactions and academic applications are supported by interactive web applications, including sharing photos and video clips, messaging, chatting and collaborating.

- 15.08 Describe appropriate use of social networking sites and applications, blogs and collaborative tools for file sharing and using listservers.
- 16.0 Use database and spreadsheet applications. The student will be able to:
- 16.01 Manage the worksheet environment by navigating through and printing a worksheet. Personalize the environment by manipulating the ribbon tabs, group settings, importing data, manipulating properties, files and folders.
  - 16.02 Create cell data, apply auto fill and hyperlinks.
  - 16.03 Format cells and worksheets by applying cell formats, merging and splitting cells, create row and column titles, hide and unhide column titles, rows and columns. Manipulate page set up options. Create and apply cell styles.
  - 16.04 Manage worksheets and workbooks by creating and formatting worksheets and manipulating views.
  - 16.05 Apply formulas and functions by creating formulas, enforcing precedence and cell formula references. Apply conditional formula logic, name and cell ranges.
  - 16.06 Demonstrate data visually by creating and modifying charts and images.
  - 16.07 Share worksheet data through email, changing file type and different versions. Manage comments.
  - 16.08 Analyze and organize data through filters, sorting and applying conditional formatting.
- 17.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
- 17.01 Explore, design, implement, and evaluate organizational structures and cultures for managing project teams.
  - 17.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 17.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 18.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 18.01 Analyze, interpret, compile, and demonstrate the ability to present and communicate data in understandable and measurable terms using common statistical procedures using charts and graphs.
  - 18.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 18.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas and spreadsheets when appropriate.
- 19.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:

- 19.01 Analyze personal skills and aptitudes in comparison with various business related job and career options.
  - 19.02 Use career resources to develop an information base that reflects local and global business related occupations and opportunities for continuing education and workplace experience.
  - 19.03 Demonstrate job-seeking skills required for entry-level employment, including resume, cover letter, thank you letter, online/hard copy application, mock interview, and follow-up call.
  - 19.04 Design and initiate a plan to facilitate growth and skill development related to anticipated job requirements and career expectations.
  - 19.05 Refine and implement a plan to facilitate personal growth and skill development related to anticipated job requirements and career expectations.
  - 19.06 Demonstrate an awareness of specific job requirements and career paths (e.g., requirements, characteristics needed) in business environments.
  - 19.07 Demonstrate an awareness of the potential impact of local and global trends on career plans and life goals.
  - 19.08 Describe the importance of building community and mentor relationships in a variety of professional and workplace situations.
- 20.0 Demonstrate personal and interpersonal skills appropriate for the workplace. – The student will be able to:
- 20.01 Demonstrate ways of accepting constructive criticism on team projects within the workplace.
  - 20.02 Apply appropriate strategies to manage and resolve conflicts in work situations.
  - 20.03 Demonstrate personal and interpersonal skills appropriate for the workplace, including: responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, and professional dress.
- 21.0 Perform e-mail activities. – The student will be able to:
- 21.01 Describe and perform e-mail capabilities and functions. Create and send messages, manage signature and automated messages. Save, send, schedule, and manage junk mail, e-mail and spam. Configure message sensitivity, security and delivery options.
  - 21.02 Use the Internet to perform e-mail activities, including: attaching external files, saving e-mail attachments, viewing mailbox details, establishing appointments, creating contact groups, and sending a meeting to a contact group to communicate in the workplace.
  - 21.03 Manage tasks and organize information.
- 22.0 Demonstrate proficiency using slide presentation software. – The student will be able to:
- 22.01 Manage and configure the presentation software environment, including: adjusting views, manipulating window, configuring toolbar and file options.
  - 22.02 Create slide presentations utilizing various project development elements, including: adding and removing slides, slide layouts, format slide design, insert or format placeholders.

- 22.03 Locate, create and incorporate graphical and multimedia elements, including: shapes, graphics, images, bullets, hyperlinks, video, and audio into a slide presentation appropriate for the project.
- 22.04 Explore and apply design and color theory to create dynamic and appealing visuals.
- 22.05 Explore various design tools and applications.
- 22.06 Create and manipulate graphical and multimedia elements to improve or develop new contacts appropriate for the project, including: creation of images, color selections, tone, hue and contrast.
- 22.07 Demonstrate various business-related elements that can be created, embedded and manipulated in a slide presentation, including: charts, graphs, tables, spreadsheets, flowcharts, and organizational charts.
- 22.08 Apply slide transitions and create custom animations to slide presentations appropriate for the target audience.
- 22.09 Demonstrate different delivery methods for slide presentations, including: packaging for CD delivery, video projection – on mouse click, rehearsed timings, printing options - outlines, handouts, slides and notes.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Introduction to Information Technology  
**Course Number:** 8207310  
**Course Credit:** 1

**Course Description:**

This course is designed to provide an introduction to information technology concepts and careers as well as the impact information technology has on the world, people, and industry and basic web design concepts. The content includes information technology career research; operating systems and software applications; electronic communications including e-mail and Internet services; basic HTML, DHTML, and XML web commands and design; emerging technologies, and Web page design.

Standards included in this course of instruction have been aligned to the academic courses shown below. This table shows the number of aligned benchmarks, the total number of academic benchmarks, and the percentage of alignment.

Math		Science					
<b>Algebra 1</b>	6/36 17%	<b>Biology 1</b>	2/56 4%	<b>Anatomy/Physiology Honors</b>	2/53 4%	<b>Astronomy Solar/Galactic Honors</b>	2/52 4%
<b>Algebra 2</b>	2/41 5%	<b>Chemistry 1</b>	2/55 4%	<b>Genetics</b>	2/35 6%	<b>Marine Science 1 Honors</b>	2/42 5%
<b>Geometry</b>	1/45 2%	<b>Physics 1</b>	2/53 4%	<b>Earth-Space Science</b>	2/58 3%	<b>Physical Science</b>	2/56 4%

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Develop keyboarding skills to enter and manipulate text and data.
- 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.03 Identify and describe communications and networking systems used in workplace environments.
- 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.06 Describe ethical issues and problems associated with computers and information systems.

02.0 Demonstrate comprehension and communication skills. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2; MA.912.D.8.1; MA.912.A.3.15; MA.912.G.8.2.

- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
- 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
- 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
- 02.04 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
- 02.05 Apply the writing process to the creation of appropriate documents following designated business formats.
- 02.06 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).

- 03.0 Use technology to enhance the effectiveness of communication skills —The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.2.12.

- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.

- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.3.15.

- 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
- 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
- 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.

- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:

- 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).

05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).

06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:

06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.

07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.5.7; MA.912.F.5.2; MA.912.A.10.1; MA.912.A.10.2; MA.912.S.1.2; MA.912.S.3.2; MA.912.A.3.5; MA.912.G.8.2.

07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.

07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).

07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:

08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.

08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.

09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2.

09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).

- 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).

- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:
- 14.01 Identify and describe Web terminology.
  - 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
  - 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
  - 14.08 Identify effective Boolean search strategies.
- 15.0 Demonstrate proficiency using html commands. – The student will be able to:
- 15.01 Identify elements of a Web page.
  - 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
  - 15.03 Define basic HTML terminology.
  - 15.04 Analyze HTML source code developed by others.
  - 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
  - 15.07 Edit and test HTML documents for accuracy and validity.
  - 15.08 Use basic functions of WYSIWYG editors.
  - 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 15.10 Enhance web pages through the addition of images and graphics including animation.
- 16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
  - 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
  - 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 16.04 Use image design software to create and edit images.
  - 16.05 Demonstrate proficiency in publishing to the Internet.
  - 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
  - 16.07 Explain the need for web-based applications.

- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.

- 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
  - 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
  - 24.03 Demonstrate the ability to incorporate digital sound.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Foundations of Web Design  
**Course Number:** 9001110  
**Course Credit:** 1

**Course Description:**

This course is designed to provide students with opportunities to acquire and apply foundational skills related to web design.

- 25.0 Demonstrate proficiency in website planning and the design process. – The student will be able to:
- 25.01 Define information architecture.
  - 25.02 Discuss the importance of information architecture to web design and development.
  - 25.03 Conduct a client interview to determine the business purpose and needs.
  - 25.04 Conduct a competitive analysis.
  - 25.05 Identify stages in the web design process and describe the activities comprising each stage.
  - 25.06 Define the site structure by creating a content map, storyboard, and associated wireframes.
  - 25.07 Create a global site map.
  - 25.08 Discuss the legal and ethical issues related to web design.
  - 25.09 Describe accessibility and its implications on web design.
  - 25.10 Create a web site mock-up for client approval.
- 26.0 Develop markup language structures. – The student will be able to:
- 26.01 Define common markup languages and their usage.
  - 26.02 Examine emerging and new markup languages.
  - 26.03 Determine browser support and appropriate usage of markup languages (existing and emerging).
  - 26.04 Identify common DOCTYPES (e.g., Strict, Transitional and Frameset) and describe their appropriate use.
- 27.0 Create basic webpages. – The student will be able to:
- 27.01 Create basic webpage structures using common markup elements and attributes.
  - 27.02 Incorporate list structures in a webpage (i.e., ordered, unordered, definition, nested).
  - 27.03 Incorporate link structures in a webpage (i.e., external, internal, email).
  - 27.04 Research and incorporate web color usage principles in a webpage.
  - 27.05 Troubleshoot markup language syntax, elements, and links.
- 28.0 Incorporate images and graphical formatting on a webpage. – The student will be able to:

- 28.01 Describe usage guidelines (e.g., format types, size, relevance) for integrating images and graphics onto a webpage.
  - 28.02 Compare and contrast standard image formats used in webpage design.
  - 28.03 Incorporate graphics into a webpage design.
  - 28.04 Create and incorporate image maps in a webpage.
  - 28.05 Optimize images and graphics for use in a webpage.
- 29.0 Create a basic table structure. – The student will be able to:
- 29.01 Describe how tables are used in web design.
  - 29.02 Discuss the advantages and disadvantages of incorporating tables in a webpage design.
  - 29.03 Define and modify table structures for the presentation of tabular information.
  - 29.04 Create accessible tables using standard table elements and attributes.
- 30.0 Incorporate form structures in a webpage. – The student will be able to:
- 30.01 Create an accessible form using common elements, including form, fieldset, legend, textarea, select, option, button, and input (radio, checkbox, submit, reset, image, password, hidden).
  - 30.02 Describe and diagram the relationship between XHTML forms and server-side technologies.
  - 30.03 Compare and contrast the GET and POST methods for forms handling.
  - 30.04 Define form validation and describe how it is accomplished
  - 30.05 List popular server-side technologies often used to process content sent from XHTML forms.
  - 30.06 Use labels with form elements.
  - 30.07 Connect a XHTML form to a server-side script for processing.
- 31.0 Describe frame structures and their usage. – The student will be able to:
- 31.01 Explore frame and iframe structures and support issues.
  - 31.02 Describe appropriate uses of iframes.
  - 31.03 Incorporate frame structure in a webpage.
- 32.0 Use Cascading Style Sheets (CSS). – The student will be able to:
- 32.01 Define CSS and describe its importance in web design.
  - 32.02 Compare and contrast existing and emerging CSS versions.
  - 32.03 Determine browser support and appropriate usage of CSS (existing and emerging versions).
  - 32.04 Explain "document flow" and describe its implications on web design.
  - 32.05 Recognize and use element selectors, ID selectors, class selectors, pseudo-class selectors, and descendant selectors.
  - 32.06 Explain how inheritance and specificity affect CSS rule conflicts.
  - 32.07 Use inline styles, embedded style sheets, and external style sheets.
  - 32.08 Use the link and import methods to connect to an external style sheet.
  - 32.09 Use CSS shorthand techniques to create efficient and concise style sheets.
  - 32.10 Apply basic CSS properties, including background, border, clear, color, float, font, height, line-height, list-style, margin, overflow, padding, position, text-align, text-indent, width, z-index, padding, et al.

- 32.11 Use CSS to style tables (e.g., borders, width, spacing, alignment, background).
- 32.12 Use CSS to enhance the appearance and usability of an XHTML form.
- 33.0 Examine web design technologies and techniques. – The student will be able to:
- 33.01 Compare and contrast common authoring tools.
- 33.02 Compare and contrast client-side and server-side technologies.
- 33.03 Define e-commerce types and usage.
- 33.04 Describe database connectivity relative to websites.
- 33.05 Identify technologies to enhance user experience.
- 34.0 Describe the process for publishing a website. – The student will be able to:
- 34.01 Explore domain name selection principles.
- 34.02 Identify process to registering a domain name.
- 34.03 Compare and contrast hosting providers, features, and selection criteria.
- 34.04 Describe the various means for uploading website files (e.g., FTP, web-based tools, etc.).
- 35.0 Describe how website performance is monitored and analyzed. – The student will be able to:
- 35.01 Identify issues related to website maintenance.
- 35.02 Use webpage validation tools.
- 35.03 Describe website performance metrics (e.g., visits, time-on-page, time-on-site, et al) and discuss their design implications.
- 35.04 Demonstrate knowledge of accessibility problems and solutions.
- 35.05 Examine indexing, page ranking, basic Search Engine Optimization techniques.
- 35.06 Explore common website analytic tools.
- 36.0 Create an informational website. – The student will be able to:
- 36.01 Use GUI (Graphical User Interface) web authoring software to create a multi-page informational website.
- 36.02 Use image-editing software to enhance website designs with simple graphics.
- 36.03 Use animation software to enhance website designs.
- 36.04 Enhance the website using client-side technologies (rollovers, check plug-ins, pop-up windows).
- 36.05 Demonstrate efficient, consistent web site development practice (use of templates, snippets, etc).
- 74.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 74.01 Locate, comprehend and evaluate key elements of oral and written information. AF 2.4
- 74.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF 2.5
- 74.03 Present information formally and informally for specific purposes and audiences. AF 2.9
- 75.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF 3.0
- 75.01 Demonstrate knowledge of arithmetic operations. AF 3.2

- 75.02 Analyze and apply data and measurements to solve problems and interpret documents. AF 3.4
- 75.03 Construct charts/tables/graphs using functions and data. AF 3.5
- 76.0 Demonstrate science knowledge and skills. – The student will be able to: AF 4.0
  - 76.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF 4.1
  - 76.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF 4.3

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** User Interface Design  
**Course Number:** 9001120  
**Course Credit:** 1

**Course Description:**

This course provides advanced concepts used in interface design. The content includes principles of Human Computer Interface (HCI), advanced page design using Cascading Style Sheets (CSS), advanced HTML commands, multimedia applications, Internet/Intranet tools, and website promotion.

37.0 Incorporate Human Computer Interface (HCI) principles of design. – The student will be able to:

- 37.01 Describe the fundamental design principles of human computer interface.
- 37.02 Differentiate between computer and human factors in screen/page design.
- 37.03 Describe what is meant by an “intuitive” interface.
- 37.04 Describe how typography, color scheme, and graphic usage are used to set website feel/tone for various types of websites (e.g., educational, entertainment, ecommerce). Identify and use the following design concepts: contrast, repetition, alignment, proximity, writing style.
- 37.05 Identify and use the following design concepts: contrast, repetition, alignment, proximity, writing style.
- 37.06 Define and establish logo, identity, and branding needed for an effective website.
- 37.07 Evaluate the HCI features included on a webpage storyboard.
- 37.08 Create a series of webpage storyboards that incorporate HCI design principles.

38.0 Research and obtain information for use in designing the user interface. – The student will be able to:

- 38.01 Identify common user information needs, information gathering models, and methods for gathering user research.
- 38.02 Define the primary audience and customer expectations and develop a rubric for defining user tasks and corresponding functionality.
- 38.03 Describe target audience preferences based on demographics (e.g., gender, age, economic status, culture, et al).
- 38.04 Identify and use web analytic tools to shape an information architecture strategy (determine keywords, etc.).
- 38.05 Apply the results of research and analytics to the design of a user interface.

39.0 Create an intuitive interface using Cascading Style Sheets (CSS). – The student will be able to:

- 39.01 Create CSS styles suitable for use on an intuitive webpage interface.
- 39.02 Use element selectors, ID selectors, class selectors, pseudo-class selectors, and descendant selectors to create a table-less webpage design
- 39.03 Create a series of templates formatted exclusively using CSS.

- 39.04 Use CSS syntax to configure and apply style sheets for multiple media displays (e.g., screen display and print).
  - 39.05 Create webpage templates using advanced CSS methods (e.g., create multi-column layouts, mimic client-side technologies, create faux columns, etc.).
  - 39.06 Differentiate among static, relative, absolute, and fixed positioning schemas.
  - 39.07 Use schemas to design a website: fixed, liquid, elastic designs.
  - 39.08 Recognize browser support for static, relative, absolute, and fixed positioning schemas.
  - 39.09 Identify and correct display issues in a web page using multiple browsers.
- 40.0 Demonstrate proficiency creating a logical website file structure. – The student will be able to:
- 40.01 Create an efficient, maintainable directory structure for a website, including the site root and subfolders for assets (e.g., images, templates, CSS, et al.).
  - 40.02 Demonstrate and use correct file paths for relative, site root relative, and absolute links.
- 41.0 Create a CSS formatted informational website. – The student will be able to:
- 41.01 Use GUI (Graphical User Interface) web authoring software to create a multi-page informational website.
  - 41.02 Create documented CSS style sheets for layout and appearance purposes.
  - 41.03 Incorporate methods used to drive traffic to the website, then engage and retain visitors.
  - 41.04 Apply standard optimization practices (e.g., keyword proximity; density; relevance; appropriate page titles, URLs, and headings, alt tags; et al) to enhance search engine performance.
  - 41.05 Use standard design techniques to correctly display a website using multiple browsers (e.g., box model, hasLayout, Internet Explorer Conditional Comments (IECC)).
  - 41.06 Integrate common multimedia and plug-ins as appropriate to enhance a website design.
  - 41.07 Use client-side technologies such as rollovers, check plug-ins, and pop-up windows to enhance the user interface.
- 42.0 Demonstrate proficiency publishing, testing, monitoring, and maintaining a website. – The student will be able to:
- 42.01 Recognize the relationship between local and remote site structure.
  - 42.02 Identify methods of acquiring a domain name, appropriate hosting, and search engine registry.
  - 42.03 Understand and implement strategies to measure website traffic and improve search engine analytics reports.
  - 42.04 Describe the use of standard web marketing technologies (e.g., blogging, podcasting, et al).
  - 42.05 Describe how social media and social networking sites can be used for marketing purposes.
  - 42.06 Test websites using common resolutions, browsers, accessibility, and validation techniques.

- 42.07 Use popular Internet browsers and tools as defined by W3C Browser Statistics (e.g., Mozilla Firefox (Web Developer Toolbar, ColorZilla, MeasureIt, Firebug), Internet Explorer 7/8) to display and troubleshoot websites.
- 42.08 Explore standard practices for feedback and usability testing
- 42.09 Identify and incorporate standard security measures in a website.
- 42.10 Identify and use online validation tools.
- 42.11 Successfully change invalid markup to comply with standards.
- 42.12 Build a webpage that successfully passes the W3C validation test at <http://validator.w3.org>.
- 42.13 Write markup that facilitates accessibility.
- 42.14 Use FTP to transfer files to a server.
- 42.15 Set up an FTP connection to a remote site and reproduce the site structure on the server.
- 77.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 77.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
- 77.02 Locate, organize and reference written information from various sources. CM 3.0
- 77.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
- 77.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
- 77.05 Apply active listening skills to obtain and clarify information. CM 7.0
- 77.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
- 77.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 78.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 78.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
- 78.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
- 78.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
- 78.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 79.0 Use information technology tools. – The student will be able to:
- 79.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 79.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 79.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 79.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 80.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:

- 80.01 Describe the nature and types of business organizations. SY 1.0
  - 80.02 Explain the effect of key organizational systems on performance and quality.
  - 80.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
  - 80.04 Explain the impact of the global economy on business organizations.
- 83.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 83.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
  - 83.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR 1.1
  - 83.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR 1.2
  - 83.04 Interpret and explain written organizational policies and procedures. ELR 2.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Web Scripting Fundamentals  
**Course Number:** 9001130  
**Course Credit:** 1

**Course Description:**

This course provides an introduction to scripting related to web development. The content primarily focuses on client-side scripting using JavaScript.

- 43.0 Discuss the differences between server-side and client-side scripting. – The student will be able to:
- 43.01 Describe the role scripting languages play in the creation of websites.
  - 43.02 Identify and describe the advantages, disadvantages, and primary uses of popular scripting languages (e.g., JavaScript, VBScript, Perl, PHP, JScript, et al).
- 44.0 Compare and contrast client-side scripting languages (JavaScript, VBScript, and ECMAScript). – The student will be able to:
- 44.01 Describe the primary usage and limitations of JavaScript in a web environment.
  - 44.02 Describe how JavaScript blends with other web-authoring technologies (i.e., HTML, CSS, Server-side programming, Plug-ins, etc.).
  - 44.03 Describe the primary differences between JavaScript and VBScript.
  - 44.04 Describe the source, features, and common uses of ECMAScript.
  - 44.05 Explain why JavaScript use far exceeds VBScript for client-side scripting.
  - 44.06 Research resources available to advance JavaScript knowledge.
  - 44.07 Explore emerging trends and upcoming revisions related to JavaScript.
- 45.0 Demonstrate understanding of the Document Object Model (DOM).
- 45.01 Describe the purpose of the Document Object Model (layout, objects, properties, and methods).
  - 45.02 Describe how JavaScript uses the DOM to detect and manipulate elements on a webpage.
- 46.0 Design, write, debug, and incorporate a JavaScript client-side script into a webpage. – The student will be able to:
- 46.01 Write, analyze and explain JavaScript syntax.
  - 46.02 Describe usage of various data types.
  - 46.03 Describe how the use of decision-making logic (AND, OR) is employed in a JavaScript program.
  - 46.04 Create and use variables, operators, and expressions.
  - 46.05 Use common JavaScript events and event handlers (e.g., click, load, onClick, onLoad) to control program flow, appearance, or functionality.
  - 46.06 Understand and incorporate JavaScript arrays (e.g., array basics, types, usage, methods, sorting).

- 46.07 Understand and incorporate JavaScript functions (e.g., using the DOM, pass a value, return value, create objects, work with classes and objects).
  - 46.08 Understand and incorporate JavaScript loops and conditions (e.g., loop basics, types, usage).
  - 46.09 Recognize, isolate, and correct common JavaScript errors (e.g., syntax, function errors, reserved word usage, unsupported DOM).
  - 46.10 Identify limitations related to obsolete JavaScript constructs and coding practices (e.g., Document.all, navigator.appName).
  - 46.11 Apply JavaScript best coding practices (i.e., properly documenting scripts, field naming conventions, writing understandable code).
  - 46.12 Use different methods to incorporate JavaScript onto a web page (e.g., <script> element, JavaScript statement block, external scripts).
  - 46.13 Troubleshoot and test incorporated script (i.e., functionality, browser usage, resolve known bugs).
- 47.0 Incorporate basic JavaScript form validation and form handling (using pre-built validation scripts or online libraries). – The student will be able to:
- 47.01 Identify and use form elements to solicit user input.
  - 47.02 Use JavaScript with HTML form controls.
  - 47.03 Validate web forms prior to submission.
  - 47.04 Use output commands to display processed data in an appropriately formatted form.
- 48.0 Use advanced JavaScript techniques. – The student will be able to:
- 48.01 Write JavaScript suitable for plug-in detection, image manipulation, and the creation of custom JavaScript objects.
  - 48.02 Use JavaScript to incorporate, create, update, and delete cookies.
  - 48.03 Describe the common security issues relevant to JavaScript.
- 49.0 Demonstrate understanding of JavaScript accessibility issues. – The student will be able to:
- 49.01 Describe the purpose of the Browser Object Model (BOM) and how it relates to JavaScript.
  - 49.02 Describe how obsolete constructs and coding practices affect browser function.
  - 49.03 Make webpages accessible and functional when JavaScript disabled or unsupported.
  - 49.04 Demonstrate ability to use XHTML, HTML, and CSS instead of JavaScript where appropriate.
  - 49.05 Demonstrate ability to determine which version of JavaScript specific browsers support and code program to meet acceptable standards.
- 50.0 Select and modify appropriate library and pre-built JavaScript to incorporate into webpage. – The student will be able to:
- 50.01 Explore common JavaScript libraries and describe the advantages & disadvantages of using libraries.
  - 50.02 Analyze pre-built library items to determine functionality.
  - 50.03 Explain how a library item achieves desired processing.

- 50.04 Determine if pre-built script provides functionality required in an effective manner.
- 50.05 Incorporate pre-built library items into web pages.
- 50.06 Identify the restrictions related to using pre-built scripts (i.e.; copyright, processing, and length of script).
- 50.07 Modify pre-built scripts to suit functionality requirements.
- 50.08 Test and troubleshoot pre-built scripts and widgets incorporated into web pages.
- 81.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 81.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
- 81.02 Explain emergency procedures to follow in response to workplace accidents.
- 81.03 Create a disaster and/or emergency response plan. SHE 2.0
- 82.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 82.01 Employ leadership skills to accomplish organizational goals and objectives. LT 1.0
- 82.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT 3.0
- 82.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 82.04 Employ mentoring skills to inspire and teach others. LT 5.0
- 84.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 84.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
- 84.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
- 84.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
- 84.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
- 84.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
- 84.06 Identify and exhibit traits for retaining employment. ECD 7.0
- 84.07 Identify opportunities and research requirements for career advancement. ECD 8.0
- 84.08 Research the benefits of ongoing professional development. ECD 9.0
- 84.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0
- 85.0 Demonstrate personal money-management concepts, procedures, and strategies. – The student will be able to:
- 85.01 Identify and describe the services and legal responsibilities of financial institutions. FL 2.0
- 85.02 Describe the effect of money management on personal and career goals. FL 3.0
- 85.03 Develop a personal budget and financial goals. FL 3.1
- 85.04 Complete financial instruments for making deposits and withdrawals. FL 3.2
- 85.05 Maintain financial records. FL 3.3
- 85.06 Read and reconcile financial statements. FL 3.4
- 85.07 Research, compare and contrast investment opportunities.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Media Integration Essentials  
**Course Number:** 9001140  
**Course Credit:** 1

**Course Description:**

This course provides in-depth instruction into techniques for integrating various forms of media onto webpages, with particular focus on XML and AJAX technologies and frameworks. Students should have a good understanding of JavaScript prior to taking this course.

51.0 Incorporate graphics, animations, and video assets into a webpage design using conventional HTML techniques – The student will be able to:

- 51.01 Use the HREF tag to integrate a video file displayed in a new window.
- 51.02 Use the EMBED tag to display a graphic animation or a video file as part of the webpage fabric.
- 51.03 Discuss the limitations of conventional media integration techniques.

52.0 Demonstrate understanding of XML vocabularies and documents. – The student will be able to:

- 52.01 Understand XML vocabularies.
- 52.02 Define well-formed and valid XML documents.
- 52.03 Describe the basic structure of an XML document.

53.0 Create and debug an XML Document. – The student will be able to:

- 53.01 Create an XML declaration.
- 53.02 Work with XML comments.
- 53.03 Create XML elements and attributes.
- 53.04 Work with character and entity references.
- 53.05 Describe how XML handles character data, parsed character data, and white space.
- 53.06 Work with XML parsers.
- 53.07 Understand how Web browsers work with XML documents.
- 53.08 Apply a style sheet to an XML document.
- 53.09 Create an XML processing instruction.

54.0 Create and debug compound documents with Namespaces. – The student will be able to:

- 54.01 Understand compound documents and the problem of name collision.
- 54.02 Declare a namespace for an XML vocabulary.
- 54.03 Apply a namespace to an element.
- 54.04 Create a default namespace.
- 54.05 Apply a namespace to an attribute.
- 54.06 Declare a namespace within a CSS style sheet.

- 54.07 Apply a namespace to a style selector.
  - 54.08 Use the escape character to apply a namespace to a selector.
  - 54.09 Create a compound document containing XML and XHTML elements and attributes.
- 55.0 Demonstrate ability to validate documents with a Data Type Definition (DTD). – The student will be able to:
- 55.01 Understand the principles of data validation.
  - 55.02 Create a DOCTYPE.
  - 55.03 Specify the content of an XML element.
  - 55.04 Define the structure of child elements.
  - 55.05 Describe how DOCTYPE changed from HTML4.01 to HTML5.
- 56.0 Demonstrate ability to validate documents with XML Schema. – The student will be able to:
- 56.01 Compare schemas and DTDs.
  - 56.02 Explore different schema vocabularies.
  - 56.03 Declare simple type elements and attributes.
  - 56.04 Declare complex type elements.
  - 56.05 Apply a schema to an instance document.
  - 56.06 Work with XML Schema data types.
  - 56.07 Derive new data types for text strings, numeric values, and dates.
  - 56.08 Create data types for patterned data using regular expressions.
  - 56.09 Explore different schema structures.
  - 56.10 Attach a schema to a namespace.
  - 56.11 Validate compound instance documents.
  - 56.12 Import one schema file into another.
- 57.0 Demonstrate an understanding of Asynchronous JavaScript and XML (AJAX) and its implications for web developers. – The student will be able to:
- 57.01 Identify the technologies that comprise AJAX and explain how they interact.
  - 57.02 Describe the purpose, advantages, disadvantages, and functions of AJAX.
  - 57.03 Describe how AJAX works and how it is used in the creation of websites.
  - 57.04 Identify AJAX requirements.
  - 57.05 Install and setup the AJAX Control Toolkit.
  - 57.06 Define appropriate use of AJAX in a web project.
  - 57.07 Identify AJAX Usability and Accessibility issues and their workarounds.
  - 57.08 Describe AJAX related browser compatibility issues and their workarounds.
  - 57.09 Explore popular AJAX applications currently on the Internet (auto-complete (Google), updating user content (Twitter), voting and rating (social bookmarking))
  - 57.10 Describe common security issues associated to AJAX
  - 57.11 Analyze the server-side implications of AJAX applications
  - 57.12 Explore methods for testing and maintaining an AJAX application.
  - 57.13 Explore the future of AJAX and its implementation.
- 58.0 Plan and implement a multi-page website that features graphics, pictures, and video galleries using AJAX techniques. – The student will be able to:

- 58.01 Research AJAX design principles and patterns (e.g., Observer, Command and MVC).
- 58.02 Research and compare popular AJAX frameworks, libraries, and toolkits (e.g., JQuery, DOJO, Prototype, et al).
- 58.03 Identify and implement methods of using AJAX when JavaScript not available (e.g. progressive enhancement).
- 58.04 Update specific areas of a page with data from the server (e.g., server-login updated) without reloading the webpage.
- 58.05 Demonstrate the ability to output results in different formats (e.g., XML, JSON, alternatives to JavaScript).
- 58.06 Use AJAX to create form submission & validation (e.g. password strength check, email/URL validation).
- 58.07 Integrate a basic slideshow via lightbox using AJAX techniques.
- 58.08 Integrate optional video selections displayed using AJAX techniques.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** E-commerce & Marketing Essentials  
**Course Number:** 9001150  
**Course Credit:** 1

**Course Description:**

This course provides instruction in the design, creation, marketing, and monitoring of e-commerce websites. Content also includes the associated security issues and methods.

59.0 Demonstrate knowledge and skills necessary to setup a secure E-commerce site. – The student will be able to:

- 59.01 Compare and contrast popular pre-built shopping cart software (e.g., PrestaShop, Zend Cart).
- 59.02 Compare and contrast hosting options available for use with shopping cart software (i.e., shared hosting or dedicated server).
- 59.03 Discuss shopping cart vulnerabilities and best-practice preventative measures.
- 59.04 Identify hardware and software necessary to install and setup pre-built shopping cart software.
- 59.05 Install and configure necessary software (database, server, etc.) to run pre-built shopping cart software.
- 59.06 Install and configure pre-built shopping cart software.
- 59.07 Verify database and server connectivity.
- 59.08 Test and troubleshoot setup/configuration issues.

60.0 Identify security issues associated with e-commerce and discuss methods to mitigate risks. – The student will be able to:

- 60.01 Describe the differences between Transaction Layer Security (TLS) and its predecessor, Secure Sockets Layer (SSL).
- 60.02 Explain transaction security.
- 60.03 Identify security and payment processing issues involved in developing a site (e.g., SSL, Digital Certificates, SET Protocol, Cyber Cash).
- 60.04 Demonstrate understanding of https and htaccess and their usage.
- 60.05 Explore methods to obtain an SSL certificate and secure transactions.
- 60.06 Compare and contrast the appropriateness of employing a merchant account or a payment gateway to handle online transactions.
- 60.07 Discuss the process, advantages, disadvantages, and costs associated with opening a merchant account.
- 60.08 Describe the process, advantages, disadvantages, and costs associated with using a payment gateway.

61.0 Apply skills necessary to setup an E-commerce storefront. – The student will be able to:

- 61.01 Setup and use an FTP (File Transfer Protocol) program to transfer files to a web server.

- 61.02 Add business specific information to site storefront (e.g., logos, product images, descriptions, et al).
  - 61.03 Setup back-end site administration functions and navigation.
  - 61.04 Setup a schema for incorporating shipping, handling, and processing fees based on carrier, geographical zones, and weight/price range.
  - 61.05 Experiment with various add-ons, themes, and modules available for customization.
  - 61.06 Customize shopping cart to suit client needs (e.g., modify fields, add buttons, etc.).
  - 61.07 Customize forms to accommodate client products and/or services.
  - 61.08 Setup Search preferences and functionality for products and/or services.
  - 61.09 Setup customer contact preferences and email notification functionality.
  - 61.10 Apply Search Engine Optimization (SEO) techniques to shopping cart pages.
  - 61.11 Test operation of shopping cart pages in multiple browsers.
  - 61.12 Troubleshoot issues and errors related to browser display and functionality.
- 62.0 Employ techniques to enhance the value and profitability of an E-commerce website. – The student will be able to:
- 62.01 Determine business goals for the e-commerce site.
  - 62.02 Identify the various types of advertising options in e-commerce (e.g., links, banner ads, affiliate programs, pop-up windows, viral marketing, newsgroup postings, et al).
  - 62.03 Describe affiliate marketing and its implications for e-commerce websites.
  - 62.04 Analyze popular affiliate programs/networks and available payment schemes.
  - 62.05 Explain the differences, advantages, and disadvantages of CPM, PPC, and Pay per Sale/Lead.
  - 62.06 Determine appropriate affiliate program for target audience.
  - 62.07 Identify the method to join an affiliate program/network.
  - 62.08 Identify considerations/ requirements of selecting an affiliate program.
  - 62.09 Determine appropriate number of affiliate programs necessary to suit client site.
  - 62.10 Determine the terms and conditions of sale, including warranties, after-sales service, and privacy assurances.
  - 62.11 Determine customer service options (e.g., e-mail, phone, fax).
  - 62.12 Create a site map.
  - 62.13 Create a Frequently Asked Questions (FAQ) page.
  - 62.14 Create a product/version comparison chart, where appropriate.
  - 62.15 Create feedback, review, survey, and recommendation pages.
- 63.0 Develop evaluation and performance monitoring metrics and target goals for an E-commerce website. – The student will be able to:
- 63.01 Research existing and emerging analytical, usability, SEO tools to improve customer satisfaction and site conversion rates.
  - 63.02 Describe web analytics tools and their features/functions.
  - 63.03 Use web analytics tools to determine optimum site keywords.
  - 63.04 Experiment with using advanced segments to view subsets of data (relating to purchasing habits, website usage, searches).
  - 63.05 Customize analytic reports using appropriate metrics (e.g., average per-visit value, bounce rates, time spent on page, et al).
  - 63.06 Create more concise reports using advanced filters in web analytics tools.

- 63.07 Use intelligence features of web analytics tools to discover patterns of usage and setup corresponding alerts.
- 63.08 Research popular mobile analytics tools (e.g., Motally, et al) and their features.
- 63.09 Interpret analytic report data and optimize website accordingly, if appropriate.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Interactivity Essentials  
**Course Number:** 9001160  
**Course Credit:** 1

**Course Description:**

This course provides instruction on technologies and techniques for enhancing the interactivity of websites from both site visitor and administration perspectives. Also covered are methods for PDF forms handling and content management.

- 64.0 Demonstrate an understanding of Content Management Systems (CMS) and their implications for web development. – The student will be able to:
- 64.01 Describe the fundamental operation of a CMS.
  - 64.02 Describe the typical features of a content management system.
  - 64.03 Compare and contrast popular CMS applications (e.g., WordPress, Joomla, et al).
  - 64.04 Describe how a content management system can be used to enhance website interactivity.
  - 64.05 Demonstrate proficiency installing and configuring content management systems and extensions/modules.
- 65.0 Use CMS features, functions, and extensions/modules to create/enhance a website. – The student will be able to:
- 65.01 Create a basic multipage website using a content management system.
  - 65.02 Enhance a webpage by using a content management system to incorporate images, animations, or video segments.
  - 65.03 Incorporate a blog feature into a website using a content management system.
  - 65.04 Demonstrate proficiency using CMS built-in security for website, password and database backup.
  - 65.05 Demonstrate proficiency using add-on modules, or plug-ins.
- 66.0 Evaluate the suitability for and system requirements for a content management system. – The student will be able to:
- 66.01 Identify business goals and evaluate their suitability for a content management system.
  - 66.02 Determine web hosting system requirements.
  - 66.03 Create a schema for creating, deleting, and managing users and their permissions.
  - 66.04 Discuss the value represented by templates in a content management system development environment.
- 67.0 Demonstrate an understanding of multimedia applications and their implications for web designers. – The student will be able to:

- 67.01 Compare and contrast the leading multimedia development applications for website development (e.g., Adobe Flash, Microsoft Silverlight, et al).
  - 67.02 Describe those circumstances whereby multimedia may be used to add interactivity to a website.
  - 67.03 Describe the limitations of multimedia development applications relative to website development.
- 68.0 Create and incorporate interactive website components. – The student will be able to:
- 68.01 Create buttons, menus, and other components that feature a static, hover, and rollover effect.
  - 68.02 Convert original artwork into an interactive component with associated script behavior.
  - 68.03 Adjust the component properties including opacity, filter, rotation, and action.
  - 68.04 Resize a multi-layer component to ensure uniform resizing of each layer.
  - 68.05 Create scrolling images, panels, and lists for incorporating into a web design.
  - 68.06 Create and incorporate animated banners, headers, and website introduction pages (e.g., Adobe Flash, Microsoft Silverlight).
- 69.0 PDF document usage considerations. – The student will be able to:
- 69.01 Discuss the advantages and disadvantages of using PDF documents in a web site.
  - 69.02 Research and discuss PDF document usage best practices.
  - 69.03 Determine when it is appropriate to use PDF documents (e.g., brochure downloads, large reports, catalogs, interactive forms).
  - 69.04 Compare and contrast the functionality of software applications used to create and process PDFs.
  - 69.05 Research and describe search engine optimization considerations related to the use of PDF documents.
  - 69.06 Research and discuss security issues related to PDF document usage in a web site (viruses, auto-open).
  - 69.07 Identify accessibility issues related to using PDF documents in a web site.
- 70.0 Create, format, and manipulate PDF documents. – The student will be able to:
- 70.01 List and describe the methods available for creating PDF documents.
  - 70.02 Create a PDF using a variety of software applications, multiple files, and web pages.
  - 70.03 Demonstrate ability to format, modify and enhance a PDF document.
  - 70.04 Describe the differences in PDF standards for document prepress data interchange and long-term archiving.
  - 70.05 Embed images, text, audio, video, and Flash content into a PDF document.
  - 70.06 Create and modify automatically generated & manual bookmarks in a PDF document.
  - 70.07 Add clickable links to a PDF document.
  - 70.08 Incorporate Find and Search methods to locate specific text in a PDF document.

- 70.09 Describe the method used to search scanned documents (optical character recognition).
  - 70.10 Understand and correct color separation issues.
  - 70.11 Create and modify PDF documents using available tools to meet accessibility requirements (e.g., tags, reading order, forms, supplemental content for multimedia, text-to-speech).
  - 70.12 Export a PDF document in a different format.
- 71.0 Display, distribution, and print considerations for PDF documents. – The student will be able to:
- 71.01 Define file specifications use to generate smaller files for electronic distribution and on-screen display.
  - 71.02 Specify image downsampling and compression settings to generate a PDF file with a smaller file size.
  - 71.03 Identify and correct potential printing issues in a PDF document.
  - 71.04 Ensure a PDF document meets appropriate criteria for print or electronic distribution.
  - 71.05 Demonstrate ability to control flattening of a transparent PDF document and misregistration.
  - 71.06 Demonstrate color management techniques that affect on-screen display and printing.
  - 71.07 Discuss methods and tools used to review a PDF document (email, shared, tracking).
- 72.0 Create and manage PDF forms. – The student will be able to:
- 72.01 Create an interactive form using fields, form objects, and distribution methods.
  - 72.02 Distribute a form electronically and manage distributed forms.
  - 72.03 Demonstrate ability to redact content in a form to protect sensitive information.
  - 72.04 Preview, test, and modify an interactive form.
- 73.0 Incorporate PDF security in a PDF document. – The student will be able to:
- 73.01 Secure a PDF document using passwords, encryption, digital IDs and signatures.
  - 73.02 Creating Security Policies and Certificates for a PDF document.
  - 73.03 Enable usage rights for Adobe Readers.
- 74.0 Demonstrate proficiency using HTML5 features and functions. – The student will be able to:
- 74.01 Apply HTML5 APIs in web pages for interactivity (e.g., audio/video, drag & drop, drawing canvas).
  - 74.02 Apply HTML5 interactivity elements into web pages (i.e., <canvas>, <embed>, <audio>, <video>, <details> <input>).
  - 74.03 Utilize HTML5 fallback strategies to address browser support issues.
  - 74.04 Utilize HTML5 to define dynamic behaviors using JavaScript.

- 74.05 Use HTML5 specification to manipulate text & images.
- 74.06 Use HTML5 to create persistent data and single session storage (HTML 5 Local Offline Storage & Session Storage).
- 74.07 Use HTML5 for media event handling (audio, video, embed, image).
- 74.08 Use HTML5 event handling for window, mouse, and form events.
- 74.09 Use CSS3 to style HTML5 (e.g., transitions, typography enhancements, etc).

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Computer Systems & Information Technology (CSIT)  
**Program Type:** Career Preparatory  
**Career Cluster:** Information Technology

Basic Skills Level	N/A	Mathematics: 10 Language: 9 Reading: 9

### **Purpose**

The purpose of this program is to prepare students for employment or advanced training in a variety of occupations in the information technology industry.

This program focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the information technology industry; technical and product skills, underlying principles of technology , planning, management, finance, labor issues, community issues and health, safety, and environmental issues.

The course content includes, but is not limited to, communication, leadership skills, human relations and employability skills; and safe, efficient work practices.

### Program Structure

This program is a planned sequence of instruction aligned with industry standards, consisting of four occupational completion points. When the recommended sequence is followed, the structure is intended to prepare students to complete the CompTIA A+, Network+, and Security+ industry certifications. Sufficient coverage of advanced networking concepts and competencies may also lead to Cisco's CCENT and CCNA industry certifications. A student who completes the applicable competencies at any occupational completion point may either continue with the training or become an occupational completer.

When offered at the post secondary level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44 (3)(b), F.S.

The following table illustrates the **PSAV** program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	CTS0082	Computer Systems Technician	300	15-1041
B	CTS0083	Computer Network Technician	150	15-1071
C	CTS0084	Computer Networking Specialist	150	15-1071
D	CTS0069	Computer Security Technician	300	15-1071.01

The following table illustrates the **Secondary** program structure:

OCP	Course Number	Course Title	Length	SOC Code	Level
A	9001210	CSIT Foundations	1 credit	15-1041	3
	9001220	CSIT System Essentials	1 credit		3
B	9001230	CSIT Network Systems Configuration	1 credit	15-1071	3
C	9001240	CSIT Network Systems Design & Administration	1 credit	15-1071	3
D	9001250	CSIT Cyber Security Essentials	1 credit	15-1071.01	3
	9001260	CSIT Cyber Security - Physical	1 credit		3

### Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

### **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills for secondary students. For postsecondary students, Phi Beta Lambda and BPA are the appropriate student organizations. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the program-specific OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

### **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 10.0, Language 9.0, and Reading 9.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination. Students may be exempt from meeting the Basic Skills requirements by earning an eligible industry certification. See the Basic Skills Exemption List document for a list of eligible industry certifications (<http://www.fldoe.org/workforce/dwdframe/rtf/basic-skills.rtf>).

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination pursuant to Section 1008.29, F.S.; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.)

### **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. Links to instructional resources in support of Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (ESE) will need modifications to meet their special needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular occupational completion point (OCP) or a modified occupational completion point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP(s)/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

## **Articulation**

The PSAV component of this program has no statewide articulation agreement approved by the Florida State Board of Education. However, this does not preclude the awarding of credits by any college through local agreements.

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Bright Futures/Gold Seal Scholarship**

Course substitutions as defined in the Comprehensive Course Table for this program area may be used to qualify a student for Florida's Gold Seal Vocational Scholarship, providing all other eligibility requirements are met. Eligibility requirements are available online at [https://www.osfaffelp.org/bfiehs/fnbpcm02\\_CCTMain.aspx](https://www.osfaffelp.org/bfiehs/fnbpcm02_CCTMain.aspx).

## **Fine Arts/Practical Arts Credit**

Many courses in CTE programs meet the Fine Arts/Practical Arts credit for high school graduation. For additional information refer to <http://www.fldoe.org/schools/pdf/ListPracticalArtsCourses.pdf>.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Technical Competencies**

- 01.0 Demonstrate proficiency with personal computer hardware.
- 02.0 Demonstrate proficiency in troubleshooting, repair and maintenance.
- 03.0 Demonstrate proficiency with operating systems and software.
- 04.0 Demonstrate proficiency with networking.
- 05.0 Demonstrate proficiency with security.
- 06.0 Demonstrate proficiency with operational procedure.
- 07.0 Demonstrate proficiency with installing, configuring, and troubleshooting personal computer hardware.
- 08.0 Demonstrate proficiency with troubleshooting operating systems.
- 09.0 Demonstrate proficiency with networking.
- 10.0 Demonstrate proficiency with security.
- 11.0 Describe the operation of data networks.
- 12.0 Differentiate between various network media and topologies.
- 13.0 Install and configure basic network devices.
- 14.0 Implement an IP addressing scheme to meet network requirements.
- 15.0 Demonstrate an understanding of network management tasks and methodologies.
- 16.0 Demonstrate proficiency using basic network tools.
- 17.0 Implement a Wireless Local Area Network (WLAN).
- 18.0 Demonstrate an understanding of network security threats and mitigation techniques.
- 19.0 Configure, verify and troubleshoot a switch with VLANs and interswitch communications.
- 20.0 Implement an IP addressing scheme and IP Services to meet network requirements in a medium-size Enterprise branch office network.
- 21.0 Configure, verify, and troubleshoot basic router operation and routing on Cisco devices.
- 22.0 Explain and select the appropriate administrative tasks required for a WLAN.
- 23.0 Identify security threats to a network and describe general methods to mitigate those threats.
- 24.0 Implement, verify, and troubleshoot NAT and ACLs in a medium-size Enterprise branch office network.
- 25.0 Implement and verify WAN links.
- 26.0 Demonstrate an understanding of cybersecurity, the terminology used, its history and culture, and trends.
- 27.0 Recognize the following types of malicious code and specify the appropriate actions to take to mitigate vulnerability and risk.
- 28.0 Recognize and be able to differentiate and explain the following access control models.
- 29.0 Recognize and be able to differentiate and explain the following methods of authentication.
- 30.0 Recognize the following attacks and specify the appropriate actions to take to mitigate vulnerability and risk.
- 31.0 Recognize and understand the processes and risks associated with the following security concerns and tasks.

- 32.0 Recognize and understand the administration of the following types of remote access technologies.
- 33.0 Recognize and understand the administration of the following email security concepts.
- 34.0 Recognize and understand the administration of the following Internet security concepts.
- 35.0 Recognize and understand the administration of the following vulnerabilities.
- 36.0 Recognize and understand the administration of the following directory security concepts.
- 37.0 Recognize and understand the administration of the following file transfer protocols and concepts.
- 38.0 Recognize and understand the administration of the following wireless technologies and concepts.
- 39.0 Compare and contrast the following types of intrusion detection in terms of implementation and configuration.
- 40.0 Be able to identify and explain the following different kinds of cryptographic algorithms.
- 41.0 Understand how cryptography and digital signatures address the following security concepts.
- 42.0 Understand and be able to explain the following concepts of PKI (Public Key Infrastructure).
- 43.0 Understand and be able to explain the following concepts of Key Management and Certificate Lifecycles.
- 44.0 Understand the application of the following concepts of physical security.
- 45.0 Understand security concerns and concepts of the following types of devices.
- 46.0 Understand the security concerns for the following types of media.
- 47.0 Explain the following security topologies as they relate to cybersecurity.
- 48.0 Implement the process of network system hardening within a computer network.
- 49.0 Implement the process of server application/service hardening within a computer network.
- 50.0 Describe the security implications of the following topics of disaster recovery options.
- 51.0 Understand the security implications of the following topics of business continuity.
- 52.0 Demonstrate proficiency in applying the concepts and uses of the following types of policies and procedures.
- 53.0 Explain the following concepts of privilege management.
- 54.0 Demonstrate an understanding of the concepts of the following topics of forensics.
- 55.0 Understand and be able to explain the following concepts of risk identification.
- 56.0 Understand the security relevance of the education and training of end users, executives and human resources.
- 57.0 Explain the following documentation and their role in cybersecurity.

### **Essential Skills**

- 58.0 Demonstrate language arts knowledge and skills.
- 59.0 Demonstrate mathematics knowledge and skills.
- 60.0 Demonstrate science knowledge and skills.
- 61.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 62.0 Solve problems using critical thinking skills, creativity and innovation.
- 63.0 Use information technology tools.
- 64.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.

- 65.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- 66.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 67.0 Describe the importance of professional ethics and legal responsibilities.
- 68.0 Explain the importance of employability skill and entrepreneurship skills.
- 69.0 Demonstrate personal money-management concepts, procedures, and strategies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: Computer Systems & Information Technology**  
**PSAV Number: Y100200**

**Course: CTS0082**

**Occupational Completion Point - A (300 Hours)**

**Computer Systems Technician - (SOC 15-1041)**

01.0 Demonstrate proficiency with personal computer hardware. – The student will be able to:

- 01.01 Categorize storage devices and backup media.
- 01.02 Explain motherboard components, types and features.
- 01.03 Classify power supplies types and characteristics.
- 01.04 Explain the purpose and characteristics of CPUs and their features.
- 01.05 Explain cooling methods and devices.
- 01.06 Compare and contrast memory types, characteristics and their purpose.
- 01.07 Distinguish between the different display devices and their characteristics.
- 01.08 Install and configure peripherals and input devices.
- 01.09 Summarize the function and types of adapter cards.
- 01.10 Install, configure and optimize laptop components and features.
- 01.11 Install and configure printers.

02.0 Demonstrate proficiency in troubleshooting, repair and maintenance. – The student will be able to:

- 02.01 Explain the troubleshooting theory.
- 02.02 Explain and interpret common hardware and operating system symptoms and their causes.
- 02.03 Determine the troubleshooting methods and tools for printers.
- 02.04 Explain and interpret common laptop issues and determine the appropriate basic troubleshooting method.
- 02.05 Integrate common preventative maintenance techniques.

03.0 Demonstrate proficiency with operating systems and software. – The student will be able to:

- 03.01 Compare and contrast the different Windows Operating Systems and their features.
- 03.02 Given a scenario, demonstrate proper use of user interfaces.
- 03.03 Explain the process and steps to install and configure the Windows OS.
- 03.04 Explain the basics of boot sequences, methods and startup utilities.

04.0 Demonstrate proficiency with networking. – The student will be able to:

- 04.01 Summarize the basics of networking fundamentals, including technologies, devices and protocols.
- 04.02 Categorize network cables and connectors and their implementations.
- 04.03 Compare and contrast the different network types.

- 05.0 Demonstrate proficiency with security. – The student will be able to:
  - 05.01 Explain the basic principles of security concepts and technologies.
  - 05.02 Summarize the following security features:
    - 05.02.1 Wireless encryption
    - 05.02.2 Malicious software protection
    - 05.02.3 BIOS Security
    - 05.02.4 Password management / password complexity
    - 05.02.5 Locking workstation
    - 05.02.6 Biometrics
  
- 06.0 Demonstrate proficiency with operational procedure. – The student will be able to:
  - 06.01 Outline the purpose of appropriate safety and environmental procedures and given a scenario apply them.
  - 06.02 Given a scenario, demonstrate the appropriate use of communication skills and professionalism in the workplace.
  
- 07.0 Demonstrate proficiency with installing, configuring, and troubleshooting personal computer hardware. – The student will be able to:
  - 07.01 Install, configure and maintain personal computer components.
  - 07.02 Detect problems, troubleshoot and repair/replace personal computer components.
  - 07.03 Install, configure, detect problems, troubleshoot and repair/replace laptop components.
  - 07.04 Select and use the following tools:
    - 07.04.1 Multimeter
    - 07.04.2 Power supply tester
    - 07.04.3 Specialty hardware / tools
    - 07.04.4 Cable testers
    - 07.04.5 Loop back plugs
    - 07.04.6 Anti-static pad and wrist strap
    - 07.04.7 Extension magnet
    - 07.04.8 Detect and resolve common printer issues.
  
- 08.0 Demonstrate proficiency with troubleshooting operating systems. – The student will be able to:
  - 08.01 Select the appropriate commands and options to troubleshoot and resolve problems.
  - 08.02 Differentiate between Windows Operating System directory structures (Windows 2000, XP, Vista, and Windows 7).
  - 08.03 Given a scenario, select and use system utilities / tools and evaluate the results
  - 08.04 Evaluate and resolve common issues.
  
- 09.0 Demonstrate proficiency with networking. – The student will be able to:
  - 09.01 Troubleshoot client-side connectivity issues using appropriate tools
  - 09.02 Install and configure a small office home office (SOHO) network

- 10.0 Demonstrate proficiency with security. – The student will be able to:
- 10.01 Given a scenario, prevent, troubleshoot and remove viruses and malware.
  - 10.02 Implement security and troubleshoot common issues.
- 58.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 58.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
  - 58.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
  - 58.03 Present information formally and informally for specific purposes and audiences. AF2.9
- 59.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 59.01 Demonstrate knowledge of arithmetic operations. AF3.2
  - 59.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
  - 59.03 Construct charts/tables/graphs using functions and data. AF3.5
- 60.0 Demonstrate science knowledge and skills. – The student will be able to: AF4.0
- 60.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF4.1
  - 60.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF4.3
- 61.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 61.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
  - 61.02 Locate, organize and reference written information from various sources. CM 3.0
  - 61.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
  - 61.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
  - 61.05 Apply active listening skills to obtain and clarify information. CM 7.0
  - 61.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
  - 61.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 62.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 62.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
  - 62.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
  - 62.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
  - 62.04 Conduct technical research to gather information necessary for decision-making. PS 4.0

- 63.0 Use information technology tools. – The student will be able to:
- 63.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
  - 63.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
  - 63.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
  - 63.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 64.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:
- 64.01 Describe the nature and types of business organizations. SY 1.0
  - 64.02 Explain the effect of key organizational systems on performance and quality.
  - 64.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
  - 64.04 Explain the impact of the global economy on business organizations.
- 65.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 65.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
  - 65.02 Explain emergency procedures to follow in response to workplace accidents.
  - 65.03 Create a disaster and/or emergency response plan. SHE 2.0
- 66.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 66.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
  - 66.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
  - 66.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
  - 66.04 Employ mentoring skills to inspire and teach others. LT 5.0
- 67.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 67.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
  - 67.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
  - 67.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2
  - 67.04 Interpret and explain written organizational policies and procedures. ELR 2.0
- 68.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:

- |       |  |          |
|-------|--|----------|
| 68.01 | Identify and demonstrate positive work behaviors needed to be employable.        | ECD 1.0  |
| 68.02 | Develop personal career plan that includes goals, objectives, and strategies.    | ECD 2.0  |
| 68.03 | Examine licensing, certification, and industry credentialing requirements.       | ECD 3.0  |
| 68.04 | Maintain a career portfolio to document knowledge, skills, and experience.       | ECD 5.0  |
| 68.05 | Evaluate and compare employment opportunities that match career goals.           | ECD 6.0  |
| 68.06 | Identify and exhibit traits for retaining employment.                            | ECD 7.0  |
| 68.07 | Identify opportunities and research requirements for career advancement.         | ECD 8.0  |
| 68.08 | Research the benefits of ongoing professional development.                       | ECD 9.0  |
| 68.09 | Examine and describe entrepreneurship opportunities as a career planning option. | ECD 10.0 |
- 69.0 Demonstrate personal money-management concepts, procedures, and strategies. – The student will be able to:
- |       |  |        |
|-------|--|--------|
| 69.01 | Identify and describe the services and legal responsibilities of financial institutions. | FL 2.0 |
| 69.02 | Describe the effect of money management on personal and career goals.                    | FL 3.0 |
| 69.03 | Develop a personal budget and financial goals.   | FL3.1  |
| 69.04 | Complete financial instruments for making deposits and withdrawals.                      | FL3.2  |
| 69.05 | Maintain financial records.  | FL3.3  |
| 69.06 | Read and reconcile financial statements.   | FL3.4  |
| 69.07 | Research, compare and contrast investment opportunities.                                 |        |

**Course: CTS0083****Occupational Completion Point - B (150 Hours)**

Computer Network Technician (SOC 15-1071)

- 11.0 Describe the operation of data networks. – The student will be able to:
- |       |  |
|-------|--|
| 11.01 | Explain the function of common networking protocols.                       |
| 11.02 | Identify commonly used TCP and UDP default ports.                          |
| 11.03 | Identify address formats.  |
| 11.04 | Identify the proper use of addressing technologies and addressing schemes. |
| 11.05 | Identify common IPv4 and IPv6 routing protocols.                           |
| 11.06 | Explain the purpose and properties of routing.                             |
| 11.07 | Compare the characteristics of wireless communication standards.           |
| 11.08 | Interpret network diagrams.  |
| 11.09 | Describe common networking applications.                                   |
- 12.0 Differentiate between various network media and topologies. – The student will be able to:
- |       |   |
|-------|---|
| 12.01 | Categorize standard cable types and their properties.     |
| 12.02 | Identify common connector types.                          |
| 12.03 | Identify common physical network topologies.              |
| 12.04 | Differentiate and implement appropriate wiring standards. |

- 12.05 Select the appropriate media, cables, ports, and connectors to connect network devices.
  - 12.06 Categorize WAN technology types and properties.
  - 12.07 Categorize LAN technology types and properties.
  - 12.08 Explain common logical network topologies and their characteristics.
  - 12.09 Install components of wiring distribution.
- 13.0 Install and configure basic network devices. – The student will be able to:
- 13.01 Install, configure and differentiate between common network devices.
  - 13.02 Identify the functions of specialized network devices.
  - 13.03 Explain the advanced features of a switch.
  - 13.04 Implement a small switched network, including remote access management.
  - 13.05 Verify network status and operation using basic utilities (e.g., ping, traceroute, telnet, SSH, arp, ipconfig).
  - 13.06 Implement a basic wireless network.
- 14.0 Implement an IP addressing scheme to meet network requirements. – The student will be able to:
- 14.01 Assign and verify valid IP addresses in a LAN environment.
  - 14.02 Describe Network Address Translation (NAT) and its importance in network communication.
  - 14.03 Distinguish between public and private IP addresses.
  - 14.04 Configure, verify, and troubleshoot DHCP and DNS operation.
  - 14.05 Implement static and dynamic IP addressing.
  - 14.06 Detect and correct IP addressing issues.
- 15.0 Demonstrate an understanding of network management tasks and methodologies. – The student will be able to:
- 15.01 Explain the function of each layer of the OSI model.
  - 15.02 Identify types of configuration management documentation.
  - 15.03 Evaluate the network based on configuration management documentation.
  - 15.04 Explain network segmentation and traffic management concepts.
  - 15.05 Conduct network monitoring to identify performance and connectivity issues.
  - 15.06 Explain different methods and rationales for network performance optimization.
  - 15.07 Implement network troubleshooting methodologies.
  - 15.08 Troubleshoot common connectivity issues and select an appropriate solution.
- 16.0 Demonstrate proficiency using basic network tools. – The student will be able to:
- 16.01 Select the appropriate command line interface tool and interpret the output to verify functionality.
  - 16.02 Explain the purpose of network scanners.

16.03 Utilize the appropriate hardware tools.

17.0 Implement a Wireless Local Area Network (WLAN). – The student will be able to:

17.01 Describe the standards associated with wireless media.

17.02 Identify and describe the purpose of the components of a small WLAN.

17.03 Configure a small WLAN such that devices connect to the correct access point.

17.04 Describe the security features and capabilities of WI-FI Protected Access (WPA).

17.05 Describe common issues with implementing a WLAN and methods for addressing these issues.

18.0 Demonstrate an understanding of network security threats and mitigation techniques. –  
The student will be able to:

18.01 Explain the function of hardware and software security devices.

18.02 Explain common features of a firewall.

18.03 Explain the methods of network access security.

18.04 Explain methods of user authentication.

18.05 Explain issues that affect device security.

18.06 Implement password and physical security in a small routed network.

18.07 Identify common security threats and mitigation techniques.

**Course: CTS0084**

**Occupational Completion Point - C (150 Hours)**

Computer Networking Specialist (SOC 15-1071)

19.0 Configure, verify and troubleshoot a switch with VLANs and interswitch communications.  
– The student will be able to:

19.01 Select the appropriate media, cables, ports, and connectors to connect switches to other network devices and hosts

19.02 Explain the technology and media access control method for Ethernet networks.

19.03 Explain network segmentation and basic traffic management concepts.

19.04 Explain basic switching concepts and the operation of Cisco switches

19.05 Perform and verify initial switch configuration tasks including remote access management.

19.06 Verify network status and switch operation using basic utilities (including: ping, traceroute, telnet, SSH, arp, ipconfig), SHOW & DEBUG commands.

19.07 Identify, prescribe, and resolve common switched network media issues, configuration issues, auto negotiation, and switch hardware failures.

19.08 Describe enhanced switching technologies (including: VTP, RSTP, VLAN, PVSTP, 802.1q).

19.09 Describe how VLANs create logically separate networks and the need for routing between them.

19.10 Configure, verify, and troubleshoot VLANs.

19.11 Configure, verify, and troubleshoot trunking on Cisco switches.

19.12 Configure, verify, and troubleshoot interVLAN routing.

- 19.13 Configure, verify, and troubleshoot VTP.
  - 19.14 Configure, verify, and troubleshoot RSTP operation.
  - 19.15 Interpret the output of various SHOW and DEBUG commands to verify the operational status of a Cisco switched network.
  - 19.16 Implement basic switch security (including: port security, trunk access, management VLAN other than VLAN1, etc.)
- 20.0 Implement an IP addressing scheme and IP Services to meet network requirements in a medium-size Enterprise branch office network. – The student will be able to:
- 20.01 Describe the operation and benefits of using private and public IP addressing.
  - 20.02 Explain the operation and benefits of using DHCP and DNS.
  - 20.03 Configure, verify and troubleshoot DHCP and DNS operation on a router (including: CLI/SDM).
  - 20.04 Implement static and dynamic addressing services for hosts in a LAN environment.
  - 20.05 Calculate and apply an addressing scheme including VLSM IP addressing design to a network.
  - 20.06 Determine the appropriate classless addressing scheme using VLSM and summarization to satisfy addressing requirements in a LAN/WAN environment.
  - 20.07 Describe the technological requirements for running IPv6 in conjunction with IPv4 (including: protocols, dual stack, tunneling, etc).
  - 20.08 Describe IPv6 addresses.
  - 20.09 Identify and correct common problems associated with IP addressing and host configurations.
- 21.0 Configure, verify, and troubleshoot basic router operation and routing on Cisco devices. – The student will be able to:
- 21.01 Describe basic routing concepts (including: packet forwarding, router lookup process).
  - 21.02 Describe the operation of Cisco routers (including: router bootup process, POST, router components).
  - 21.03 Select the appropriate media, cables, ports, and connectors to connect routers to other network devices and hosts.
  - 21.04 Configure, verify, and troubleshoot RIPv2.
  - 21.05 Access and utilize the router to set basic parameters.(including: CLI/SDM).
  - 21.06 Connect, configure, and verify operation status of a device interface.
  - 21.07 Verify device configuration and network connectivity using ping, traceroute, telnet, SSH or other utilities
  - 21.08 Perform and verify routing configuration tasks for a static or default route given specific routing requirements.
  - 21.09 Manage IOS configuration files. (including: save, edit, upgrade, restore).
  - 21.10 Manage Cisco IOS.
  - 21.11 Compare and contrast methods of routing and routing protocols.
  - 21.12 Configure, verify, and troubleshoot OSPF.
  - 21.13 Configure, verify, and troubleshoot EIGRP.
  - 21.14 Verify network connectivity (including: using ping, traceroute, and telnet or SSH).
  - 21.15 Troubleshoot routing issues.
  - 21.16 Verify router hardware and software operation using SHOW & DEBUG commands.

- 21.17 Implement basic router security.
- 22.0 Explain and select the appropriate administrative tasks required for a WLAN. – The student will be able to:
- 22.01 Describe standards associated with wireless media (including: IEEE WI-FI Alliance, ITU/FCC).
  - 22.02 Identify and describe the purpose of the components in a small wireless network. (Including: SSID, BSS, ESS)
  - 22.03 Identify the basic parameters to configure on a wireless network to ensure that devices connect to the correct access point.
  - 22.04 Compare and contrast wireless security features and capabilities of WPA security (including: open, WEP, WPA-1/2).
  - 22.05 Identify common issues with implementing wireless networks. (Including: interface, misconfiguration).
- 23.0 Identify security threats to a network and describe general methods to mitigate those threats. – The student will be able to:
- 23.01 Describe today's increasing network security threats and explain the need to implement a comprehensive security policy to mitigate the threats.
  - 23.02 Explain general methods to mitigate common security threats to network devices, hosts, and applications.
  - 23.03 Describe the functions of common security appliances and applications.
  - 23.04 Describe security recommended practices including initial steps to secure network devices.
- 24.0 Implement, verify, and troubleshoot NAT and ACLs in a medium-size Enterprise branch office network. – The student will be able to:
- 24.01 Describe the purpose and types of ACLs.
  - 24.02 Configure and apply ACLs based on network filtering requirements.(including: CLI/SDM).
  - 24.03 Configure and apply an ACLs to limit telnet and SSH access to the router using (including: SDM/CLI).
  - 24.04 Verify and monitor ACLs in a network environment.
  - 24.05 Troubleshoot ACL issues.
  - 24.06 Explain the basic operation of NAT.
  - 24.07 Configure NAT for given network requirements using (including: CLI/SDM).
  - 24.08 Troubleshoot NAT issues.
- 25.0 Implement and verify WAN links. – The student will be able to:
- 25.01 Describe different methods for connecting to a WAN.
  - 25.02 Configure and verify a basic WAN serial connection.
  - 25.03 Configure and verify Frame Relay on Cisco routers.
  - 25.04 Troubleshoot WAN implementation issues.
  - 25.05 Describe VPN technology (including: importance, benefits, role, impact, components).
  - 25.06 Configure and verify a PPP connection between Cisco routers.

**Course: CTS0069**  
**Occupational Completion Point - D (300 HOURS)**  
Computer Security Technician (SOC 15-1071.01)

- 26.0 Demonstrate an understanding of cybersecurity, the terminology used, its history and culture, and trends. – The student will be able to:
- 26.01 Describe the history of cybersecurity, including the evolution of a hacker culture.
  - 26.02 Discuss the trends and national initiatives related to cybersecurity.
  - 26.03 Distinguish between information assurance and cybersecurity.
  - 26.04 Describe the concepts of confidentiality as it relates to user and data impact.
  - 26.05 Explain authentication and the concept of non-repudiation.
- 27.0 Recognize the following types of malicious code and specify the appropriate actions to take to mitigate vulnerability and risk. – The student will be able to:
- 27.01 Viruses
  - 27.02 Trojan Horses
  - 27.03 Logic Bombs
  - 27.04 Worms
- 28.0 Recognize and be able to differentiate and explain the following access control models. – The student will be able to:
- 28.01 MAC (Mandatory Access Control)
  - 28.02 DAC (Discretionary Access Control)
  - 28.03 RBAC (Role Based Access Control)
- 29.0 Recognize and be able to differentiate and explain the following methods of authentication. – The student will be able to:
- 29.01 Kerberos
  - 29.02 CHAP (Challenge Handshake Authentication Protocol)
  - 29.03 Certificates
  - 29.04 Username / Password
  - 29.05 Tokens
  - 29.06 Multi-factor
  - 29.07 Mutual
  - 29.08 Biometrics
- 30.0 Recognize the following attacks and specify the appropriate actions to take to mitigate vulnerability and risk. – The student will be able to:
- 30.01 DOS / DDOS (Denial of Service / Distributed Denial of Service)
  - 30.02 Back Door
  - 30.03 Spoofing
  - 30.04 Man in the Middle
  - 30.05 Replay
  - 30.06 TCP/IP Hijacking
  - 30.07 Weak Keys
  - 30.08 Mathematical

- 30.09 Social Engineering
  - 30.10 Birthday
  - 30.11 Password Guessing (e.g., Brute Force, Dictionary)
  - 30.12 Software Exploitation
- 31.0 Recognize and understand the processes and risks associated with the following security concerns and tasks. – The student will be able to:
- 31.01 Identify non-essential services and protocols and know what actions to take to reduce the risks of those services and protocols.
  - 31.02 Understand the concept of and know how reduce the risks of social engineering.
  - 31.03 Understand the concept and significance of auditing, logging and system scanning.
  - 31.04 Identify and be able to differentiate different cryptographic standards and protocols.
- 32.0 Recognize and understand the administration of the following types of remote access technologies. – The student will be able to:
- 32.01 802.1x
  - 32.02 VPN (Virtual Private Network)
  - 32.03 RADIUS (Remote Authentication Dial-In User Service)
  - 32.04 TACACS (Terminal Access Controller Access Control System)
  - 32.05 L2TP / PPTP (Layer Two Tunneling Protocol / Point to Point Tunneling Protocol)
  - 32.06 SSH (Secure Shell)
  - 32.07 IPSEC (Internet Protocol Security)
  - 32.08 Vulnerabilities
- 33.0 Recognize and understand the administration of the following email security concepts. – The student will be able to:
- 33.01 S/MIME (Secure Multipurpose Internet Mail Extensions)
  - 33.02 PGP (Pretty Good Privacy) like technologies
  - 33.03 Vulnerabilities
  - 33.04 SPAM
  - 33.05 Hoaxes
- 34.0 Recognize and understand the administration of the following Internet security concepts. – The student will be able to:
- 34.01 SSL / TLS (Secure Sockets Layer / Transport Layer Security)
  - 34.02 HTTP/S (Hypertext Transfer Protocol / Hypertext Transfer Protocol over Secure Sockets Layer)
  - 34.03 Instant Messaging (i.e., Vulnerabilities, Packet Sniffing, Privacy)
- 35.0 Recognize and understand the administration of the following vulnerabilities. – The student will be able to:
- 35.01 Java Script
  - 35.02 ActiveX
  - 35.03 Buffer Overflows

- 35.04 Cookies
  - 35.05 Signed Applets
  - 35.06 CGI (Common Gateway Interface)
  - 35.07 SMTP (Simple Mail Transfer Protocol) Relay
- 36.0 Recognize and understand the administration of the following directory security concepts. – The student will be able to:
- 36.01 SSL / TLS (Secure Sockets Layer / Transport Layer Security)
  - 36.02 LDAP (Lightweight Directory Access Protocol)
- 37.0 Recognize and understand the administration of the following file transfer protocols and concepts. – The student will be able to:
- 37.01 S/FTP (File Transfer Protocol)
  - 37.02 Blind FTP (File Transfer Protocol) / Anonymous
  - 37.03 File Sharing
  - 37.04 Vulnerabilities (i.e., packet sniffing, naming conventions)
- 38.0 Recognize and understand the administration of the following wireless technologies and concepts. – The student will be able to:
- 38.01 WTLS (Wireless Transport Layer Security)
  - 38.02 802.11 and 802.11x
  - 38.03 WEP / WAP (Wired Equivalent Privacy / Wireless Application Protocol)
  - 38.04 Vulnerabilities (i.e., site surveys)
- 39.0 Compare and contrast the following types of intrusion detection in terms of implementation and configuration. – The student will be able to:
- 39.01 Network Based – Active and Passive
  - 39.02 Host Based – Active and Passive
  - 39.03 Honey Pots
  - 39.04 Incident Response
- 40.0 Be able to identify and explain the following different kinds of cryptographic algorithms. – The student will be able to:
- 40.01 Hashing
  - 40.02 Symmetric
  - 40.03 Asymmetric
- 41.0 Understand how cryptography and digital signatures address the following security concepts. – The student will be able to:
- 41.01 Confidentiality
  - 41.02 Integrity
  - 41.03 Authentication
  - 41.04 Non-Repudiation
  - 41.05 Access Control

- 42.0 Understand and be able to explain the following concepts of PKI (Public Key Infrastructure). – The student will be able to:
  - 42.01 Certificates (e.g., policies, practice statements)
  - 42.02 Revocation
  - 42.03 Trust Models
  
- 43.0 Understand and be able to explain the following concepts of Key Management and Certificate Lifecycles. – The student will be able to:
  - 43.01 Centralized versus Decentralized
  - 43.02 Hardware versus software key storage
  - 43.03 Private key storage
  - 43.04 Escrow
  - 43.05 Expiration
  - 43.06 Revocation versus suspension (e.g., status checking)
  - 43.07 Recovery authorization schema (e.g., M-of-N Control - Of M appropriate individuals, N must be present to authorize recovery)
  - 43.08 Renewal
  - 43.09 Destruction
  - 43.10 Key Usage
  - 43.11 Multiple Key Pairs (Single, Dual)
  
- 44.0 Understand the application of the following concepts of physical security. – The student will be able to:
  - 44.01 Access Control (e.g., physical barriers, biometrics)
  - 44.02 Social Engineering
  - 44.03 Environment (e.g., wireless cells, location, shielding, fire suppression)
  
- 45.0 Understand security concerns and concepts of the following types of devices. – The student will be able to:
  - 45.01 Firewalls
  - 45.02 Routers
  - 45.03 Switches
  - 45.04 Wireless
  - 45.05 Modems
  - 45.06 RAS (Remote Access Server)
  - 45.07 Telecom / PBX (Private Branch Exchange)
  - 45.08 VPN (Virtual Private Network)
  - 45.09 IDS (Intrusion Detection System)
  - 45.10 Network Monitoring / Diagnostics
  - 45.11 Workstations
  - 45.12 Servers
  - 45.13 Mobile Devices
  
- 46.0 Understand the security concerns for the following types of media. – The student will be able to:
  - 46.01 Coaxial Cable

- 46.02 UTP / STP (Unshielded Twisted Pair / Shielded Twisted Pair)
  - 46.03 Fiber Optic Cable
  - 46.04 Removable Media
  - 46.05 Tape
  - 46.06 CD-R (Recordable Compact Disks)
  - 46.07 Hard Drives
  - 46.08 Diskettes
  - 46.09 Flashcards
  - 46.10 Smartcards
- 47.0 Explain the following security topologies as they relate to cybersecurity. – The student will be able to:
- 47.01 Security Zones
  - 47.02 DMZ (Demilitarized Zone)
  - 47.03 Intranet
  - 47.04 Extranet
  - 47.05 VLANs (Virtual Local Area Network)
  - 47.06 NAT (Network Address Translation)
  - 47.07 Tunneling
- 48.0 Implement the process of network system hardening within a computer network. – The student will be able to:
- 48.01 Updates (Firmware & Software)
  - 48.02 Operating System
  - 48.03 Configuration
  - 48.04 Enabling and Disabling Services and Protocols
  - 48.05 Access Control Lists
- 49.0 Implement the process of server application/service hardening within a computer network. – The student will be able to:
- 49.01 Updates (Hotfixes, Service Packs, Patches)
  - 49.02 Web Servers
  - 49.03 E-mail Servers
  - 49.04 FTP (File Transfer Protocol) Servers
  - 49.05 DNS (Domain Name Service) Servers
  - 49.06 NNTP (Network News Transfer Protocol) Servers
  - 49.07 File / Print Servers
  - 49.08 DHCP (Dynamic Host Configuration Protocol) Servers
  - 49.09 Data Repositories
  - 49.10 Directory Services
  - 49.11 Databases
- 50.0 Describe the security implications of the following topics of disaster recovery options. – The student will be able to:
- 50.01 Backups (On-site versus off-site storage)
  - 50.02 Secure Recovery
  - 50.03 Alternate Sites

- 50.04 Disaster Recovery Plan
- 51.0 Understand the security implications of the following topics of business continuity. – The student will be able to:
  - 51.01 Utilities
  - 51.02 High Availability / Fault Tolerance
  - 51.03 Backups
- 52.0 Demonstrate proficiency in applying the concepts and uses of the following types of policies and procedures. – The student will be able to:
  - 52.01 Security Policy
  - 52.02 Acceptable Use
  - 52.03 Due Care
  - 52.04 Privacy
  - 52.05 Separation of Duties
  - 52.06 Need to Know
  - 52.07 Password Management
  - 52.08 SLAs (Service Level Agreements)
  - 52.09 Disposal / Destruction
  - 52.10 HR policies related to passwords, privileges, and Code of Ethics in hiring and termination situations.
  - 52.11 Incident Response Policy
- 53.0 Explain the following concepts of privilege management. – The student will be able to:
  - 53.01 User / Group / Role Management
  - 53.02 Single Sign-on
  - 53.03 Centralized vs. Decentralized
  - 53.04 Auditing (Privilege, Usage, Escalation)
  - 53.05 MAC / DAC / RBAC (Mandatory Access Control / Discretionary Access Control / Role Based Access Control)
- 54.0 Demonstrate an understanding of the concepts of the following topics of forensics. – The student will be able to:
  - 54.01 Chain of Custody
  - 54.02 Preservation of Evidence
  - 54.03 Collection of Evidence
- 55.0 Understand and be able to explain the following concepts of risk identification. – The student will be able to:
  - 55.01 Asset Identification
  - 55.02 Risk Assessment
  - 55.03 Threat Identification
  - 55.04 Vulnerabilities
- 56.0 Understand the security relevance of the education and training of end users, executives and human resources. – The student will be able to:

- 56.01 Communication
- 56.02 User Awareness
- 56.03 Education
- 56.04 On-line Resources

57.0 Explain the following documentation and their role in cybersecurity. – The student will be able to:

- 57.01 Standards and Guidelines
- 57.02 Systems Architecture
- 57.03 Change Documentation
- 57.04 Logs and Inventories
- 57.05 Classification / Notification Schema
- 57.06 Retention / Storage
- 57.07 Destruction

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** CSIT Foundations  
**Course Number:** 9001210  
**Course Credit:** 1

01.0 Demonstrate proficiency with personal computer hardware. – The student will be able to:

- 01.01 Categorize storage devices and backup media.
- 01.02 Explain motherboard components, types and features.
- 01.03 Classify power supplies types and characteristics.
- 01.04 Explain the purpose and characteristics of CPUs and their features.
- 01.05 Explain cooling methods and devices.
- 01.06 Compare and contrast memory types, characteristics and their purpose.
- 01.07 Distinguish between the different display devices and their characteristics.
- 01.08 Install and configure peripherals and input devices.
- 01.09 Summarize the function and types of adapter cards.
- 01.10 Install, configure and optimize laptop components and features.
- 01.11 Install and configure printers.

02.0 Demonstrate proficiency in troubleshooting, repair and maintenance. – The student will be able to:

- 02.01 Explain the troubleshooting theory.
- 02.02 Explain and interpret common hardware and operating system symptoms and their causes.
- 02.03 Determine the troubleshooting methods and tools for printers.
- 02.04 Explain and interpret common laptop issues and determine the appropriate basic troubleshooting method.
- 02.05 Integrate common preventative maintenance techniques.

03.0 Demonstrate proficiency with operating systems and software. – The student will be able to:

- 03.01 Compare and contrast the different Windows Operating Systems and their features.
- 03.02 Given a scenario, demonstrate proper use of user interfaces.
- 03.03 Explain the process and steps to install and configure the Windows OS.
- 03.04 Explain the basics of boot sequences, methods and startup utilities.

04.0 Demonstrate proficiency with networking. – The student will be able to:

- 04.01 Summarize the basics of networking fundamentals, including technologies, devices and protocols.
- 04.02 Categorize network cables and connectors and their implementations.
- 04.03 Compare and contrast the different network types.

05.0 Demonstrate proficiency with security. – The student will be able to:

- 05.01 Explain the basic principles of security concepts and technologies.
- 05.02 Summarize the following security features:
  - 05.02.1 Wireless encryption
  - 05.02.2 Malicious software protection
  - 05.02.3 BIOS Security
  - 05.02.4 Password management / password complexity
  - 05.02.5 Locking workstation
  - 05.02.6 Biometrics
  
- 06.0 Demonstrate proficiency with operational procedure. – The student will be able to:
  - 06.01 Outline the purpose of appropriate safety and environmental procedures and given a scenario apply them.
  - 06.02 Given a scenario, demonstrate the appropriate use of communication skills and professionalism in the workplace.
  
- 58.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
  - 58.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
  - 58.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
  - 58.03 Present information formally and informally for specific purposes and audiences. AF2.9
  
- 59.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
  - 59.01 Demonstrate knowledge of arithmetic operations. AF3.2
  - 59.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
  - 59.03 Construct charts/tables/graphs using functions and data. AF3.5
  
- 60.0 Demonstrate science knowledge and skills. – The student will be able to: AF4.0
  - 60.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF4.1
  - 60.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF4.3

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** CSIT System Essentials  
**Course Number:** 9001220  
**Course Credit:** 1

07.0 Demonstrate proficiency with installing, configuring, and troubleshooting personal computer hardware. – The student will be able to:

- 07.01 Install, configure and maintain personal computer components.
- 07.02 Detect problems, troubleshoot and repair/replace personal computer components.
- 07.03 Install, configure, detect problems, troubleshoot and repair/replace laptop components.
- 07.04 Select and use the following tools:
  - 07.04.1 Multimeter
  - 07.04.2 Power supply tester
  - 07.04.3 Specialty hardware / tools
  - 07.04.4 Cable testers
  - 07.04.5 Loop back plugs
  - 07.04.6 Anti-static pad and wrist strap
  - 07.04.7 Extension magnet
  - 07.04.8 Detect and resolve common printer issues.

08.0 Demonstrate proficiency with troubleshooting operating systems. – The student will be able to:

- 08.01 Select the appropriate commands and options to troubleshoot and resolve problems.
- 08.02 Differentiate between Windows Operating System directory structures (Windows 2000, XP, Vista, and Windows 7).
- 08.03 Given a scenario, select and use system utilities / tools and evaluate the results
- 08.04 Evaluate and resolve common issues.

09.0 Demonstrate proficiency with networking. – The student will be able to:

- 09.01 Troubleshoot client-side connectivity issues using appropriate tools
- 09.02 Install and configure a small office home office (SOHO) network

10.0 Demonstrate proficiency with security. – The student will be able to:

- 10.01 Given a scenario, prevent, troubleshoot and remove viruses and malware.
- 10.02 Implement security and troubleshoot common issues.

61.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:

- 61.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
- 61.02 Locate, organize and reference written information from various sources. CM 3.0
- 61.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
- 61.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
- 61.05 Apply active listening skills to obtain and clarify information. CM 7.0
- 61.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
- 61.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 62.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 62.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
- 62.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
- 62.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
- 62.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 63.0 Use information technology tools. – The student will be able to:
- 63.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 63.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 63.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 63.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 64.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:
- 64.01 Describe the nature and types of business organizations. SY 1.0
- 64.02 Explain the effect of key organizational systems on performance and quality.
- 64.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
- 64.04 Explain the impact of the global economy on business organizations.
- 67.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 67.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
- 67.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
- 67.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2
- 67.04 Interpret and explain written organizational policies and procedures. ELR 2.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** CSIT Network Systems Configuration  
**Course Number:** 9001230  
**Course Credit:** 1

- 11.0 Describe the operation of data networks. – The student will be able to:
- 11.01 Explain the function of common networking protocols.
  - 11.02 Identify commonly used TCP and UDP default ports.
  - 11.03 Identify address formats.
  - 11.04 Identify the proper use of addressing technologies and addressing schemes.
  - 11.05 Identify common IPv4 and IPv6 routing protocols.
  - 11.06 Explain the purpose and properties of routing.
  - 11.07 Compare the characteristics of wireless communication standards.
  - 11.08 Interpret network diagrams.
  - 11.09 Describe common networking applications.
- 12.0 Differentiate between various network media and topologies. – The student will be able to:
- 12.01 Categorize standard cable types and their properties.
  - 12.02 Identify common connector types.
  - 12.03 Identify common physical network topologies.
  - 12.04 Differentiate and implement appropriate wiring standards.
  - 12.05 Select the appropriate media, cables, ports, and connectors to connect network devices.
  - 12.06 Categorize WAN technology types and properties.
  - 12.07 Categorize LAN technology types and properties.
  - 12.08 Explain common logical network topologies and their characteristics.
  - 12.09 Install components of wiring distribution.
- 13.0 Install and configure basic network devices. – The student will be able to:
- 13.01 Install, configure and differentiate between common network devices.
  - 13.02 Identify the functions of specialized network devices.
  - 13.03 Explain the advanced features of a switch.
  - 13.04 Implement a small switched network, including remote access management.
  - 13.05 Verify network status and operation using basic utilities (e.g., ping, traceroute, telnet, SSH, arp, ipconfig).
  - 13.06 Implement a basic wireless network.
- 14.0 Implement an IP addressing scheme to meet network requirements. – The student will be able to:

- 14.01 Assign and verify valid IP addresses in a LAN environment.
  - 14.02 Describe Network Address Translation (NAT) and its importance in network communication.
  - 14.03 Distinguish between public and private IP addresses.
  - 14.04 Configure, verify, and troubleshoot DHCP and DNS operation.
  - 14.05 Implement static and dynamic IP addressing.
  - 14.06 Detect and correct IP addressing issues.
- 15.0 Demonstrate an understanding of network management tasks and methodologies. – The student will be able to:
- 15.01 Explain the function of each layer of the OSI model.
  - 15.02 Identify types of configuration management documentation.
  - 15.03 Evaluate the network based on configuration management documentation.
  - 15.04 Explain network segmentation and traffic management concepts.
  - 15.05 Conduct network monitoring to identify performance and connectivity issues.
  - 15.06 Explain different methods and rationales for network performance optimization.
  - 15.07 Implement network troubleshooting methodologies.
  - 15.08 Troubleshoot common connectivity issues and select an appropriate solution.
- 16.0 Demonstrate proficiency using basic network tools. – The student will be able to:
- 16.01 Select the appropriate command line interface tool and interpret the output to verify functionality.
  - 16.02 Explain the purpose of network scanners.
  - 16.03 Utilize the appropriate hardware tools.
- 17.0 Implement a Wireless Local Area Network (WLAN). – The student will be able to:
- 17.01 Describe the standards associated with wireless media.
  - 17.02 Identify and describe the purpose of the components of a small WLAN.
  - 17.03 Configure a small WLAN such that devices connect to the correct access point.
  - 17.04 Describe the security features and capabilities of WI-FI Protected Access (WPA).
  - 17.05 Describe common issues with implementing a WLAN and methods for addressing these issues.
- 18.0 Demonstrate an understanding of network security threats and mitigation techniques. – The student will be able to:
- 18.01 Explain the function of hardware and software security devices.
  - 18.02 Explain common features of a firewall.
  - 18.03 Explain the methods of network access security.
  - 18.04 Explain methods of user authentication.

- 18.05 Explain issues that affect device security.
- 18.06 Implement password and physical security in a small routed network.
- 18.07 Identify common security threats and mitigation techniques.
- 65.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 65.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
- 65.02 Explain emergency procedures to follow in response to workplace accidents.
- 65.03 Create a disaster and/or emergency response plan. SHE 2.0
- 66.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 66.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
- 66.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
- 66.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 66.04 Employ mentoring skills to inspire and teach others. LT 5.0
- 68.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 68.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
- 68.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
- 68.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
- 68.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
- 68.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
- 68.06 Identify and exhibit traits for retaining employment. ECD 7.0
- 68.07 Identify opportunities and research requirements for career advancement. ECD 8.0
- 68.08 Research the benefits of ongoing professional development. ECD 9.0
- 68.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0
- 69.0 Demonstrate personal money-management concepts, procedures, and strategies. – The student will be able to:
- 69.01 Identify and describe the services and legal responsibilities of financial institutions. FL 2.0
- 69.02 Describe the effect of money management on personal and career goals. FL 3.0
- 69.03 Develop a personal budget and financial goals. FL3.1
- 69.04 Complete financial instruments for making deposits and withdrawals. FL3.2
- 69.05 Maintain financial records. FL3.3
- 69.06 Read and reconcile financial statements. FL3.4
- 69.07 Research, compare and contrast investment opportunities.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** CSIT Network Systems Design & Administration  
**Course Number:** 9001240  
**Course Credit:** 1

19.0 Configure, verify and troubleshoot a switch with VLANs and interswitch communications.  
 – The student will be able to:

- 19.01 Select the appropriate media, cables, ports, and connectors to connect switches to other network devices and hosts
- 19.02 Explain the technology and media access control method for Ethernet networks.
- 19.03 Explain network segmentation and basic traffic management concepts.
- 19.04 Explain basic switching concepts and the operation of Cisco switches
- 19.05 Perform and verify initial switch configuration tasks including remote access management.
- 19.06 Verify network status and switch operation using basic utilities (including: ping, traceroute, telnet, SSH, arp, ipconfig), SHOW & DEBUG commands.
- 19.07 Identify, prescribe, and resolve common switched network media issues, configuration issues, auto negotiation, and switch hardware failures.
- 19.08 Describe enhanced switching technologies (including: VTP, RSTP, VLAN, PVSTP, 802.1q).
- 19.09 Describe how VLANs create logically separate networks and the need for routing between them.
- 19.10 Configure, verify, and troubleshoot VLANs.
- 19.11 Configure, verify, and troubleshoot trunking on Cisco switches.
- 19.12 Configure, verify, and troubleshoot interVLAN routing.
- 19.13 Configure, verify, and troubleshoot VTP.
- 19.14 Configure, verify, and troubleshoot RSTP operation.
- 19.15 Interpret the output of various SHOW and DEBUG commands to verify the operational status of a Cisco switched network.
- 19.16 Implement basic switch security (including: port security, trunk access, management VLAN other than VLAN1, etc.)

20.0 Implement an IP addressing scheme and IP Services to meet network requirements in a medium-size Enterprise branch office network. – The student will be able to:

- 20.01 Describe the operation and benefits of using private and public IP addressing.
- 20.02 Explain the operation and benefits of using DHCP and DNS.
- 20.03 Configure, verify and troubleshoot DHCP and DNS operation on a router (including: CLI/SDM).
- 20.04 Implement static and dynamic addressing services for hosts in a LAN environment.
- 20.05 Calculate and apply an addressing scheme including VLSM IP addressing design to a network.
- 20.06 Determine the appropriate classless addressing scheme using VLSM and summarization to satisfy addressing requirements in a LAN/WAN environment.

- 20.07 Describe the technological requirements for running IPv6 in conjunction with IPv4 (including: protocols, dual stack, tunneling, etc).
  - 20.08 Describe IPv6 addresses.
  - 20.09 Identify and correct common problems associated with IP addressing and host configurations.
- 21.0 Configure, verify, and troubleshoot basic router operation and routing on Cisco devices.  
– The student will be able to:
- 21.01 Describe basic routing concepts (including: packet forwarding, router lookup process).
  - 21.02 Describe the operation of Cisco routers (including: router bootup process, POST, router components).
  - 21.03 Select the appropriate media, cables, ports, and connectors to connect routers to other network devices and hosts.
  - 21.04 Configure, verify, and troubleshoot RIPv2.
  - 21.05 Access and utilize the router to set basic parameters.(including: CLI/SDM).
  - 21.06 Connect, configure, and verify operation status of a device interface.
  - 21.07 Verify device configuration and network connectivity using ping, traceroute, telnet, SSH or other utilities
  - 21.08 Perform and verify routing configuration tasks for a static or default route given specific routing requirements.
  - 21.09 Manage IOS configuration files. (including: save, edit, upgrade, restore).
  - 21.10 Manage Cisco IOS.
  - 21.11 Compare and contrast methods of routing and routing protocols.
  - 21.12 Configure, verify, and troubleshoot OSPF.
  - 21.13 Configure, verify, and troubleshoot EIGRP.
  - 21.14 Verify network connectivity (including: using ping, traceroute, and telnet or SSH).
  - 21.15 Troubleshoot routing issues.
  - 21.16 Verify router hardware and software operation using SHOW & DEBUG commands.
  - 21.17 Implement basic router security.
- 22.0 Explain and select the appropriate administrative tasks required for a WLAN. – The student will be able to:
- 22.01 Describe standards associated with wireless media (including: IEEE WI-FI Alliance, ITU/FCC).
  - 22.02 Identify and describe the purpose of the components in a small wireless network. (Including: SSID, BSS, ESS)
  - 22.03 Identify the basic parameters to configure on a wireless network to ensure that devices connect to the correct access point.
  - 22.04 Compare and contrast wireless security features and capabilities of WPA security (including: open, WEP, WPA-1/2).
  - 22.05 Identify common issues with implementing wireless networks. (Including: interface, misconfiguration).
- 23.0 Identify security threats to a network and describe general methods to mitigate those threats. – The student will be able to:

- 23.01 Describe today's increasing network security threats and explain the need to implement a comprehensive security policy to mitigate the threats.
  - 23.02 Explain general methods to mitigate common security threats to network devices, hosts, and applications.
  - 23.03 Describe the functions of common security appliances and applications.
  - 23.04 Describe security recommended practices including initial steps to secure network devices.
- 24.0 Implement, verify, and troubleshoot NAT and ACLs in a medium-size Enterprise branch office network. – The student will be able to:
- 24.01 Describe the purpose and types of ACLs.
  - 24.02 Configure and apply ACLs based on network filtering requirements.(including: CLI/SDM).
  - 24.03 Configure and apply an ACLs to limit telnet and SSH access to the router using (including: SDM/CLI).
  - 24.04 Verify and monitor ACLs in a network environment.
  - 24.05 Troubleshoot ACL issues.
  - 24.06 Explain the basic operation of NAT.
  - 24.07 Configure NAT for given network requirements using (including: CLI/SDM).
  - 24.08 Troubleshoot NAT issues.
- 25.0 Implement and verify WAN links. – The student will be able to:
- 25.01 Describe different methods for connecting to a WAN.
  - 25.02 Configure and verify a basic WAN serial connection.
  - 25.03 Configure and verify Frame Relay on Cisco routers.
  - 25.04 Troubleshoot WAN implementation issues.
  - 25.05 Describe VPN technology (including: importance, benefits, role, impact, components).
  - 25.06 Configure and verify a PPP connection between Cisco routers.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** CSIT Cyber Security Essentials  
**Course Number:** 9001250  
**Course Credit:** 1

- 26.0 Demonstrate an understanding of cybersecurity, the terminology used, its history and culture, and trends. – The student will be able to:
- 26.01 Describe the history of cybersecurity, including the evolution of a hacker culture.
  - 26.02 Discuss the trends and national initiatives related to cybersecurity.
  - 26.03 Distinguish between information assurance and cybersecurity.
  - 26.04 Describe the concepts of confidentiality as it relates to user and data impact.
  - 26.05 Explain authentication and the concept of non-repudiation.
  - 26.06 Describe the concept of “Hacking - The Human Element” and elaborate on its implications to cybersecurity.
- 27.0 Recognize the following types of malicious code and specify the appropriate actions to take to mitigate vulnerability and risk. – The student will be able to:
- 27.01 Viruses
  - 27.02 Trojan Horses
  - 27.03 Logic Bombs
  - 27.04 Worms
- 28.0 Recognize and be able to differentiate and explain the following access control models. – The student will be able to:
- 28.01 MAC (Mandatory Access Control)
  - 28.02 DAC (Discretionary Access Control)
  - 28.03 RBAC (Role Based Access Control)
- 29.0 Recognize and be able to differentiate and explain the following methods of authentication. – The student will be able to:
- 29.01 Kerberos
  - 29.02 CHAP (Challenge Handshake Authentication Protocol)
  - 29.03 Certificates
  - 29.04 Username / Password
  - 29.05 Tokens
  - 29.06 Multi-factor
  - 29.07 Mutual
  - 29.08 Biometrics
- 30.0 Recognize the following attacks and specify the appropriate actions to take to mitigate vulnerability and risk. – The student will be able to:

- 30.01 DOS / DDOS (Denial of Service / Distributed Denial of Service)
  - 30.02 Back Door
  - 30.03 Spoofing
  - 30.04 Man in the Middle
  - 30.05 Replay
  - 30.06 TCP/IP Hijacking
  - 30.07 Weak Keys
  - 30.08 Mathematical
  - 30.09 Social Engineering
  - 30.10 Birthday
  - 30.11 Password Guessing (e.g., Brute Force, Dictionary)
  - 30.12 Software Exploitation
- 31.0 Recognize and understand the processes and risks associated with the following security concerns and tasks. – The student will be able to:
- 31.01 Identify non-essential services and protocols and know what actions to take to reduce the risks of those services and protocols.
  - 31.02 Understand the concept of and know how reduce the risks of social engineering.
  - 31.03 Understand the concept and significance of auditing, logging and system scanning.
  - 31.04 Identify and be able to differentiate different cryptographic standards and protocols.
- 32.0 Recognize and understand the administration of the following types of remote access technologies. – The student will be able to:
- 32.01 802.1x
  - 32.02 VPN (Virtual Private Network)
  - 32.03 RADIUS (Remote Authentication Dial-In User Service)
  - 32.04 TACACS (Terminal Access Controller Access Control System)
  - 32.05 L2TP / PPTP (Layer Two Tunneling Protocol / Point to Point Tunneling Protocol)
  - 32.06 SSH (Secure Shell)
  - 32.07 IPSEC (Internet Protocol Security)
  - 32.08 Vulnerabilities
- 33.0 Recognize and understand the administration of the following email security concepts. – The student will be able to:
- 33.01 S/MIME (Secure Multipurpose Internet Mail Extensions)
  - 33.02 PGP (Pretty Good Privacy) like technologies
  - 33.03 Vulnerabilities
  - 33.04 SPAM
  - 33.05 Hoaxes
- 34.0 Recognize and understand the administration of the following Internet security concepts. – The student will be able to:
- 34.01 SSL / TLS (Secure Sockets Layer / Transport Layer Security)

- 34.02 HTTP/S (Hypertext Transfer Protocol / Hypertext Transfer Protocol over Secure Sockets Layer)
- 34.03 Instant Messaging (i.e., Vulnerabilities, Packet Sniffing, Privacy)
- 35.0 Recognize and understand the administration of the following vulnerabilities. – The student will be able to:
  - 35.01 Java Script
  - 35.02 ActiveX
  - 35.03 Buffer Overflows
  - 35.04 Cookies
  - 35.05 Signed Applets
  - 35.06 CGI (Common Gateway Interface)
  - 35.07 SMTP (Simple Mail Transfer Protocol) Relay
- 36.0 Recognize and understand the administration of the following directory security concepts. – The student will be able to:
  - 36.01 SSL / TLS (Secure Sockets Layer / Transport Layer Security)
  - 36.02 LDAP (Lightweight Directory Access Protocol)
- 37.0 Recognize and understand the administration of the following file transfer protocols and concepts. – The student will be able to:
  - 37.01 S/FTP (File Transfer Protocol)
  - 37.02 Blind FTP (File Transfer Protocol) / Anonymous
  - 37.03 File Sharing
  - 37.04 Vulnerabilities (i.e., packet sniffing, naming conventions)
- 38.0 Recognize and understand the administration of the following wireless technologies and concepts. – The student will be able to:
  - 38.01 WTLS (Wireless Transport Layer Security)
  - 38.02 802.11 and 802.11x
  - 38.03 WEP / WAP (Wired Equivalent Privacy / Wireless Application Protocol)
  - 38.04 Vulnerabilities (i.e., site surveys)
- 39.0 Compare and contrast the following types of intrusion detection in terms of implementation and configuration. – The student will be able to:
  - 39.01 Network Based – Active and Passive
  - 39.02 Host Based – Active and Passive
  - 39.03 Honey Pots
  - 39.04 Incident Response
- 40.0 Be able to identify and explain the following different kinds of cryptographic algorithms. – The student will be able to:
  - 40.01 Hashing
  - 40.02 Symmetric
  - 40.03 Asymmetric

41.0 Understand how cryptography and digital signatures address the following security concepts. – The student will be able to:

- 41.01 Confidentiality
- 41.02 Integrity
- 41.03 Authentication
- 41.04 Non-Repudiation
- 41.05 Access Control

42.0 Understand and be able to explain the following concepts of PKI (Public Key Infrastructure). – The student will be able to:

- 42.01 Certificates (e.g., policies, practice statements)
- 42.02 Revocation
- 42.03 Trust Models

43.0 Understand and be able to explain the following concepts of Key Management and Certificate Lifecycles. – The student will be able to:

- 43.01 Centralized versus Decentralized
- 43.02 Hardware versus software key storage
- 43.03 Private key storage
- 43.04 Escrow
- 43.05 Expiration
- 43.06 Revocation versus suspension (e.g., status checking)
- 43.07 Recovery authorization schema (e.g., M-of-N Control - Of M appropriate individuals, N must be present to authorize recovery)
- 43.08 Renewal
- 43.09 Destruction
- 43.10 Key Usage
- 43.11 Multiple Key Pairs (Single, Dual)

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** CSIT Cyber Security - Physical  
**Course Number:** 9001260  
**Course Credit:** 1

44.0 Understand the application of the following concepts of physical security. – The student will be able to:

- 44.01 Access Control (e.g., physical barriers, biometrics)
- 44.02 Social Engineering
- 44.03 Environment (e.g., wireless cells, location, shielding, fire suppression)

45.0 Understand security concerns and concepts of the following types of devices. – The student will be able to:

- 45.01 Firewalls
- 45.02 Routers
- 45.03 Switches
- 45.04 Wireless
- 45.05 Modems
- 45.06 RAS (Remote Access Server)
- 45.07 Telecom / PBX (Private Branch Exchange)
- 45.08 VPN (Virtual Private Network)
- 45.09 IDS (Intrusion Detection System)
- 45.10 Network Monitoring / Diagnostics
- 45.11 Workstations
- 45.12 Servers
- 45.13 Mobile Devices

46.0 Understand the security concerns for the following types of media. – The student will be able to:

- 46.01 Coaxial Cable
- 46.02 UTP / STP (Unshielded Twisted Pair / Shielded Twisted Pair)
- 46.03 Fiber Optic Cable
- 46.04 Removable Media
- 46.05 Tape
- 46.06 CD-R (Recordable Compact Disks)
- 46.07 Hard Drives
- 46.08 Diskettes
- 46.09 Flashcards
- 46.10 Smartcards

47.0 Explain the following security topologies as they relate to cybersecurity. – The student will be able to:

- 47.01 Security Zones
  - 47.02 DMZ (Demilitarized Zone)
  - 47.03 Intranet
  - 47.04 Extranet
  - 47.05 VLANs (Virtual Local Area Network)
  - 47.06 NAT (Network Address Translation)
  - 47.07 Tunneling
- 48.0 Implement the process of network system hardening within a computer network. – The student will be able to:
- 48.01 Updates (Firmware & Software)
  - 48.02 Operating System
  - 48.03 Configuration
  - 48.04 Enabling and Disabling Services and Protocols
  - 48.05 Access Control Lists
- 49.0 Implement the process of server application/service hardening within a computer network. – The student will be able to:
- 49.01 Updates (Hotfixes, Service Packs, Patches)
  - 49.02 Web Servers
  - 49.03 E-mail Servers
  - 49.04 FTP (File Transfer Protocol) Servers
  - 49.05 DNS (Domain Name Service) Servers
  - 49.06 NNTP (Network News Transfer Protocol) Servers
  - 49.07 File / Print Servers
  - 49.08 DHCP (Dynamic Host Configuration Protocol) Servers
  - 49.09 Data Repositories
  - 49.10 Directory Services
  - 49.11 Databases
- 50.0 Describe the security implications of the following topics of disaster recovery options. – The student will be able to:
- 50.01 Backups (On-site versus off-site storage)
  - 50.02 Secure Recovery
  - 50.03 Alternate Sites
  - 50.04 Disaster Recovery Plan
- 51.0 Understand the security implications of the following topics of business continuity. – The student will be able to:
- 51.01 Utilities
  - 51.02 High Availability / Fault Tolerance
  - 51.03 Backups
- 52.0 Demonstrate proficiency in applying the concepts and uses of the following types of policies and procedures. – The student will be able to:
- 52.01 Security Policy

- 52.02 Acceptable Use
  - 52.03 Due Care
  - 52.04 Privacy
  - 52.05 Separation of Duties
  - 52.06 Need to Know
  - 52.07 Password Management
  - 52.08 SLAs (Service Level Agreements)
  - 52.09 Disposal / Destruction
  - 52.10 HR policies related to passwords, privileges, and Code of Ethics in hiring and termination situations.
  - 52.11 Incident Response Policy
- 53.0 Explain the following concepts of privilege management. – The student will be able to:
- 53.01 User / Group / Role Management
  - 53.02 Single Sign-on
  - 53.03 Centralized vs. Decentralized
  - 53.04 Auditing (Privilege, Usage, Escalation)
  - 53.05 MAC / DAC / RBAC (Mandatory Access Control / Discretionary Access Control / Role Based Access Control)
- 54.0 Demonstrate an understanding of the concepts of the following topics of forensics. – The student will be able to:
- 54.01 Chain of Custody
  - 54.02 Preservation of Evidence
  - 54.03 Collection of Evidence
- 55.0 Understand and be able to explain the following concepts of risk identification. – The student will be able to:
- 55.01 Asset Identification
  - 55.02 Risk Assessment
  - 55.03 Threat Identification
  - 55.04 Vulnerabilities
- 56.0 Understand the security relevance of the education and training of end users, executives and human resources. – The student will be able to:
- 56.01 Communication
  - 56.02 User Awareness
  - 56.03 Education
  - 56.04 On-line Resources
- 57.0 Explain the following documentation and their role in cybersecurity. – The student will be able to:
- 57.01 Standards and Guidelines
  - 57.02 Systems Architecture
  - 57.03 Change Documentation
  - 57.04 Logs and Inventories

- 57.05 Classification / Notification Schema
- 57.06 Retention / Storage
- 57.07 Destruction

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Applied Cybersecurity  
**Program Type:** Career Preparatory  
**Career Cluster:** Information Technology

	Secondary	PSAV

Basic Skills Level	N/A	Mathematics: 10 Language: 9 Reading: 9

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and cybersecurity-related careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of cybersecurity.

The content includes but is not limited to foundational knowledge and skills in computer and network security, security vulnerabilities, attack mechanisms and techniques, intrusion detection and prevention, cryptographic systems, system hardening, risk identification, incidence response, penetration testing, key management, access control, and recovery. Specialized courses focus on database security, planning and analysis, software, and web security.

### Program Structure

This program is a planned sequence of instruction consisting of two Occupational Completion Points (OCPs). The Introduction to Information Technology course (8207310) may be used as a substitute for IT Fundamentals (9001310) in this program. Students may choose any of the five optional courses shown below to complete OCP-B.

When offered at the postsecondary level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44 (3)(b), F.S.

The following table illustrates the **PSAV** program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	CTS0018	Cybersecurity Associate	600 hours	15-1071.01
B	CTS0019	Information Security Manager or	150 hours	15-1071.01
B	CTS0021	Data Security Specialist or	150 hours	15-1071.01
B	CTS0060	Software Security Specialist or	150 hours	15-1071.01
B	CTS0085	Web Security Specialist or	150 hours	15-1071.01
B	CTS0089	Information Security Administrator	150 hours	15-1071.01

The following table illustrates the **Secondary** program structure:

OCP	Course Number	Course Title	Length	SOC Code	Level
A	9001310	IT Fundamentals	1 credit	15-1071.01	2
	8207310	or Introduction to Information Technology	1 credit		
	9001320	and Computer & Network Security Fundamentals	1 credit		
	9001330	Cybersecurity Essentials	1 credit		
	9001340	Operational Cybersecurity	1 credit		
B	9001350	Cybersecurity Planning & Analysis or	1 credit	15-1071.01	3
B	9001360	Database Security or	1 credit	15-1071.01	3
B	9001370	Software & Application Security or	1 credit	15-1071.01	3
B	9001380	Web Security or	1 credit	15-1071.01	3
B	9001390	Applied Cybersecurity Applications	1 credit	15-1071.01	3

### Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for

students. Activities contained in this program are best accomplished in a virtual computing environment.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills for secondary students. For postsecondary students, Phi Beta Lambda and BPA are the appropriate student organizations. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

### **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. A complete list of Essential Skills and links to instructional resources in support of these Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

### **Basic Skills (if applicable)**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 10, Language 9, and Reading 9. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.) Exemptions from state, national or industry licensure are

limited to the certifications listed at <http://www.fl DOE.org/workforce/dwdframe/rtf/basicskills-License-exempt.rtf>.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular Occupational Completion Point (OCP) or a Modified Occupational Completion Point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

### **Articulation**

The PSAV component of this program has no statewide articulation agreement approved by the State Board of Education. However, this does not preclude the awarding of credits by any college through local agreements.

For details on statewide articulation agreements which correlate to programs and industry certifications, refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

### **Bright Futures/Gold Seal Scholarship**

Course substitutions as defined in the Comprehensive Course Table for this program area may be used to qualify a student for Florida's Gold Seal Vocational Scholarship, providing all other eligibility requirements are met. Eligibility requirements are available online at [https://www.osfaffelp.org/bfiehs/fnbpcm02\\_CCTMain.aspx](https://www.osfaffelp.org/bfiehs/fnbpcm02_CCTMain.aspx).

## **Fine Arts/Practical Arts Credit**

Many courses in CTE programs meet the Fine Arts/Practical Arts credit for high school graduation. For additional information refer to

<http://www.fldoe.org/schools/pdf/ListPracticalArtsCourses.pdf>.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **IT Fundamentals Competencies**

- 01.0 Demonstrate knowledge, skill, and application of computer systems.
- 02.0 Demonstrate knowledge of different operating systems.
- 03.0 Develop a familiarity with the information technology industry.
- 04.0 Develop an awareness of microprocessors and digital computers.
- 05.0 Develop an awareness of programming languages.
- 06.0 Develop an awareness of emerging technologies.
- 07.0 Demonstrate an understanding of the Open Systems Interface (OSI) model.
- 08.0 Identify computer components and their functions.
- 09.0 Demonstrate proficiency using the Internet to locate information.
- 10.0 Demonstrate an understanding of Internet safety and ethics.
- 11.0 Demonstrate proficiency using Hypertext Markup Language (HTML).
- 12.0 Demonstrate proficiency in webpage design.
- 13.0 Demonstrate proficiency using common software applications.
- 14.0 Perform email activities.
- 15.0 Demonstrate proficiency in using presentation software and equipment.
- 16.0 Perform decision-making activities in a multimedia environment.

**OR**

### **Introduction to Information Technology Competencies**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate Comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles.
- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals.

- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace.
- 11.0 Participate in work-based learning experiences.
- 12.0 Perform e-mail activities.
- 13.0 Demonstrate knowledge of different operating systems.
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW.
- 15.0 Demonstrate proficiency using HTML commands.
- 16.0 Demonstrate proficiency in page design applicable to the WWW.
- 17.0 Demonstrate proficiency using specialized web design software.
- 18.0 Develop an awareness of the information technology industry.
- 19.0 Develop an awareness of microprocessors and digital computers.
- 20.0 Develop an awareness of programming languages.
- 21.0 Develop an awareness of emerging technologies.
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model.
- 23.0 Demonstrate proficiency using common software applications.
- 24.0 Demonstrate proficiency using specialized software applications.

### **Computer & Network Security Fundamentals**

- 25.0 Demonstrate an understanding of cybersecurity, including its origins, trends, culture, and legal implications.
- 26.0 Describe the national agencies and supporting initiatives involved in cybersecurity.
- 27.0 Discuss the underlying concepts of terms used in cybersecurity.
- 28.0 Demonstrate an understanding of basic computer components, their functions, and their operation.
- 29.0 Demonstrate knowledge of different operating systems.
- 30.0 Demonstrate an understanding of the Open Systems Interface (OSI) model.
- 31.0 Describe the services and protocols that operate in the application, transport, network, and link layers of the OSI Model.
- 32.0 Demonstrate proficiency using computer networks.
- 33.0 Demonstrate an understanding of basic security concepts.
- 34.0 Demonstrate an understanding of legal and ethical issues in cybersecurity.
- 35.0 Demonstrate an understanding of virtualization technology.
- 36.0 Recognize and understand the administration of the following types of remote access technologies.
- 37.0 Understand the application of the following concepts of physical security.
- 38.0 Understand security concerns and concepts of the following types of devices.
- 39.0 Recognize and be able to differentiate and explain the following access control models.
- 40.0 Understand the security concerns for the following types of media.
- 41.0 Explain the following security topologies as they relate to cybersecurity.

### **Cybersecurity Essentials**

- 42.0 Demonstrate an understanding of the technical underpinnings of cybersecurity and its taxonomy, terminology, and challenges.
- 43.0 Demonstrate an understanding of common information and computer system security vulnerabilities.
- 44.0 Demonstrate an understanding of common cyber attack mechanisms, their consequences, and motivation for their use.
- 45.0 Be able to identify and explain the following different kinds of cryptographic algorithms.

- 46.0 Demonstrate an understanding of the following kinds of steganographic techniques and their use in cybersecurity.
- 47.0 Understand how cryptography and digital signatures address the following security concepts.
- 48.0 Understand and be able to explain the following concepts of PKI (Public Key Infrastructure).
- 49.0 Demonstrate an understanding of certificates and their role in cybersecurity.
- 50.0 Demonstrate an understanding of intrusion, the types of intruders, their techniques, and their motivation.
- 51.0 Demonstrate an understanding of Intrusion Detection Systems (IDS).
- 52.0 Describe host-based IDS, its capabilities, and its approaches to detection (i.e., anomaly, signature).
- 53.0 Describe network-based IDS, its capabilities, and its approaches to detection (i.e., anomaly, signature).
- 54.0 Demonstrate an understanding of IDS applications.
- 55.0 Demonstrate an understanding of port scanning and network traffic monitoring employed as intrusion detection techniques.
- 56.0 Demonstrate an understanding of firewalls and other means of intrusion prevention.
- 57.0 Demonstrate an understanding of vulnerabilities unique to virtual computing environments.
- 58.0 Demonstrate an understanding of social engineering and its implications to cybersecurity.
- 59.0 Demonstrate an understanding of fundamental security design principles and their role in limiting points of vulnerability.

### **Operational Cybersecurity**

- 60.0 Demonstrate an understanding of how to configure host systems to guard against cyber intrusion.
- 61.0 Demonstrate an understanding of authentication methods and strategies.
- 62.0 Demonstrate an understanding of methods and strategies for controlling access to computer networks.
- 63.0 Demonstrate an understanding of key network services, their operation, vulnerabilities, and ways in which they may be secured.
- 64.0 Demonstrate an understanding of the processes involved in hardening a computer system or network.
- 65.0 Demonstrate an understanding of Public Key Infrastructure (PKI) management functions, key states, and life cycle/transition considerations.
- 66.0 Demonstrate an understanding of the processes associated with assessing vulnerabilities and risks within an organization.
- 67.0 Demonstrate an understanding of penetration testing, the types of tests and metrics, testing methodologies, and reporting processes.
- 68.0 Demonstrate an understanding of the Incident Response Life Cycle and the activities comprising each phase.

### **Essential Skills**

- 69.0 Demonstrate language arts knowledge and skills.
- 70.0 Demonstrate mathematics knowledge and skills.
- 71.0 Demonstrate science knowledge and skills.
- 72.0 Use oral and written communication skills in creating, expressing and interpreting

- 73.0 Solve problems using critical thinking skills, creativity and innovation.
- 74.0 Use information technology tools.
- 75.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.
- 76.0 Describe the importance of professional ethics and legal responsibilities.
- 77.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- 78.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 79.0 Explain the importance of employability skill and entrepreneurship skills.

### **Cybersecurity Planning & Analysis**

- 80.0 Demonstrate proficiency in cybersecurity risk mitigation planning.
- 81.0 Demonstrate proficiency in establishing a risk management framework.
- 82.0 Demonstrate proficiency in creating a corporate security policy.
- 83.0 Demonstrate proficiency in addressing process risks.
- 84.0 Demonstrate proficiency in addressing physical security risks.
- 85.0 Demonstrate proficiency in cybersecurity contingency planning.
- 86.0 Demonstrate proficiency in cybersecurity disaster recovery planning.
- 87.0 Demonstrate proficiency in cybersecurity business continuity planning.
- 88.0 Demonstrate proficiency in the essential elements of forensic analysis.

### **Database Security**

- 89.0 Demonstrate an understanding of database design, structure, and operation.
- 90.0 Demonstrate a fundamental understanding of Structured Query Language (SQL).
- 91.0 Demonstrate an understanding of database security policies.
- 92.0 Demonstrate an understanding of database access control, functions, methods, and verification.
- 93.0 Demonstrate an understanding of database vulnerabilities, attack vectors, and associated countermeasures.
- 94.0 Demonstrate an understanding of pre- and post-intrusion actions to facilitate database recovery.

### **Software & Application Security**

- 95.0 Demonstrate an understanding of software design, structure, and operation.
- 96.0 Demonstrate a fundamental understanding of common software attack vectors.
- 97.0 Demonstrate an understanding input syntax validation.
- 98.0 Demonstrate an understanding of best practices for processing input data to ensure safe and secure program code.
- 99.0 Demonstrate an understanding of the role of environment variables in the operation of software applications.
- 100.0 Demonstrate an understanding of program design strategies for inhibiting elevated privilege attacks.

### **Web Security**

- 101.0 Demonstrate an understanding of the primary security services used in Internet and intranet environments.
- 102.0 Demonstrate a fundamental understanding of the SSL protocol stack and its elements.
- 103.0 Demonstrate an understanding of IPSec, including its uses, elements, and mechanisms.
- 104.0 Demonstrate an understanding of S/MIME, including its uses, functions, cryptographic algorithms, and key certificates.
- 105.0 Demonstrate an understanding of Kerberos and its role in third-part authentication in a distributed network.
- 106.0 Demonstrate an understanding of identity management and ways in which secure identify information is exchanged across different domains.

### **Applied Cybersecurity Applications**

- 107.0 Complete a safety skills inventory.
- 108.0 Demonstrate acceptable project values.
- 109.0 Demonstrate the ability to detect and resolve system vulnerabilities.
- 110.0 Plan, organize, and carry out a penetration testing plan.
- 111.0 Demonstrate proficiency in conducting forensic analysis.
- 112.0 Successfully work as a member of a team.
- 113.0 Manage time according to a plan.
- 114.0 Keep acceptable records of progress problems and solutions.
- 115.0 Manage resources.
- 116.0 Use tools, materials, and processes in an appropriate and safe manner.
- 117.0 Research content related to the project and document the results.
- 118.0 Use presentation skills, and appropriate media to describe the progress, results and outcomes of the experience.
- 119.0 Demonstrate competency in the area of expertise related to the Applied Cybersecurity education program previously completed that this project is based upon.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: Applied Cybersecurity**  
**PSAV Number: Y100300**

**Course Number: CTS0018**  
**Occupational Completion Point: A**  
**Cybersecurity Associate – 600 Hours – SOC Code 15-1071.01**

**IT Fundamentals Competencies**

01.0 Demonstrate knowledge, skill, and application of computer systems. – The student will be able to:

- 01.01 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.02 Describe the types of communications and networking systems used in workplace environments.
- 01.03 Locate and use software application reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals.
- 01.04 Troubleshoot problems with computer hardware peripherals.
- 01.05 Describe ethical, privacy, and security issues and problems associated with computers and information systems.
- 01.06 Demonstrate proficiency in using the basic features of GUI browsers.

02.0 Demonstrate knowledge of different operating systems. – The student will be able to:

- 02.01 Identify the most common computer operating systems.
- 02.02 Describe and use industry accepted file naming conventions, particularly in NTFS and FAT file systems.
- 02.03 Demonstrate proficiency with file management tasks (e.g., folder creation, file creation, backup, copy, delete, open, save).
- 02.04 Demonstrate a working knowledge of standard file formats.
- 02.05 Compare and contrast various operating systems (e.g., DOS, Windows, Mac, and Linux).
- 02.06 Differentiate between different operating systems and applications.
- 02.07 Compare and contrast open source and proprietary software.
- 02.08 Explain how system utilities are used to maintain computer performance.

03.0 Develop a familiarity with the information technology industry. – The student will be able to:

- 03.01 Explain how information technology impacts the operation and management of business and society.
- 03.02 Identify and describe the various ways of segmenting the IT industry (e.g., hardware vs. software, server vs. client, business vs. entertainment, stable vs. mobile, etc.)
- 03.03 Describe how digital technologies (social media, et al) are changing both work and personal lifestyles.

04.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:

- 04.01 Describe the evolution of the digital computer.
- 04.02 Explain the general architecture of a microcomputer system.
- 04.03 Explain the evolution of microprocessors.
- 04.04 Explain software hierarchy and its impact on microprocessors.
- 04.05 Explain the need for and use of peripherals.
- 04.06 Demonstrate proficiency installing and using plug-and-play peripherals.
- 04.07 Identify the basic concepts of computer maintenance and upgrades.

05.0 Develop an awareness of programming languages. – The student will be able to:

- 05.01 Explain the evolution of programming languages.
- 05.02 Explain the need for and use of compilers.
- 05.03 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 05.04 Compare the various types or classes of programming languages (e.g., compiled, interpretive, etc.).
- 05.05 Differentiate among source code, machine code, interpreters, and compilers.
- 05.06 Characterize the major categories of programming languages and how they are used.
- 05.07 Create a model flowchart for a computer program.
- 05.08 Describe the stages in the software development life cycle and explain how to successfully implement them.

06.0 Develop an awareness of emerging technologies. – The student will be able to:

- 06.01 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 06.02 Describe social media as an emerging technology.
- 06.03 Adhere to published best practices for protecting personal identifiable information when using the Internet.
- 06.04 Identify trends related to the use of information technology in people's personal and professional lives.
- 06.05 Characterize how the rapid pace of change in information technology impacts our society.

07.0 Demonstrate an understanding of the Open Systems Interface (OSI) model. – The student will be able to:

- 07.01 Describe the evolution of OSI from its inception to the present and into the future.
- 07.02 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 07.03 Describe the purpose of the OSI model and each of its layers.
- 07.04 Explain specific functions belonging to each OSI model layer.
- 07.05 Understand how two network nodes communicate through the OSI model.
- 07.06 Discuss the structure and purpose of data packets and frames.
- 07.07 Describe the two types of addressing covered by the OSI model.

- 08.0 Identify computer components and their functions. – The student will be able to:
- 08.01 Identify the internal components of a computer (e.g., power supply, hard drive, mother board, I/O cards/ports, cabling, etc.).
  - 08.02 Use common computer and programming terminology.
- 09.0 Demonstrate proficiency using the Internet to locate information. – The student will be able to:
- 09.01 Identify and describe web terminology.
  - 09.02 Define Universal Resource Locators (URLs) and associated protocols (e.g., http, ftp, telnet, mailto).
  - 09.03 Compare and contrast the types of Internet domains (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 09.04 Trace the evolution of the Internet from its inception to the present and into the future.
  - 09.05 Demonstrate proficiency using search engines, including Boolean search strategies.
  - 09.06 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
  - 09.07 Compare and contrast the roles of web servers and web browsers.
- 10.0 Demonstrate an understanding of Internet safety and ethics. – The student will be able to:
- 10.01 Describe cyber-bullying and its impact on perpetrators and victims.
  - 10.02 Differentiate between viruses and malware, specifically their sources, ploys, and impact on personal privacy and computer operation, and ways to avoid infection.
  - 10.03 Describe risks associated with sexting, including related legal issues, social engineering aspects, prevention methods, and reporting of offenses.
  - 10.04 Describe the risks associated with online gaming and ways to mitigate these risks.
  - 10.05 Describe the ethics and copyright legalities of downloading music or videos from the Internet.
  - 10.06 Describe risks associated with social networking sites (e.g., FaceBook, MySpace, and Twitter) and ways to mitigate these risks.
  - 10.07 Adhere to cyber safety practices with regard to conducting Internet searches, email, chat rooms, and other social network websites.
- 11.0 Demonstrate proficiency using Hypertext Markup Language (HTML). – The student will be able to:
- 11.01 Categorize websites according to their purpose.
  - 11.02 Describe the types of documents that might be used in a web environment (e.g., HTML, ASP, DHTML, XML, JS, CSS, PHP).
  - 11.03 Identify elements of a webpage.
  - 11.04 Define basic HTML terminology.
  - 11.05 Critique the aesthetic and functional operation of sample websites.
  - 11.06 Create storyboards depicting a multi-page website (e.g., linear, hierarchical).
  - 11.07 Design, edit, and test HTML documents for accuracy and validity.

- 11.08 Create and modify webpages using a Graphical User Interface (GUI) editor.
  - 11.09 Enhance webpages through the addition of images and graphics including animation.
  - 11.10 Analyze webpage source code developed by others.
  - 11.11 Create webpages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
- 12.0 Demonstrate proficiency in webpage design. – The student will be able to:
- 12.01 Develop an awareness of acceptable webpage design, including index pages in relation to the rest of the website.
  - 12.02 Describe and apply color theory as it applies to webpage design (e.g., background and text color).
  - 12.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 12.04 Use image design software to create and edit images.
  - 12.05 Demonstrate proficiency in publishing to the Internet.
  - 12.06 Explain the need for web-based applications.
- 13.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 13.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, email, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 13.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, email, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 14.0 Perform email activities. – The student will be able to:
- 14.01 Describe email capabilities and functions.
  - 14.02 Identify components of an email message.
  - 14.03 Identify the components of an email address.
  - 14.04 Identify when to use different email options.
  - 14.05 Attach a file to an email message.
  - 14.06 Forward an email message.
  - 14.07 Use an address book.
  - 14.08 Reply to an email message.
  - 14.09 Use the Internet to perform email activities.
  - 14.10 Identify the appropriate use of email and demonstrate related email etiquette.
  - 14.11 Identify when to include information from an original email message in a response.
  - 14.12 Identify common problems associated with widespread use of email.
- 15.0 Demonstrate proficiency in using presentation software and equipment. – The student will be able to:

- 15.01 Produce a presentation that includes music, animation, and digital photography and present it using a projection system.
  - 15.02 Using presentation software, create a multimedia presentation that incorporates shot and edited video, animation, music, narration and adheres to good design principles, use of transitions, and effective message conveyance.
  - 15.03 Demonstrate knowledge of the roles and responsibilities of a multimedia production team (e.g. project manager, creative or design director, content experts, writers, graphic designers, animators, sound designers, videographer, interface designers/programmers, etc.).
  - 15.04 Collaborate with team members to plan, edit, evaluate, and present a multimedia presentation where individuals on the team function in specific production roles .
  - 15.05 Create a self-running presentation with synchronized audio, convert presentation slides (e.g. PowerPoint) into streaming ASF files for use on the Web.
- 16.0 Perform decision-making activities in a multimedia environment. – The student will be able to:
- 16.01 Determine work priorities, the audience, project budgets, project specifications, and the production schedule.
  - 16.02 Evaluate and select appropriate software packages and multimedia tools to complete assigned tasks.
  - 16.03 Present and defend design projects.
  - 16.04 Evaluate criteria for selecting an operating system.

OR

### **Introduction to Information Technology Competencies**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
  - 01.06 Describe ethical issues and problems associated with computers and information systems.
- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
  - 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
  - 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.

- 02.04 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
  - 02.05 Apply the writing process to the creation of appropriate documents following designated business formats.
  - 02.06 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).
- 03.0 Use technology to enhance the effectiveness of communication skills —The student will be able to:
- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
  - 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
- 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
- 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.

- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
  - 08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:
- 09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).
  - 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:

- 11.01 Participate in work-based learning experiences in an information technology environment.
- 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
  - 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
  - 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:
  - 14.01 Identify and describe Web terminology.
  - 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
  - 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
  - 14.08 Identify effective Boolean search strategies.
- 15.0 Demonstrate proficiency using html commands. – The student will be able to:
  - 15.01 Identify elements of a Web page.

- 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
  - 15.03 Define basic HTML terminology.
  - 15.04 Analyze HTML source code developed by others.
  - 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
  - 15.07 Edit and test HTML documents for accuracy and validity.
  - 15.08 Use basic functions of WYSIWYG editors.
  - 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 15.10 Enhance web pages through the addition of images and graphics including animation.
- 16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
  - 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
  - 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 16.04 Use image design software to create and edit images.
  - 16.05 Demonstrate proficiency in publishing to the Internet.
  - 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
  - 16.07 Explain the need for web-based applications.
- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.

- 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.
  - 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:

- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
- 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
- 24.03 Demonstrate the ability to incorporate digital sound.

### **Program Competencies**

- 25.0 Demonstrate an understanding of cybersecurity, including its origins, trends, culture, and legal implications. – The student will be able to:
  - 25.01 Define cybersecurity.
  - 25.02 Describe how information security evolved into cybersecurity and the impact of the Internet on the pace and nature of the evolution.
  - 25.03 Describe the individual elements that comprise the CIA triad (i.e., Confidentiality, Integrity, and Availability).
  - 25.04 Define and explain the various types of hackers and the role each plays in cybersecurity.
  - 25.05 Describe various methodologies used by hackers and the basis for their employment.
- 26.0 Describe the national agencies and supporting initiatives involved in cybersecurity. – The student will be able to:
  - 26.01 Describe the role of the National Security Agency.
  - 26.02 Describe current trends in cyber attacks and strategies for combating them.
  - 26.03 Describe the legal implications of computer hacking and other forms of cyber attacks.
- 27.0 Discuss the underlying concepts of terms used in cybersecurity. – The student will be able to:
  - 27.01 Differentiate between cybersecurity and information assurance.
  - 27.02 Define confidentiality and give examples of security breaches.
  - 27.03 Define integrity and give examples of security breaches.
  - 27.04 Define authenticity and give examples of security breaches.
  - 27.05 Define accountability (non-repudiation) and give examples of security breaches.
- 28.0 Demonstrate an understanding of basic computer components, their functions, and their operation. – The student will be able to:
  - 28.01 Describe the internal components of a computer (e.g., power supply, hard drive, mother board, I/O cards/ports, cabling, et al).
  - 28.02 Demonstrate and understanding of common computer and programming terminology.
  - 28.03 Explain the physical and logical architecture of a microcomputer system.
  - 28.04 Describe the file types used in the operation of a computer.
  - 28.05 Compare and contrast memory technologies (e.g., RAM, ROM, virtual memory, memory management).

- 29.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 29.01 Compare operating system file naming conventions.
  - 29.02 Describe the common elements that comprise the architecture of an operating system (e.g., kernel, file manager, memory manager, device manager, network manager, etc.).
  - 29.03 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 29.04 Demonstrate a working knowledge of standard file formats.
  - 29.05 Describe the purpose of various operating systems (e.g., Windows, Mac, and Unix/Linux).
  - 29.06 Describe the difference between client and network operating systems.
  - 29.07 Differentiate between different operating systems and applications.
  - 29.08 Explain the basics of boot sequences, methods and startup utilities.
  - 29.09 Compare and contrast open source and proprietary software.
  - 29.10 Describe common system utilities used in performing computer maintenance.
- 30.0 Demonstrate an understanding of the Open Systems Interface (OSI) model. – The student will be able to:
- 30.01 Describe the evolution of OSI from its inception to the present and into the future.
  - 30.02 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
  - 30.03 Describe the purpose of the OSI model and each of its layers.
  - 30.04 Explain specific functions belonging to each OSI model layer.
  - 30.05 Understand how two network nodes communicate through the OSI model.
  - 30.06 Discuss the structure and purpose of data packets and frames.
  - 30.07 Describe the two types of addressing covered by the OSI model.
- 31.0 Describe the services and protocols that operate in the application, transport, network, and link layers of the OSI Model. – The student will be able to:
- 31.01 Describe the services and protocols used in the OSI Application Layer (i.e., DHCP, DNS, FTP, HTTP, SMTP, Telnet, IMAP).
  - 31.02 Describe the services and protocols used in the OSI Transport Layer (i.e., TCP, TSL/SSL, UDP).
  - 31.03 Describe the services and protocols used in the OSI Network Layer (i.e., IP, ICMP, IGMP, IPSec).
  - 31.04 Describe the services and protocols used in the OSI Link Layer (i.e., ARP, OSPF, L2TP, PPP).
- 32.0 Demonstrate proficiency using computer networks. – The student will be able to:
- 32.01 Define networking and describe the purpose of a network.
  - 32.02 Describe the conceptual background of digital networks including terminology and basics.
  - 32.03 Describe various types of networks and the advantages and disadvantages of each (e.g. peer to peer, client/server, mainframe/terminal).
  - 32.04 Describe the use, advantages, and disadvantages of various network media (e.g. thinnet cable, coaxial), twisted pair (cat 5), fiber optics).

- 32.05 Describe the function of various network devices (e.g. hub, switched hub or switch, router bridge, gateway, and access points).
  - 32.06 Describe how network devices are identified (i.e., IP addressing).
  - 32.07 Explain the protocols commonly used in a network environment.
  - 32.08 Differentiate between public and private IP addresses.
  - 32.09 Describe the common ports and corresponding protocols used in a network.
  - 32.10 Describe the difference between the Internet and intranet.
  - 32.11 Compare and contrast IP Version 6 and IP Version 4.
  - 32.12 Compare and contrast the different methods for network connectivity (e.g. broadband, wireless, Bluetooth, and cellular).
  - 32.13 Discuss the differences between Local Area Network (LAN), Wide Area Network (WAN), Metropolitan Area Network (MAN), and Virtual Private Network (VPN).
- 33.0 Demonstrate an understanding of basic security concepts. – The student will be able to:
- 33.01 Distinguish between vulnerability and a threat.
  - 33.02 Discuss the different types of attacks (e.g., active, passive).
  - 33.03 Define security policy and explain its role in cybersecurity.
  - 33.04 Describe the basic methods of authentication (e.g., password, biometrics, smart cards).
  - 33.05 Describe the various forms of encryption methodologies (e.g., symmetric, asymmetric, block cipher, stream cipher).
  - 33.06 Describe hash functions and their role in authentication.
  - 33.07 Describe various method of access control used in computer security (e.g., policies, Groups, Access Control List (ACL)).
- 34.0 Demonstrate an understanding of legal and ethical issues in cybersecurity. – The student will be able to:
- 34.01 Define cyber crime and discuss the challenges facing law enforcement.
  - 34.02 Identify the key legislative acts that impact cybersecurity.
  - 34.03 Describe the Federal criminal code related to computers and give examples of cyber crimes and penalties, particularly those involving inappropriate access.
  - 34.04 Discuss digital forensics and its role in cybersecurity.
  - 34.05 Distinguish among the Intellectual Property Rights of trademark, patent, and copyright.
  - 34.06 Explain digital rights management and the implications of the Digital Millennium Copyright Act.
  - 34.07 Describe the implications of social media (e.g., MySpace, Facebook, Twitter, et al) on the safeguarding of personal or sensitive information.
  - 34.08 Describe various safeguards that can be employed to help ensure that sensitive or confidential information is not inadvertently divulged or obtained.
- 35.0 Demonstrate an understanding of virtualization technology. – The student will be able to:
- 35.01 Define virtual computing.
  - 35.02 Explain the benefits of virtual computing.
  - 35.03 Differentiate between guest and host operating systems.
  - 35.04 Install desktop virtualization software.
  - 35.05 Describe the role of the hypervisor.
  - 35.06 Create and upgrade a virtual machine.

- 35.07 Optimize the performance of a virtual machine.
  - 35.08 Preserve the state of a virtual machine.
  - 35.09 Clone, move and share virtual machines.
  - 35.10 Use virtual disks and disk drives.
  - 35.11 Configure a virtual network.
  - 35.12 Connect devices to a virtual machine.
  - 35.13 Enable security settings on a virtual machine.
- 36.0 Recognize and understand the administration of the following types of remote access technologies. – The student will be able to:
- 36.01 802.1x
  - 36.02 VPN (Virtual Private Network)
  - 36.03 RADIUS (Remote Authentication Dial-In User Service)
  - 36.04 TACACS (Terminal Access Controller Access Control System)
  - 36.05 L2TP / PPTP (Layer Two Tunneling Protocol / Point to Point Tunneling Protocol)
  - 36.06 SSH (Secure Shell)
  - 36.07 IPSEC (Internet Protocol Security)
  - 36.08 Vulnerabilities
- 37.0 Understand the application of the following concepts of physical security. – The student will be able to:
- 37.01 Access Control (e.g., physical barriers, biometrics)
  - 37.02 Social Engineering
  - 37.03 Environment (e.g., wireless cells, location, shielding, fire suppression)
- 38.0 Understand security concerns and concepts of the following types of devices. – The student will be able to:
- 38.01 Firewalls
  - 38.02 Routers
  - 38.03 Switches
  - 38.04 Wireless
  - 38.05 Modems
  - 38.06 RAS (Remote Access Server)
  - 38.07 Telecom / PBX (Private Branch Exchange)
  - 38.08 VPN (Virtual Private Network)
  - 38.09 IDS (Intrusion Detection System)
  - 38.10 Network Monitoring / Diagnostics
  - 38.11 Workstations
  - 38.12 Servers
  - 38.13 Mobile Devices
- 39.0 Recognize and be able to differentiate and explain the following access control models. – The student will be able to:
- 39.01 MAC (Mandatory Access Control)
  - 39.02 DAC (Discretionary Access Control)
  - 39.03 RBAC (Role Based Access Control)

- 40.0 Understand the security concerns for the following types of media. – The student will be able to:
- 40.01 Coaxial Cable
  - 40.02 UTP / STP (Unshielded Twisted Pair / Shielded Twisted Pair)
  - 40.03 Fiber Optic Cable
  - 40.04 Removable Media
  - 40.05 Tape
  - 40.06 CD-R (Recordable Compact Disks)
  - 40.07 Hard Drives
  - 40.08 Diskettes
  - 40.09 Flashcards
  - 40.10 Smartcards
- 41.0 Explain the following security topologies as they relate to cybersecurity. – The student will be able to:
- 41.01 Security Zones
  - 41.02 DMZ (Demilitarized Zone)
  - 41.03 Intranet
  - 41.04 Extranet
  - 41.05 VLANs (Virtual Local Area Network)
  - 41.06 NAT (Network Address Translation)
  - 41.07 Tunneling
- 42.0 Demonstrate an understanding of the technical underpinnings of cybersecurity and its taxonomy, terminology, and challenges. – The student will be able to:
- 42.01 Explain the various elements that make up the security taxonomy used by the U.S. Computer Emergency Readiness Team (CERT).
  - 42.02 Describe the challenges associated with achieving and maintaining computer security.
  - 42.03 Discuss the range of potential consequences of various forms of security breaches.
  - 42.04 Describe various defense mechanisms, techniques, and methodologies.
  - 42.05 Compare and contrast mechanisms employed in passive and active cyber attacks.
  - 42.06 Describe the difference between an inside and an outside attack.
  - 42.07 Describe vulnerabilities associated with each element of the CIA Triad.
  - 42.08 Explain the differences between hardware, software, data, and network assets susceptible to cyber attack.
  - 42.09 Describe the tools and technologies used in cybersecurity.
  - 42.10 Define intrusion detection and discuss its role in cybersecurity.
  - 42.11 Explain what is meant by the term countermeasures.
  - 42.12 Describe the role recovery plays in cybersecurity.
- 43.0 Demonstrate an understanding of common information and computer system security vulnerabilities. – The student will be able to:

- 43.01 Describe the basic categories of vulnerabilities associated with cybersecurity (i.e., hardware, software, network, human, physical, and organizational).
  - 43.02 Describe the ways in which social networks such as Facebook and MySpace are cybersecurity targets.
  - 43.03 Describe footprinting and explain how it is used to reveal system vulnerabilities.
  - 43.04 Explain why default values and technical controls are points of vulnerability and describe the hardening efforts being taken by government and industry.
  - 43.05 Describe the process of port scanning and explain why it is so prevalent in cybersecurity.
  - 43.06 Describe what is meant by password strength and explain its relationship to vulnerability.
  - 43.07 Distinguish between a weak and a strong password.
  - 43.08 Describe some of the ways in which intruders are able to cover their tracks.
  - 43.09 Describe the circumstances under which a computer system is vulnerable to a denial of service attack.
- 44.0 Demonstrate an understanding of common cyber attack mechanisms, their consequences, and motivation for their use. – The student will be able to:
- 44.01 Describe spoofing as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.02 Describe the introduction of malware or spyware as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.03 Describe the use of grayware as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.04 Describe the use of computer viruses or worms as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.05 Describe Logic Bombs as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.06 Describe botnet and rootkit as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.07 Describe the introduction of a Trojan Horse as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.08 Describe DNS poisoning as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.09 Describe buffer overflow as an attack mechanism and discuss its consequences and common motivating factors for its use.
- 45.0 Be able to identify and explain the following different kinds of cryptographic algorithms. – The student will be able to:
- 45.01 Hashing Functions
  - 45.02 Symmetric Keys
  - 45.03 Asymmetric Keys
  - 45.04 Kerberos
- 46.0 Demonstrate an understanding of the following kinds of steganographic techniques and their use in cybersecurity. – The student will be able to:
- 46.01 Network steganographic methods (e.g., VOIP, WLAN).

- 46.02 Digital steganographic methods (e.g., image encryption, audio, mimic functions, video, packet manipulation, et al).
- 47.0 Understand how cryptography and digital signatures address the following security concepts. – The student will be able to:
- 47.01 Confidentiality
  - 47.02 Integrity
  - 47.03 Authentication
  - 47.04 Non-Repudiation
  - 47.05 Access Control
- 48.0 Understand and be able to explain the following concepts of PKI (Public Key Infrastructure). – The student will be able to:
- 48.01 Certificates (e.g., policies, practice statements)
  - 48.02 Revocation
  - 48.03 Trust Models
- 49.0 Demonstrate an understanding of certificates and their role in cybersecurity. – The student will be able to:
- 49.01 Describe the role of a Certificate Authority (CA).
  - 49.02 Describe Registration Authority (RA) and its relevance to security certificates.
  - 49.03 Compare and contrast SSL/TSL X.509-compliant certificates with PGP-compliant certificates.
  - 49.04 Describe the events that make up the lifecycle of a certificate.
  - 49.05 Describe how root certificate distribution works.
- 50.0 Demonstrate an understanding of intrusion, the types of intruders, their techniques, and their motivation. – The student will be able to:
- 50.01 Define intrusion.
  - 50.02 Describe the classes of intruders (i.e., masquerader, misfeasor, and clandestine user).
  - 50.03 Describe what is meant by a hacker and discuss their role in cybersecurity.
  - 50.04 Compare and contrast the “black hat” and “white hat” hacker cultures (i.e., computer criminal versus computer security expert).
  - 50.05 Describe various techniques used by hackers to achieve intrusion.
- 51.0 Demonstrate an understanding of Intrusion Detection Systems (IDS). – The student will be able to:
- 51.01 Describe the three logical components that comprise an IDS (i.e., sensors, analyzers, and user interface).
  - 51.02 Explain how user behavior relates to the detection of an intruder.
  - 51.03 Describe the essential requirements for any IDS.
- 52.0 Describe host-based IDS, its capabilities, and its approaches to detection (i.e., anomaly, signature). – The student will be able to:

- 52.01 Describe anomaly detection, specifically threshold and profile-based approaches.
  - 52.02 Describe the types of audit records employed in intrusion detection (i.e., native and detection-specific).
  - 52.03 Describe signature detection, specifically rule-based anomaly and penetration identification approaches.
- 53.0 Describe network-based IDS, its capabilities, and its approaches to detection (i.e., anomaly, signature). – The student will be able to:
- 53.01 Describe the primary approach for intrusion detection in a network.
  - 53.02 Compare and contrast inline and passive sensors.
  - 53.03 Discuss typical placement of sensors in a network-based IDS environment and explain the rationale for each.
- 54.0 Demonstrate an understanding of IDS applications. – The student will be able to:
- 54.01 Describe the operation, typical activities, and outputs of an intrusion detection system.
  - 54.02 Describe some of the limitations of intrusion detection systems.
  - 54.03 Differentiate between an intrusion detection system (passive) and an intrusion prevention (reactive) system.
  - 54.04 Compare and contrast several of the intrusion detection systems available on the current market.
- 55.0 Demonstrate an understanding of port scanning and network traffic monitoring employed as intrusion detection techniques. – The student will be able to:
- 55.01 Describe the process of monitoring/detecting port scanning attacks and associated patterns.
  - 55.02 Explain how the monitoring and analysis of network traffic can be used to detect intrusion.
- 56.0 Demonstrate an understanding of firewalls and other means of intrusion prevention. – The student will be able to:
- 56.01 Describe the purpose and limitations of firewalls.
  - 56.02 Describe the four types of firewalls (i.e., packet filtering, stateful inspection, application-level gateway, and circuit-level gateway).
  - 56.03 Describe the use of honeypots as an intrusion prevention technique.
  - 56.04 Explain how security policies are used to prevent intruders.
  - 56.05 Explain how Access Control Lists (ACLs) are used to prevent intrusion.
- 57.0 Demonstrate an understanding of vulnerabilities unique to virtual computing environments. – The student will be able to:
- 57.01 Describe the limitations of traffic monitoring within virtual networks.
  - 57.02 Discuss the primary vulnerability of virtual operating systems.
  - 57.03 Describe the “hypervisor” and explain its role in securing a virtual environment.
- 58.0 Demonstrate an understanding of social engineering and its implications to cybersecurity. – The student will be able to:

- 58.01 Define social engineering and describe its role in cybersecurity.
  - 58.02 Discuss common mechanisms that constitute social engineering (e.g., phishing, baiting, quid pro quo, pretexting, et al).
  - 58.03 Describe the variety of attacks targeting the human element.
  - 58.04 Describe countermeasures that can be used to counter social engineering attacks.
- 59.0 Demonstrate an understanding of fundamental security design principles and their role in limiting points of vulnerability. – The student will be able to:
- 59.01 Discuss the three over-arching security design principles (i.e., only necessary, simple, ease of use).
  - 59.02 Describe the principle of least privilege as it relates to computer security.
  - 59.03 Describe the principle of separation of duties as it relates to computer security.
  - 59.04 Describe the principle of defense in depth as it relates to computer security.
  - 59.05 Describe the principle of fail secure or fail safe as it relates to computer security.
  - 59.06 Describe the principle of economy of mechanism as it relates to computer security.
  - 59.07 Describe the principle of complete mediation as it relates to computer security.
  - 59.08 Describe the principle of open design as it relates to computer security.
  - 59.09 Describe the principle of least common mechanism as it relates to computer security.
  - 59.10 Describe the principle of psychological acceptability as it relates to computer security.
  - 59.11 Describe the principle of leveraging existing components as it relates to computer security.
  - 59.12 Describe the principle of weakest link as it relates to computer security.
  - 59.13 Describe the principle of single point of failure as it relates to computer security.
- 60.0 Demonstrate an understanding of how to configure host systems to guard against cyber intrusion. – The student will be able to:
- 60.01 Describe the security features and options available for configuring network routers to prevent intrusion.
  - 60.02 Describe the various types of firewalls (i.e., packet filtering, stateful, application-level gateway, and circuit-level gateway) and how each can be used to prevent intrusion.
  - 60.03 Explain the configuration and operation of a Demilitarized Zone (DMZ) host, including the key services contained within the zone.
  - 60.04 Describe the role of security zones, content filters, subnets, and trusted zones in configuring a network infrastructure.
- 61.0 Demonstrate an understanding of authentication methods and strategies. – The student will be able to:
- 61.01 Describe the strengths, vulnerabilities, and countermeasures related to the use of passwords for authentication.
  - 61.02 Describe ways in which passwords are compromised and techniques/models for strengthening.

- 61.03 Explain token authentication methods (e.g., memory cards, smart cards, et al) and limitations.
  - 61.04 Discuss the use of biometrics (i.e., facial recognition, fingerprint, hand geometry, retinal pattern, iris, signature, and voice) as an authentication strategy, including its advantages, limitations, vulnerabilities, and countermeasures.
  - 61.05 Describe the challenges associated with remote user authentication, including unique vulnerabilities and corresponding and effective countermeasures.
- 62.0 Demonstrate an understanding of methods and strategies for controlling access to computer networks. – The student will be able to:
- 62.01 Compare and contrast the three primary categories of access control (i.e., discretionary, mandatory, and role-based).
  - 62.02 Describe the underlying principles of authorization as an access control mechanism applicable to individuals, system services, subjects, and objects.
  - 62.03 Discuss the key features of an access control system (i.e., reliable input, granularity, least privilege, separation of duty, open/close policies, conflict resolution, and administration).
  - 62.04 Describe the three elements of access control (i.e., subject, object, and right).
  - 62.05 Describe access rights (i.e., read, write, execute, delete, create, and search) and their use in establishing individual and group access control policies.
  - 62.06 Compare and contrast the use, operation, and limitations of Access Control Matrix (ACM), Access Control Lists (ACLs), and Capability Tickets in a network environment.
  - 62.07 Describe the UNIX file access control schema.
  - 62.08 Explain the relationship between security policies and access control.
  - 62.09 Describe the use and conceptual operation of formal security policy models (e.g., Bell-La Padula (BLP), Chinese Wall Model (CWM), Harrison Ruzzo Ullman (HRU)).
  - 62.10 Describe the use, strengths, and vulnerabilities of group policies in access control and strategies for ensuring safety.
  - 62.11 Describe the key entities, relationships, and functions that comprise Role-Based Access Control (RBAC), including privilege management considerations.
- 63.0 Demonstrate an understanding of key network services, their operation, vulnerabilities, and ways in which they may be secured. – The student will be able to:
- 63.01 Describe the operation of Dynamic Host Configuration Protocol (DHCP), its vulnerabilities, typical cyber attacks, and potential countermeasure strategies.
  - 63.02 Describe the operation of the Domain Name System (DNS) service, its role in a network environment, its vulnerabilities, typical cyber attacks, and potential countermeasure strategies.
  - 63.03 Describe the operation of the Simple Mail Transport Protocol (SMTP), its role in a network environment, its vulnerabilities, typical cyber attacks, and potential countermeasure strategies.
  - 63.04 Describe the operation of the File Transfer Protocol (FTP) and Telnet, their role in a network environment, their vulnerabilities, typical cyber attacks, and potential countermeasure strategies.
- 64.0 Demonstrate an understanding of the processes involved in hardening a computer system or network. – The student will be able to:

- 64.01 Describe hardening and some of the general approaches for securing a computer network.
  - 64.02 Describe and apply the process by which a web server is hardened against their typical cyber attacks.
  - 64.03 Describe and apply the process by which a mail server is hardened against their typical cyber attacks.
  - 64.04 Describe and apply the process by which a FTP server is hardened against their typical cyber attacks.
  - 64.05 Describe and apply the process by which a file/print server is hardened against their typical cyber attacks.
  - 64.06 Describe and apply the process by which data repositories are hardened against their typical cyber attacks.
  - 64.07 Describe and apply the process by which Directory Services is hardened against their typical cyber attacks.
  - 64.08 Describe and apply the process by which various network appliances are hardened against their typical cyber attacks.
- 65.0 Demonstrate an understanding of Public Key Infrastructure (PKI) management functions, key states, and life cycle/transition considerations. – The student will be able to:
- 65.01 Compare and contrast the forms, limitations, and vulnerabilities associated with centralized and decentralized key management schemas, including the PKI web of trust model.
  - 65.02 Describe key escrow, its role in key management, its advantages, and its risks.
  - 65.03 Differentiate between key backup and key escrow.
  - 65.04 Explain the role of a key's expiration date, its implications on the key's validity, and its relationship to deactivation.
  - 65.05 Describe the circumstances under which a key might be revoked, who has authority to revoke a key, and how revocation is communicated.
  - 65.06 Compare and contrast key suspension and key revocation.
  - 65.07 Describe ways in which key recovery might be achieved, who is authorized to recover keys, and associated vulnerabilities to attack.
  - 65.08 Compare and contrast key renewal and key replacement, who is authorized to initiate renewal or replacement, and associated vulnerabilities to attack.
  - 65.09 Describe the circumstances under which a key might be destroyed, the considerations prior to destruction, and associated vulnerabilities to compromise or attack.
- 66.0 Demonstrate an understanding of the processes associated with assessing vulnerabilities and risks within an organization. – The student will be able to:
- 66.01 Describe the process of asset identification relative to risk assessment and the considerations or criteria used in identifying assets requiring protection.
  - 66.02 Describe the process of threat identification, including identifying the types of threats, asset vulnerabilities, and threat sources.
  - 66.03 Describe the process of risk assessment, including determination of attack probability, attack consequences, and assignment of risk priorities.
  - 66.04 Evaluate an existing security posture and identify gaps and vulnerabilities in security.

- 67.0 Demonstrate an understanding of penetration testing, the types of tests and metrics, testing methodologies, and reporting processes. – The student will be able to:
- 67.01 Describe the types of penetration tests (i.e., human, physical, wireless, data networks, and telecommunications), the goals of each type, the metrics tested, and the value of their results.
  - 67.02 Compare and contrast the processes of black box versus white box penetration testing, including their characteristics, limitations, and appropriateness.
  - 67.03 Define attack vector and explain its relationship and importance to penetration testing.
  - 67.04 Describe common testing methodologies and standards used in penetration testing.
  - 67.05 Describe the salient points, structure, detail, and documentation typically addressed in reporting and debriefing the results of penetration testing.
  - 67.06 Detect malicious and abnormal activities through logs, intrusion detection systems, and other utilities and appliances.
  - 67.07 Reproduce methods that intruders use to gain unauthorized access to a network system for purposes of compromising information assets.
  - 67.08 Deploy proprietary and/or open source tools to test known technical vulnerabilities in networked systems.
  - 67.09 Determine which vulnerabilities are exploitable and estimate the risk and impact of potential exploitations.
  - 67.10 Recommend appropriate mitigation procedures against discovered vulnerabilities and security gaps.
  - 67.11 Model the ethics of a licensed Penetration Tester or Computer Security Specialist.
- 68.0 Demonstrate an understanding of the Incident Response Life Cycle and the activities comprising each phase. – The student will be able to:
- 68.01 Describe the activities that make up the Preparation Phase of the Incident Response Life Cycle, including identification of useful tools and resources.
  - 68.02 Describe the activities that make up the Detection and Analysis Phase of the Incident Response Life Cycle, including identification of indication sources, analysis of resulting signs of an intrusion event, documentation, and notification of the incident.
  - 68.03 Describe the factors to consider when prioritizing an incident.
  - 68.04 Describe the activities that make up the Containment, Eradication, and Recovery Phase of the Incident Response Life Cycle, including selecting a containment strategy, collecting and preserving evidence for forensic analysis, identifying the attacker, re-securing the system, and system restoration.
  - 68.05 Describe the activities that make up the Post Incident Activity Phase of the Incident Response Life Cycle, including identification of lessons learned and evidence retention.

**Course Number: CTS0019**

**Occupational Completion Point: B**

**Information Security Manager – 150 Hours – SOC Code 15-1071.01**

- 80.0 Demonstrate proficiency in cybersecurity risk mitigation planning. – The student will be able to:

- 80.01 Describe the major activities and security controls that are implemented as part of a sound risk management program.
- 80.02 Discuss the rationale for executive sponsorship and delineated management responsibilities in successfully implementing a risk management program.
- 81.0 Demonstrate proficiency in establishing a risk management framework. – The student will be able to:
  - 81.01 Describe the importance of creating a system definition for use in assessing vulnerabilities and risks.
  - 81.02 Describe the major elements of a system definition.
  - 81.03 Differentiate among critical assets, cyber assets, and critical cyber assets.
  - 81.04 Explain why cyber assets are classified as public, restricted, confidential, or private and why this plays a role in creating a risk management framework.
  - 81.05 Compare and contrast the classes of cyber assets (i.e., public, restricted, confidential, and private) and give examples of each.
  - 81.06 Create a system definition that identifies all cyber assets, their class, and their risk category (e.g., critical).
  - 81.07 Describe an Electronic Security Perimeter (ESP) and discuss its role in formulating a risk management framework.
  - 81.08 Describe the process and goals of a vulnerability assessment of ESP access points.
  - 81.09 Define risk level and explain the variabilities of its components.
  - 81.10 Describe ways in which system vulnerability may be ranked according to impact (e.g., safety, outage, privacy, monetary).
  - 81.11 Describe some of the security controls (e.g., access control, training, audit, configuration, maintenance, et al) that come into play when determining the appropriate risk mitigation strategy.
  - 81.12 Compare and contrast a top-down and a bottoms-up analysis approach for identifying and mitigating risks.
  - 81.13 Describe the range of testing/evaluation and associated tools used to monitor mitigation control effectiveness.
  - 81.14 Create a risk management framework.
- 82.0 Demonstrate proficiency in creating a corporate security policy. – The student will be able to:
  - 82.01 Describe the best practices and security controls that typify a sound corporate security policy.
  - 82.02 Discuss the elements of a corporate security policy, including policy management, personnel and training, critical asset management, ESP, physical security, incident reporting and response, disaster recovery and business continuity plans.
  - 82.03 Describe the need for specific implementation and enforcement processes as part of a corporate security policy.
  - 82.04 Explain the controls required for addressing personnel risks in a corporate security policy (e.g., training, hiring due diligence, enforcement of “least privilege,” access revocation).
- 83.0 Demonstrate proficiency in addressing process risks. – The student will be able to:

- 83.01 Describe the best practices and security controls typically implemented for assessing and mitigating operational risks, including.
    - 83.01.01 Periodic risk assessment
    - 83.01.02 Enforce access control, monitoring, and logging
    - 83.01.03 Perform disposal/redeployment of assets
    - 83.01.04 Enforce change control and configuration management
    - 83.01.05 Conduct vulnerability assessments
    - 83.01.06 Control, Monitor, and log all access to assets
    - 83.01.07 Configuration and maintenance
    - 83.01.08 Ensure incident handling processes
    - 83.01.09 Provide for contingency planning
  - 83.02 Create an organized mitigation table that identifies operational or process risks, the potential impact of the risk, and specific actions required to mitigate the risk.
- 84.0 Demonstrate proficiency in addressing physical security risks. – The student will be able to:
- 84.01 Describe the best practices and security controls that ensure good physical security of critical infrastructure and assets.
  - 84.02 Discuss the resulting potential for compromise once physical security is breached.
  - 84.03 Create an organized mitigation table that identifies physical security risks, the potential impact of the risk, and specific actions required to mitigate the risk.
- 85.0 Demonstrate proficiency in cybersecurity contingency planning. – The student will be able to:
- 85.01 Define resiliency and its relationship to contingency planning.
  - 85.02 Describe the purpose and scope of an Information Systems Contingency Plan (ISCP).
  - 85.03 Identify the five main components of a contingency plan (i.e., Supporting Information, Activation and Notification, Recovery, Reconstitution, and Appendices).
  - 85.04 Describe the contingency planning process and the rationale for each step in the process.
  - 85.05 Explain the three step process for conducting a business impact analysis (i.e., determine recovery criticality, identify resource requirements, and identify recovery priorities).
  - 85.06 Compare and contrast Maximum Tolerable Downtime (MTD), Recovery Time Objective (RTO), and Recovery Point Objective (RPO).
  - 85.07 Discuss the criteria typically used to activate the contingency plan.
  - 85.08 Discuss the role of backup and recovery considerations in contingency planning.
  - 85.09 Create a contingency plan that includes roles and responsibilities, a business impact analysis with contingency strategies/solutions, outage assessment, resource recovery priorities, backup and recovery strategies, and testing/training considerations.
- 86.0 Demonstrate proficiency in cybersecurity disaster recovery planning. – The student will be able to:

- 86.01 Describe the purpose and scope of a cybersecurity disaster recovery plan.
  - 86.02 Describe various recovery strategies according to their appropriateness.
  - 86.03 Explain the key considerations when formalizing a disaster recovery plan.
  - 86.04 Discuss the role of data collection relative to disaster recovery.
  - 86.05 Identify the types, purposes, and role of documentation during disaster recovery.
  - 86.06 Discuss the role of testing in a disaster recovery plan.
- 87.0 Demonstrate proficiency in cybersecurity business continuity planning. – The student will be able to:
- 87.01 Describe the purpose and scope of a cybersecurity business continuity plan.
  - 87.02 Explain the concept of fault tolerance and discuss its role in business continuity planning.
  - 87.03 Identify and use various utilities employed for the purpose of business continuity.
  - 87.04 Describe the role of backups for ensuring business continuity.
- 88.0 Demonstrate proficiency in the essential elements of forensic analysis. – The student will be able to:
- 88.01 Describe the four phases of forensic analysis and discuss the activities performed in each phase.
  - 88.02 Describe the forensic and evidentiary considerations when determining containment.
  - 88.03 Describe the types and sources of data collected for forensic analysis.
  - 88.04 Explain the various forms of data and associated collection/retrieval tools for the application transport, IP, and link layers.
  - 88.05 Explain the processes by which data is collected for analysis.
  - 88.06 Describe the role of system event logs in data collection.
  - 88.07 Describe the role of the process log in data collection.
  - 88.08 Describe the processes associated with preserving evidence collected for forensic purposes.
  - 88.09 Describe how the chain of custody can be maintained for evidence collected during a forensic analysis effort.

**Course Number: CTS0021**

**Occupational Completion Point: B**

**Data Security Specialist – 150 Hours – SOC Code 15-1071.01**

- 89.0 Demonstrate an understanding of database design, structure, and operation. – The student will be able to:
- 89.01 Describe a relational database and its key elements.
  - 89.02 Describe the Entity Relationship Model (ERM) and relate how it is a factor in database security.
  - 89.03 Describe the process of normalization and explain its role in database security.
  - 89.04 Differentiate between one-to-many, many-to-many and one-to-one relationships.
  - 89.05 Define referential integrity and describe its implications on database security.
  - 89.06 Discuss the role of authentication in database security.
- 90.0 Demonstrate a fundamental understanding of Structured Query Language (SQL). – The student will be able to:

- 90.01 List the capabilities of SQL SELECT statements.
  - 90.02 Execute basic SQL statements, including SELECT, INSERT, and UPDATE.
  - 90.03 Apply the concatenation operator to link columns to other columns, arithmetic expressions, or constant values to create a character expression.
  - 90.04 Use column aliases to rename columns in the query result.
  - 90.05 Use SQL to display the structure of a table.
  - 90.06 Apply SQL syntax to restrict the rows returned from a query.
  - 90.07 Demonstrate application of the WHERE clause syntax.
  - 90.08 Apply the proper comparison operator to return a desired result.
  - 90.09 Create, drop, rename and truncate tables using SQL.
  - 90.10 Create and remove an index using a SQL statement.
  - 90.11 Create or modify users and roles using SQL statements.
  - 90.12 Use the GRANT and REVOKE SQL statements to control access.
  - 90.13 Differentiate between Data Definition Language (DDL) and Data Manipulation Language (DML) SQL statements and discuss their respective implications to database security.
- 91.0 Demonstrate an understanding of database security policies. – The student will be able to:
- 91.01 Explain the role of the Database Management System (DBMS) in maintaining database security.
  - 91.02 Describe three aspects of system level security related to databases (i.e., user privilege schema, user authentication, and operating system level privileges).
  - 91.03 Describe the mechanisms that control access to and use of the database at the object level.
  - 91.04 Explain how role-based privilege assignment can be used as a data security model.
  - 91.05 Compare and contrast the implications of connecting to a database with administrator versus user privileges.
- 92.0 Demonstrate an understanding of database access control, functions, methods, and verification. – The student will be able to:
- 92.01 Compare and contrast rights and privileges as they relate to database security.
  - 92.02 Describe the manner in which database user rights and privileges are controlled (e.g., granted, revoked).
  - 92.03 Describe application access rights and discuss their role in a database security schema.
  - 92.04 Compare and contrast table, column, and row level security, including VIEW implications.
  - 92.05 Describe fine-grained access control and its use in database security.
  - 92.06 Describe the operation of a database firewall and explain its role in a database security schema.
  - 92.07 Describe how database security policies may be used to trigger security auditing events.
  - 92.08 Describe the various types of auditing (e.g., statement, privilege, object, fine-grained) and associated records.
- 93.0 Demonstrate an understanding of database vulnerabilities, attack vectors, and associated countermeasures. – The student will be able to:

- 93.01 Describe the SQL Injection attack vector and explain its potential consequences (e.g., privilege escalation, data compromise, data destruction).
  - 93.02 Describe database inference as a vulnerability and explain how sensitive information can be compromised inadvertently.
  - 93.03 Discuss ways in which to prevent or limit database inference at design time and query time.
  - 93.04 Compare and contrast the various countermeasures and strategies to prevent an SQL injection from being successful.
  - 93.05 Compare and contrast the ways in which encryption might be applied to a database (i.e., database, fields, records, columns) and discuss the tradeoffs of each.
- 94.0 Demonstrate an understanding of pre- and post-intrusion actions to facilitate database recovery. – The student will be able to:
- 94.01 Describe the criteria which might be employed to trigger an intrusion or breach alarm.
  - 94.02 Identify the sources for confirming and tracking intrusion.
  - 94.03 Describe the tools and methodologies used to determine the scope of data compromise.
  - 94.04 Assess an intrusion, determine the scope of compromise, and restore compromised data.
  - 94.05 Describe the appropriate actions related to database recovery during incidence response.

**Course Number: CTS0060****Occupational Completion Point: B****Software Security Specialist – 150 Hours – SOC Code 15-1071.01**

- 95.0 Demonstrate an understanding of software design, structure, and operation. – The student will be able to:
- 95.01 Describe a typical software application and its key elements.
  - 95.02 Compare and contrast software quality and software security in terms of development time, testing, and implementation.
  - 95.03 Explain how security can be a software design parameter and discuss the inherent trade-offs during the development life cycle.
  - 95.04 Describe the common failings in software security (e.g., input handling, inadequate testing, incomplete/incorrect algorithms, memory misuse, holes for privilege escalation, et al).
- 96.0 Demonstrate a fundamental understanding of common software attack vectors. – The student will be able to:
- 96.01 Describe how buffer overflow attacks can be prevented through input validation and proper interpretation.
  - 96.02 Describe a command injection attack, how it can occur, and the potential consequences.
  - 96.03 Describe an SQL injection attack, how it can occur, and the potential consequences.

- 96.04 Describe a code injection attack, including PHP remote code injection, how it can occur, and the potential consequences.
- 96.05 Describe cross-site scripting attack, how it can occur, and the potential consequences.
- 97.0 Demonstrate an understanding input syntax validation. – The student will be able to:
  - 97.01 Explain the need for validating input syntax to ensure proper input handling.
  - 97.02 Describe canonicalization and its role in handling alternate encoding schemas.
  - 97.03 Discuss the risks associated with improper handling of signed or unsigned numeric input (e.g., very large data length versus negative number).
- 98.0 Demonstrate an understanding of best practices for processing input data to ensure safe and secure program code. – The student will be able to:
  - 98.01 Explain why any input processing algorithm must correctly handle all problem variants.
  - 98.02 Explain why debug or test code should be removed from all production bound software.
  - 98.03 Describe the need for ensuring that machine instructions correctly implement the intended actions of the high-level language code.
  - 98.04 Describe the concept of a strongly typed programming language and explain its role in correct data interpretation.
  - 98.05 Describe memory leak as it pertains to dynamically allocated memory, its causes, and potential consequences (e.g., DOS attack).
  - 98.06 Describe the race condition associated with shared memory access, its causes, and potential consequences (e.g., DOS attack causing deadlock).
- 99.0 Demonstrate an understanding of the role of environment variables in the operation of software applications. – The student will be able to:
  - 99.01 Describe how the PATH, IFS, and LD\_LIBRARY\_PATH environment variables can be exploited.
  - 99.02 Explain how dynamic libraries can be subverted through the use of environment variables and describe the potential consequences (e.g., elevated privileges).
  - 99.03 Describe the principle of “least privilege” relative to the operation of software applications, particularly as it relates to file/directory ownership management.
- 100.0 Demonstrate an understanding of program design strategies for inhibiting elevated privilege attacks. – The student will be able to:
  - 100.01 Describe a Root/Admin program and explain the development and operational benefits of partitioning the program into smaller modules.
  - 100.02 Identify the sources for confirming and tracking intrusion.
  - 100.03 Describe the tools and methodologies used to determine the scope of data compromise.
  - 100.04 Assess an intrusion, determine the scope of compromise, and restore compromised data.
  - 100.05 Describe the appropriate actions related to database recovery during incidence response.

**Course Number: CTS0085**  
**Occupational Completion Point: B**  
**Web Security Specialist – 150 Hours – SOC Code 15-1071.01**

- 101.0 Demonstrate an understanding of the primary security services used in Internet and intranet environments. – The student will be able to:
- 101.01 Describe Secure Sockets Layer (SSL) security service.
  - 101.02 Compare and contrast SSL with Transport Layer Security (TLS) as a security service.
  - 101.03 Describe Internet Protocol Security (IPSec) and discuss its benefits and three functional areas (i.e., authentication, confidentiality, and key management).
  - 101.04 Describe Secure/Multipurpose Internet Mail Extension (S/MIME) and discuss its role in achieving secure Internet-based communications.
- 102.0 Demonstrate a fundamental understanding of the SSL protocol stack and its elements. – The student will be able to:
- 102.01 Compare and contrast SSL Connection and SSL Session.
  - 102.02 Describe SSL Record Protocol services and discuss their role in managing SSL exchanges (i.e., message integrity, confidentiality).
  - 102.03 Describe the operation of the SSL Record Protocol, including the key steps that ensure security (e.g., adding message authentication code, encryption).
  - 102.04 Explain the role of the SSL Change Cipher Spec Protocol in ensuring secure transactions.
  - 102.05 Explain the role of the SSL Alert Protocol.
  - 102.06 Describe the SSL Handshake Protocol and explain the role of each phase of communication (i.e., establish security capability, server authentication/key exchange, client authentication/key exchange, complete secure connection).
- 103.0 Demonstrate an understanding of IPSec, including its uses, elements, and mechanisms. – The student will be able to:
- 103.01 Compare and contrast IPSec with SSL and TSL.
  - 103.02 Compare and contrast security services provided under IPv4 and IPv6.
  - 103.03 Differentiate between the three facilities available under IPSec (i.e., Authentication Header, Encapsulating Security Payload, and key exchange).
  - 103.04 Describe the concept of Security Association (SA) and explain the roles of its three parameters (i.e., Security Parameters Index, IP Destination Address, and Security Protocol Identifier).
  - 103.05 Describe the purpose, structure, and criteria of the Authentication Header (AH).
  - 103.06 Describe the purpose, structure, and elements of the Encapsulating Security Protocol (ESP).
  - 103.07 Describe the structure and operation of the key management facility of IPSec.
- 104.0 Demonstrate an understanding of S/MIME, including its uses, functions, cryptographic algorithms, and key certificates. – The student will be able to:
- 104.01 Describe the role of S/MIME in conducting email communications.

- 104.02 Compare and contrast the four new security functions provided by S/MIME (i.e., enveloped data, signed data, clear-signed data, and signed and enveloped data).
  - 104.03 Outline the process of using S/MIME during email processing.
  - 104.04 Describe the various cryptographic algorithms used by S/MIME and discuss their applicability (i.e., DSS, RSA, SHA-1, MD5, ElGamal, AES, 3DES, and HMAC).
  - 104.05 Describe memory leak as it pertains to dynamically allocated memory, its causes, and potential consequences (e.g., DOS attack).
  - 104.06 Describe the need for using x.509 v3 public key certificates with S/MIME.
- 105.0 Demonstrate an understanding of Kerberos and its role in third-part authentication in a distributed network. – The student will be able to:
- 105.01 Compare and contrast the roles and operation of a Kerberos Authentication Server (AS) and a Ticket Granting Server (TGS).
  - 105.02 Describe a Kerberos realm and the mechanism for inter-realm authentication.
- 106.0 Demonstrate an understanding of identity management and ways in which secure identify information is exchanged across different domains. – The student will be able to:
- 106.01 Describe the key components of identity management architecture.
  - 106.02 Describe the concept of identity federation and explain its benefits.
  - 106.03 Describe the standards used in federated identity management (i.e., XML, SOAP, WS-Security, and SAML).

**Course Number: CTS0089****Occupational Completion Point: B****Information Security Administrator – 150 Hours – SOC Code 15-1071.01**

- 107.0 Complete a safety skills inventory. – The student will be able to:
- 107.01 Practice safety procedures while enrolled in this course.
  - 107.02 Demonstrate an understanding of safety and general policies and procedures.
- 108.0 Demonstrate acceptable project values. – The student will be able to:
- 108.01 Maintain a positive relationship with peers.
  - 108.02 Demonstrate adaptive self-management skills.
  - 108.03 Adhere to industry accepted, legal, and ethical standards of cyber conduct.
  - 108.04 Rotate through a wide variety of increasingly responsible experiences.
  - 108.05 Apply basic skills in communications, mathematics, and science appropriate to technological content and learning activities.
- 109.0 Demonstrate the ability to detect and resolve system vulnerabilities. – The student will be able to:
- 109.01 Prepare a vulnerability matrix to identify and record weak points, the type of vulnerability, significance of the vulnerability, the priority, and the solution.
  - 109.02 Determine possible solutions for each vulnerability.
  - 109.03 Research each detected vulnerability.

- 109.04 Document solutions as they are devised.
  - 109.05 Prepare an alternative for any solution that is not successful.
  - 109.06 Continue the process until a workable solution is found for each vulnerability.
- 110.0 Plan, organize, and carry out a penetration testing plan. – The student will be able to:
- 110.01 Determine the scope and attack vectors for the test.
  - 110.02 Organize the team according to individual strengths.
  - 110.03 Assign specific tasks within a team.
  - 110.04 Prioritize the attack vectors and sequence the test.
  - 110.05 Identify required resources.
  - 110.06 Carry out the testing plan to successful completion.
  - 110.07 Create the test report detailing the goals, tests, findings, and results.
- 111.0 Demonstrate proficiency in conducting forensic analysis. – The student will be able to:
- 111.01 Create security incident handling and response policies.
  - 111.02 Recover deleted, encrypted, or damaged file information as evidence for prosecution in computer crimes.
  - 111.03 Deploy proprietary and/or open source tools to identify intruder footprints.
  - 111.04 Coordinate incident response activities.
  - 111.05 Prepare proper documentation of chain of custody, including accounting for evidence source, destination, and possession.
  - 111.06 Preserve forensic integrity of evidence.
  - 111.07 Model highest moral and ethical standards in conducting digital forensic investigations.
- 112.0 Successfully work as a member of a team. – The student will be able to:
- 112.01 Accept responsibility for specific tasks in a given situation.
  - 112.02 Document progress, and provide feedback on work accomplished in a timely manner.
  - 112.03 Complete assigned tasks in a timely and professional manner.
  - 112.04 Reassign responsibilities when the need arises.
  - 112.05 Complete daily tasks as assigned on one's own initiative.
- 113.0 Manage time according to a plan. – The student will be able to:
- 113.01 Set realistic time frames and schedules.
  - 113.02 Record time worked in the daily journal.
  - 113.03 Meet goals and objectives set by the team.
  - 113.04 Identify individual priorities.
  - 113.05 Complete a weekly evaluation of accomplishments, and reevaluate goals, objectives and priorities as needed.
- 114.0 Keep acceptable records of progress problems and solutions. – The student will be able to:
- 114.01 Develop a record keeping system in the form of a log book or journal to record daily progress.
  - 114.02 Use a project journal to identify problem statement

- 114.03 Develop a portfolio of work accomplished to include design drawings, research, drawings and plans, storyboards, models, mock-ups and prototypes.
- 115.0 Manage resources. – The student will be able to:
- 115.01 Identify required resources for each stage of the project plan.
  - 115.02 Determine the methods needed to acquire needed resources.
  - 115.03 Demonstrate good judgment in the use of resources.
  - 115.04 Recycle and reuse resources where appropriate.
  - 115.05 Demonstrate an understanding of proper legal and ethical treatment of copyrighted material.
- 116.0 Use tools, materials, and processes in an appropriate and safe manner. – The student will be able to:
- 116.01 Identify the proper tool for a given job.
  - 116.02 Use tools and machines in a safe manner.
  - 116.03 Adhere to laboratory or job site safety rules and procedures.
  - 116.04 Identify the application of processes appropriate to the task at hand.
  - 116.05 Identify materials appropriate to their application.
- 117.0 Research content related to the project and document the results.
- 117.01 Identify the basic research needed to develop the project plan.
  - 117.02 Identify available resources for completing background research required in the project plan.
  - 117.03 Demonstrate the ability to locate resource materials in a library, data base, internet and other research resources.
  - 117.04 Demonstrate the ability to organize information retrieval.
  - 117.05 Demonstrate the ability to prepare a topic outline.
  - 117.06 Write a draft of the design and testing report.
  - 117.07 Edit and proof the respective report.
  - 117.08 Prepare an electronically composed report in proper form.
- 118.0 Use presentation skills, and appropriate media to describe the progress, results and outcomes of the experience.
- 118.01 Prepare a multi-media presentation on the completed project.
  - 118.02 Make an oral presentation, using multi-media materials.
  - 118.03 Review the presentation, and make changes in the delivery method(s) to improve presentation skills.
- 119.0 Demonstrate competency in the area of expertise related to the Applied Cybersecurity education program previously completed that this project is based upon.
- 119.01 Demonstrate a mastery of the content of the selected subject area.
  - 119.02 Demonstrate the ability to use related technological tools, materials and processes related to the specific program area.
  - 119.03 Demonstrate the ability to apply the knowledge, experience and skill developed in the previous program completion to the successful completion of this demonstration.

- 119.04 Demonstrate the acquisition of additional knowledge, skill and experience in one area of the selected field of study beyond the performance standards of the initial program standards.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** IT Fundamentals  
**Course Number:** 9001310  
**Course Credit:** 1

**Course Description:**

This course introduces students to the essential concepts, components, terminology, and knowledge about computers, computer systems, peripherals, and networks.

01.0 Demonstrate knowledge, skill, and application of computer systems. – The student will be able to:

- 01.01 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.02 Describe the types of communications and networking systems used in workplace environments.
- 01.03 Locate and use software application reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals.
- 01.04 Troubleshoot problems with computer hardware peripherals.
- 01.05 Describe ethical, privacy, and security issues and problems associated with computers and information systems.
- 01.06 Demonstrate proficiency in using the basic features of GUI browsers.

02.0 Demonstrate knowledge of different operating systems. – The student will be able to:

- 02.01 Identify the most common computer operating systems.
- 02.02 Describe and use industry accepted file naming conventions, particularly in NTFS and FAT file systems.
- 02.03 Demonstrate proficiency with file management tasks (e.g., folder creation, file creation, backup, copy, delete, open, save).
- 02.04 Demonstrate a working knowledge of standard file formats.
- 02.05 Compare and contrast various operating systems (e.g., DOS, Windows, Mac, and Linux).
- 02.06 Differentiate between different operating systems and applications.
- 02.07 Compare and contrast open source and proprietary software.
- 02.08 Explain how system utilities are used to maintain computer performance.

03.0 Develop a familiarity with the information technology industry. – The student will be able to:

- 03.01 Explain how information technology impacts the operation and management of business and society.
- 03.02 Identify and describe the various ways of segmenting the IT industry (e.g., hardware vs. software, server vs. client, business vs. entertainment, stable vs. mobile, etc.)
- 03.03 Describe how digital technologies (social media, et al) are changing both work and personal lifestyles.

04.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:

- 04.01 Describe the evolution of the digital computer.
- 04.02 Explain the general architecture of a microcomputer system.
- 04.03 Explain the evolution of microprocessors.
- 04.04 Explain software hierarchy and its impact on microprocessors.
- 04.05 Explain the need for and use of peripherals.
- 04.06 Demonstrate proficiency installing and using plug-and-play peripherals.
- 04.07 Identify the basic concepts of computer maintenance and upgrades.

05.0 Develop an awareness of programming languages. – The student will be able to:

- 05.01 Explain the evolution of programming languages.
- 05.02 Explain the need for and use of compilers.
- 05.03 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 05.04 Compare the various types or classes of programming languages (e.g., compiled, interpretive, etc.).
- 05.05 Differentiate among source code, machine code, interpreters, and compilers.
- 05.06 Characterize the major categories of programming languages and how they are used.
- 05.07 Create a model flowchart for a computer program.
- 05.08 Describe the stages in the software development life cycle and explain how to successfully implement them.

06.0 Develop an awareness of emerging technologies. – The student will be able to:

- 06.01 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 06.02 Describe social media as an emerging technology.
- 06.03 Adhere to published best practices for protecting personal identifiable information when using the Internet.
- 06.04 Identify trends related to the use of information technology in people's personal and professional lives.
- 06.05 Characterize how the rapid pace of change in information technology impacts our society.

07.0 Demonstrate an understanding of the Open Systems Interface (OSI) model. – The student will be able to:

- 07.01 Describe the evolution of OSI from its inception to the present and into the future.
- 07.02 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 07.03 Describe the purpose of the OSI model and each of its layers.
- 07.04 Explain specific functions belonging to each OSI model layer.
- 07.05 Understand how two network nodes communicate through the OSI model.
- 07.06 Discuss the structure and purpose of data packets and frames.
- 07.07 Describe the two types of addressing covered by the OSI model.

- 08.0 Identify computer components and their functions. – The student will be able to:
- 08.01 Identify the internal components of a computer (e.g., power supply, hard drive, mother board, I/O cards/ports, cabling, etc.).
  - 08.02 Use common computer and programming terminology.
- 09.0 Demonstrate proficiency using the Internet to locate information. – The student will be able to:
- 09.01 Identify and describe web terminology.
  - 09.02 Define Universal Resource Locators (URLs) and associated protocols (e.g., http, ftp, telnet, mailto).
  - 09.03 Compare and contrast the types of Internet domains (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 09.04 Trace the evolution of the Internet from its inception to the present and into the future.
  - 09.05 Demonstrate proficiency using search engines, including Boolean search strategies.
  - 09.06 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
  - 09.07 Compare and contrast the roles of web servers and web browsers.
- 10.0 Demonstrate an understanding of Internet safety and ethics. – The student will be able to:
- 10.01 Describe cyber-bullying and its impact on perpetrators and victims.
  - 10.02 Differentiate between viruses and malware, specifically their sources, ploys, and impact on personal privacy and computer operation, and ways to avoid infection.
  - 10.03 Describe risks associated with sexting, related legal issues, social engineering aspects, prevention methods, and reporting of offenses.
  - 10.04 Describe the risks associated with online gaming and ways to mitigate these risks.
  - 10.05 Describe the ethics and copyright legalities of downloading music or videos from the Internet.
  - 10.06 Describe risks associated with social networking sites (e.g., FaceBook, MySpace, and Twitter) and ways to mitigate these risks.
  - 10.07 Adhere to cyber safety practices with regard to conducting Internet searches, email, chat rooms, and other social network websites.
- 11.0 Demonstrate proficiency using Hypertext Markup Language (HTML). – The student will be able to:
- 11.01 Categorize websites according to their purpose.
  - 11.02 Describe the types of documents that might be used in a web environment (e.g., HTML, ASP, DHTML, XML, JS, CSS, PHP).
  - 11.03 Identify elements of a webpage.
  - 11.04 Define basic HTML terminology.
  - 11.05 Critique the aesthetic and functional operation of sample websites.
  - 11.06 Create storyboards depicting a multi-page website (e.g., linear, hierarchical).
  - 11.07 Design, edit, and test HTML documents for accuracy and validity.

- 11.08 Create and modify webpages using a Graphical User Interface (GUI) editor.
  - 11.09 Enhance webpages through the addition of images and graphics including animation.
  - 11.10 Analyze webpage source code developed by others.
  - 11.11 Create webpages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
- 12.0 Demonstrate proficiency in webpage design. – The student will be able to:
- 12.01 Develop an awareness of acceptable webpage design, including index pages in relation to the rest of the website.
  - 12.02 Describe and apply color theory as it applies to webpage design (e.g., background and text color).
  - 12.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 12.04 Use image design software to create and edit images.
  - 12.05 Demonstrate proficiency in publishing to the Internet.
  - 12.06 Explain the need for web-based applications.
- 13.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 13.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, email, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 13.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, email, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 14.0 Perform email activities. – The student will be able to:
- 14.01 Describe email capabilities and functions.
  - 14.02 Identify components of an email message.
  - 14.03 Identify the components of an email address.
  - 14.04 Identify when to use different email options.
  - 14.05 Attach a file to an email message.
  - 14.06 Forward an email message.
  - 14.07 Use an address book.
  - 14.08 Reply to an email message.
  - 14.09 Use the Internet to perform email activities.
  - 14.10 Identify the appropriate use of email and demonstrate related email etiquette.
  - 14.11 Identify when to include information from an original email message in a response.
  - 14.12 Identify common problems associated with widespread use of email.
- 15.0 Demonstrate proficiency in using presentation software and equipment. – The student will be able to:

- 15.01 Produce a presentation that includes music, animation, and digital photography and present it using a projection system.
- 15.02 Using presentation software, create a multimedia presentation that incorporates shot and edited video, animation, music, narration and adheres to good design principles, use of transitions, and effective message conveyance.
- 15.03 Demonstrate knowledge of the roles and responsibilities of a multimedia production team (e.g. project manager, creative or design director, content experts, writers, graphic designers, animators, sound designers, videographer, interface designers/programmers, etc.).
- 15.04 Collaborate with team members to plan, edit, evaluate, and present a multimedia presentation where individuals on the team function in specific production roles .
- 15.05 Create a self-running presentation with synchronized audio, convert presentation slides (e.g. PowerPoint) into streaming ASF files for use on the Web.
- 16.0 Perform decision-making activities in a multimedia environment. – The student will be able to:
- 16.01 Determine work priorities, the audience, project budgets, project specifications, and the production schedule.
- 16.02 Evaluate and select appropriate software packages and multimedia tools to complete assigned tasks.
- 16.03 Present and defend design projects.
- 16.04 Evaluate criteria for selecting an operating system.
- 69.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 69.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
- 69.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
- 69.03 Present information formally and informally for specific purposes and audiences. AF2.9
- 70.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 70.01 Demonstrate knowledge of arithmetic operations. AF3.2
- 70.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
- 70.03 Construct charts/tables/graphs using functions and data. AF3.5
- 71.0 Demonstrate science knowledge and skills. – The student will be able to: AF4.0
- 71.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF4.1
- 71.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF4.3

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Introduction to Information Technology  
**Course Number:** 8207310  
**Course Credit:** 1

**Course Description:**

This course is designed to provide an introduction to information technology concepts and careers as well as the impact information technology has on the world, people, and industry and basic web design concepts. The content includes information technology career research; operating systems and software applications; electronic communications including e-mail and Internet services; basic HTML, DHTML, and XML web commands and design; emerging technologies, and Web page design.

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Develop keyboarding skills to enter and manipulate text and data.
- 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.03 Identify and describe communications and networking systems used in workplace environments.
- 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.06 Describe ethical issues and problems associated with computers and information systems.

02.0 Demonstrate comprehension and communication skills. – The student will be able to:

- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
- 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
- 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
- 02.04 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
- 02.05 Apply the writing process to the creation of appropriate documents following designated business formats.
- 02.06 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).

03.0 Use technology to enhance the effectiveness of communication skills —The student will be able to:

- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
  - 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
  - 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
  - 08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:
- 09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).
  - 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.

- 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:
- 14.01 Identify and describe Web terminology.
  - 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
  - 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
  - 14.08 Identify effective Boolean search strategies.
- 15.0 Demonstrate proficiency using html commands. – The student will be able to:
- 15.01 Identify elements of a Web page.
  - 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
  - 15.03 Define basic HTML terminology.
  - 15.04 Analyze HTML source code developed by others.
  - 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
  - 15.07 Edit and test HTML documents for accuracy and validity.
  - 15.08 Use basic functions of WYSIWYG editors.
  - 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 15.10 Enhance web pages through the addition of images and graphics including animation.

- 16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
  - 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
  - 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 16.04 Use image design software to create and edit images.
  - 16.05 Demonstrate proficiency in publishing to the Internet.
  - 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
  - 16.07 Explain the need for web-based applications.
- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).

- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.
  - 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
  - 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
  - 24.03 Demonstrate the ability to incorporate digital sound.
- 69.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 69.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
  - 69.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5

69.03	Present information formally and informally for specific purposes and audiences.	AF2.9
70.0	<u>Demonstrate mathematics knowledge and skills.</u> – The student will be able to:	AF3.0
70.01	Demonstrate knowledge of arithmetic operations.	AF3.2
70.02	Analyze and apply data and measurements to solve problems and interpret documents.	AF3.4
70.03	Construct charts/tables/graphs using functions and data.	AF3.5
71.0	<u>Demonstrate science knowledge and skills.</u> – The student will be able to:	AF4.0
71.01	Discuss the role of creativity in constructing scientific questions, methods and explanations.	AF4.1
71.02	Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings.	AF4.3

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Computer & Network Security Fundamentals  
**Course Number:** 9001320  
**Course Credit:** 1.0

**Course Description:**

This course introduces students to cybersecurity and provides them with essential computer and networking knowledge and skills, particularly those related to cybersecurity.

- 25.0 Demonstrate an understanding of cybersecurity, including its origins, trends, culture, and legal implications. – The student will be able to:
- 25.01 Define cybersecurity.
  - 25.02 Describe how information security evolved into cybersecurity and the impact of the Internet on the pace and nature of the evolution.
  - 25.03 Describe the individual elements that comprise the CIA triad (i.e., Confidentiality, Integrity, and Availability).
  - 25.04 Define and explain the various types of hackers and the role each plays in cybersecurity.
  - 25.05 Describe various methodologies used by hackers and the basis for their employment.
- 26.0 Describe the national agencies and supporting initiatives involved in cybersecurity. – The student will be able to:
- 26.01 Describe the role of the National Security Agency.
  - 26.02 Describe current trends in cyber attacks and strategies for combating them.
  - 26.03 Describe the legal implications of computer hacking and other forms of cyber attacks.
- 27.0 Discuss the underlying concepts of terms used in cybersecurity. – The student will be able to:
- 27.01 Differentiate between cybersecurity and information assurance.
  - 27.02 Define confidentiality and give examples of security breaches.
  - 27.03 Define integrity and give examples of security breaches.
  - 27.04 Define authenticity and give examples of security breaches.
  - 27.05 Define accountability (non-repudiation) and give examples of security breaches.
- 28.0 Demonstrate an understanding of basic computer components, their functions, and their operation. – The student will be able to:
- 28.01 Describe the internal components of a computer (e.g., power supply, hard drive, mother board, I/O cards/ports, cabling, et al).
  - 28.02 Demonstrate and understanding of common computer and programming terminology.
  - 28.03 Explain the physical and logical architecture of a microcomputer system.

- 28.04 Describe the file types used in the operation of a computer.
- 28.05 Compare and contrast memory technologies (e.g., RAM, ROM, virtual memory, memory management).
- 29.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 29.01 Compare operating system file naming conventions.
- 29.02 Describe the common elements that comprise the architecture of an operating system (e.g., kernel, file manager, memory manager, device manager, network manager, etc.).
- 29.03 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
- 29.04 Demonstrate a working knowledge of standard file formats.
- 29.05 Describe the purpose of various operating systems (e.g., Windows, Mac, and Unix/Linux).
- 29.06 Describe the difference between client and network operating systems.
- 29.07 Differentiate between different operating systems and applications.
- 29.08 Explain the basics of boot sequences, methods and startup utilities.
- 29.09 Compare and contrast open source and proprietary software.
- 29.10 Describe common system utilities used in performing computer maintenance.
- 30.0 Demonstrate an understanding of the Open Systems Interface (OSI) model. – The student will be able to:
- 30.01 Describe the evolution of OSI from its inception to the present and into the future.
- 30.02 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 30.03 Describe the purpose of the OSI model and each of its layers.
- 30.04 Explain specific functions belonging to each OSI model layer.
- 30.05 Understand how two network nodes communicate through the OSI model.
- 30.06 Discuss the structure and purpose of data packets and frames.
- 30.07 Describe the two types of addressing covered by the OSI model.
- 31.0 Describe the services and protocols that operate in the application, transport, network, and link layers of the OSI Model. – The student will be able to:
- 31.01 Describe the services and protocols used in the OSI Application Layer (i.e., DHCP, DNS, FTP, HTTP, SMTP, Telnet, IMAP).
- 31.02 Describe the services and protocols used in the OSI Transport Layer (i.e., TCP, TSL/SSL, UDP).
- 31.03 Describe the services and protocols used in the OSI Network Layer (i.e., IP, ICMP, IGMP, IPSec).
- 31.04 Describe the services and protocols used in the OSI Link Layer (i.e., ARP, OSPF, L2TP, PPP).
- 32.0 Demonstrate proficiency using computer networks. – The student will be able to:
- 32.01 Define networking and describe the purpose of a network.
- 32.02 Describe the conceptual background of digital networks including terminology and basics.

- 32.03 Describe various types of networks and the advantages and disadvantages of each (e.g. peer to peer, client/server, mainframe/terminal).
  - 32.04 Describe the use, advantages, and disadvantages of various network media (e.g. thinnet cable, coaxial), twisted pair (cat 5), fiber optics).
  - 32.05 Describe the function of various network devices (e.g. hub, switched hub or switch, router bridge, gateway, and access points).
  - 32.06 Describe how network devices are identified (i.e., IP addressing).
  - 32.07 Explain the protocols commonly used in a network environment.
  - 32.08 Differentiate between public and private IP addresses.
  - 32.09 Describe the common ports and corresponding protocols used in a network.
  - 32.10 Describe the difference between the Internet and intranet.
  - 32.11 Compare and contrast IP Version 6 and IP Version 4.
  - 32.12 Compare and contrast the different methods for network connectivity (e.g. broadband, wireless, Bluetooth, and cellular).
  - 32.13 Discuss the differences between Local Area Network (LAN), Wide Area Network (WAN), Metropolitan Area Network (MAN), and Virtual Private Network (VPN).
- 33.0 Demonstrate an understanding of basic security concepts. – The student will be able to:
- 33.01 Distinguish between vulnerability and a threat.
  - 33.02 Discuss the different types of attacks (e.g., active, passive).
  - 33.03 Define security policy and explain its role in cybersecurity.
  - 33.04 Describe the basic methods of authentication (e.g., password, biometrics, smart cards).
  - 33.05 Describe the various forms of encryption methodologies (e.g., symmetric, asymmetric, block cipher, stream cipher).
  - 33.06 Describe hash functions and their role in authentication.
  - 33.07 Describe various method of access control used in computer security (e.g., policies, Groups, Access Control List (ACL)).
- 34.0 Demonstrate an understanding of legal and ethical issues in cybersecurity. – The student will be able to:
- 34.01 Define cyber crime and discuss the challenges facing law enforcement.
  - 34.02 Identify the key legislative acts that impact cybersecurity.
  - 34.03 Describe the Federal criminal code related to computers and give examples of cyber crimes and penalties, particularly those involving inappropriate access.
  - 34.04 Discuss digital forensics and its role in cybersecurity.
  - 34.05 Distinguish among the Intellectual Property Rights of trademark, patent, and copyright.
  - 34.06 Explain digital rights management and the implications of the Digital Millennium Copyright Act.
  - 34.07 Describe the implications of social media (e.g., MySpace, Facebook, Twitter, et al) on the safeguarding of personal or sensitive information.
  - 34.08 Describe various safeguards that can be employed to help ensure that sensitive or confidential information is not inadvertently divulged or obtained.
- 35.0 Demonstrate an understanding of virtualization technology. – The student will be able to:
- 35.01 Define virtual computing.
  - 35.02 Explain the benefits of virtual computing.

- 35.03 Differentiate between guest and host operating systems.
  - 35.04 Install desktop virtualization software.
  - 35.05 Describe the role of the hypervisor.
  - 35.06 Create and upgrade a virtual machine.
  - 35.07 Optimize the performance of a virtual machine.
  - 35.08 Preserve the state of a virtual machine.
  - 35.09 Clone, move and share virtual machines.
  - 35.10 Use virtual disks and disk drives.
  - 35.11 Configure a virtual network.
  - 35.12 Connect devices to a virtual machine.
  - 35.13 Enable security settings on a virtual machine.
- 36.0 Recognize and understand the administration of the following types of remote access technologies. – The student will be able to:
- 36.01 802.1x
  - 36.02 VPN (Virtual Private Network)
  - 36.03 RADIUS (Remote Authentication Dial-In User Service)
  - 36.04 TACACS (Terminal Access Controller Access Control System)
  - 36.05 L2TP / PPTP (Layer Two Tunneling Protocol / Point to Point Tunneling Protocol)
  - 36.06 SSH (Secure Shell)
  - 36.07 IPSEC (Internet Protocol Security)
  - 36.08 Vulnerabilities
- 37.0 Understand the application of the following concepts of physical security. – The student will be able to:
- 37.01 Access Control (e.g., physical barriers, biometrics)
  - 37.02 Social Engineering
  - 37.03 Environment (e.g., wireless cells, location, shielding, fire suppression)
- 38.0 Understand security concerns and concepts of the following types of devices. – The student will be able to:
- 38.01 Firewalls
  - 38.02 Routers
  - 38.03 Switches
  - 38.04 Wireless
  - 38.05 Modems
  - 38.06 RAS (Remote Access Server)
  - 38.07 Telecom / PBX (Private Branch Exchange)
  - 38.08 VPN (Virtual Private Network)
  - 38.09 IDS (Intrusion Detection System)
  - 38.10 Network Monitoring / Diagnostics
  - 38.11 Workstations
  - 38.12 Servers
  - 38.13 Mobile Devices
- 39.0 Recognize and be able to differentiate and explain the following access control models. – The student will be able to:

- 39.01 MAC (Mandatory Access Control)
  - 39.02 DAC (Discretionary Access Control)
  - 39.03 RBAC (Role Based Access Control)
- 40.0 Understand the security concerns for the following types of media. – The student will be able to:
- 40.01 Coaxial Cable
  - 40.02 UTP / STP (Unshielded Twisted Pair / Shielded Twisted Pair)
  - 40.03 Fiber Optic Cable
  - 40.04 Removable Media
  - 40.05 Tape
  - 40.06 CD-R (Recordable Compact Disks)
  - 40.07 Hard Drives
  - 40.08 Diskettes
  - 40.09 Flashcards
  - 40.10 Smartcards
- 41.0 Explain the following security topologies as they relate to cybersecurity. – The student will be able to:
- 41.01 Security Zones
  - 41.02 DMZ (Demilitarized Zone)
  - 41.03 Intranet
  - 41.04 Extranet
  - 41.05 VLANs (Virtual Local Area Network)
  - 41.06 NAT (Network Address Translation)
  - 41.07 Tunneling
- 72.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 72.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
  - 72.02 Locate, organize and reference written information from various sources. CM 3.0
  - 72.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
  - 72.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
  - 72.05 Apply active listening skills to obtain and clarify information. CM 7.0
  - 72.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
  - 72.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 73.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 73.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
  - 73.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0

- 73.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
- 73.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 74.0 Use information technology tools. – The student will be able to:
- 74.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 74.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 74.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 74.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 75.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:
- 75.01 Describe the nature and types of business organizations. SY 1.0
- 75.02 Explain the effect of key organizational systems on performance and quality.
- 75.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
- 75.04 Explain the impact of the global economy on business organizations.
- 76.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 76.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
- 76.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
- 76.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2
- 76.04 Interpret and explain written organizational policies and procedures. ELR 2.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Cybersecurity Essentials  
**Course Number:** 9001330  
**Course Credit:** 1.0

**Course Description:**

This course provides students with insight into the many variations of vulnerabilities, attack mechanisms, intrusion detection systems, and some methods to mitigate cybersecurity risks, including certificate services and cryptographic systems.

42.0 Demonstrate an understanding of the technical underpinnings of cybersecurity and its taxonomy, terminology, and challenges. – The student will be able to:

- 42.01 Explain the various elements that make up the security taxonomy used by the U.S. Computer Emergency Readiness Team (CERT).
- 42.02 Describe the challenges associated with achieving and maintaining computer security.
- 42.03 Discuss the range of potential consequences of various forms of security breaches.
- 42.04 Describe various defense mechanisms, techniques, and methodologies.
- 42.05 Compare and contrast mechanisms employed in passive and active cyber attacks.
- 42.06 Describe the difference between an inside and an outside attack.
- 42.07 Describe vulnerabilities associated with each element of the CIA Triad.
- 42.08 Explain the differences between hardware, software, data, and network assets susceptible to cyber attack.
- 42.09 Describe the tools and technologies used in cybersecurity.
- 42.10 Define intrusion detection and discuss its role in cybersecurity.
- 42.11 Explain what is meant by the term countermeasures.
- 42.12 Describe the role recovery plays in cybersecurity.

43.0 Demonstrate an understanding of common information and computer system security vulnerabilities. – The student will be able to:

- 43.01 Describe the basic categories of vulnerabilities associated with cybersecurity (i.e., hardware, software, network, human, physical, and organizational).
- 43.02 Describe the ways in which social networks such as Facebook and MySpace are cybersecurity targets.
- 43.03 Describe footprinting and explain how it is used to reveal system vulnerabilities.
- 43.04 Explain why default values and technical controls are points of vulnerability and describe the hardening efforts being taken by government and industry.
- 43.05 Describe the process of port scanning and explain why it is so prevalent in cybersecurity.
- 43.06 Describe what is meant by password strength and explain its relationship to vulnerability.
- 43.07 Distinguish between a weak and a strong password.
- 43.08 Describe some of the ways in which intruders are able to cover their tracks.

- 43.09 Describe the circumstances under which a computer system is vulnerable to a denial of service attack.
- 44.0 Demonstrate an understanding of common cyber attack mechanisms, their consequences, and motivation for their use. – The student will be able to:
- 44.01 Describe spoofing as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.02 Describe the introduction of malware or spyware as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.03 Describe the use of grayware as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.04 Describe the use of computer viruses or worms as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.05 Describe Logic Bombs as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.06 Describe botnet and rootkit as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.07 Describe the introduction of a Trojan Horse as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.08 Describe DNS poisoning as an attack mechanism and discuss its consequences and common motivating factors for its use.
  - 44.09 Describe buffer overflow as an attack mechanism and discuss its consequences and common motivating factors for its use.
- 45.0 Be able to identify and explain the following different kinds of cryptographic algorithms. – The student will be able to:
- 45.01 Hashing Functions
  - 45.02 Symmetric Keys
  - 45.03 Asymmetric Keys
  - 45.04 Kerberos
- 46.0 Demonstrate an understanding of the following kinds of steganographic techniques and their use in cybersecurity. – The student will be able to:
- 46.01 Network steganographic methods (e.g., VOIP, WLAN).
  - 46.02 Digital steganographic methods (e.g., image encryption, audio, mimic functions, video, packet manipulation, et al).
- 47.0 Understand how cryptography and digital signatures address the following security concepts. – The student will be able to:
- 47.01 Confidentiality
  - 47.02 Integrity
  - 47.03 Authentication
  - 47.04 Non-Repudiation
  - 47.05 Access Control
- 48.0 Understand and be able to explain the following concepts of PKI (Public Key Infrastructure). – The student will be able to:

- 48.01 Certificates (e.g., policies, practice statements)
  - 48.02 Revocation
  - 48.03 Trust Models
- 49.0 Demonstrate an understanding of certificates and their role in cybersecurity. – The student will be able to:
- 49.01 Describe the role of a Certificate Authority (CA).
  - 49.02 Describe Registration Authority (RA) and its relevance to security certificates.
  - 49.03 Compare and contrast SSL/TLS X.509-compliant certificates with PGP-compliant certificates.
  - 49.04 Describe the events that make up the lifecycle of a certificate.
  - 49.05 Describe how root certificate distribution works.
- 50.0 Demonstrate an understanding of intrusion, the types of intruders, their techniques, and their motivation. – The student will be able to:
- 50.01 Define intrusion.
  - 50.02 Describe the classes of intruders (i.e., masquerader, misfeonsor, and clandestine user).
  - 50.03 Describe what is meant by a hacker and discuss their role in cybersecurity.
  - 50.04 Compare and contrast the “black hat” and “white hat” hacker cultures (i.e., computer criminal versus computer security expert).
  - 50.05 Describe various techniques used by hackers to achieve intrusion.
- 51.0 Demonstrate an understanding of Intrusion Detection Systems (IDS). – The student will be able to:
- 51.01 Describe the three logical components that comprise an IDS (i.e., sensors, analyzers, and user interface).
  - 51.02 Explain how user behavior relates to the detection of an intruder.
  - 51.03 Describe the essential requirements for any IDS.
- 52.0 Describe host-based IDS, its capabilities, and its approaches to detection (i.e., anomaly, signature). – The student will be able to:
- 52.01 Describe anomaly detection, specifically threshold and profile-based approaches.
  - 52.02 Describe the types of audit records employed in intrusion detection (i.e., native and detection-specific).
  - 52.03 Describe signature detection, specifically rule-based anomaly and penetration identification approaches.
- 53.0 Describe network-based IDS, its capabilities, and its approaches to detection (i.e., anomaly, signature). – The student will be able to:
- 53.01 Describe the primary approach for intrusion detection in a network.
  - 53.02 Compare and contrast inline and passive sensors.
  - 53.03 Discuss typical placement of sensors in a network-based IDS environment and explain the rationale for each.

- 54.0 Demonstrate an understanding of IDS applications. – The student will be able to:
- 54.01 Describe the operation, typical activities, and outputs of an intrusion detection system.
  - 54.02 Describe some of the limitations of intrusion detection systems.
  - 54.03 Differentiate between an intrusion detection system (passive) and an intrusion prevention (reactive) system.
  - 54.04 Compare and contrast several of the intrusion detection systems available on the current market.
- 55.0 Demonstrate an understanding of port scanning and network traffic monitoring employed as intrusion detection techniques. – The student will be able to:
- 55.01 Describe the process of monitoring/detecting port scanning attacks and associated patterns.
  - 55.02 Explain how the monitoring and analysis of network traffic can be used to detect intrusion.
- 56.0 Demonstrate an understanding of firewalls and other means of intrusion prevention. – The student will be able to:
- 56.01 Describe the purpose and limitations of firewalls.
  - 56.02 Describe the four types of firewalls (i.e., packet filtering, stateful inspection, application-level gateway, and circuit-level gateway).
  - 56.03 Describe the use of honeypots as an intrusion prevention technique.
  - 56.04 Explain how security policies are used to prevent intruders.
  - 56.05 Explain how Access Control Lists (ACLs) are used to prevent intrusion.
- 57.0 Demonstrate an understanding of vulnerabilities unique to virtual computing environments. – The student will be able to:
- 57.01 Describe the limitations of traffic monitoring within virtual networks.
  - 57.02 Discuss the primary vulnerability of virtual operating systems.
  - 57.03 Describe the “hypervisor” and explain its role in securing a virtual environment.
- 58.0 Demonstrate an understanding of social engineering and its implications to cybersecurity. – The student will be able to:
- 58.01 Define social engineering and describe its role in cybersecurity.
  - 58.02 Discuss common mechanisms that constitute social engineering (e.g., phishing, baiting, quid pro quo, pretexting, et al).
  - 58.03 Describe the variety of attacks targeting the human element.
  - 58.04 Describe countermeasures that can be used to counter social engineering attacks.
- 59.0 Demonstrate an understanding of fundamental security design principles and their role in limiting points of vulnerability. – The student will be able to:
- 59.01 Discuss the three over-arching security design principles (i.e., only necessary, simple, ease of use).
  - 59.02 Describe the principle of least privilege as it relates to computer security.

- 59.03 Describe the principle of separation of duties as it relates to computer security.
- 59.04 Describe the principle of defense in depth as it relates to computer security.
- 59.05 Describe the principle of fail secure or fail safe as it relates to computer security.
- 59.06 Describe the principle of economy of mechanism as it relates to computer security.
- 59.07 Describe the principle of complete mediation as it relates to computer security.
- 59.08 Describe the principle of open design as it relates to computer security.
- 59.09 Describe the principle of least common mechanism as it relates to computer security.
- 59.10 Describe the principle of psychological acceptability as it relates to computer security.
- 59.11 Describe the principle of leveraging existing components as it relates to computer security.
- 59.12 Describe the principle of weakest link as it relates to computer security.
- 59.13 Describe the principle of single point of failure as it relates to computer security.
- 77.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 77.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
- 77.02 Explain emergency procedures to follow in response to workplace accidents.
- 77.03 Create a disaster and/or emergency response plan. SHE 2.0
- 78.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 78.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
- 78.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
- 78.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 78.04 Employ mentoring skills to inspire and teach others. LT 5.0
- 79.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 79.01 Identify and demonstrate positive work behaviors needed to be employable.ECD 1.0
- 79.02 Develop personal career plan that includes goals, objectives, and strategies.ECD 2.0
- 79.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
- 79.04 Maintain a career portfolio to document knowledge, skills, and experience.ECD 5.0
- 79.05 Evaluate and compare employment opportunities that match career goals.ECD 6.0
- 79.06 Identify and exhibit traits for retaining employment. ECD 7.0
- 79.07 Identify opportunities and research requirements for career advancement.ECD 8.0
- 79.08 Research the benefits of ongoing professional development. ECD 9.0
- 79.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Operational Cybersecurity  
**Course Number:** 9001340  
**Course Credit:** 1.0

**Course Description:**

This course provides students with insight into the many ways in which computer systems can be secured, countermeasures implemented, and risk assessment performed.

60.0 Demonstrate an understanding of how to configure host systems to guard against cyber intrusion. – The student will be able to:

- 60.01 Describe the security features and options available for configuring network routers to prevent intrusion.
- 60.02 Describe the various types of firewalls (i.e., packet filtering, stateful, application-level gateway, and circuit-level gateway) and how each can be used to prevent intrusion.
- 60.03 Explain the configuration and operation of a Demilitarized Zone (DMZ) host, including the key services contained within the zone.
- 60.04 Describe the role of security zones, content filters, subnets, and trusted zones in configuring a network infrastructure.

61.0 Demonstrate an understanding of authentication methods and strategies. – The student will be able to:

- 61.01 Describe the strengths, vulnerabilities, and countermeasures related to the use of passwords for authentication.
- 61.02 Describe ways in which passwords are compromised and techniques/models for strengthening.
- 61.03 Explain token authentication methods (e.g., memory cards, smart cards, et al) and limitations.
- 61.04 Discuss the use of biometrics (i.e., facial recognition, fingerprint, hand geometry, retinal pattern, iris, signature, and voice) as an authentication strategy, including its advantages, limitations, vulnerabilities, and countermeasures.
- 61.05 Describe the challenges associated with remote user authentication, including unique vulnerabilities and corresponding and effective countermeasures.

62.0 Demonstrate an understanding of methods and strategies for controlling access to computer networks. – The student will be able to:

- 62.01 Compare and contrast the three primary categories of access control (i.e., discretionary, mandatory, and role-based).
- 62.02 Describe the underlying principles of authorization as an access control mechanism applicable to individuals, system services, subjects, and objects.
- 62.03 Discuss the key features of an access control system (i.e., reliable input, granularity, least privilege, separation of duty, open/close policies, conflict resolution, and administration).

- 62.04 Describe the three elements of access control (i.e., subject, object, and right).
  - 62.05 Describe access rights (i.e., read, write, execute, delete, create, and search) and their use in establishing individual and group access control policies.
  - 62.06 Compare and contrast the use, operation, and limitations of Access Control Matrix (ACM), Access Control Lists (ACLs), and Capability Tickets in a network environment.
  - 62.07 Describe the UNIX file access control schema.
  - 62.08 Explain the relationship between security policies and access control.
  - 62.09 Describe the use and conceptual operation of formal security policy models (e.g., Bell-La Padula (BLP), Chinese Wall Model (CWM), Harrison Ruzzo Ullman (HRU)).
  - 62.10 Describe the use, strengths, and vulnerabilities of group policies in access control and strategies for ensuring safety.
  - 62.11 Describe the key entities, relationships, and functions that comprise Role-Based Access Control (RBAC), including privilege management considerations.
- 63.0 Demonstrate an understanding of key network services, their operation, vulnerabilities, and ways in which they may be secured. – The student will be able to:
- 63.01 Describe the operation of Dynamic Host Configuration Protocol (DHCP), its vulnerabilities, typical cyber attacks, and potential countermeasure strategies.
  - 63.02 Describe the operation of the Domain Name System (DNS) service, its role in a network environment, its vulnerabilities, typical cyber attacks, and potential countermeasure strategies.
  - 63.03 Describe the operation of the Simple Mail Transport Protocol (SMTP), its role in a network environment, its vulnerabilities, typical cyber attacks, and potential countermeasure strategies.
  - 63.04 Describe the operation of the File Transfer Protocol (FTP) and Telnet, their role in a network environment, their vulnerabilities, typical cyber attacks, and potential countermeasure strategies.
- 64.0 Demonstrate an understanding of the processes involved in hardening a computer system or network. – The student will be able to:
- 64.01 Describe hardening and some of the general approaches for securing a computer network.
  - 64.02 Describe and apply the process by which a web server is hardened against their typical cyber attacks.
  - 64.03 Describe and apply the process by which a mail server is hardened against their typical cyber attacks.
  - 64.04 Describe and apply the process by which a FTP server is hardened against their typical cyber attacks.
  - 64.05 Describe and apply the process by which a file/print server is hardened against their typical cyber attacks.
  - 64.06 Describe and apply the process by which data repositories are hardened against their typical cyber attacks.
  - 64.07 Describe and apply the process by which Directory Services is hardened against their typical cyber attacks.
  - 64.08 Describe and apply the process by which various network appliances are hardened against their typical cyber attacks.

- 65.0 Demonstrate an understanding of Public Key Infrastructure (PKI) management functions, key states, and life cycle/transition considerations. – The student will be able to:
- 65.01 Compare and contrast the forms, limitations, and vulnerabilities associated with centralized and decentralized key management schemas, including the PKI web of trust model.
  - 65.02 Describe key escrow, its role in key management, its advantages, and its risks.
  - 65.03 Differentiate between key backup and key escrow.
  - 65.04 Explain the role of a key's expiration date, its implications on the key's validity, and its relationship to deactivation.
  - 65.05 Describe the circumstances under which a key might be revoked, who has authority to revoke a key, and how revocation is communicated.
  - 65.06 Compare and contrast key suspension and key revocation.
  - 65.07 Describe ways in which key recovery might be achieved, who is authorized to recover keys, and associated vulnerabilities to attack.
  - 65.08 Compare and contrast key renewal and key replacement, who is authorized to initiate renewal or replacement, and associated vulnerabilities to attack.
  - 65.09 Describe the circumstances under which a key might be destroyed, the considerations prior to destruction, and associated vulnerabilities to compromise or attack.
- 66.0 Demonstrate an understanding of the processes associated with assessing vulnerabilities and risks within an organization. – The student will be able to:
- 66.01 Describe the process of asset identification relative to risk assessment and the considerations or criteria used in identifying assets requiring protection.
  - 66.02 Describe the process of threat identification, including identifying the types of threats, asset vulnerabilities, and threat sources.
  - 66.03 Describe the process of risk assessment, including determination of attack probability, attack consequences, and assignment of risk priorities.
  - 66.04 Evaluate an existing security posture and identify gaps and vulnerabilities in security.
- 67.0 Demonstrate an understanding of penetration testing, the types of tests and metrics, testing methodologies, and reporting processes. – The student will be able to:
- 67.01 Describe the types of penetration tests (i.e., human, physical, wireless, data networks, and telecommunications), the goals of each type, the metrics tested, and the value of their results.
  - 67.02 Compare and contrast the processes of black box versus white box penetration testing, including their characteristics, limitations, and appropriateness.
  - 67.03 Define attack vector and explain its relationship and importance to penetration testing.
  - 67.04 Describe common testing methodologies and standards used in penetration testing.
  - 67.05 Describe the salient points, structure, detail, and documentation typically addressed in reporting and debriefing the results of penetration testing.
  - 67.06 Detect malicious and abnormal activities through logs, intrusion detection systems, and other utilities and appliances.
  - 67.07 Reproduce methods that intruders use to gain unauthorized access to a network system for purposes of compromising information assets.

- 67.08 Deploy proprietary and/or open source tools to test known technical vulnerabilities in networked systems.
  - 67.09 Determine which vulnerabilities are exploitable and estimate the risk and impact of potential exploitations.
  - 67.10 Recommend appropriate mitigation procedures against discovered vulnerabilities and security gaps.
  - 67.11 Model the ethics of a licensed Penetration Tester or Computer Security Specialist.
- 68.0 Demonstrate an understanding of the Incident Response Life Cycle and the activities comprising each phase. – The student will be able to:
- 68.01 Describe the activities that make up the Preparation Phase of the Incident Response Life Cycle, including identification of useful tools and resources.
  - 68.02 Describe the activities that make up the Detection and Analysis Phase of the Incident Response Life Cycle, including identification of indication sources, analysis of resulting signs of an intrusion event, documentation, and notification of the incident.
  - 68.03 Describe the factors to consider when prioritizing an incident.
  - 68.04 Describe the activities that make up the Containment, Eradication, and Recovery Phase of the Incident Response Life Cycle, including selecting a containment strategy, collecting and preserving evidence for forensic analysis, identifying the attacker, re-securing the system, and system restoration.
  - 68.05 Describe the activities that make up the Post Incident Activity Phase of the Incident Response Life Cycle, including identification of lessons learned and evidence retention.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Cybersecurity Planning & Analysis  
**Course Number:** 9001350  
**Course Credit:** 1.0

**Course Description:**

This course focuses on the mitigation planning, disaster recovery, business continuity planning, and forensic analysis associated with securing computer environments. Many of the standards covered in this framework are based on or aligned with guidelines published by the Computer Security Division of the National Institute of Standards and Technology (NIST).

- 80.0 Demonstrate proficiency in cybersecurity risk mitigation planning. – The student will be able to:
- 80.01 Describe the major activities and security controls that are implemented as part of a sound risk management program.
  - 80.02 Discuss the rationale for executive sponsorship and delineated management responsibilities in successfully implementing a risk management program.
- 81.0 Demonstrate proficiency in establishing a risk management framework. – The student will be able to:
- 81.01 Describe the importance of creating a system definition for use in assessing vulnerabilities and risks.
  - 81.02 Describe the major elements of a system definition.
  - 81.03 Differentiate among critical assets, cyber assets, and critical cyber assets.
  - 81.04 Explain why cyber assets are classified as public, restricted, confidential, or private and why this plays a role in creating a risk management framework.
  - 81.05 Compare and contrast the classes of cyber assets (i.e., public, restricted, confidential, and private) and give examples of each.
  - 81.06 Create a system definition that identifies all cyber assets, their class, and their risk category (e.g., critical).
  - 81.07 Describe an Electronic Security Perimeter (ESP) and discuss its role in formulating a risk management framework.
  - 81.08 Describe the process and goals of a vulnerability assessment of ESP access points.
  - 81.09 Define risk level and explain the variabilities of its components.
  - 81.10 Describe ways in which system vulnerability may be ranked according to impact (e.g., safety, outage, privacy, monetary).
  - 81.11 Describe some of the security controls (e.g., access control, training, audit, configuration, maintenance, et al) that come into play when determining the appropriate risk mitigation strategy.
  - 81.12 Compare and contrast a top-down and a bottoms-up analysis approach for identifying and mitigating risks.
  - 81.13 Describe the range of testing/evaluation and associated tools used to monitor mitigation control effectiveness.
  - 81.14 Create a risk management framework.

- 82.0 Demonstrate proficiency in creating a corporate security policy. – The student will be able to:
- 82.01 Describe the best practices and security controls that typify a sound corporate security policy.
  - 82.02 Discuss the elements of a corporate security policy, including policy management, personnel and training, critical asset management, ESP, physical security, incident reporting and response, disaster recovery and business continuity plans.
  - 82.03 Describe the need for specific implementation and enforcement processes as part of a corporate security policy.
  - 82.04 Explain the controls required for addressing personnel risks in a corporate security policy (e.g., training, hiring due diligence, enforcement of “least privilege,” access revocation).
- 83.0 Demonstrate proficiency in addressing process risks. – The student will be able to:
- 83.01 Describe the best practices and security controls typically implemented for assessing and mitigating operational risks, including.
    - 83.01.01 Periodic risk assessment
    - 83.01.02 Enforce access control, monitoring, and logging
    - 83.01.03 Perform disposal/redeployment of assets
    - 83.01.04 Enforce change control and configuration management
    - 83.01.05 Conduct vulnerability assessments
    - 83.01.06 Control, Monitor, and log all access to assets
    - 83.01.07 Configuration and maintenance
    - 83.01.08 Ensure incident handling processes
    - 83.01.09 Provide for contingency planning
  - 83.02 Create an organized mitigation table that identifies operational or process risks, the potential impact of the risk, and specific actions required to mitigate the risk.
- 84.0 Demonstrate proficiency in addressing physical security risks. – The student will be able to:
- 84.01 Describe the best practices and security controls that ensure good physical security of critical infrastructure and assets.
  - 84.02 Discuss the resulting potential for compromise once physical security is breached.
  - 84.03 Create an organized mitigation table that identifies physical security risks, the potential impact of the risk, and specific actions required to mitigate the risk.
- 85.0 Demonstrate proficiency in cybersecurity contingency planning. – The student will be able to:
- 85.01 Define resiliency and its relationship to contingency planning.
  - 85.02 Describe the purpose and scope of an Information Systems Contingency Plan (ISCP).
  - 85.03 Identify the five main components of a contingency plan (i.e., Supporting Information, Activation and Notification, Recovery, Reconstitution, and Appendices).

- 85.04 Describe the contingency planning process and the rationale for each step in the process.
  - 85.05 Explain the three step process for conducting a business impact analysis (i.e., determine recovery criticality, identify resource requirements, and identify recovery priorities).
  - 85.06 Compare and contrast Maximum Tolerable Downtime (MTD), Recovery Time Objective (RTO), and Recovery Point Objective (RPO).
  - 85.07 Discuss the criteria typically used to activate the contingency plan.
  - 85.08 Discuss the role of backup and recovery considerations in contingency planning.
  - 85.09 Create a contingency plan that includes roles and responsibilities, a business impact analysis with contingency strategies/solutions, outage assessment, resource recovery priorities, backup and recovery strategies, and testing/training considerations.
- 86.0 Demonstrate proficiency in cybersecurity disaster recovery planning. – The student will be able to:
- 86.01 Describe the purpose and scope of a cybersecurity disaster recovery plan.
  - 86.02 Describe various recovery strategies according to their appropriateness.
  - 86.03 Explain the key considerations when formalizing a disaster recovery plan.
  - 86.04 Discuss the role of data collection relative to disaster recovery.
  - 86.05 Identify the types, purposes, and role of documentation during disaster recovery.
  - 86.06 Discuss the role of testing in a disaster recovery plan.
- 87.0 Demonstrate proficiency in cybersecurity business continuity planning. – The student will be able to:
- 87.01 Describe the purpose and scope of a cybersecurity business continuity plan.
  - 87.02 Explain the concept of fault tolerance and discuss its role in business continuity planning.
  - 87.03 Identify and use various utilities employed for the purpose of business continuity.
  - 87.04 Describe the role of backups for ensuring business continuity.
- 88.0 Demonstrate proficiency in the essential elements of forensic analysis. – The student will be able to:
- 88.01 Describe the four phases of forensic analysis and discuss the activities performed in each phase.
  - 88.02 Describe the forensic and evidentiary considerations when determining containment.
  - 88.03 Describe the types and sources of data collected for forensic analysis.
  - 88.04 Explain the various forms of data and associated collection/retrieval tools for the application transport, IP, and link layers.
  - 88.05 Explain the processes by which data is collected for analysis.
  - 88.06 Describe the role of system event logs in data collection.
  - 88.07 Describe the role of the process log in data collection.
  - 88.08 Describe the processes associated with preserving evidence collected for forensic purposes.
  - 88.09 Describe how the chain of custody can be maintained for evidence collected during a forensic analysis effort.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Database Security  
**Course Number:** 9001360  
**Course Credit:** 1.0

**Course Description:**

This course focuses on strategies employed to mitigate data compromise, including design, access, and deployment of databases.

- 89.0 Demonstrate an understanding of database design, structure, and operation. – The student will be able to:
- 89.01 Describe a relational database and its key elements.
  - 89.02 Describe the Entity Relationship Model (ERM) and relate how it is a factor in database security.
  - 89.03 Describe the process of normalization and explain its role in database security.
  - 89.04 Differentiate between one-to-many, many-to-many and one-to-one relationships.
  - 89.05 Define referential integrity and describe its implications on database security.
  - 89.06 Discuss the role of authentication in database security.
- 90.0 Demonstrate a fundamental understanding of Structured Query Language (SQL). – The student will be able to:
- 90.01 List the capabilities of SQL SELECT statements.
  - 90.02 Execute basic SQL statements, including SELECT, INSERT, and UPDATE.
  - 90.03 Apply the concatenation operator to link columns to other columns, arithmetic expressions, or constant values to create a character expression.
  - 90.04 Use column aliases to rename columns in the query result.
  - 90.05 Use SQL to display the structure of a table.
  - 90.06 Apply SQL syntax to restrict the rows returned from a query.
  - 90.07 Demonstrate application of the WHERE clause syntax.
  - 90.08 Apply the proper comparison operator to return a desired result.
  - 90.09 Create, drop, rename and truncate tables using SQL.
  - 90.10 Create and remove an index using a SQL statement.
  - 90.11 Create or modify users and roles using SQL statements.
  - 90.12 Use the GRANT and REVOKE SQL statements to control access.
  - 90.13 Differentiate between Data Definition Language (DDL) and Data Manipulation Language (DML) SQL statements and discuss their respective implications to database security.
- 91.0 Demonstrate an understanding of database security policies. – The student will be able to:
- 91.01 Explain the role of the Database Management System (DBMS) in maintaining database security.

- 91.02 Describe three aspects of system level security related to databases (i.e., user privilege schema, user authentication, and operating system level privileges).
  - 91.03 Describe the mechanisms that control access to and use of the database at the object level.
  - 91.04 Explain how role-based privilege assignment can be used as a data security model.
  - 91.05 Compare and contrast the implications of connecting to a database with administrator versus user privileges.
- 92.0 Demonstrate an understanding of database access control, functions, methods, and verification. – The student will be able to:
- 92.01 Compare and contrast rights and privileges as they relate to database security.
  - 92.02 Describe the manner in which database user rights and privileges are controlled (e.g., granted, revoked).
  - 92.03 Describe application access rights and discuss their role in a database security schema.
  - 92.04 Compare and contrast table, column, and row level security, including VIEW implications.
  - 92.05 Describe fine-grained access control and its use in database security.
  - 92.06 Describe the operation of a database firewall and explain its role in a database security schema.
  - 92.07 Describe how database security policies may be used to trigger security auditing events.
  - 92.08 Describe the various types of auditing (e.g., statement, privilege, object, fine-grained) and associated records.
- 93.0 Demonstrate an understanding of database vulnerabilities, attack vectors, and associated countermeasures. – The student will be able to:
- 93.01 Describe the SQL Injection attack vector and explain its potential consequences (e.g., privilege escalation, data compromise, data destruction).
  - 93.02 Describe database inference as a vulnerability and explain how sensitive information can be compromised inadvertently.
  - 93.03 Discuss ways in which to prevent or limit database inference at design time and query time.
  - 93.04 Compare and contrast the various countermeasures and strategies to prevent an SQL injection from being successful.
  - 93.05 Compare and contrast the ways in which encryption might be applied to a database (i.e., database, fields, records, columns) and discuss the tradeoffs of each.
- 94.0 Demonstrate an understanding of pre- and post-intrusion actions to facilitate database recovery. – The student will be able to:
- 94.01 Describe the criteria which might be employed to trigger an intrusion or breach alarm.
  - 94.02 Identify the sources for confirming and tracking intrusion.
  - 94.03 Describe the tools and methodologies used to determine the scope of data compromise.

- 94.04 Assess an intrusion, determine the scope of compromise, and restore compromised data.
- 94.05 Describe the appropriate actions related to database recovery during incidence response.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Software & Application Security  
**Course Number:** 9001370  
**Course Credit:** 1.0

**Course Description:**

This course addresses the creation of secure software applications, including identifying the vulnerabilities and mitigation strategies.

95.0 Demonstrate an understanding of software design, structure, and operation. – The student will be able to:

- 95.01 Describe a typical software application and its key elements.
- 95.02 Compare and contrast software quality and software security in terms of development time, testing, and implementation.
- 95.03 Explain how security can be a software design parameter and discuss the inherent trade-offs during the development life cycle.
- 95.04 Describe the common failings in software security (e.g., input handling, inadequate testing, incomplete/incorrect algorithms, memory misuse, holes for privilege escalation, et al).

96.0 Demonstrate a fundamental understanding of common software attack vectors. – The student will be able to:

- 96.01 Describe how buffer overflow attacks can be prevented through input validation and proper interpretation.
- 96.02 Describe a command injection attack, how it can occur, and the potential consequences.
- 96.03 Describe an SQL injection attack, how it can occur, and the potential consequences.
- 96.04 Describe a code injection attack, including PHP remote code injection, how it can occur, and the potential consequences.
- 96.05 Describe cross-site scripting attack, how it can occur, and the potential consequences.

97.0 Demonstrate an understanding input syntax validation. – The student will be able to:

- 97.01 Explain the need for validating input syntax to ensure proper input handling.
- 97.02 Describe canonicalization and its role in handling alternate encoding schemas.
- 97.03 Discuss the risks associated with improper handling of signed or unsigned numeric input (e.g., very large data length versus negative number).

98.0 Demonstrate an understanding of best practices for processing input data to ensure safe and secure program code. – The student will be able to:

- 98.01 Explain why any input processing algorithm must correctly handle all problem variants.

- 98.02 Explain why debug or test code should be removed from all production bound software.
  - 98.03 Describe the need for ensuring that machine instructions correctly implement the intended actions of the high-level language code.
  - 98.04 Describe the concept of a strongly typed programming language and explain its role in correct data interpretation.
  - 98.05 Describe memory leak as it pertains to dynamically allocated memory, its causes, and potential consequences (e.g., DOS attack).
  - 98.06 Describe the race condition associated with shared memory access, its causes, and potential consequences (e.g., DOS attack causing deadlock).
- 99.0 Demonstrate an understanding of the role of environment variables in the operation of software applications. – The student will be able to:
- 99.01 Describe how the PATH, IFS, and LD\_LIBRARY\_PATH environment variables can be exploited.
  - 99.02 Explain how dynamic libraries can be subverted through the use of environment variables and describe the potential consequences (e.g., elevated privileges).
  - 99.03 Describe the principle of “least privilege” relative to the operation of software applications, particularly as it relates to file/directory ownership management.
- 100.0 Demonstrate an understanding of program design strategies for inhibiting elevated privilege attacks. – The student will be able to:
- 100.01 Describe a Root/Admin program and explain the development and operational benefits of partitioning the program into smaller modules.
  - 100.02 Identify the sources for confirming and tracking intrusion.
  - 100.03 Describe the tools and methodologies used to determine the scope of data compromise.
  - 100.04 Assess an intrusion, determine the scope of compromise, and restore compromised data.
  - 100.05 Describe the appropriate actions related to database recovery during incidence response.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Web Security  
**Course Number:** 9001380  
**Course Credit:** 1.0

**Course Description:**

This course addresses the creation of secure websites and authentication applications, including identifying the vulnerabilities and mitigation strategies.

- 101.0 Demonstrate an understanding of the primary security services used in Internet and intranet environments. – The student will be able to:
- 101.01 Describe Secure Sockets Layer (SSL) security service.
  - 101.02 Compare and contrast SSL with Transport Layer Security (TLS) as a security service.
  - 101.03 Describe Internet Protocol Security (IPSec) and discuss its benefits and three functional areas (i.e., authentication, confidentiality, and key management).
  - 101.04 Describe Secure/Multipurpose Internet Mail Extension (S/MIME) and discuss its role in achieving secure Internet-based communications.
- 102.0 Demonstrate a fundamental understanding of the SSL protocol stack and its elements. – The student will be able to:
- 102.01 Compare and contrast SSL Connection and SSL Session.
  - 102.02 Describe SSL Record Protocol services and discuss their role in managing SSL exchanges (i.e., message integrity, confidentiality).
  - 102.03 Describe the operation of the SSL Record Protocol, including the key steps that ensure security (e.g., adding message authentication code, encryption).
  - 102.04 Explain the role of the SSL Change Cipher Spec Protocol in ensuring secure transactions.
  - 102.05 Explain the role of the SSL Alert Protocol.
  - 102.06 Describe the SSL Handshake Protocol and explain the role of each phase of communication (i.e., establish security capability, server authentication/key exchange, client authentication/key exchange, complete secure connection).
- 103.0 Demonstrate an understanding of IPSec, including its uses, elements, and mechanisms. – The student will be able to:
- 103.01 Compare and contrast IPSec with SSL and TSL.
  - 103.02 Compare and contrast security services provided under IPv4 and IPv6.
  - 103.03 Differentiate between the three facilities available under IPSec (i.e., Authentication Header, Encapsulating Security Payload, and key exchange).
  - 103.04 Describe the concept of Security Association (SA) and explain the roles of its three parameters (i.e., Security Parameters Index, IP Destination Address, and Security Protocol Identifier).
  - 103.05 Describe the purpose, structure, and criteria of the Authentication Header (AH).

- 103.06 Describe the purpose, structure, and elements of the Encapsulating Security Protocol (ESP).
- 103.07 Describe the structure and operation of the key management facility of IPsec.
- 104.0 Demonstrate an understanding of S/MIME, including its uses, functions, cryptographic algorithms, and key certificates. – The student will be able to:
  - 104.01 Describe the role of S/MIME in conducting email communications.
  - 104.02 Compare and contrast the four new security functions provided by S/MIME (i.e., enveloped data, signed data, clear-signed data, and signed and enveloped data).
  - 104.03 Outline the process of using S/MIME during email processing.
  - 104.04 Describe the various cryptographic algorithms used by S/MIME and discuss their applicability (i.e., DSS, RSA, SHA-1, MD5, ElGamal, AES, 3DES, and HMAC).
  - 104.05 Describe memory leak as it pertains to dynamically allocated memory, its causes, and potential consequences (e.g., DOS attack).
  - 104.06 Describe the need for using x.509 v3 public key certificates with S/MIME.
- 105.0 Demonstrate an understanding of Kerberos and its role in third-party authentication in a distributed network. – The student will be able to:
  - 105.01 Compare and contrast the roles and operation of a Kerberos Authentication Server (AS) and a Ticket Granting Server (TGS).
  - 105.02 Describe a Kerberos realm and the mechanism for inter-realm authentication.
- 106.0 Demonstrate an understanding of identity management and ways in which secure identity information is exchanged across different domains. – The student will be able to:
  - 106.01 Describe the key components of identity management architecture.
  - 106.02 Describe the concept of identity federation and explain its benefits.
  - 106.03 Describe the standards used in federated identity management (i.e., XML, SOAP, WS-Security, and SAML).

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Applied Cybersecurity Applications  
**Course Number:** 9001390  
**Course Credit:** 1

**Course Description:**

This is a project-based capstone course to provide Applied Cybersecurity students with the opportunity to apply their skills from both offensive and defensive perspectives. Students work in teams to research, plan, design, create, and configure a virtual network to prevent intrusion. Students will be expected to plan, document, perform, and report on penetration testing of a mock virtual network. This activity may take the form of a Capture the Flag (CTF) event.

The following components should be a part of this course:

**Planning Conference**

The teacher and all team members must participate in a planning conference. It is critical that all parties involved understand and agree on time schedules, expectations, constraints, advanced learning applications, and evaluation criteria.

**Project Criteria**

The following criteria shall be met when choosing the Applied Cybersecurity Applications project:

The project must allow experiences that utilize both skills and knowledge directly related to the student's "white hat" career interests in cybersecurity. Activities related to penetration testing should span the various types of tests and attack vectors.

The project must provide opportunities for members to experience a high level of interactivity related to the challenges of learning and applying advanced skills in cybersecurity.

The project must provide a safe, legal, and ethically sound environment with up-to-date facilities and equipment.

Each student must maintain a journal with daily entries, defined by the teacher, such as:

- (a) Time spent on the project (log in and log out)
- (b) Description of the activity for the period(s)
- (c) Materials/equipment/fixtures used
- (d) Obstacles/challenges/vulnerabilities identified
- (e) Possible solutions/strategies identified
- (f) Work/successes accomplished
- (g) Solutions/tests attempted
- (h) Solutions/tests that failed
- (i) Conclusions

Each student will be expected to actively participate in creating their team's network design and penetration testing report. The teacher will create a rubric for communicating report requirements and assessing performance.

All design and penetration testing must be limited to the virtual computing environment provided to students and must be supervised and controlled by the teacher. Access to the virtual environment may be acceptable from off-campus or home computers, but is subject to approval by the teacher.

### **Supervision**

Teacher-coordinators of the Applied Cybersecurity Applications project must monitor student activities and support learning. Students must also be evaluated a minimum of once per grading period by the teacher-coordinator. The evaluation should assess how well the student is progressing toward goals established by the teacher-coordinator. The rubric-based design and report assessment, in combination with the student journal, is a recommended method of student assessment.

107.0 Complete a safety skills inventory. – The student will be able to:

107.01 Practice safety procedures while enrolled in this course.

107.02 Demonstrate an understanding of safety and general policies and procedures.

108.0 Demonstrate acceptable project values. – The student will be able to:

108.01 Maintain a positive relationship with peers.

108.02 Demonstrate adaptive self-management skills.

108.03 Adhere to industry accepted, legal, and ethical standards of cyber conduct.

108.04 Rotate through a wide variety of increasingly responsible experiences.

108.05 Apply basic skills in communications, mathematics, and science appropriate to technological content and learning activities.

109.0 Demonstrate the ability to detect and resolve system vulnerabilities. – The student will be able to:

109.01 Prepare a vulnerability matrix to identify and record weak points, the type of vulnerability, significance of the vulnerability, the priority, and the solution.

109.02 Determine possible solutions for each vulnerability.

109.03 Research each detected vulnerability.

109.04 Document solutions as they are devised.

109.05 Prepare an alternative for any solution that is not successful.

109.06 Continue the process until a workable solution is found for each vulnerability.

110.0 Plan, organize, and carry out a penetration testing plan. – The student will be able to:

110.01 Determine the scope and attack vectors for the test.

110.02 Organize the team according to individual strengths.

110.03 Assign specific tasks within a team.

110.04 Prioritize the attack vectors and sequence the test.

110.05 Identify required resources.

- 110.06 Carry out the testing plan to successful completion.
- 110.07 Create the test report detailing the goals, tests, findings, and results.
- 111.0 Demonstrate proficiency in conducting forensic analysis. – The student will be able to:
  - 111.01 Create security incident handling and response policies.
  - 111.02 Recover deleted, encrypted, or damaged file information as evidence for prosecution in computer crimes.
  - 111.03 Deploy proprietary and/or open source tools to identify intruder footprints.
  - 111.04 Coordinate incident response activities.
  - 111.05 Prepare proper documentation of chain of custody, including accounting for evidence source, destination, and possession.
  - 111.06 Preserve forensic integrity of evidence.
  - 111.07 Model highest moral and ethical standards in conducting digital forensic investigations.
- 112.0 Successfully work as a member of a team. – The student will be able to:
  - 112.01 Accept responsibility for specific tasks in a given situation.
  - 112.02 Document progress, and provide feedback on work accomplished in a timely manner.
  - 112.03 Complete assigned tasks in a timely and professional manner.
  - 112.04 Reassign responsibilities when the need arises.
  - 112.05 Complete daily tasks as assigned on one's own initiative.
- 113.0 Manage time according to a plan. – The student will be able to:
  - 113.01 Set realistic time frames and schedules.
  - 113.02 Record time worked in the daily journal.
  - 113.03 Meet goals and objectives set by the team.
  - 113.04 Identify individual priorities.
  - 113.05 Complete a weekly evaluation of accomplishments, and reevaluate goals, objectives and priorities as needed.
- 114.0 Keep acceptable records of progress problems and solutions. – The student will be able to:
  - 114.01 Develop a record keeping system in the form of a log book or journal to record daily progress.
  - 114.02 Use a project journal to identify problem statement
  - 114.03 Develop a portfolio of work accomplished to include design drawings, research, drawings and plans, storyboards, models, mock-ups and prototypes.
- 115.0 Manage resources. – The student will be able to:
  - 115.01 Identify required resources for each stage of the project plan.
  - 115.02 Determine the methods needed to acquire needed resources.
  - 115.03 Demonstrate good judgment in the use of resources.
  - 115.04 Recycle and reuse resources where appropriate.
  - 115.05 Demonstrate an understanding of proper legal and ethical treatment of copyrighted material.

116.0 Use tools, materials, and processes in an appropriate and safe manner. – The student will be able to:

- 116.01 Identify the proper tool for a given job.
- 116.02 Use tools and machines in a safe manner.
- 116.03 Adhere to laboratory or job site safety rules and procedures.
- 116.04 Identify the application of processes appropriate to the task at hand.
- 116.05 Identify materials appropriate to their application.

117.0 Research content related to the project and document the results.

- 117.01 Identify the basic research needed to develop the project plan.
- 117.02 Identify available resources for completing background research required in the project plan.
- 117.03 Demonstrate the ability to locate resource materials in a library, data base, internet and other research resources.
- 117.04 Demonstrate the ability to organize information retrieval.
- 117.05 Demonstrate the ability to prepare a topic outline.
- 117.06 Write a draft of the design and testing report.
- 117.07 Edit and proof the respective report.
- 117.08 Prepare an electronically composed report in proper form.

118.0 Use presentation skills, and appropriate media to describe the progress, results and outcomes of the experience.

- 118.01 Prepare a multi-media presentation on the completed project.
- 118.02 Make an oral presentation, using multi-media materials.
- 118.03 Review the presentation, and make changes in the delivery method(s) to improve presentation skills.

119.0 Demonstrate competency in the area of expertise related to the Applied Cybersecurity education program previously completed that this project is based upon.

- 119.01 Demonstrate a mastery of the content of the selected subject area.
- 119.02 Demonstrate the ability to use related technological tools, materials and processes related to the specific program area.
- 119.03 Demonstrate the ability to apply the knowledge, experience and skill developed in the previous program completion to the successful completion of this demonstration.
- 119.04 Demonstrate the acquisition of additional knowledge, skill and experience in one area of the selected field of study beyond the performance standards of the initial program standards.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Applied Information Technology  
**Program Type:** Career Preparatory  
**Career Cluster:** Information Technology

	Secondary	PSAV
Program Number	9003400	Y300400
CIP Number	0511010302	0511010302
Grade Level	9-12, 30, 31	30, 31
Standard Length	4 credits	600 hours
Teacher Certification	BUS ED 1 @2 COMPU SCI 6 INFO TECH 7G	BUS ED 1 @2 COMPU SCI 6 INFO TECH 7G
CTSO	FBLA BPA	Phi Beta Lambda BPA
SOC Codes (all applicable)	15-1041	15-1041
Facility Code	212 <a href="http://www.fldoe.org/edfacil/sref.asp">http://www.fldoe.org/edfacil/sref.asp</a> (State Requirements for Educational Facilities)	
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>	
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>	
Industry Certifications	<a href="http://www.fldoe.org/workforce/fcpea/default.asp">http://www.fldoe.org/workforce/fcpea/default.asp</a>	
Basic Skills Level	N/A	Mathematics: 9 Language: 9 Reading: 9

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to computer application skills including computer hardware, software applications, web applications, computer programming, web page design and advanced web tools, systems support and maintenance, network concepts, relational

database concepts, multimedia tools, cybersecurity ; extensive exploration of information technology careers; strategies for success including goal setting, study skills, organizing skills, learning styles, employability skills, and service learning; and core academic skills with a strong emphasis on effective communication skills.

### Program Structure

This program is a planned sequence of instruction consisting of three occupational completion points. Students may choose any of the six optional courses shown below to complete OCP-C.

When offered at the post secondary level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44 (3)(b), F.S.

The following table illustrates the **PSAV** program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	OTA0040	Information Technology Assistant	150	15-1041
B	CTS0072	IT & Web Systems	300	15-1041
C	CTS0063	Database Essentials or	150	15-1041
C	CTS0030	Programming Fundamentals or	150	15-1041
C	CTS0073	Web Development Fundamentals or	150	15-1041
C	CTS0075	Multimedia Systems or	150	15-1041
C	CTS0025	Computer Networking or	150	15-1041
C	CTS0068	Cybersecurity Essentials	150	15-1041

The following table illustrates the **Secondary** program structure:

OCP	Course Number	Course Title	Length	SOC Code	Level
A	9003410	Computer Fundamentals	1 credit	15-1041	2
	OR 8207310	OR Introduction to Information Technology			2
B	9003420	Web Technologies	1 credit	15-1041	3
	9003430	IT Systems & Applications	1 credit		3
C	9003440	Database Essentials or	1 credit	15-1041	3
C	9003450	Programming Essentials or	1 credit	15-1041	3
C	9003460	Web Development Technologies or	1 credit	15-1041	3
C	9003470	Multimedia Technologies or	1 credit	15-1041	3
C	9003480	Computer Networking Fundamentals or	1 credit	15-1041	3
C	9003490*	Cybersecurity Fundamentals	1 credit	15-1041	3

\* Students should have a strong networking knowledge base prior to enrolling in this course. The Computer Networking Fundamentals course (9003480) is recommended to provide this knowledge base.

## Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## Special Notes

### Academic Alignment

Some or all of the courses in this program have been aligned to the Next Generation Sunshine State Standards contained in specific math and science core academic courses. This alignment resulted from a collaborative review by Career and Technical Education (CTE) teachers and core academic teachers. The table below contains the results of the alignment efforts. Data shown in the table includes the number of academic standards in the CTE course, the total number of math and science standards contained in the academic course, and the percentage of alignment to the CTE course. The following academic courses were included in the alignment (see code for use in table).

Academic Subject Area	Academic Course
Math	Algebra 1 (ALG1) Algebra 2 (ALG2) Geometry (GEO)
Science	Anatomy/Physiology Honors (APH) Astronomy Solar/Galactic Honors (ASGH) Biology 1 (BIO1) Chemistry 1 (CHM1) Earth-Space Science (ESS) Genetics (GEN) Marine Science 1 Honors (MS1H) Physical Science (PS) Physics 1 (PHY1)

Course	Math			Science								
	ALG1	ALG2	GEO	APH	ASGH	BIO1	CHM1	ESS	GEN	MS1H	PS	PHY1
Introduction to IT	6/36 17%	2/41 5%	1/45 2%	2/53 4%	2/52 4%	2/56 4%	2/55 4%	2/58 3%	2/35 6%	2/42 5%	2/56 4%	2/53 4%
Computer Fundamentals	**	**	**	**	**	**	**	**	**	**	**	**
Web Technologies	**	**	**	**	**	**	**	**	**	**	**	**
IT Systems & Applications	**	**	**	**	**	**	**	**	**	**	**	**
Database Essentials	**	**	**	**	**	**	**	**	**	**	**	**
Programming Essentials	**	**	**	**	**	**	**	**	**	**	**	**

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

### **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills for secondary students. For postsecondary students, Phi Beta Lambda and BPA are the appropriate student organizations. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the program-specific OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

### **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 9.0, Language 9.0, and Reading 9.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination. Students may be exempt from meeting the Basic Skills requirements by earning an eligible industry certification. See the Basic Skills Exemption List document for a list of eligible industry certifications (<http://www.fldoe.org/workforce/dwdframe/rtf/basic-skills.rtf>).

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination pursuant to Section 1008.29, F.S.; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.)

## **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. Links to instructional resources in support of Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (ESE) will need modifications to meet their special needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular occupational completion point (OCP) or a modified occupational completion point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP(s)/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

## **Articulation**

The PSAV component of this program has no statewide articulation agreement approved by the Florida State Board of Education. However, this does not preclude the awarding of credits by any college through local agreements.

For details on statewide articulation agreements which correlate to programs and industry certifications, refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Bright Futures/Gold Seal Scholarship**

Course substitutions as defined in the Comprehensive Course Table for this program area may be used to qualify a student for Florida's Gold Seal Vocational Scholarship, providing all other eligibility requirements are met. Eligibility requirements are available online at [https://www.osfaffelp.org/bfiehs/fnbpcm02\\_CCTMain.aspx](https://www.osfaffelp.org/bfiehs/fnbpcm02_CCTMain.aspx).

### **Fine Arts/Practical Arts Credit**

Many courses in CTE programs meet the Fine Arts/Practical Arts credit for high school graduation. For additional information refer to <http://www.fldoe.org/schools/pdf/ListPracticalArtsCourses.pdf>.

### **Standards**

After successfully completing this program, the student will be able to perform the following:

#### **Computer Fundamentals Standards**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Practice quality performance.
- 03.0 Demonstrate knowledge of different operating systems.
- 04.0 Develop a familiarity with the information technology industry.
- 05.0 Develop an awareness of microprocessors and digital computers.
- 06.0 Develop an awareness of programming languages.
- 07.0 Develop an awareness of emerging technologies.
- 08.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model.
- 09.0 Demonstrate an awareness of specialized software.
- 10.0 Identify computer components and their functions.
- 11.0 Demonstrate proficiency using the Internet to locate information.
- 12.0 Demonstrate proficiency using Hypertext Markup Language (HTML).
- 13.0 Demonstrate proficiency in webpage design.
- 14.0 Demonstrate proficiency using common software applications.
- 15.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles.
- 16.0 Perform e-mail activities.
- 17.0 Demonstrate proficiency in using presentation software and equipment.
- 18.0 Perform decision-making activities in a multimedia environment.

**OR**

#### **Introduction to IT Standards:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate Comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles.

- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace.
- 11.0 Participate in work-based learning experiences.
- 12.0 Perform e-mail activities.
- 13.0 Demonstrate knowledge of different operating systems.
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW.
- 15.0 Demonstrate proficiency using HTML commands.
- 16.0 Demonstrate proficiency in page design applicable to the WWW.
- 17.0 Demonstrate proficiency using specialized web design software.
- 18.0 Develop an awareness of the information technology industry.
- 19.0 Develop an awareness of microprocessors and digital computers.
- 20.0 Develop an awareness of programming languages.
- 21.0 Develop an awareness of emerging technologies.
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model.
- 23.0 Demonstrate proficiency using common software applications.
- 24.0 Demonstrate proficiency using specialized software applications.

### **Web Technologies Standards**

- 25.0 Demonstrate proficiency on the principles of design.
- 26.0 Demonstrate proficiency planning an effective website.
- 27.0 Demonstrate proficiency formulating a website.
- 28.0 Demonstrate proficiency using web development tools and techniques.
- 29.0 Demonstrate proficiency using specialized web design software.
- 30.0 Demonstrate proficiency gathering and preparing web content.
- 31.0 Demonstrate an awareness of preparing a website for launch.

### **IT Systems & Applications Standards**

- 32.0 Explain motherboard components, types and features.
- 33.0 Explain the purpose and characteristics of CPUs and their features.
- 34.0 Perform installation and configuration activities.
- 35.0 Demonstrate proficiency using computer networks.
- 36.0 Perform the process for problem diagnostics and problem resolution through wireless, infrared, telephone, e-mail, remote access, or direct contact.
- 37.0 Demonstrate knowledge of presentation production issues.
- 38.0 Demonstrate proficiency using computer networks.
- 39.0 Demonstrate proficiency communicating over the Internet.
- 40.0 Demonstrate proficiency in troubleshooting, repair and maintenance of computers.

- 41.0 Demonstrate proficiency in the basic principles of security concepts and technologies.
- 42.0 Demonstrate proficiency in operational procedures as they relate to computer equipment and components.

### **Database Essentials Standards**

- 43.0 Develop an awareness of the changes taking place in the information age and how they fit into an evolving society.
- 44.0 Develop the "big picture" of database design and how to best organize data according to business rules and/or client needs.
- 45.0 Develop the process of creating an entity by identifying relationships.
- 46.0 Formulate and assemble initial entity relationship by expanding on modeling concepts.
- 47.0 Consider the degree and optionality of relationships of entities.
- 48.0 Demonstrate proficiency in early construction stages of the data modeling process by using unique identifiers and many-to-many (M:M) relationships for building entity relationship diagrams.
- 49.0 Demonstrate proficiency in advanced data constructs by analyzing business requirements and diagramming entities and relationships.
- 50.0 Apply the complex ERM information by fine-tuning entities and the process for relating them.
- 51.0 Apply initial database design and normalization by following the set of house rules that determine how items are stored and retrieved.
- 52.0 Manipulating data.
- 53.0 Building and modifying tables.
- 54.0 Performing queries and filtering records.

### **Programming Essentials Standards**

- 55.0 Plan program design.
- 56.0 Code programs.
- 57.0 Test programs.
- 58.0 Perform program maintenance.
- 59.0 Create and maintain documentation.
- 60.0 Develop an awareness of software quality assurance.
- 61.0 Develop an understanding of programming techniques and concepts.
- 62.0 Design structured programs.

### **Web Development Technologies Standards**

- 63.0 Demonstrate proficiency in page design applicable to the WWW.
- 64.0 Demonstrate proficiency in web page design applicable to the WWW.
- 65.0 Demonstrate proficiency in using a WYSIWG editor, web design, or web animation software for web page design.
- 66.0 Demonstrate proficiency in using digital photography and digital imaging.
- 67.0 Design and create webpages suitable for publishing to the Internet.
- 68.0 Describe how website performance is monitored and analyzed.
- 69.0 Demonstrate proficiency in hosting a website.
- 70.0 Demonstrate the ability to attract traffic for a website.

### **Multimedia Technologies Standards**

- 71.0 Demonstrate knowledge of presentation production issues.
- 72.0 Demonstrate proficiency in using digital photography and digital imaging.
- 73.0 Demonstrate basic video production.
- 74.0 Demonstrate set-up and configuration of a computer for video applications.
- 75.0 Demonstrate the basic operation of a video workstation.
- 76.0 Demonstrate basic audio production.
- 77.0 Set-up and configure a computer for audio applications.
- 78.0 Operate an audio workstation.
- 79.0 Demonstrate proficiency in using presentation software and equipment.

### **Computer Networking Fundamentals Standards**

- 80.0 Demonstrate understanding of network technologies.
- 81.0 Understand, install, and configure network hardware.
- 82.0 Understand, install and configure networking devices.
- 83.0 Understand, install and configure network management software.
- 84.0 Understand, install and configure networking tools.
- 85.0 Install, configure, and manage network security hardware and software devices.

### **Cybersecurity Fundamentals Standards**

- 86.0 Demonstrate an understanding of cybersecurity, the terminology used, its history and culture, and trends.
- 87.0 Recognize the following types of malicious code and specify the appropriate actions to take to mitigate vulnerability and risk.
- 88.0 Recognize and be able to differentiate and explain the following access control models.
- 89.0 Recognize and be able to differentiate and explain the following methods of authentication.
- 90.0 Recognize the following attacks and specify the appropriate actions to take to mitigate vulnerability and risk.
- 91.0 Recognize and understand the processes and risks associated with the following security concerns and tasks.
- 92.0 Recognize and understand the administration of the following types of remote access technologies.
- 93.0 Recognize and understand the administration of the following email security concepts.
- 94.0 Recognize and understand the administration of the following Internet security concepts.
- 95.0 Recognize and understand the administration of the following vulnerabilities.
- 96.0 Recognize and understand the administration of the following directory security concepts.
- 97.0 Recognize and understand the administration of the following file transfer protocols and concepts.
- 98.0 Recognize and understand the administration of the following wireless technologies and concepts.
- 99.0 Compare and contrast the following types of intrusion detection in terms of implementation and configuration.
- 100.0 Be able to identify and explain the following different kinds of cryptographic algorithms.
- 101.0 Understand how cryptography and digital signatures address the following security concepts.
- 102.0 Understand and be able to explain the following concepts of PKI (Public Key Infrastructure).

103.0 Understand and be able to explain the following concepts of Key Management and Certificate Lifecycles.

**Essential Skills**

- 104.0 Demonstrate language arts knowledge and skills.
- 105.0 Demonstrate mathematics knowledge and skills.
- 106.0 Demonstrate science knowledge and skills.
- 107.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 108.0 Solve problems using critical thinking skills, creativity and innovation.
- 109.0 Use information technology tools.
- 110.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.
- 111.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- 112.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 113.0 Describe the importance of professional ethics and legal responsibilities.
- 114.0 Explain the importance of employability skill and entrepreneurship skills.
- 115.0 Demonstrate personal money-management concepts, procedures, and strategies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: Applied Information Technology**  
**PSAV Number: Y300400**

**Course Number: OTA0040**  
**Occupational Completion Point – A**  
**Information Technology Assistant – 150 Hours – SOC Code 15-1041**

**Computer Fundamentals Standards**

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.02 Identify and describe communications and networking systems used in workplace environments.
- 01.03 Locate and apply reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.04 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.05 Describe ethical, privacy, and security issues and problems associated with computers and information systems.
- 01.06 Demonstrate proficiency in using the basic features of GUI browsers.

02.0 Practice quality performance. – The student will be able to:

- 02.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
- 02.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).

03.0 Demonstrate knowledge of different operating systems. – The student will be able to:

- 03.01 Identify operating system file naming conventions.
- 03.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
- 03.03 Demonstrate a working knowledge of standard file formats.
- 03.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 03.05 Differentiate between different operating systems and applications.
- 03.06 Compare and contrast open source and proprietary software.
- 03.07 Display understanding of how system utilities help maintain a computer.

04.0 Develop a familiarity with the information technology industry. – The student will be able to:

- 04.01 Explain how information technology impacts the operation and management of business and society.
- 04.02 Identify and describe the various ways of segmenting the IT industry (e.g., hardware vs. software, server vs. client, business vs. entertainment, stable vs. mobile, etc.)
- 04.03 Describe how digital technologies (social media, et al) are changing both work and personal lifestyles.

05.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:

- 05.01 Describe the evolution of the digital computer.
- 05.02 Explain the general architecture of a microcomputer system.
- 05.03 Explain the evolution of microprocessors.
- 05.04 Explain software hierarchy and its impact on microprocessors.
- 05.05 Explain the need for and use of peripherals.
- 05.06 Demonstrate proficiency installing and using plug-and-play peripherals.
- 05.07 Identify the basic concepts of computer maintenance and upgrades.

06.0 Develop an awareness of programming languages. – The student will be able to:

- 06.01 Explain the evolution of programming languages.
- 06.02 Explain the need for and use of compilers.
- 06.03 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 06.04 Compare the various types or classes of programming languages (e.g., compiled, interpretive, etc.).
- 06.05 Differentiate among source code, machine code, interpreters, and compilers.
- 06.06 Characterize the major categories of programming languages and how they are used.
- 06.07 Create a model flowchart for a computer program.
- 06.08 Create a simple computer application program using JavaScript and HTML
- 06.09 Describe the stages in the software development life cycle and explain how to successfully implement them.

07.0 Develop an awareness of emerging technologies. – The student will be able to:

- 07.01 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 07.02 Describe social media as an emerging technology.
- 07.03 Adhere to published best practices for protecting personal identifiable information when using the Internet.
- 07.04 Identify trends related to the use of information technology in people's personal and professional lives.
- 07.05 Characterize how the rapid pace of change in information technology impacts our society.

- 08.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 08.01 Describe the evolution of OSI from its inception to the present and into the future.
  - 08.02 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
  - 08.03 Describe the purpose of the OSI model and each of its layers.
  - 08.04 Explain specific functions belonging to each OSI model layer.
  - 08.05 Understand how two network nodes communicate through the OSI model.
  - 08.06 Discuss the structure and purpose of data packets and frames.
  - 08.07 Describe the two types of addressing covered by the OSI model.
- 09.0 Demonstrate an awareness of specialized software. – The student will be able to:
- 09.01 Compare and contrast the appropriate use of specialized software (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.).
  - 09.02 Research and report on the current state of specialized software (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
  - 09.03 Describe the hardware implications of using specialized software (e.g., RAM, hard drive size, CPU, storage devices, etc.).
- 10.0 Identify computer components and their functions. – The student will be able to:
- 10.01 Identify the internal components of a computer (e.g., power supply, hard drive, mother board, I/O cards/ports, cabling, etc.).
  - 10.02 Identify generic computer and programming terminology.
- 11.0 Demonstrate proficiency using the Internet to locate information. – The student will be able to:
- 11.01 Identify and describe web terminology.
  - 11.02 Define Universal Resource Locators (URLs) and associated protocols (e.g., http, ftp, telnet, mailto).
  - 11.03 Compare and contrast the types of Internet domains (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 11.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 11.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 11.06 Demonstrate proficiency using search engines, including Boolean search strategies.
  - 11.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
  - 11.08 Compare and contrast the roles of web servers and web browsers.
- 12.0 Demonstrate proficiency using Hypertext Markup Language (HTML). – The student will be able to:
- 12.01 Categorize websites according to their purpose.

- 12.02 Describe the types of documents that might be used in a web environment (e.g., HTML, ASP, DHTML, XML, JS, CSS, PHP).
  - 12.03 Identify elements of a webpage.
  - 12.04 Define basic HTML terminology.
  - 12.05 Critique the aesthetic and functional operation of sample websites.
  - 12.06 Create storyboards depicting a multi-page website (e.g., linear, hierarchical).
  - 12.07 Design, edit, and test HTML documents for accuracy and validity.
  - 12.08 Create and modify webpages using a Graphical User Interface (GUI) editor.
  - 12.09 Enhance webpages through the addition of images and graphics including animation.
  - 12.10 Analyze webpage source code developed by others.
  - 12.11 Create webpages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
- 13.0 Demonstrate proficiency in webpage design. – The student will be able to:
- 13.01 Develop an awareness of acceptable webpage design, including index pages in relation to the rest of the website.
  - 13.02 Describe and apply color theory as it applies to webpage design (e.g., background and text color).
  - 13.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 13.04 Use image design software to create and edit images.
  - 13.05 Demonstrate proficiency in publishing to the Internet.
  - 13.06 Demonstrate proficiency in adding downloadable forms to webpages.
  - 13.07 Explain the need for web-based applications.
- 14.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 14.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 14.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 15.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
- 15.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 15.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 15.03 Collaborate with individuals and teams to complete tasks and solve business related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 16.0 Perform e-mail activities. – The student will be able to:

- 16.01 Describe e-mail capabilities and functions.
  - 16.02 Identify components of an e-mail message.
  - 16.03 Identify the components of an e-mail address.
  - 16.04 Identify when to use different e-mail options.
  - 16.05 Attach a file to an e-mail message.
  - 16.06 Forward an e-mail message.
  - 16.07 Use an address book.
  - 16.08 Reply to an e-mail message.
  - 16.09 Use the Internet to perform e-mail activities.
  - 16.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 16.11 Identify when to include information from an original e-mail message in a response.
  - 16.12 Identify common problems associated with widespread use of e-mail.
- 17.0 Demonstrate proficiency in using presentation software and equipment. – The student will be able to:
- 17.01 Produce a presentation that includes music, animation, and digital photography and present it using a projection system.
  - 17.02 Using presentation software, create a multimedia presentation that incorporates shot and edited video, animation, music, narration and adheres to good design principles, use of transitions, and effective message conveyance.
  - 17.03 Demonstrate knowledge of the roles and responsibilities of a multimedia production team (e.g. project manager, creative or design director, content experts, writers, graphic designers, animators, sound designers, videographer, interface designers/programmers, etc.).
  - 17.04 Collaborate with team members to plan, edit, evaluate, and present a multimedia presentation where individuals on the team function in specific production roles .
  - 17.05 Create a self-running presentation with synchronized audio, convert presentation slides (e.g. PowerPoint) into streaming ASF files for use on the Web.
- 18.0 Perform decision-making activities in a multimedia environment. – The student will be able to:
- 18.01 Determine work priorities, the audience, project budgets, project specifications, and the production schedule.
  - 18.02 Evaluate and select appropriate software packages and multimedia tools to complete assigned tasks.
  - 18.03 Present and defend design projects.
  - 18.04 Evaluate criteria for selecting an operating system.
- 104.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 104.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
  - 104.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
  - 104.03 Present information formally and informally for specific purposes and audiences. AF2.9
- 105.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0

- |        |   |       |
|--------|---|-------|
| 105.01 | Demonstrate knowledge of arithmetic operations.   | AF3.2 |
| 105.02 | Analyze and apply data and measurements to solve problems and interpret documents.  | AF3.4 |
| 105.03 | Construct charts/tables/graphs using functions and data.  | AF3.5 |
| 106.0  | <u>Demonstrate science knowledge and skills.</u> – The student will be able to:   | AF4.0 |
| 106.01 | Discuss the role of creativity in constructing scientific questions, methods and explanations.  | AF4.1 |
| 106.02 | Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. | AF4.3 |

**OR**

**Introduction to Information Technology Standards**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
  - 01.06 Describe ethical issues and problems associated with computers and information systems.
- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
  - 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
  - 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
  - 02.04 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
  - 02.05 Apply the writing process to the creation of appropriate documents following designated business formats.
  - 02.06 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).
- 03.0 Use technology to enhance the effectiveness of communication skills. – The student will be able to:

- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
  - 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
  - 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
  - 08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:
- 09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).
  - 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.

- 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:
- 14.01 Identify and describe Web terminology.
  - 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
  - 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
  - 14.08 Identify effective Boolean search strategies.
- 15.0 Demonstrate proficiency using HTML commands. – The student will be able to:
- 15.01 Identify elements of a Web page.
  - 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
  - 15.03 Define basic HTML terminology.
  - 15.04 Analyze HTML source code developed by others.
  - 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
  - 15.07 Edit and test HTML documents for accuracy and validity.
  - 15.08 Use basic functions of WYSIWYG editors.
  - 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 15.10 Enhance web pages through the addition of images and graphics including animation.

- 16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
  - 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
  - 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 16.04 Use image design software to create and edit images.
  - 16.05 Demonstrate proficiency in publishing to the Internet.
  - 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
  - 16.07 Explain the need for web-based applications.
- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).

- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.
  - 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
  - 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
  - 24.03 Demonstrate the ability to incorporate digital sound.
- 104.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 104.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
  - 104.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5

- 104.03 Present information formally and informally for specific purposes and audiences. AF2.9
- 105.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 105.01 Demonstrate knowledge of arithmetic operations. AF3.2
- 105.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
- 105.03 Construct charts/tables/graphs using functions and data. AF3.5
- 106.0 Demonstrate science knowledge and skills. – The student will be able to: AF4.0
- 106.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF4.1
- 106.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF4.3

**Course Number: CTS0072**  
**Occupational Completion Point – B**  
**IT & Web Systems – 300 Hours – SOC Code 15-1041**

- 25.0 Demonstrate proficiency on the principles of design. – The student will be able to
- 25.01 Identify industry best practices in visual design (e.g., color schemes, fonts, navigation methods, pagination).
- 25.02 Explain the key concepts of meeting client needs.
- 25.03 Apply the principles of Human Computer Interface (HCI) to design and develop an effective look and feel for a website.
- 25.04 Design and create a webpage for optimal display in multiple browsers.
- 26.0 Demonstrate proficiency planning an effective website. The student will be able to:
- 26.01 Compare and contrast site maps and wireframes.
- 26.02 Develop an effective site map for a website.
- 26.03 Create page layout wireframes for a website.
- 27.0 Demonstrate proficiency formulating a website. – The student will be able to:
- 27.01 Classify web development tasks according to when they are performed during the web development cycle.
- 27.02
- 27.03 Describe the different types of business requirements that apply to website design.
- 27.04 Design business requirements to help ensure success for a specific website.
- 27.05 Demonstrate ability to use effective designer-client communication skills.
- 28.0 Demonstrate proficiency using web development tools and techniques. – The student will be able to:

- 28.01 Compare and contrast writing HTML using a text editor versus using a WYSIWYG editor
  - 28.02 Design and create an effective web page template.
  - 28.03 Create attractive, engaging, and efficient web pages using a WYSIWYG editor.
  - 28.04 Create an appropriate directory structure, naming convention protocol, and file organization for a website.
  - 28.05 Create DHTML and XML documents using editors or converters.
- 29.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 29.01 Compare and contrast various specialized web design software (e.g., Flash, Photoshop, Dreamweaver, etc.).
  - 29.02 Demonstrate proficiency using various specialized web design software (e.g., Flash, Photoshop, Dreamweaver, etc.).
- 30.0 Demonstrate proficiency gathering and preparing web content. – The student will be able to:
- 30.01 Characterize effective writing styles and conventions for the web.
  - 30.02 Create effective written content for the web.
  - 30.03 Prepare various types of graphical content for use on a webpage.
  - 30.04 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 30.05 Create and edit images using image or graphic design software.
  - 30.06 Compare and contrast static versus dynamic web content.
- 31.0 Demonstrate an awareness of preparing a website for launch. – The student will be able to:
- 31.01 Evaluate a website for basic usability and accessibility issues.
  - 31.02 List the steps that are necessary to determine when a website is ready to launch.
  - 31.03 Develop a User Testing Plan.
  - 31.04 Demonstrate the ability to organize and execute a user testing of a website.
  - 31.05 Demonstrate proficiency in publishing to the Internet.
- 32.0 Explain motherboard components, types and features. – The student will be able to:
- 32.01 Identify different motherboard form factors (ATX/BTX and micro ATX).
  - 32.02 Identify input/output interfaces (e.g. USB, serial and NIC).
  - 32.03 Identify the different types of bus slots (e.g. PCI, AGP, PCMCIA).
  - 32.04 Identify the BIOS/CMOS/Firmware (e.g. POST, CMOS battery).
- 33.0 Explain the purpose and characteristics of CPUs and their features. – The student will be able to:
- 33.01 Identify types of CPUs (e.g. AMD and Intel).
  - 33.02 Define hyper threading
  - 33.03 Explain multi core (e.g. dual, triple and quad).
  - 33.04 Explain the difference between onboard cache (e.g. L1, L2, and L3).
  - 33.05 Compare and contrast between real and actual speed.

- 33.06 Compare and contrast between 32 bit and 64 bit processing.
- 34.0 Perform installation and configuration activities. – The student will be able to:
- 34.01 Install and configure software including device drivers.
  - 34.02 Install and configure operating system software.
  - 34.03 Install and configure application software.
  - 34.04 Install and configure peripherals including device drivers (e.g., scanners, cameras, printers).
  - 34.05 Supervise the testing of operating system management systems (e.g., registry, INI files).
  - 34.06 Prepare the hard disk and related issues for operating system installation (e.g., BIOS, disk controllers).
  - 34.07 Format and partition the hard disk.
  - 34.08 Verify the proper operation of the system (e.g., physical inspection, tests, utilities).
  - 34.09 Compare and contrast memory technologies (e.g., RAM, ROM, virtual memory, memory management)
  - 34.10 Demonstrate proficiency using various memory technologies (e.g., RAM, ROM, virtual memory, memory management).
  - 34.11 Demonstrate proper use of user interfaces, command utilities, and troubleshooting utilities
  - 34.12 Explain the basics of boot sequences, methods and startup utilities.
- 35.0 Demonstrate proficiency using computer networks. – The student will be able to:
- 35.01 Compare and contrast various implementation models (e.g., TCP/IP protocols, OSI 7, IPX, cross mapping of protocols).
  - 35.02 Describe an Ethernet network and the use of CSMA\CD.
- 36.0 Perform the process for problem diagnostics and problem resolution through wireless, infrared, telephone, e-mail, remote access, or direct contact. – The student will be able to:
- 36.01 Identify, troubleshoot and propose solutions for configuration problems.
  - 36.02 Identify, troubleshoot and propose solutions for software problems.
  - 36.03 Identify, troubleshoot and propose solutions for hardware malfunctions.
  - 36.04 Identify, troubleshoot and propose solutions for network malfunctions.
  - 36.05 Plan and implement a system upgrade and downgrade.
  - 36.06 Evaluate data recovery using various techniques (e.g., MBR repair tools, rescue disks, disk image, backup).
  - 36.07 Organize and perform system maintenance activities (e.g., management console, SNMP, system monitors, diagnostics, virus management).
  - 36.08 Demonstrate corporate interaction proficiency (e.g., responsibility, interaction, communication).
- 37.0 Demonstrate knowledge of presentation production issues. – The student will be able to:
- 37.01 Demonstrate knowledge of copyright laws including copyright statute, disclaimers, and filing procedure.

- 37.02 Demonstrate an understanding of graphic and other file formats (e.g., EPS, TIFF, JPEG, ASCII, MPEG, MIDI, AVI, WAV, etc.) and knowledge of image size when scanning and saving files for use in different presentation types (Web, computer, print, etc.).
  - 37.03 Identify display device connectors and types (e.g. VGA, HDMi, and S-Video).
  - 37.04 Define refresh rate, resolution, multi-monitor and Degauss.
  - 37.05 Demonstrate knowledge of presentation vocabulary/terms.
  - 37.06 Compare and contrast and utilize various audio/video output solutions and devices (e.g., DVD, CD-Rom, web).
  - 37.07 Compare and contrast removable storage (tape drive, thumb drive, flash drive, USB, external CD-RW and external hard drive).
- 38.0 Demonstrate proficiency using computer networks. – The student will be able to:
- 38.01 29.01 Define networking and describe the purpose of a network.
  - 38.02 29.02 Describe the conceptual background of digital networks including terminology and basics.
  - 38.03 29.03 Describe various types of networks and the advantages and disadvantages of each (e.g. peer to peer, client/server, mainframe/terminal).
  - 38.04 24.04 Describe the use, advantages, and disadvantages of various network media [e.g. thinnet cable, coaxial), twisted pair (cat 5), fiber optics]
  - 38.05 24.05 Describe the function of various network devices (e.g. hub, switched hub or switch, router bridge, gateway, and access points)
  - 38.06 24.06 Describe the difference between the internet and intranet.
  - 38.07 24.07 Compare and contrast IP Version 6 and IP Version 4.
  - 38.08 24.08 Compare and contrast the different network types (e.g. broadband, wireless, Bluetooth, and cellular).
- 39.0 Demonstrate proficiency communicating over the Internet. – The student will be able to:
- 39.01 Display understanding of how Internet Service Providers (ISP) operate and what role they play in enabling users to connect to the Internet.
  - 39.02 Explain how the Internet works and how documents are connected and transferred.
  - 39.03 Configure an email client for SMTP and POP3 servers, including port assignment.
  - 39.04 Explain how the primary modes of Internet communication are used.
- 40.0 Demonstrate proficiency in troubleshooting, repair and maintenance of computers. – The student will be able to:
- 40.01 Determine the troubleshooting methods and tools for printers.
  - 40.02 Explain and interpret common laptop issues and basic troubleshooting methods.
  - 40.03 Integrate common preventative maintenance techniques.
- 41.0 Demonstrate proficiency in the basic principles of security concepts and technologies. – The student will be able to:
- 41.01 Evaluate encryption technologies, software firewall, authentication technologies, and data security.

- 41.02 Summarize the following security features (e.g. wireless encryption, malicious software protection and BIOS security, password management and biometrics).
- 42.0 Demonstrate proficiency in operational procedures as they relate to computer equipment and components. – The student will be able to:
- 42.01 Compare and contrast ESD, EMI, RFI, and electrical safety.
- 42.02 Demonstrate proficiency in the use of state regulations for hazardous materials (e.g. MSDS).
- 107.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 107.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
- 107.02 Locate, organize and reference written information from various sources. CM 3.0
- 107.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
- 107.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
- 107.05 Apply active listening skills to obtain and clarify information. CM 7.0
- 107.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
- 107.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 108.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 108.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
- 108.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
- 108.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
- 108.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 109.0 Use information technology tools. – The student will be able to:
- 109.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 109.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 109.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 109.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 110.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:
- 110.01 Describe the nature and types of business organizations. SY 1.0

- 110.02 Explain the effect of key organizational systems on performance and quality.
- 110.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
- 110.04 Explain the impact of the global economy on business organizations.
- 113.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 113.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
- 113.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
- 113.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2
- 113.04 Interpret and explain written organizational policies and procedures. ELR 2.0

**Course Number: CTS0063**  
**Occupational Completion Point – C**  
**Database Essentials – 150 Hours – SOC Code 15-1041**

- 43.0 Develop an awareness of the changes taking place in the information age and how they fit into an evolving society. – The student will be able to:
- 43.01 Describe the role a database plays in a business and predict its evolution.
- 43.02 Demonstrate the difference between “data” and “information.”
- 43.03 Understand the importance of clear communication when discussing business informational requirements.
- 43.04 Experiment with web-based email and explain how these services use a database.
- 44.0 Develop the "big picture" of database design and how to best organize data according to business rules and/or client needs. – The student will be able to:
- 44.01 Identify and analyze the phases of the database development process.
- 44.02 Explain what conceptual data modeling and database design involves.
- 44.03 Compare database development process with that of the application development process.
- 44.04 Identify the need for databases and why they are used.
- 44.05 Explain the various types of databases (i.e., flat file, relational) and the appropriate use of each.
- 44.06 Demonstrate proficiency in design methodology by completing appropriate tasks during the appropriate time of the developmental life cycle.
- 44.07 Demonstrate proficiency in design methodology by considering where the database will reside.
- 45.0 Develop the process of creating an entity by identifying relationships. – The student will be able to:
- 45.01 Identify and model various types of entities.
- 45.02 Identify naming and drawing conventions for entities.

- 45.03 Sequence the steps that are necessary for creation of an entity.
- 45.04 Analyze and model the relationships between entities.
- 46.0 Formulate and assemble initial entity relationship by expanding on modeling concepts. – The student will be able to:
- 46.01 Analyze and model attributes.
- 46.02 Identify unique identifiers for each entity.
- 46.03 Develop an entity relationship diagram tagging attributes with optionality.
- 47.0 Consider the degree and optionality of relationships of entities. – The student will be able to:
- 47.01 Create models and entity relationship information requirements and interviews.
- 47.02 Begin to differentiate between one-to-many, many-to-many and one-to-one relationships.
- 47.03 Identify relationship between two entities by reading a given diagram.
- 47.04 Create a relationship between instances of the same entity.
- 47.05 Read an entity relationship model in order to validate it.
- 48.0 Demonstrate proficiency in early construction stages of the data modeling process by using unique identifiers and many-to-many (M:M) relationships for building entity relationship diagrams. – The student will be able to:
- 48.01 Identify the significance of an attribute that has more than one value for each entity instance.
- 48.02 Evaluate appropriate methods of storing validation rules for attributes.
- 48.03 Recognize unique identifiers inherited from other entities.
- 48.04 Sequence the steps involved in resolving a many-to-many relationship.
- 49.0 Demonstrate proficiency in advanced data constructs by analyzing business requirements and diagramming entities and relationships -The student will be able to:
- 49.01 Validate that an attribute is properly placed based upon its dependence on its entity's unique identifier (UID).
- 49.02 Model advanced data constructs including recursive relationships, subtypes, and exclusive relationships.
- 49.03 Enforce referential integrity.
- 50.0 Apply the complex ERM information by fine-tuning entities and the process for relating them. – The student will be able to:
- 50.01 Describe a relational database and how it is different from other database systems.
- 50.02 Define primary keys and foreign keys and describe their purpose.
- 50.03 Describe what data integrity refers to and list some constraints.
- 50.04 Explain how database design fits into the database development process.
- 50.05 Translate an entity-relationship model into a relational database design.
- 51.0 Apply initial database design and normalization by following the set of house rules that determine how items are stored and retrieved. – The student will be able to:

- 51.01 Recognize raw data and evaluate the steps for creating a data group in unnormalized form (UNF).
- 52.0 Manipulating data. – The student will be able to:
- 52.01 Determine appropriate data inputs and outputs for an existing database.
  - 52.02 Demonstrate proficiency in record management (i.e., entering, editing, finding, selecting, sorting, deleting records).
  - 52.03 Change the layout of a datasheet.
  - 52.04 Create forms, reports, mailing labels, and charts using a database.
  - 52.05 Export data to appropriate software applications.
  - 52.06 Demonstrate proficiency in coordinating databases with appropriate software applications.
- 53.0 Building and modifying tables. – The student will be able to:
- 53.01 Create a database table.
  - 53.02 Create table structures and establish table relationships.
  - 53.03 Determine fields and assign data types in a database table.
  - 53.04 Demonstrate appropriate manipulation of database tables (i.e., enter data, add and delete records).
  - 53.05 Modify a database table by adding, deleting, and removing fields.
  - 53.06 Demonstrate proficiency in the appropriate use of database wizards.
- 54.0 Performing queries and filtering records. – The student will be able to:
- 54.01 Design a query and extract specific data from a database table.
  - 54.02 Create a calculated field.
  - 54.03 Filter data in records by selection and by form.
  - 54.04 Modify a saved query.
- 111.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 111.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
  - 111.02 Explain emergency procedures to follow in response to workplace accidents.
  - 111.03 Create a disaster and/or emergency response plan. SHE 2.0
- 112.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 112.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
  - 112.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
  - 112.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
  - 112.04 Employ mentoring skills to inspire and teach others. LT 5.0

- 114.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 114.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
  - 114.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
  - 114.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
  - 114.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
  - 114.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
  - 114.06 Identify and exhibit traits for retaining employment. ECD 7.0
  - 114.07 Identify opportunities and research requirements for career advancement. ECD 8.0
  - 114.08 Research the benefits of ongoing professional development. ECD 9.0
  - 114.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0
- 115.0 Demonstrate personal money-management concepts, procedures, and strategies. – The student will be able to:
- 115.01 Identify and describe the services and legal responsibilities of financial institutions. FL 2.0
  - 115.02 Describe the effect of money management on personal and career goals. FL 3.0
  - 115.03 Develop a personal budget and financial goals. FL3.1
  - 115.04 Complete financial instruments for making deposits and withdrawals. FL3.2
  - 115.05 Maintain financial records. FL3.3
  - 115.06 Read and reconcile financial statements. FL3.4
  - 115.07 Research, compare and contrast investment opportunities.

**Course Number: CTSS0030**  
**Occupational Completion Point – C**  
**Programming Fundamentals – 150 Hours – SOC Code 15-1041**

- 55.0 Plan program design. – The student will be able to:
- 55.01 Formulate a plan to determine program specifications individually or in groups.
  - 55.02 Use a graphical representation or pseudocode to represent the structure in a program or subroutine.
  - 55.03 Design programs to solve problems using problem-solving strategies.
  - 55.04 Prepare proper input/output layout specifications.
  - 55.05 Manually trace the execution of programs and verify that programs follow the logic of their design as documented.
  - 55.06 Analyze problem statements.
  - 55.07 Determine what kind of information the desired program must process.
  - 55.08 Formulate concise descriptions of a program's task and purpose.
  - 55.09 Formulate concise descriptions of task and purpose of a program's pieces.
  - 55.10 Organize programs according to the problem analysis.
  - 55.11 Recognize changes in the problem statement.
  - 55.12 Suggest changes in the program organization.
- 56.0 Code programs. – The student will be able to:

- 56.01 Write programs according to recognized programming standards.
- 56.02 Write internal documentation statements as needed in the program source code.
- 56.03 Code programs using logical statements (e.g., If-Then-Else, Do..While).
- 56.04 Enter and modify source code using a program language editor.
- 56.05 Code routines within programs that validate input data.
- 56.06 Code programs using object-oriented languages (techniques).
- 56.07 Select the essential aspects of a problem statement.
- 56.08 Provide a solution to a problem.
- 56.09 Find solutions to an extended problem statement.
- 56.10 Utilize reference manuals and help systems.
- 56.11 Use pre-defined functions within programs.

57.0 Test programs. – The student will be able to:

- 57.01 Develop a plan for testing programs.
- 57.02 Develop data for use in program testing.
- 57.03 Perform debugging activities.
- 57.04 Distinguish among the different types of program and design errors.
- 57.05 Evaluate program test results.
- 57.06 Execute programs and subroutines as they relate to the total application.
- 57.07 Develop examples that illustrate the core behavior of each program.
- 57.08 Develop examples that illustrate the core behavior of each program component.
- 57.09 Illustrate the behavior of boundary cases.
- 57.10 Demonstrate an understanding that engineering artifacts requires rigorous and systematic testing.
- 57.11 Use examples to show that the solution meets pre-determined criteria.
- 57.12 Demonstrate understanding that testing can expose problems but not prove the correctness of the design in an absolute sense.
- 57.13 Compile (interpret) and run programs.

58.0 Perform program maintenance. – The student will be able to:

- 58.01 Analyze output to identify and annotate errors or enhancements.

59.0 Create and maintain documentation. – The student will be able to:

- 59.01 Follow established documentation standards.

60.0 Develop an awareness of software quality assurance. – The student will be able to:

- 60.01 Identify the legal and social consequences of errors in software.
- 60.02 Describe copyright and other laws that relate to software theft and misuse.
- 60.03 Describe software security measures to protect computer systems and data from unauthorized use and tampering (e.g., physical security, passwords, virus protection/prevention).

61.0 Develop an understanding of programming techniques and concepts. – The student will be able to:

- 61.01 Identify the basic constructs used in structured programming.

- 62.0 Design structured programs. – The student will be able to:
- 62.01 Design programs that model mathematical relationships from application areas (e.g., accounting, economics, multimedia, programming, science, web, etc.).
  - 62.02 Design programs that deal with multi-faceted objects (e.g., personnel records, physical objects, attributes of HTML tags, etc.).
  - 62.03 Design programs that deal with mixed classes of objects (e.g., a class of geometric shapes containing circles, rectangles, triangles, squares, polygons, etc.).
  - 62.04 Design programs that deal with objects of undetermined size (e.g., shopping lists, family trees, file directories on computers, websites, etc.).

**Course Number: CTS0073**

**Occupational Completion Point – C**

**Web Development Fundamentals – 150 Hours – SOC Code 15-1041**

- 63.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 63.01 Identify and convert graphic formats.
  - 63.02 Demonstrate proficiency in adding Java scripts to web pages.
  - 63.03
- 64.0 Demonstrate proficiency in web page design applicable to the WWW. – The student will be able to:
- 64.01 Determine the objectives and the audience for Web pages.
  - 64.02 Identify design strategies to reach and keep an audience.
  - 64.03 Use storyboarding to plan a website.
  - 64.04 Create styles and other design elements (e.g. backgrounds, colors, fonts, buttons, etc.).
- 65.0 Demonstrate proficiency in using a WYSIWG editor, web design, or web animation software for web page design. – The student will be able to:
- 65.01 Apply style sheets for consistent website design.
  - 65.02 Create and edit images and photographs for Web pages using digital imaging software (e.g., ImageReady in Photoshop).
  - 65.03 Insert audio files into a Web page.
  - 65.04 Create, edit and integrate video files into a Web page.
  - 65.05 Create, edit and integrate animation files into a Web page.
  - 65.06 Demonstrate an understanding of photograph compression factors such as transmission speed, color reduction, and browser support.
  - 65.07 Demonstrate knowledge of image formats related to photos and graphics on the Internet (e.g. Graphic formats (TIFF & EPS), Web formats (JPEG, GIF, PNG, etc.)
  - 65.08 Save and export a photograph to the Web in the format best for image quality and file size.
  - 65.09 Build, optimize, edit, and test web pages for publication.
  - 65.10 Create a web page that utilizes plug-ins.

- 65.11 Demonstrate an understanding of network and web implementation issues (e.g., bandwidth, compression, streaming).
  - 65.12 Compare and contrast various methods by which information may be accessed on the Internet/Intranet (e.g., FTP, telnet, browser).
  - 65.13 Demonstrate an understanding of file encryption methods (e.g., secure server, unsecured server).
- 66.0 Demonstrate proficiency in using digital photography and digital imaging – The student will be able to:
- 66.01 Demonstrate knowledge of ethics related to digital imaging, and legal and consent issues.
  - 66.02 Apply effective design principles in digital photography compositions.
  - 66.03 Illustrate the essence of an event, quote, or slogan through digital photography/imaging.
  - 66.04 Demonstrate skill in using digital imaging software for image manipulation, color correction, and special effects to creatively convey a message or literary interpretation.
  - 66.05 Demonstrate skill in scanning and cropping photographs.
- 67.0 Design and create webpages suitable for publishing to the Internet. – The student will be able to:
- 67.01 Explain the need for web-based applications.
  - 67.02 Evaluate a website for basic usability and accessibility issues.
  - 67.03 Display an understanding of the purposes of site maps and wireframes.
  - 67.04 Develop an effective site map for a website.
  - 67.05 Develop effective wireframes for a website.
  - 67.06 Identify industry best practices in visual design.
  - 67.07 Explain the key concepts of meeting client needs.
  - 67.08 Develop an effective look and feel for a website.
  - 67.09 Develop an effective web page template.
  - 67.10 Describe a correct directory structure, naming convention protocol, and file organization for a website.
  - 67.11 Characterize effective writing for the web.
  - 67.12 Create effective written content for the web.
  - 67.13 Decide how to best prepare various types of graphical content for use on a web page.
  - 67.14 Develop a User Testing Plan.
  - 67.15 List the steps that are necessary to determine when a website is ready to launch.
  - 67.16 Demonstrate the ability to organize and execute a user testing of a website.
- 68.0 Describe how website performance is monitored and analyzed. – The student will be able to:
- 68.01 Identify issues related to website maintenance.
  - 68.02 Use webpage validation tools.
  - 68.03 Describe website performance metrics (e.g., visits, time-on-page, time-on-site, et al) and discuss their design implications.
  - 68.04 Demonstrate knowledge of accessibility problems and solutions.
  - 68.05 Examine indexing, page ranking, basic Search Engine Optimization techniques.

- 68.06 Explore common website analytic tools
- 68.07 Construct web pages with streaming media content.
- 68.08 Construct web pages with streaming media content.

69.0 Demonstrate proficiency in hosting a website. – The student will be able to:

- 69.01 Apply professional guidelines to choose, search for, and register a domain name.
- 69.02 Evaluate criteria upon which to select an appropriate web host.
- 69.03 Make generalizations about optimal download speed for a particular website.
- 69.04 Demonstrate the ability to upload and download files using FTP protocol.
- 69.05 Develop a Maintenance Plan for a client.

70.0 Demonstrate the ability to attract traffic for a website. – The student will be able to:

- 70.01 Explain and describe the best practices for attracting traffic to websites.
- 70.02 Evaluate an effective search engine optimization strategy.
- 70.03 Describe tactics for building online credibility.
- 70.04 Explain how to use standard techniques to gather and/or track site statistics.

**Course Number: CTS0075**  
**Occupational Completion Point – C**  
**Multimedia Systems – 150 Hours – SOC Code 15-1041**

71.0 Demonstrate knowledge of presentation production issues. – The student will be able to:

- 71.01 Identify characteristics of various types of presentations (informing, selling, teaching, and entertaining).
- 71.02 Identify presentation materials (e.g. handouts, seminar notebooks, business cards, coupons, etc.) and presentation marketing mediums (ex. print media such as newspaper, magazines; TV; movies; computer presentations; interactive CD ROM; kiosks, and Web pages, etc.).
- 71.03 Identify design characteristics (fonts, size and styles, backgrounds, etc.) that are suited for each type of presentation format and material.
- 71.04 Demonstrate knowledge of copyright laws including copyright statute, disclaimers, and filing procedures.
- 71.05 Research and identify skills needed for career positions in multimedia.
- 71.06 Demonstrate an understanding of graphic and other file formats (e.g., EPS, TIFF, JPEG, ASCII, MPEG, MIDI, AVI, WAV, etc.) and knowledge of image size when scanning and saving files for use in different presentation types (Web, computer, print, etc.)
- 71.07 Demonstrate knowledge of presentation vocabulary/terms.

72.0 Demonstrate proficiency in using digital photography and digital imaging. – The student will be able to:

- 72.01 Demonstrate knowledge of ethics related to digital imaging, and legal and consent issues.
- 72.02 Apply effective design principles in digital photography compositions.
- 72.03 Illustrate the essence of an event, quote, or slogan through digital photography/imaging.

- 72.04 Demonstrate skill in using digital imaging software for image manipulation, color correction, and special effects to creatively convey a message or literary interpretation.
  - 72.05 Demonstrate skill in scanning and cropping photographs.
  - 72.06 Incorporate scanned or digitally taken photographs into documents (poster, brochure, card, photo journalism story, report or book covers, letterhead, etc.) that have been designed using desktop publishing software or the desktop publishing features of word processing software.
- 73.0 Demonstrate basic video production. – The student will be able to:
- 73.01 Use current industry standard production video equipment.
  - 73.02 Operate camera in studio and location (field) production environments.
  - 73.03 Demonstrate understanding of digital video storage concepts and digital storage media.
  - 73.04 Demonstrate knowledge of and the ability to operate digital recording decks, and other digital storage devices.
  - 73.05 Identify and select microphones for production needs.
  - 73.06 Determine appropriate lighting needs for production settings.
  - 73.07 Identify location and studio lighting types, method of use and application.
- 74.0 Demonstrate set-up and configuration of a computer for video applications. – The student will be able to:
- 74.01 Install basic peripheral devices related to video programs.
  - 74.02 Install and configure software related to video programs.
  - 74.03 Demonstrate basic knowledge of computer system requirements.
  - 74.04 Demonstrate basic knowledge of installing plug-ins or additional audio source material such as beats and or samples.
  - 74.05 Understand the signal flow of a digital video workstation.
- 75.0 Demonstrate the basic operation of a video workstation. – The student will be able to:
- 75.01 Demonstrate knowledge of the digital video workstation interface.
  - 75.02 Demonstrate a working familiarity and understanding of the function and operation of digital video workstations.
  - 75.03 Describe a full digital media production cycle
  - 75.04 Demonstrate ability to edit, cut, erase, and insert video utilizing various digital production techniques.
  - 75.05 Record video directly to the digital video workstation.
  - 75.06 Demonstrate knowledge of editing video according to message.
  - 75.07 Demonstrate skill in using video effects and plug-ins.
  - 75.08 Describe a first complete run-through of the video production process
  - 75.09 Characterize the qualities of effective communication in a completed video
  - 75.10 Prepare a video project for final compositing and export.
  - 75.11 Transfer video files between various video software applications.
  - 75.12 Export finished video.
  - 75.13 Identify and describe solutions to the challenges and obstacles that arise in a video production
- 76.0 Demonstrate basic audio production. – The student will be able to:

- 76.01 Describe digital audio storage concepts and digital storage media.
- 76.02 Operate digital recording decks and other digital storage devices.
- 76.03 Describe the function and operation of digital audio workstations.
- 76.04 Edit, cut, erase, and insert sound utilizing various digital production techniques.
- 76.05 Perform digital noise reduction and noise extraction via spectral display.

77.0 Set-up and configure a computer for audio applications. – The student will be able to:

- 77.01 Install basic peripheral devices related to audio programs.
- 77.02 Install and configure software related to audio programs.
- 77.03 Demonstrate basic knowledge of computer system requirements.
- 77.04 Install plug-ins or additional audio source material such as beats and or samples.
- 77.05 Diagram the signal flow of a digital audio workstation.

78.0 Operate an audio workstation. – The student will be able to:

- 78.01 Demonstrate knowledge of the digital audio workstation interface.
- 78.02 Create and arrange a multi-track project.
- 78.03 Create interest and effect using editing techniques
- 78.04 Design and edit audio using a waveform editor.
- 78.05 Record audio directly to the digital audio workstation.
- 78.06 Mix audio.
- 78.07 Demonstrate skill in using audio effects and plug-ins.
- 78.08 Prepare an audio project for finishing and final mix down.
- 78.09 Transfer audio files between various audio software applications.
- 78.10 Demonstrate the understanding of audio file bit depth, bandwidth and dithering and be able to explain when and where these apply in various applications of digital audio production.
- 78.11 Export finished audio.

79.0 Demonstrate proficiency in using presentation software and equipment. – The student will be able to:

- 79.01 Using presentation software, create a multimedia presentation that incorporates shot and edited video, animation, music, narration and adheres to good design principles, use of transitions, and effective message conveyance.
- 79.02 Demonstrate knowledge of the roles and responsibilities of a multimedia production team (e.g. project manager, creative or design director, content experts, writers, graphic designers, animators, sound designers, videographer, interface designers/programmers, etc.).
- 79.03 Collaborate with team members to plan, edit, evaluate, and present a multimedia presentation.

**Course Number: CTS0025**

**Occupational Completion Point – C**

**Computer Networking – 150 Hours – SOC Code 15-1041**

80.0 Demonstrate understanding of network technologies. – The student will be able to:

- 80.01 Explain the function of common networking protocols such as TCP,FTP, UDP, TCP/IP suite, DHCP, TFTP, DNS, HTTP(S), ARP, SIP (VoIP), RTP (VoIP), SSH, POP3, NTP, IMAP4, TELNET, SMTP, SNMP 2/3, ICMP, IGMP, TLS
  - 80.02 Identify commonly used TCP and UDP default ports such as the following: TCP ports, FTP – 20, 21, SSH – 22, TELNET – 23, SMTP – 25, DNS – 53, HTTP – 80, POP3 – 110, NTP – 123, IMAP4 – 143, HTTPS – 443, UDP ports TFTP – 69, DNS – 53, BOOTPS/DHCP – 67, SNMP – 161
  - 80.03 Identify the following address formats IPv6, IPv4, and MAC Addressing
  - 80.04 Evaluate the proper use of the following addressing technologies and addressing schemes: Subnetting, Classful vs. classless (e.g. CIDR, Supernetting), NAT, PAT, SNAT, Public vs. private, DHCP (static, dynamic APIPA), Addressing schemes, Unicast, Multicast, Broadcast
  - 80.05 Identify common IPv4 and IPv6 routing protocols - Link state OSPF, IS-IS, Distance vector, RIP, RIPv2, BGP, Hybrid EIGRP
  - 80.06 Explain the purpose and properties of routing such as IGP vs EGP, Static vs dynamic, Next Hop, Understanding routing tables and how they pertain to path selection, and explain convergence ( steady state).
  - 80.07 Compare the characteristics of wireless communication standards such as 802.11 a/b/g/n, speeds, distance, channels, frequency, authentication and encryption such as WPA, WEP, RADIUS, AND TKIP.
- 81.0 Understand, install, and configure network hardware. – The student will be able to:
- 81.01 Categorize standard cable types and their properties such as CAT3, CAT5, CAT5e, CAT6, STP, UTP, Multimode fiber, single-mode fiber, coaxial, serial, plenum vs non-plenum, transmission speeds, distance, duplex, noise immunity ( security, EMI), and frequency
  - 81.02 Identify common connector types such as RJ-11, RJ-45, BNC, SC, ST, LC, RS-232,
  - 81.03 Identify common physical network topologies such as Star, Mesh, Bus, Ring, Point to Point, Point to Multipoint, and Hybrid
  - 81.04 Differentiate and implement appropriate wiring standards such as 568A, 568 B Straight vs cross over, rollover, and Loopback
  - 81.05 categorize Wan technologies types and properties such as Frame Relay, E1/T1, ADSL, SDSL, VDSL, Cable modem, Satellite, E3/T3, Oc-x, Wireless, ATM, SONET, MPLS, ISD Bri, ISDN PRI, POTS, PSTN, Circuit, switch, packet switch, speed, transmission media, and Distance.
  - 81.06 Categorize LAN technology types and properties such as Ethernet, 10BaseT, 100BaseTX, 100BaseFX, 1000BaseT, 1000BaseX, 10GbaseSR, 10GBaseLR, 10GBaseER, 10GBaseSW , 10GBaseLW, 10GBaseEW, 10GBaseT and properties of each such as CSMA/CD, Broadcast, Collision, Bonding, Speed, and Distance,
  - 81.07 Explain common logical network topologies and their characteristics such as peer to peer, client/server, VPN, VLAN
  - 81.08 Install components of wiring distribution such as Vertical and horizontal cross connects, Patch panels, 66 block, MDFs, IDFs, 25 pair, 100 pair, 110 block, Demarc, Demarc extension, Smart jack, verify wiring installation, and Verify wiring termination.
- 82.0 Understand, install and configure networking devices. – The student will be able to:

- 82.01 Install, configure and differentiate between common network devices such as hub, repeater, modem, NIC, media converters, basic switch, bridge, wireless access point, basic router, basic firewall, basic DHCP server.
  - 82.02 Identify the function of specialized network devices such as multilayer switch, Content switch, IDS/IPS, load balancer, multifunction network devices, DNS server Bandwidth shaper, proxy server, and CSU/DSU
  - 82.03 Explain the advance features of a switch such as PoE, Spanning tree, VLAN, Trunking, Port mirroring, and Port Authentication
  - 82.04 Implement a basic wireless network using the following technologies installed client, access point placement, access point with encryption, access point with configured channels and frequencies, and a set ESSSID and beacon.
- 83.0 Understand, install and configure network management software. – The student will be able to:
- 83.01 Explain the function of the OSI layer model such as physical, data link, network, transport, session, presentation, and application
  - 83.02 Identifies types of configuration management documentation such as wiring schematics, physical and logical network diagram, baselines, policies, procedure and configuration and regulations
  - 83.03 Evaluate the network based on configuration management documentation such as compare wiring schematics, physical and logical network diagrams, baselines, policies and procedures, and configurations to network devices and infrastructure, and update wiring schematics, physical and logical network diagrams, configuration and job logs as needed.
  - 83.04 Conduct network monitoring to identify performance and connectivity issues using the following: network monitoring utilities (packet sniffers, connectivity software, load testing, throughput testers) and system logs, history, event log
  - 83.05 Conduct network monitoring to identify performance and connectivity issues using the following: network monitoring utilities (packet sniffers, connectivity software, load testing, and throughput testers), system logs, history logs, and event logs.
  - 83.06 Explain different methods and rationales for network performance optimization such as QoS, Traffic shaping, Load balancing, high availability, Caching engines, Fault tolerance, Latency sensitivity, High bandwidth applications, VoIP, Video applications, and Uptime
  - 83.07 Implement the following network troubleshooting methodology - Information gathering, identify symptoms and problems, Identify the affected areas of the network, Determine if anything has changed, Establish the most probable cause, Determine if escalation is necessary, Create an action plan and solution identifying potential effects, Implement and test the solution, Identify the results and effects of the solution, and Document the solution and the entire process
  - 83.08 Troubleshoot common connectivity issues and select an appropriate solution  
Physical issues: Cross talk, Near End crosstalk, Attenuation, collisions, Shorts Open, Impedance mismatch (echo), and Interference - Logical issues: Port speed, Port duplex mismatch, incorrect VLAN, Incorrect IP address, Wrong gateway, Wrong DNS, Wrong subnet mask, Issues that should be identified but escalated: Switching loop, Routing loop, Route problems, Proxy arp, Broadcast storms, Wireless Issues: Interference (bleed, environmental factors), incorrect encryption, Incorrect channel, Incorrect frequency, ESSSID mismatch, Standard mismatch (802.11 a/b/g/n), Distance, Bounce, and Incorrect antenna placement.

- 84.0 Understand, install and configure networking tools. – The student will be able to:
- 84.01 Select the appropriate command line interface tool and interpret the output to verify functionality such as Traceroute, Ipconfig, IFconfig, Ping, Arp ping, Arp, Nslookup, Hostname, Dig, Mtr, Route, and Nbtstat.
  - 84.02 Explain the purpose of network scanners such as Packet sniffers, Intrusion detection software, Intrusion prevention software, Port scanners
  - 84.03 Utilize the appropriate hardware tools such as Cable testers, Protocol analyzer, Certifiers, TDR, OTDR, Multimeter, Toner probe, Butt set, Punch down tool, Cable stripper, Snips, Voltage event recorder, and Temperature monitor
- 85.0 Install, configure, and manage network security hardware and software devices. – The student will be able to:
- 85.01 Explain the function of hardware and software security devices such as Network based firewall, Host based firewall, IDS, IPS, and VPN concentrator
  - 85.02 Explain common features of a firewall for example: Application layer vs. network layer, Stateful vs. stateless, Scanning services, Content filtering, Signature identification, and Zones
  - 85.03 Explain the methods of network access security using the following: Filtering: ACL, MAC filtering, IP filtering, Tunneling and encryption, SSL VPN, VPN, L2TP, PPTP, IPSEC, Remote access, RAS, RDP, PPPoE, PPP, VNC, and ICA
  - 85.04 Explain methods of user authentication using the following methods: PKI, Kerberos, AAA, RADIUS, TACACS+, Network access control, 802.1x, CHAP, MS-CHAP, and EAP
  - 85.05 Explain issues that affect device security such as the Physical security, Restricting local and remote access, Secure methods vs. unsecure methods, SSH, HTTPS, SNMPv3, SFTP, SCP, and TELNET, HTTP, FTP, RSH, RCP, SNMPv1/2
  - 85.06 Identify common security threats and mitigation techniques such as Security threats, DoS, Viruses, Worms, Attackers, Man in the middle, murf, Rogue access points, Social engineering (phishing), Mitigation techniques, Policies and procedures, User training, Patches and updates.

**Course Number: CTS0068****Occupational Completion Point – C****Cybersecurity Essentials – 150 Hours – SOC Code 15-1041**

- 86.0 Demonstrate an understanding of cybersecurity, the terminology used, its history and culture, and trends. – The student will be able to:
- 86.01 Describe the history of cybersecurity, including the evolution of a hacker culture.
  - 86.02 Discuss the trends and national initiatives related to cybersecurity.
  - 86.03 Distinguish between information assurance and cybersecurity.
  - 86.04 Describe the concepts of confidentiality as it relates to user and data impact.
  - 86.05 Explain authentication and the concept of non-repudiation.
  - 86.06 Describe the concept of “Hacking - The Human Element” and elaborate on its implications to cybersecurity.

- 87.0 Recognize the following types of malicious code and specify the appropriate actions to take to mitigate vulnerability and risk. – The student will be able to:
- 87.01 Viruses
  - 87.02 Trojan Horses
  - 87.03 Logic Bombs
  - 87.04 Worms
- 88.0 Recognize and be able to differentiate and explain the following access control models. – The student will be able to:
- 88.01 MAC (Mandatory Access Control)
  - 88.02 DAC (Discretionary Access Control)
  - 88.03 RBAC (Role Based Access Control)
- 89.0 Recognize and be able to differentiate and explain the following methods of authentication. – The student will be able to:
- 89.01 Kerberos
  - 89.02 CHAP (Challenge Handshake Authentication Protocol)
  - 89.03 Certificates
  - 89.04 Username / Password
  - 89.05 Tokens
  - 89.06 Multi-factor
  - 89.07 Mutual
  - 89.08 Biometrics
- 90.0 Recognize the following attacks and specify the appropriate actions to take to mitigate vulnerability and risk. – The student will be able to:
- 90.01 DOS / DDOS (Denial of Service / Distributed Denial of Service)
  - 90.02 Back Door
  - 90.03 Spoofing
  - 90.04 Man in the Middle
  - 90.05 Replay
  - 90.06 TCP/IP Hijacking
  - 90.07 Weak Keys
  - 90.08 Mathematical
  - 90.09 Social Engineering
  - 90.10 Birthday
  - 90.11 Password Guessing (e.g., Brute Force, Dictionary)
  - 90.12 Software Exploitation
- 91.0 Recognize and understand the processes and risks associated with the following security concerns and tasks. – The student will be able to:
- 91.01 Identify non-essential services and protocols and know what actions to take to reduce the risks of those services and protocols.
  - 91.02 Understand the concept of and know how reduce the risks of social engineering.
  - 91.03 Understand the concept and significance of auditing, logging and system scanning.

- 91.04 Identify and be able to differentiate different cryptographic standards and protocols.
- 92.0 Recognize and understand the administration of the following types of remote access technologies. – The student will be able to:
  - 92.01 802.1x
  - 92.02 VPN (Virtual Private Network)
  - 92.03 RADIUS (Remote Authentication Dial-In User Service)
  - 92.04 TACACS (Terminal Access Controller Access Control System)
  - 92.05 L2TP / PPTP (Layer Two Tunneling Protocol / Point to Point Tunneling Protocol)
  - 92.06 SSH (Secure Shell)
  - 92.07 IPSEC (Internet Protocol Security)
  - 92.08 Vulnerabilities
- 93.0 Recognize and understand the administration of the following email security concepts. – The student will be able to:
  - 93.01 S/MIME (Secure Multipurpose Internet Mail Extensions)
  - 93.02 PGP (Pretty Good Privacy) like technologies
  - 93.03 Vulnerabilities
  - 93.04 SPAM
  - 93.05 Hoaxes
- 94.0 Recognize and understand the administration of the following Internet security concepts. – The student will be able to:
  - 94.01 SSL / TLS (Secure Sockets Layer / Transport Layer Security)
  - 94.02 HTTP/S (Hypertext Transfer Protocol / Hypertext Transfer Protocol over Secure Sockets Layer)
  - 94.03 Instant Messaging (i.e., Vulnerabilities, Packet Sniffing, Privacy)
- 95.0 Recognize and understand the administration of the following vulnerabilities. – The student will be able to:
  - 95.01 Java Script
  - 95.02 ActiveX
  - 95.03 Buffer Overflows
  - 95.04 Cookies
  - 95.05 Signed Applets
  - 95.06 CGI (Common Gateway Interface)
  - 95.07 SMTP (Simple Mail Transfer Protocol) Relay
- 96.0 Recognize and understand the administration of the following directory security concepts. – The student will be able to:
  - 96.01 SSL / TLS (Secure Sockets Layer / Transport Layer Security)
  - 96.02 LDAP (Lightweight Directory Access Protocol)
- 97.0 Recognize and understand the administration of the following file transfer protocols and concepts. – The student will be able to:

- 97.01 S/FTP (File Transfer Protocol)
  - 97.02 Blind FTP (File Transfer Protocol) / Anonymous
  - 97.03 File Sharing
  - 97.04 Vulnerabilities (i.e., packet sniffing, naming conventions)
- 98.0 Recognize and understand the administration of the following wireless technologies and concepts. – The student will be able to:
- 98.01 WTLS (Wireless Transport Layer Security)
  - 98.02 802.11 and 802.11x
  - 98.03 WEP / WAP (Wired Equivalent Privacy / Wireless Application Protocol)
  - 98.04 Vulnerabilities (i.e., site surveys)
- 99.0 Compare and contrast the following types of intrusion detection in terms of implementation and configuration. – The student will be able to:
- 99.01 Network Based – Active and Passive
  - 99.02 Host Based – Active and Passive
  - 99.03 Honey Pots
  - 99.04 Incident Response
- 100.0 Be able to identify and explain the following different kinds of cryptographic algorithms. – The student will be able to:
- 100.01 Hashing
  - 100.02 Symmetric
  - 100.03 Asymmetric
- 101.0 Understand how cryptography and digital signatures address the following security concepts. – The student will be able to:
- 101.01 Confidentiality
  - 101.02 Integrity
  - 101.03 Authentication
  - 101.04 Non-Repudiation
  - 101.05 Access Control
- 102.0 Understand and be able to explain the following concepts of PKI (Public Key Infrastructure). – The student will be able to:
- 102.01 Certificates (e.g., policies, practice statements)
  - 102.02 Revocation
  - 102.03 Trust Models
- 103.0 Understand and be able to explain the following concepts of Key Management and Certificate Lifecycles. – The student will be able to:
- 103.01 Centralized versus Decentralized
  - 103.02 Hardware versus software key storage
  - 103.03 Private key storage

- 103.04 Escrow
- 103.05 Expiration
- 103.06 Revocation versus suspension (e.g., status checking)
- 103.07 Recovery authorization schema (e.g., M-of-N Control - Of M appropriate individuals, N must be present to authorize recovery)
- 103.08 Renewal
- 103.09 Destruction
- 103.10 Key Usage
- 103.11 Multiple Key Pairs (Single, Dual)

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Introduction to Information Technology  
**Course Number:** 8207310  
**Course Credit:** 1

**Course Description:**

This course is designed to provide an introduction to information technology concepts and careers as well as the impact information technology has on the world, people, and industry and basic web design concepts. The content includes information technology career research; operating systems and software applications; electronic communications including e-mail and Internet services; basic HTML, DHTML, and XML web commands and design; emerging technologies, and Web page design.

Standards included in this course of instruction have been aligned to the academic courses shown below. This table shows the number of aligned benchmarks, the total number of academic benchmarks, and the percentage of alignment.

Math		Science					
<b>Algebra 1</b>	6/36 17%	<b>Biology 1</b>	2/56 4%	<b>Anatomy/Physiology Honors</b>	2/53 4%	<b>Astronomy Solar/Galactic Honors</b>	2/52 4%
<b>Algebra 2</b>	2/41 5%	<b>Chemistry 1</b>	2/55 4%	<b>Genetics</b>	2/35 6%	<b>Marine Science 1 Honors</b>	2/42 5%
<b>Geometry</b>	1/45 2%	<b>Physics 1</b>	2/53 4%	<b>Earth-Space Science</b>	2/58 3%	<b>Physical Science</b>	2/56 4%

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Develop keyboarding skills to enter and manipulate text and data.
- 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.03 Identify and describe communications and networking systems used in workplace environments.
- 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.06 Describe ethical issues and problems associated with computers and information systems.

02.0 Demonstrate comprehension and communication skills. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2; MA.912.D.8.1; MA.912.A.3.15; MA.912.G.8.2.

- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
- 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
- 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
- 02.04 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
- 02.05 Apply the writing process to the creation of appropriate documents following designated business formats.
- 02.06 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).

- 03.0 Use technology to enhance the effectiveness of communication skills —The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.2.12.

- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.

- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.3.15.

- 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
- 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
- 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.

- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:

- 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).

05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).

06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:

06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.

07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.5.7; MA.912.F.5.2; MA.912.A.10.1; MA.912.A.10.2; MA.912.S.1.2; MA.912.S.3.2; MA.912.A.3.5; MA.912.G.8.2.

07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.

07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).

07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:

08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.

08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.

09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2.

09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).

- 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).

14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:

- 14.01 Identify and describe Web terminology.
- 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
- 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
- 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
- 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
- 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
- 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
- 14.08 Identify effective Boolean search strategies.

15.0 Demonstrate proficiency using html commands. – The student will be able to:

- 15.01 Identify elements of a Web page.
- 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
- 15.03 Define basic HTML terminology.
- 15.04 Analyze HTML source code developed by others.
- 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
- 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
- 15.07 Edit and test HTML documents for accuracy and validity.
- 15.08 Use basic functions of WYSIWYG editors.
- 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
- 15.10 Enhance web pages through the addition of images and graphics including animation.

16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:

- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
- 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
- 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
- 16.04 Use image design software to create and edit images.
- 16.05 Demonstrate proficiency in publishing to the Internet.
- 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
- 16.07 Explain the need for web-based applications.

- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.

- 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
- 22.05 Identify Intranets, Extranets and how they relate to the Internet.
- 22.06 Demonstrate basic understanding of network administration.
- 22.07 Describe the evolution of OSI from its inception to the present and into the future.
- 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
- 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
- 24.03 Demonstrate the ability to incorporate digital sound.
- Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 104.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
- 104.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
- 104.03 Present information formally and informally for specific purposes and audiences. AF2.9
- 105.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 105.01 Demonstrate knowledge of arithmetic operations. AF3.2
- 105.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
- 105.03 Construct charts/tables/graphs using functions and data. AF3.5
- 106.0 Demonstrate science knowledge and skills. – The student will be able to: AF4.0
- 106.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF4.1
- 106.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF4.3

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Computer Fundamentals  
**Course Number:** 9003410  
**Course Credit:** 1

**Course Description:**

This course introduces students to the essential concepts, components, terminology, and knowledge about computers, computer systems, peripherals, and networks.

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.02 Identify and describe communications and networking systems used in workplace environments.
- 01.03 Locate and apply reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.04 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.05 Describe ethical, privacy, and security issues and problems associated with computers and information systems.
- 01.06 Demonstrate proficiency in using the basic features of GUI browsers.

02.0 Practice quality performance. – The student will be able to:

- 02.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
- 02.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).

03.0 Demonstrate knowledge of different operating systems. – The student will be able to:

- 03.01 Identify operating system file naming conventions.
- 03.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
- 03.03 Demonstrate a working knowledge of standard file formats.
- 03.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 03.05 Differentiate between different operating systems and applications.
- 03.06 Compare and contrast open source and proprietary software.
- 03.07 Display understanding of how system utilities help maintain a computer.

04.0 Develop a familiarity with the information technology industry. – The student will be able to:

- 04.01 Explain how information technology impacts the operation and management of business and society.
- 04.02 Identify and describe the various ways of segmenting the IT industry (e.g., hardware vs. software, server vs. client, business vs. entertainment, stable vs. mobile, etc.)
- 04.03 Describe how digital technologies (social media, et al) are changing both work and personal lifestyles.

05.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:

- 05.01 Describe the evolution of the digital computer.
- 05.02 Explain the general architecture of a microcomputer system.
- 05.03 Explain the evolution of microprocessors.
- 05.04 Explain software hierarchy and its impact on microprocessors.
- 05.05 Explain the need for and use of peripherals.
- 05.06 Demonstrate proficiency installing and using plug-and-play peripherals.
- 05.07 Identify the basic concepts of computer maintenance and upgrades.

06.0 Develop an awareness of programming languages. – The student will be able to:

- 06.01 Explain the evolution of programming languages.
- 06.02 Explain the need for and use of compilers.
- 06.03 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 06.04 Compare the various types or classes of programming languages (e.g., compiled, interpretive, etc.).
- 06.05 Differentiate among source code, machine code, interpreters, and compilers.
- 06.06 Characterize the major categories of programming languages and how they are used.
- 06.07 Create a model flowchart for a computer program.
- 06.08 Create a simple computer application program using JavaScript and HTML
- 06.09 Describe the stages in the software development life cycle and explain how to successfully implement them.

07.0 Develop an awareness of emerging technologies. – The student will be able to:

- 07.01 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 07.02 Describe social media as an emerging technology.
- 07.03 Adhere to published best practices for protecting personal identifiable information when using the Internet.
- 07.04 Identify trends related to the use of information technology in people's personal and professional lives.
- 07.05 Characterize how the rapid pace of change in information technology impacts our society.

- 08.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 08.01 Describe the evolution of OSI from its inception to the present and into the future.
  - 08.02 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
  - 08.03 Describe the purpose of the OSI model and each of its layers.
  - 08.04 Explain specific functions belonging to each OSI model layer.
  - 08.05 Understand how two network nodes communicate through the OSI model.
  - 08.06 Discuss the structure and purpose of data packets and frames.
  - 08.07 Describe the two types of addressing covered by the OSI model.
- 09.0 Demonstrate an awareness of specialized software. – The student will be able to:
- 09.01 Compare and contrast the appropriate use of specialized software (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.).
  - 09.02 Research and report on the current state of specialized software (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
  - 09.03 Describe the hardware implications of using specialized software (e.g., RAM, hard drive size, CPU, storage devices, etc.).
- 10.0 Identify computer components and their functions. – The student will be able to:
- 10.01 Identify the internal components of a computer (e.g., power supply, hard drive, mother board, I/O cards/ports, cabling, etc.).
  - 10.02 Identify generic computer and programming terminology.
- 11.0 Demonstrate proficiency using the Internet to locate information. – The student will be able to:
- 11.01 Identify and describe web terminology.
  - 11.02 Define Universal Resource Locators (URLs) and associated protocols (e.g., http, ftp, telnet, mailto).
  - 11.03 Compare and contrast the types of Internet domains (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 11.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 11.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 11.06 Demonstrate proficiency using search engines, including Boolean search strategies.
  - 11.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
  - 11.08 Compare and contrast the roles of web servers and web browsers.
- 12.0 Demonstrate proficiency using Hypertext Markup Language (HTML). – The student will be able to:
- 12.01 Categorize websites according to their purpose.

- 12.02 Describe the types of documents that might be used in a web environment (e.g., HTML, ASP, DHTML, XML, JS, CSS, PHP).
  - 12.03 Identify elements of a webpage.
  - 12.04 Define basic HTML terminology.
  - 12.05 Critique the aesthetic and functional operation of sample websites.
  - 12.06 Create storyboards depicting a multi-page website (e.g., linear, hierarchical).
  - 12.07 Design, edit, and test HTML documents for accuracy and validity.
  - 12.08 Create and modify webpages using a Graphical User Interface (GUI) editor.
  - 12.09 Enhance webpages through the addition of images and graphics including animation.
  - 12.10 Analyze webpage source code developed by others.
  - 12.11 Create webpages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
- 13.0 Demonstrate proficiency in webpage design. – The student will be able to:
- 13.01 Develop an awareness of acceptable webpage design, including index pages in relation to the rest of the website.
  - 13.02 Describe and apply color theory as it applies to webpage design (e.g., background and text color).
  - 13.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 13.04 Use image design software to create and edit images.
  - 13.05 Demonstrate proficiency in publishing to the Internet.
  - 13.06 Demonstrate proficiency in adding downloadable forms to webpages.
  - 13.07 Explain the need for web-based applications.
- 14.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 14.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 14.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 15.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
- 15.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 15.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 15.03 Collaborate with individuals and teams to complete tasks and solve business related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 16.0 Perform e-mail activities. – The student will be able to:

- 16.01 Describe e-mail capabilities and functions.
  - 16.02 Identify components of an e-mail message.
  - 16.03 Identify the components of an e-mail address.
  - 16.04 Identify when to use different e-mail options.
  - 16.05 Attach a file to an e-mail message.
  - 16.06 Forward an e-mail message.
  - 16.07 Use an address book.
  - 16.08 Reply to an e-mail message.
  - 16.09 Use the Internet to perform e-mail activities.
  - 16.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 16.11 Identify when to include information from an original e-mail message in a response.
  - 16.12 Identify common problems associated with widespread use of e-mail.
- 17.0 Demonstrate proficiency in using presentation software and equipment. – The student will be able to:
- 17.01 Produce a presentation that includes music, animation, and digital photography and present it using a projection system.
  - 17.02 Using presentation software, create a multimedia presentation that incorporates shot and edited video, animation, music, narration and adheres to good design principles, use of transitions, and effective message conveyance.
  - 17.03 Demonstrate knowledge of the roles and responsibilities of a multimedia production team (e.g. project manager, creative or design director, content experts, writers, graphic designers, animators, sound designers, videographer, interface designers/programmers, etc.).
  - 17.04 Collaborate with team members to plan, edit, evaluate, and present a multimedia presentation where individuals on the team function in specific production roles .
  - 17.05 Create a self-running presentation with synchronized audio, convert presentation slides (e.g. PowerPoint) into streaming ASF files for use on the Web.
- 18.0 Perform decision-making activities in a multimedia environment. – The student will be able to:
- 18.01 Determine work priorities, the audience, project budgets, project specifications, and the production schedule.
  - 18.02 Evaluate and select appropriate software packages and multimedia tools to complete assigned tasks.
  - 18.03 Present and defend design projects.
  - 18.04 Evaluate criteria for selecting an operating system.
- 104.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 104.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
  - 104.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
  - 104.03 Present information formally and informally for specific purposes and audiences. AF2.9
- 105.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0

- 105.01 Demonstrate knowledge of arithmetic operations. AF3.2
- 105.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
- 105.03 Construct charts/tables/graphs using functions and data. AF3.5
- 106.0 Demonstrate science knowledge and skills. – The student will be able to: AF4.0
  - 106.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF4.1
  - 106.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF4.3

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Web Technologies  
**Course Number:** 9003420  
**Course Credit:** 1

**Course Description:**

- 25.0 Demonstrate proficiency on the principles of design. – The student will be able to
- 25.01 Identify industry best practices in visual design (e.g., color schemes, fonts, navigation methods, pagination).
  - 25.02 Explain the key concepts of meeting client needs.
  - 25.03 Apply the principles of Human Computer Interface (HCI) to design and develop an effective look and feel for a website.
  - 25.04 Design and create a webpage for optimal display in multiple browsers.
- 26.0 Demonstrate proficiency planning an effective website. – The student will be able to:
- 26.01 Compare and contrast site maps and wireframes.
  - 26.02 Develop an effective site map for a website.
  - 26.03 Create page layout wireframes for a website.
- 27.0 Demonstrate proficiency formulating a website. – The student will be able to:
- 27.01 Classify web development tasks according to when they are performed during the web development cycle.
  - 27.02
  - 27.03 Describe the different types of business requirements that apply to website design.
  - 27.04 Design business requirements to help ensure success for a specific website.
  - 27.05 Demonstrate ability to use effective designer-client communication skills.
- 28.0 Demonstrate proficiency using web development tools and techniques. – The student will be able to:
- 28.01 Compare and contrast writing HTML using a text editor versus using a WYSIWYG editor
  - 28.02 Design and create an effective web page template.
  - 28.03 Create attractive, engaging, and efficient web pages using a WYSIWYG editor.
  - 28.04 Create an appropriate directory structure, naming convention protocol, and file organization for a website.
  - 28.05 Create DHTML and XML documents using editors or converters.
- 29.0 Demonstrate proficiency using specialized web design software. – The student will be able to:

- 29.01 Compare and contrast various specialized web design software (e.g., Flash, Photoshop, Dreamweaver, etc.).
- 29.02 Demonstrate proficiency using various specialized web design software (e.g., Flash, Photoshop, Dreamweaver, etc.).
- 30.0 Demonstrate proficiency gathering and preparing web content. – The student will be able to:
- 30.01 Characterize effective writing styles and conventions for the web.
- 30.02 Create effective written content for the web.
- 30.03 Prepare various types of graphical content for use on a webpage.
- 30.04 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
- 30.05 Create and edit images using image or graphic design software.
- 30.06 Compare and contrast static versus dynamic web content.
- 31.0 Demonstrate an awareness of preparing a website for launch. – The student will be able to:
- 31.01 Evaluate a website for basic usability and accessibility issues.
- 31.02 List the steps that are necessary to determine when a website is ready to launch.
- 31.03 Develop a User Testing Plan.
- 31.04 Demonstrate the ability to organize and execute a user testing of a website.
- 31.05 Demonstrate proficiency in publishing to the Internet.
- 107.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 107.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
- 107.02 Locate, organize and reference written information from various sources. CM 3.0
- 107.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
- 107.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
- 107.05 Apply active listening skills to obtain and clarify information. CM 7.0
- 107.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
- 107.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 108.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 108.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
- 108.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
- 108.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
- 108.04 Conduct technical research to gather information necessary for decision-making. PS 4.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** IT Systems & Applications  
**Course Number:** 9003430  
**Course Credit:** 1

**Course Description:**

- 32.0 Explain motherboard components, types and features. – The student will be able to:
- 32.01 Identify different motherboard form factors (ATX/BTX and micro ATX).
  - 32.02 Identify input/output interfaces (e.g. USB, serial and NIC).
  - 32.03 Identify the different types of bus slots (e.g. PCI, AGP, PCMCIA).
  - 32.04 Identify the BIOS/CMOS/Firmware (e.g. POST, CMOS battery).
- 33.0 Explain the purpose and characteristics of CPUs and their features. – The student will be able to:
- 33.01 Identify types of CPUs (e.g. AMD and Intel).
  - 33.02 Define hyper threading
  - 33.03 Explain multi core (e.g. dual, triple and quad).
  - 33.04 Explain the difference between onboard cache (e.g. L1, L2, and L3).
  - 33.05 Compare and contrast between real and actual speed.
  - 33.06 Compare and contrast between 32 bit and 64 bit processing.
- 34.0 Perform installation and configuration activities. – The student will be able to:
- 34.01 Install and configure software including device drivers.
  - 34.02 Install and configure operating system software.
  - 34.03 Install and configure application software.
  - 34.04 Install and configure peripherals including device drivers (e.g., scanners, cameras, printers).
  - 34.05 Supervise the testing of operating system management systems (e.g., registry, INI files).
  - 34.06 Prepare the hard disk and related issues for operating system installation (e.g., BIOS, disk controllers).
  - 34.07 Format and partition the hard disk.
  - 34.08 Verify the proper operation of the system (e.g., physical inspection, tests, utilities).
  - 34.09 Compare and contrast memory technologies (e.g., RAM, ROM, virtual memory, memory management)
  - 34.10 Demonstrate proficiency using various memory technologies (e.g., RAM, ROM, virtual memory, memory management).
  - 34.11 Demonstrate proper use of user interfaces, command utilities, and troubleshooting utilities
  - 34.12 Explain the basics of boot sequences, methods and startup utilities.
- 35.0 Demonstrate proficiency using computer networks. – The student will be able to:

- 35.01 Compare and contrast various implementation models (e.g., TCP/IP protocols, OSI 7, IPX, cross mapping of protocols).
  - 35.02 Describe an Ethernet network and the use of CSMA\CD.
- 36.0 Perform the process for problem diagnostics and problem resolution through wireless, infrared, telephone, e-mail, remote access, or direct contact. – The student will be able to:
- 36.01 Identify, troubleshoot and propose solutions for configuration problems.
  - 36.02 Identify, troubleshoot and propose solutions for software problems.
  - 36.03 Identify, troubleshoot and propose solutions for hardware malfunctions.
  - 36.04 Identify, troubleshoot and propose solutions for network malfunctions.
  - 36.05 Plan and implement a system upgrade and downgrade.
  - 36.06 Evaluate data recovery using various techniques (e.g., MBR repair tools, rescue disks, disk image, backup).
  - 36.07 Organize and perform system maintenance activities (e.g., management console, SNMP, system monitors, diagnostics, virus management).
  - 36.08 Demonstrate corporate interaction proficiency (e.g., responsibility, interaction, communication).
- 37.0 Demonstrate knowledge of presentation production issues. – The student will be able to:
- 37.01 Demonstrate knowledge of copyright laws including copyright statute, disclaimers, and filing procedure.
  - 37.02 Demonstrate an understanding of graphic and other file formats (e.g., EPS, TIFF, JPEG, ASCII, MPEG, MIDI, AVI, WAV, etc.) and knowledge of image size when scanning and saving files for use in different presentation types (Web, computer, print, etc.).
  - 37.03 Identify display device connectors and types (e.g. VGA, HDMi, and S-Video).
  - 37.04 Define refresh rate, resolution, multi-monitor and Degauss.
  - 37.05 Demonstrate knowledge of presentation vocabulary/terms.
  - 37.06 Compare and contrast and utilize various audio/video output solutions and devices (e.g., DVD, CD-Rom, web).
  - 37.07 Compare and contrast removable storage (tape drive, thumb drive, flash drive, USB, external CD-RW and external hard drive).
- 38.0 Demonstrate proficiency using computer networks. – The student will be able to:
- 38.01 Define networking and describe the purpose of a network.
  - 38.02 Describe the conceptual background of digital networks including terminology and basics.
  - 38.03 Describe various types of networks and the advantages and disadvantages of each (e.g. peer to peer, client/server, mainframe/terminal).
  - 38.04 Describe the use, advantages, and disadvantages of various network media [e.g. thinnet cable, coaxial), twisted pair (cat 5), fiber optics]
  - 38.05 Describe the function of various network devices (e.g. hub, switched hub or switch, router bridge, gateway, and access points)
  - 38.06 Describe the difference between the internet and intranet.
  - 38.07 Compare and contrast IP Version 6 and IP Version 4.
  - 38.08 Compare and contrast the different network types (e.g. broadband, wireless, Bluetooth, and cellular).

- 39.0 Demonstrate proficiency communicating over the Internet. – The student will be able to:
- 39.01 Display understanding of how Internet Service Providers (ISP) operate and what role they play in enabling users to connect to the Internet.
  - 39.02 Explain how the Internet works and how documents are connected and transferred.
  - 39.03 Configure an email client for SMTP and POP3 servers, including port assignment.
  - 39.04 Explain how the primary modes of Internet communication are used.
- 40.0 Demonstrate proficiency in troubleshooting, repair and maintenance of computers. – The student will be able to:
- 40.01 Determine the troubleshooting methods and tools for printers.
  - 40.02 Explain and interpret common laptop issues and basic troubleshooting methods.
  - 40.03 Integrate common preventative maintenance techniques.
- 41.0 Demonstrate proficiency in the basic principles of security concepts and technologies. – The student will be able to:
- 41.01 Evaluate encryption technologies, software firewall, authentication technologies, and data security.
  - 41.02 Summarize the following security features (e.g. wireless encryption, malicious software protection and BIOS security, password management and biometrics).
- 42.0 Demonstrate proficiency in operational procedures as they relate to computer equipment and components. – The student will be able to:
- 42.01 Compare and contrast ESD, EMI, RFI, and electrical safety.
  - 42.02 Demonstrate proficiency in the use of state regulations for hazardous materials (e.g. MSDS).
- 109.0 Use information technology tools. – The student will be able to:
- 109.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
  - 109.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
  - 109.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
  - 109.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 110.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:
- 110.01 Describe the nature and types of business organizations. SY 1.0
  - 110.02 Explain the effect of key organizational systems on performance and quality.
  - 110.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0

110.04 Explain the impact of the global economy on business organizations.

114.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:

114.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0

114.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1

114.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2

114.04 Interpret and explain written organizational policies and procedures. ELR 2.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Database Essentials  
**Course Number:** 9003440  
**Course Credit:** 1

**Course Description:**

- 43.0 Develop an awareness of the changes taking place in the information age and how they fit into an evolving society. – The student will be able to:
- 43.01 Describe the role a database plays in a business and predict its evolution.
  - 43.02 Demonstrate the difference between “data” and “information.”
  - 43.03 Understand the importance of clear communication when discussing business informational requirements.
  - 43.04 Experiment with web-based email and explain how these services use a database.
- 44.0 Develop the "big picture" of database design and how to best organize data according to business rules and/or client needs. – The student will be able to:
- 44.01 Identify and analyze the phases of the database development process.
  - 44.02 Explain what conceptual data modeling and database design involves.
  - 44.03 Compare database development process with that of the application development process.
  - 44.04 Identify the need for databases and why they are used.
  - 44.05 Explain the various types of databases (i.e., flat file, relational) and the appropriate use of each.
  - 44.06 Demonstrate proficiency in design methodology by completing appropriate tasks during the appropriate time of the developmental life cycle.
  - 44.07 Demonstrate proficiency in design methodology by considering where the database will reside.
- 45.0 Develop the process of creating an entity by identifying relationships. – The student will be able to:
- 45.01 Identify and model various types of entities.
  - 45.02 Identify naming and drawing conventions for entities.
  - 45.03 Sequence the steps that are necessary for creation of an entity.
  - 45.04 Analyze and model the relationships between entities.
- 46.0 Formulate and assemble initial entity relationship by expanding on modeling concepts. – The student will be able to:
- 46.01 Analyze and model attributes.
  - 46.02 Identify unique identifiers for each entity.
  - 46.03 Develop an entity relationship diagram tagging attributes with optionality.

- 47.0 Consider the degree and optionality of relationships of entities. – The student will be able to:
- 47.01 Create models and entity relationship information requirements and interviews.
  - 47.02 Begin to differentiate between one-to-many, many-to-many and one-to-one relationships.
  - 47.03 Identify relationship between two entities by reading a given diagram.
  - 47.04 Create a relationship between instances of the same entity.
  - 47.05 Read an entity relationship model in order to validate it.
- 48.0 Demonstrate proficiency in early construction stages of the data modeling process by using unique identifiers and many-to-many (M:M) relationships for building entity relationship diagrams. – The student will be able to:
- 48.01 Identify the significance of an attribute that has more than one value for each entity instance.
  - 48.02 Evaluate appropriate methods of storing validation rules for attributes.
  - 48.03 Recognize unique identifiers inherited from other entities.
  - 48.04 Sequence the steps involved in resolving a many-to-many relationship.
- 49.0 Demonstrate proficiency in advanced data constructs by analyzing business requirements and diagramming entities and relationships -The student will be able to:
- 49.01 Validate that an attribute is properly placed based upon its dependence on its entity's unique identifier (UID).
  - 49.02 Model advanced data constructs including recursive relationships, subtypes, and exclusive relationships.
  - 49.03 Enforce referential integrity.
- 50.0 Apply the complex ERM information by fine-tuning entities and the process for relating them. – The student will be able to:
- 50.01 Describe a relational database and how it is different from other database systems.
  - 50.02 Define primary keys and foreign keys and describe their purpose.
  - 50.03 Describe what data integrity refers to and list some constraints.
  - 50.04 Explain how database design fits into the database development process.
  - 50.05 Translate an entity-relationship model into a relational database design.
- 51.0 Apply initial database design and normalization by following the set of house rules that determine how items are stored and retrieved. – The student will be able to:
- 51.01 Recognize raw data and evaluate the steps for creating a data group in unnormalized form (UNF).
- 52.0 Manipulating data. – The student will be able to:
- 52.01 Determine appropriate data inputs and outputs for an existing database.
  - 52.02 Demonstrate proficiency in record management (i.e., entering, editing, finding, selecting, sorting, deleting records).
  - 52.03 Change the layout of a datasheet.

- 52.04 Create forms, reports, mailing labels, and charts using a database.
- 52.05 Export data to appropriate software applications.
- 52.06 Demonstrate proficiency in coordinating databases with appropriate software applications.
- 53.0 Building and modifying tables. – The student will be able to:
- 53.01 Create a database table.
- 53.02 Create table structures and establish table relationships.
- 53.03 Determine fields and assign data types in a database table.
- 53.04 Demonstrate appropriate manipulation of database tables (i.e., enter data, add and delete records).
- 53.05 Modify a database table by adding, deleting, and removing fields.
- 53.06 Demonstrate proficiency in the appropriate use of database wizards.
- 54.0 Performing queries and filtering records. – The student will be able to:
- 54.01 Design a query and extract specific data from a database table.
- 54.02 Create a calculated field.
- 54.03 Filter data in records by selection and by form.
- 54.04 Modify a saved query.
- 111.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 111.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
- 111.02 Explain emergency procedures to follow in response to workplace accidents.
- 111.03 Create a disaster and/or emergency response plan. SHE 2.0
- 112.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 112.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
- 112.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
- 112.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 112.04 Employ mentoring skills to inspire and teach others. LT 5.0
- 116.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 116.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
- 116.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
- 116.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
- 116.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
- 116.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
- 116.06 Identify and exhibit traits for retaining employment. ECD 7.0
- 116.07 Identify opportunities and research requirements for career advancement. ECD 8.0
- 116.08 Research the benefits of ongoing professional development. ECD 9.0

- 116.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0
- 117.0 Demonstrate personal money-management concepts, procedures, and strategies. –  
The student will be able to:
- 117.01 Identify and describe the services and legal responsibilities of financial institutions. FL 2.0
  - 117.02 Describe the effect of money management on personal and career goals. FL 3.0
  - 117.03 Develop a personal budget and financial goals. FL3.1
  - 117.04 Complete financial instruments for making deposits and withdrawals. FL3.2
  - 117.05 Maintain financial records. FL3.3
  - 117.06 Read and reconcile financial statements. FL3.4
  - 117.07 Research, compare and contrast investment opportunities.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Programming Essentials  
**Course Number:** 9003450  
**Course Credit:** 1

**Course Description:**

55.0 Plan program design. – The student will be able to:

- 55.01 Formulate a plan to determine program specifications individually or in groups.
- 55.02 Use a graphical representation or pseudocode to represent the structure in a program or subroutine.
- 55.03 Design programs to solve problems using problem-solving strategies.
- 55.04 Prepare proper input/output layout specifications.
- 55.05 Manually trace the execution of programs and verify that programs follow the logic of their design as documented.
- 55.06 Analyze problem statements.
- 55.07 Determine what kind of information the desired program must process.
- 55.08 Formulate concise descriptions of a program's task and purpose.
- 55.09 Formulate concise descriptions of task and purpose of a program's pieces.
- 55.10 Organize programs according to the problem analysis.
- 55.11 Recognize changes in the problem statement.
- 55.12 Suggest changes in the program organization.

56.0 Code programs. – The student will be able to:

- 56.01 Write programs according to recognized programming standards.
- 56.02 Write internal documentation statements as needed in the program source code.
- 56.03 Code programs using logical statements (e.g., If-Then-Else, Do..While).
- 56.04 Enter and modify source code using a program language editor.
- 56.05 Code routines within programs that validate input data.
- 56.06 Code programs using object-oriented languages (techniques).
- 56.07 Select the essential aspects of a problem statement.
- 56.08 Provide a solution to a problem.
- 56.09 Find solutions to an extended problem statement.
- 56.10 Utilize reference manuals and help systems.
- 56.11 Use pre-defined functions within programs.

57.0 Test programs. – The student will be able to:

- 57.01 Develop a plan for testing programs.
- 57.02 Develop data for use in program testing.
- 57.03 Perform debugging activities.
- 57.04 Distinguish among the different types of program and design errors.
- 57.05 Evaluate program test results.
- 57.06 Execute programs and subroutines as they relate to the total application.
- 57.07 Develop examples that illustrate the core behavior of each program.
- 57.08 Develop examples that illustrate the core behavior of each program component.

- 57.09 Illustrate the behavior of boundary cases.
  - 57.10 Demonstrate an understanding that engineering artifacts requires rigorous and systematic testing.
  - 57.11 Use examples to show that the solution meets pre-determined criteria.
  - 57.12 Demonstrate understanding that testing can expose problems but not prove the correctness of the design in an absolute sense.
  - 57.13 Compile (interpret) and run programs.
- 58.0 Perform program maintenance. – The student will be able to:
- 58.01 Analyze output to identify and annotate errors or enhancements.
- 59.0 Create and maintain documentation. – The student will be able to:
- 59.01 Follow established documentation standards.
- 60.0 Develop an awareness of software quality assurance. – The student will be able to:
- 60.01 Identify the legal and social consequences of errors in software.
  - 60.02 Describe copyright and other laws that relate to software theft and misuse.
  - 60.03 Describe software security measures to protect computer systems and data from unauthorized use and tampering (e.g., physical security, passwords, virus protection/prevention).
- 61.0 Develop an understanding of programming techniques and concepts. – The student will be able to:
- 61.01 Identify the basic constructs used in structured programming.
- 62.0 Design structured programs. – The student will be able to:
- 62.01 Design programs that model mathematical relationships from application areas (e.g., accounting, economics, multimedia, programming, science, web, etc.).
  - 62.02 Design programs that deal with multi-faceted objects (e.g., personnel records, physical objects, attributes of HTML tags, etc.).
  - 62.03 Design programs that deal with mixed classes of objects (e.g., a class of geometric shapes containing circles, rectangles, triangles, squares, polygons, etc.).
  - 62.04 Design programs that deal with objects of undetermined size (e.g., shopping lists, family trees, file directories on computers, websites, etc.).

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Web Development Technologies  
**Course Number:** 9003460  
**Course Credit:** 1

**Course Description:**

- 63.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 63.01 Identify and convert graphic formats.
  - 63.02 Demonstrate proficiency in adding Java scripts to web pages.
- 64.0 Demonstrate proficiency in web page design applicable to the WWW. – The student will be able to:
- 64.01 Determine the objectives and the audience for Web pages.
  - 64.02 Identify design strategies to reach and keep an audience.
  - 64.03 Use storyboarding to plan a website.
  - 64.04 Create styles and other design elements (e.g. backgrounds, colors, fonts, buttons, etc.).
- 65.0 Demonstrate proficiency in using a WYSIWG editor, web design, or web animation software for web page design. – The student will be able to:
- 65.01 Apply style sheets for consistent website design.
  - 65.02 Create and edit images and photographs for Web pages using digital imaging software (e.g., ImageReady in Photoshop).
  - 65.03 Insert audio files into a Web page.
  - 65.04 Create, edit and integrate video files into a Web page.
  - 65.05 Create, edit and integrate animation files into a Web page.
  - 65.06 Demonstrate an understanding of photograph compression factors such as transmission speed, color reduction, and browser support.
  - 65.07 Demonstrate knowledge of image formats related to photos and graphics on the Internet (e.g. Graphic formats (TIFF & EPS), Web formats (JPEG, GIF, PNG, etc.)
  - 65.08 Save and export a photograph to the Web in the format best for image quality and file size.
  - 65.09 Build, optimize, edit, and test web pages for publication.
  - 65.10 Create a web page that utilizes plug-ins.
  - 65.11 Demonstrate an understanding of network and web implementation issues (e.g., bandwidth, compression, streaming).
  - 65.12 Compare and contrast various methods by which information may be accessed on the Internet/Intranet (e.g., FTP, telnet, browser).
  - 65.13 Demonstrate an understanding of file encryption methods (e.g., secure server, unsecured server).

- 66.0 Demonstrate proficiency in using digital photography and digital imaging – The student will be able to:
- 66.01 Demonstrate knowledge of ethics related to digital imaging, and legal and consent issues.
  - 66.02 Apply effective design principles in digital photography compositions.
  - 66.03 Illustrate the essence of an event, quote, or slogan through digital photography/imaging.
  - 66.04 Demonstrate skill in using digital imaging software for image manipulation, color correction, and special effects to creatively convey a message or literary interpretation.
  - 66.05 Demonstrate skill in scanning and cropping photographs.
- 67.0 Design and create webpages suitable for publishing to the Internet. – The student will be able to:
- 67.01 Explain the need for web-based applications.
  - 67.02 Evaluate a website for basic usability and accessibility issues.
  - 67.03 Display an understanding of the purposes of site maps and wireframes.
  - 67.04 Develop an effective site map for a website.
  - 67.05 Develop effective wireframes for a website.
  - 67.06 Identify industry best practices in visual design.
  - 67.07 Explain the key concepts of meeting client needs.
  - 67.08 Develop an effective look and feel for a website.
  - 67.09 Develop an effective web page template.
  - 67.10 Describe a correct directory structure, naming convention protocol, and file organization for a website.
  - 67.11 Characterize effective writing for the web.
  - 67.12 Create effective written content for the web.
  - 67.13 Decide how to best prepare various types of graphical content for use on a web page.
  - 67.14 Develop a User Testing Plan.
  - 67.15 List the steps that are necessary to determine when a website is ready to launch.
  - 67.16 Demonstrate the ability to organize and execute a user testing of a website.
- 68.0 Describe how website performance is monitored and analyzed. – The student will be able to:
- 68.01 Identify issues related to website maintenance.
  - 68.02 Use webpage validation tools.
  - 68.03 Describe website performance metrics (e.g., visits, time-on-page, time-on-site, et al) and discuss their design implications.
  - 68.04 Demonstrate knowledge of accessibility problems and solutions.
  - 68.05 Examine indexing, page ranking, basic Search Engine Optimization techniques.
  - 68.06 Explore common website analytic tools
  - 68.07 Construct web pages with streaming media content.
- 69.0 Demonstrate proficiency in hosting a website. – The student will be able to:
- 69.01 Apply professional guidelines to choose, search for, and register a domain name.
  - 69.02 Evaluate criteria upon which to select an appropriate web host.

- 69.03 Make generalizations about optimal download speed for a particular website.
- 69.04 Demonstrate the ability to upload and download files using FTP protocol.
- 69.05 Develop a Maintenance Plan for a client.

70.0 Demonstrate the ability to attract traffic for a website. – The student will be able to:

- 70.01 Explain and describe the best practices for attracting traffic to websites.
- 70.02 Evaluate an effective search engine optimization strategy.
- 70.03 Describe tactics for building online credibility.
- 70.04 Explain how to use standard techniques to gather and/or track site statistics.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:**           **Multimedia Technologies**  
**Course Number:**       **9003470**  
**Course Credit:**         **1**

**Course Description:**

71.0 Demonstrate knowledge of presentation production issues. – The student will be able to:

- 71.01 Identify characteristics of various types of presentations (informing, selling, teaching, and entertaining).
- 71.02 Identify presentation materials (e.g. handouts, seminar notebooks, business cards, coupons, etc.) and presentation marketing mediums (ex. print media such as newspaper, magazines; TV; movies; computer presentations; interactive CD ROM; kiosks, and Web pages, etc.).
- 71.03 Identify design characteristics (fonts, size and styles, backgrounds, etc.) that are suited for each type of presentation format and material.
- 71.04 Demonstrate knowledge of copyright laws including copyright statute, disclaimers, and filing procedures.
- 71.05 Research and identify skills needed for career positions in multimedia.
- 71.06 Demonstrate an understanding of graphic and other file formats (e.g., EPS, TIFF, JPEG, ASCII, MPEG, MIDI, AVI, WAV, etc.) and knowledge of image size when scanning and saving files for use in different presentation types (Web, computer, print, etc.)
- 71.07 Demonstrate knowledge of presentation vocabulary/terms.

72.0 Demonstrate proficiency in using digital photography and digital imaging. – The student will be able to:

- 72.01 Demonstrate knowledge of ethics related to digital imaging, and legal and consent issues.
- 72.02 Apply effective design principles in digital photography compositions.
- 72.03 Illustrate the essence of an event, quote, or slogan through digital photography/imaging.
- 72.04 Demonstrate skill in using digital imaging software for image manipulation, color correction, and special effects to creatively convey a message or literary interpretation.
- 72.05 Demonstrate skill in scanning and cropping photographs.
- 72.06 Incorporate scanned or digitally taken photographs into documents (poster, brochure, card, photo journalism story, report or book covers, letterhead, etc.) that have been designed using desktop publishing software or the desktop publishing features of word processing software.

73.0 Demonstrate basic video production. – The student will be able to:

- 73.01 Use current industry standard production video equipment.
- 73.02 Operate camera in studio and location (field) production environments.

- 73.03 Demonstrate understanding of digital video storage concepts and digital storage media.
  - 73.04 Demonstrate knowledge of and the ability to operate digital recording decks, and other digital storage devices.
  - 73.05 Identify and select microphones for production needs.
  - 73.06 Determine appropriate lighting needs for production settings.
  - 73.07 Identify location and studio lighting types, method of use and application.
- 74.0 Demonstrate set-up and configuration of a computer for video applications. – The student will be able to:
- 74.01 Install basic peripheral devices related to video programs.
  - 74.02 Install and configure software related to video programs.
  - 74.03 Demonstrate basic knowledge of computer system requirements.
  - 74.04 Demonstrate basic knowledge of installing plug-ins or additional audio source material such as beats and or samples.
  - 74.05 Understand the signal flow of a digital video workstation.
- 75.0 Demonstrate the basic operation of a video workstation. – The student will be able to:
- 75.01 Demonstrate knowledge of the digital video workstation interface.
  - 75.02 Demonstrate a working familiarity and understanding of the function and operation of digital video workstations.
  - 75.03 Describe a full digital media production cycle
  - 75.04 Demonstrate ability to edit, cut, erase, and insert video utilizing various digital production techniques.
  - 75.05 Record video directly to the digital video workstation.
  - 75.06 Demonstrate knowledge of editing video according to message.
  - 75.07 Demonstrate skill in using video effects and plug-ins.
  - 75.08 Describe a first complete run-through of the video production process
  - 75.09 Characterize the qualities of effective communication in a completed video
  - 75.10 Prepare a video project for final compositing and export.
  - 75.11 Transfer video files between various video software applications.
  - 75.12 Export finished video.
  - 75.13 Identify and describe solutions to the challenges and obstacles that arise in a video production
- 76.0 Demonstrate basic audio production. – The student will be able to:
- 76.01 Describe digital audio storage concepts and digital storage media.
  - 76.02 Operate digital recording decks and other digital storage devices.
  - 76.03 Describe the function and operation of digital audio workstations.
  - 76.04 Edit, cut, erase, and insert sound utilizing various digital production techniques.
  - 76.05 Perform digital noise reduction and noise extraction via spectral display.
- 77.0 Set-up and configure a computer for audio applications. – The student will be able to:
- 77.01 Install basic peripheral devices related to audio programs.
  - 77.02 Install and configure software related to audio programs.
  - 77.03 Demonstrate basic knowledge of computer system requirements.
  - 77.04 Install plug-ins or additional audio source material such as beats and or samples.

- 77.05 Diagram the signal flow of a digital audio workstation.
- 78.0 Operate an audio workstation. – The student will be able to:
  - 78.01 Demonstrate knowledge of the digital audio workstation interface.
  - 78.02 Create and arrange a multi-track project.
  - 78.03 Create interest and effect using editing techniques
  - 78.04 Design and edit audio using a waveform editor.
  - 78.05 Record audio directly to the digital audio workstation.
  - 78.06 Mix audio.
  - 78.07 Demonstrate skill in using audio effects and plug-ins.
  - 78.08 Prepare an audio project for finishing and final mix down.
  - 78.09 Transfer audio files between various audio software applications.
  - 78.10 Demonstrate the understanding of audio file bit depth, bandwidth and dithering and be able to explain when and where these apply in various applications of digital audio production.
  - 78.11 Export finished audio.
- 79.0 Demonstrate proficiency in using presentation software and equipment. – The student will be able to:
  - 79.01 Using presentation software, create a multimedia presentation that incorporates shot and edited video, animation, music, narration and adheres to good design principles, use of transitions, and effective message conveyance.
  - 79.02 Demonstrate knowledge of the roles and responsibilities of a multimedia production team (e.g. project manager, creative or design director, content experts, writers, graphic designers, animators, sound designers, videographer, interface designers/programmers, etc.).
  - 79.03 Collaborate with team members to plan, edit, evaluate, and present a multimedia presentation.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Computer Networking Fundamentals  
**Course Number:** 9003480  
**Course Credit:** 1

**Course Description:**

80.0 Demonstrate understanding of network technologies. – The student will be able to:

- 80.01 Explain the function of common networking protocols such as TCP,FTP, UDP, TCP/IP suite, DHCP, TFTP, DNS, HTTP(S), ARP, SIP (VoIP), RTP (VoIP), SSH, POP3, NTP, IMAP4, TELNET, SMTP, SNMP 2/3, ICMP, IGMP, TLS
- 80.02 Identify commonly used TCP and UDP default ports such as the following: TCP ports, FTP – 20, 21, SSH – 22, TELNET – 23, SMTP – 25, DNS – 53, HTTP – 80, POP3 – 110, NTP – 123, IMAP4 – 143, HTTPS – 443, UDP ports TFTP – 69, DNS – 53, BOOTPS/DHCP – 67, SNMP – 161
- 80.03 Identify the following address formats IPv6, IPv4, and MAC Addressing
- 80.04 Evaluate the proper use of the following addressing technologies and addressing schemes: Subnetting, Classful vs. classless (e.g. CIDR, Supernetting), NAT, PAT, SNAT, Public vs. private, DHCP (static, dynamic APIPA), Addressing schemes, Unicast, Multicast, Broadcast
- 80.05 Identify common IPv4 and IPv6 routing protocols - Link state OSPF, IS-IS, Distance vector, RIP, RIPv2, BGP, Hybrid EIGRP
- 80.06 Explain the purpose and properties of routing such as IGP vs EGP, Static vs dynamic, Next Hop, Understanding routing tables and how they pertain to path selection, and explain convergence ( steady state).
- 80.07 Compare the characteristics of wireless communication standards such as 802.11 a/b/g/n, speeds, distance, channels, frequency, authentication and encryption such as WPA, WEP, RADIUS, AND TKIP.

81.0 Understand, install, and configure network hardware. – The student will be able to:

- 81.01 Categorize standard cable types and their properties such as CAT3, CAT5, CAT5e, CAT6, STP, UTP, Multimode fiber, single-mode fiber, coaxial, serial, plenum vs non-plenum, transmission speeds, distance, duplex, noise immunity ( security, EMI), and frequency
- 81.02 Identify common connector types such as RJ-11, RJ-45, BNC, SC, ST, LC, RS-232,
- 81.03 Identify common physical network topologies such as Star, Mesh, Bus, Ring, Point to Point, Point to Multipoint, and Hybrid
- 81.04 Differentiate and implement appropriate wiring standards such as 568A, 568 B Straight vs cross over, rollover, and Loopback
- 81.05 categorize Wan technologies types and properties such as Frame Relay, E1/T1, ADSL, SDSL, VDSL, Cable modem, Satellite, E3/T3, Oc-x, Wireless, ATM, SONET, MPLS, ISD Bri, ISDN PRI, POTS, PSTN, Circuit, switch, packet switch, speed, transmission media, and Distance.
- 81.06 Categorize LAN technology types and properties such as Ethernet, 10BaseT, 100BaseTX, 100BaseFX, 1000BaseT, 1000BaseX, 10GbaseSR, 10GBaseLR,

10GBaseER, 10GBaseSW , 10GBaseLW, 10GBaseEW, 10GBaseT and properties of each such as CSMA/CD, Broadcast, Collision, Bonding, Speed, and Distance,

- 81.07 Explain common logical network topologies and their characteristics such as peer to peer, client/server, VPN, VLAN
  - 81.08 Install components of wiring distribution such as Vertical and horizontal cross connects, Patch panels, 66 block, MDFs, IDFs, 25 pair, 100 pair, 110 block, Demarc, Demarc extension, Smart jack, verify wiring installation, and Verify wiring termination.
- 82.0 Understand, install and configure networking devices. – The student will be able to:
- 82.01 Install, configure and differentiate between common network devices such as hub, repeater, modem, NIC, media converters, basic switch, bridge, wireless access point, basic router, basic firewall, basic DHCP server.
  - 82.02 Identify the function of specialized network devices such as multilayer switch, Content switch, IDS/IPS, load balancer, multifunction network devices, DNS server Bandwidth shaper, proxy server, and CSU/DSU
  - 82.03 Explain the advance features of a switch such as PoE, Spanning tree, VLAN, Trunking, Port mirroring, and Port Authentication
  - 82.04 Implement a basic wireless network using the following technologies installed client, access point placement, access point with encryption, access point with configured channels and frequencies, and a set ESSSID and beacon.
- 83.0 Understand, install and configure network management software. – The student will be able to:
- 83.01 Explain the function of the OSI layer model such as physical, data link, network, transport, session, presentation, and application
  - 83.02 Identifies types of configuration management documentation such as wiring schematics, physical and logical network diagram, baselines, policies, procedure and configuration and regulations
  - 83.03 Evaluate the network based on configuration management documentation such as compare wiring schematics, physical and logical network diagrams, baselines, policies and procedures, and configurations to network devices and infrastructure, and update wiring schematics, physical and logical network diagrams, configuration and job logs as needed.
  - 83.04 Conduct network monitoring to identify performance and connectivity issues using the following: network monitoring utilities (packet sniffers, connectivity software, load testing, throughput testers) and system logs, history, event log
  - 83.05 Conduct network monitoring to identify performance and connectivity issues using the following: network monitoring utilities (packet sniffers, connectivity software, load testing, and throughput testers), system logs, history logs, and event logs.
  - 83.06 Explain different methods and rationales for network performance optimization such as QoS, Traffic shaping, Load balancing, high availability, Caching engines, Fault tolerance, Latency sensitivity, High bandwidth applications, VoIP, Video applications, and Uptime
  - 83.07 Implement the following network troubleshooting methodology - Information gathering, identify symptoms and problems, Identify the affected areas of the network, Determine if anything has changed, Establish the most probable cause,

- Determine if escalation is necessary, Create an action plan and solution identifying potential effects, Implement and test the solution, Identify the results and effects of the solution, and Document the solution and the entire process
- 83.08 Troubleshoot common connectivity issues and select an appropriate solution  
Physical issues: Cross talk, Near End crosstalk, Attenuation, collisions, Shorts Open, Impedance mismatch (echo), and Interference - Logical issues: Port speed, Port duplex mismatch, incorrect VLAN, Incorrect IP address, Wrong gateway, Wrong DNS, Wrong subnet mask, Issues that should be identified but escalated: Switching loop, Routing loop, Route problems, Proxy arp, Broadcast storms, Wireless Issues: Interference (bleed, environmental factors), incorrect encryption, Incorrect channel, Incorrect frequency, ESSID mismatch, Standard mismatch (802.11 a/b/g/n), Distance, Bounce, and Incorrect antenna placement.
- 84.0 Understand, install and configure networking tools. – The student will be able to:
- 84.01 Select the appropriate command line interface tool and interpret the output to verify functionality such as Traceroute, Ipconfig, IFconfig, Ping, Arp ping, Arp, Nslookup, Hostname, Dig, Mtr, Route, and Nbtstat.
- 84.02 Explain the purpose of network scanners such as Packet sniffers, Intrusion detection software, Intrusion prevention software, Port scanners
- 84.03 Utilize the appropriate hardware tools such as Cable testers, Protocol analyzer, Certifiers, TDR, OTDR, Multimeter, Toner probe, Butt set, Punch down tool, Cable stripper, Snips, Voltage event recorder, and Temperature monitor
- 85.0 Install, configure, and manage network security hardware and software devices. – The student will be able to:
- 85.01 Explain the function of hardware and software security devices such as Network based firewall, Host based firewall, IDS, IPS, and VPN concentrator
- 85.02 Explain common features of a firewall for example: Application layer vs. network layer, Stateful vs. stateless, Scanning services, Content filtering, Signature identification, and Zones
- 85.03 Explain the methods of network access security using the following: Filtering: ACL, MAC filtering, IP filtering, Tunneling and encryption, SSL VPN, VPN, L2TP, PPTP, IPSEC, Remote access, RAS, RDP, PPPoE, PPP, VNC, and ICA
- 85.04 Explain methods of user authentication using the following methods: PKI, Kerberos, AAA, RADIUS, TACACS+, Network access control, 802.1x, CHAP, MS-CHAP, and EAP
- 85.05 Explain issues that affect device security such as the Physical security, Restricting local and remote access, Secure methods vs. unsecure methods, SSH, HTTPS, SNMPv3, SFTP, SCP, and TELNET, HTTP, FTP, RSH, RCP, SNMPv1/2
- 85.06 Identify common security threats and mitigation techniques such as Security threats, DoS, Viruses, Worms, Attackers, Man in the middle, murf, Rogue access points, Social engineering (phishing), Mitigation techniques, Policies and procedures, User training, Patches and updates.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Cybersecurity Fundamentals  
**Course Number:** 9003490  
**Course Credit:** 1

**Course Description:**

104.0 Demonstrate an understanding of cybersecurity, the terminology used, its history and culture, and trends. – The student will be able to:

- 104.01 Describe the history of cybersecurity, including the evolution of a hacker culture.
- 104.02 Discuss the trends and national initiatives related to cybersecurity.
- 104.03 Distinguish between information assurance and cybersecurity.
- 104.04 Describe the concepts of confidentiality as it relates to user and data impact.
- 104.05 Explain authentication and the concept of non-repudiation.
- 104.06 Describe the concept of “Hacking - The Human Element” and elaborate on its implications to cybersecurity.

105.0 Recognize the following types of malicious code and specify the appropriate actions to take to mitigate vulnerability and risk. – The student will be able to:

- 105.01 Viruses
- 105.02 Trojan Horses
- 105.03 Logic Bombs
- 105.04 Worms

106.0 Recognize and be able to differentiate and explain the following access control models. – The student will be able to:

- 106.01 MAC (Mandatory Access Control)
- 106.02 DAC (Discretionary Access Control)
- 106.03 RBAC (Role Based Access Control)

107.0 Recognize and be able to differentiate and explain the following methods of authentication. – The student will be able to:

- 107.01 Kerberos
- 107.02 CHAP (Challenge Handshake Authentication Protocol)
- 107.03 Certificates
- 107.04 Username / Password
- 107.05 Tokens
- 107.06 Multi-factor
- 107.07 Mutual
- 107.08 Biometrics

108.0 Recognize the following attacks and specify the appropriate actions to take to mitigate vulnerability and risk. – The student will be able to:

- 108.01 DOS / DDOS (Denial of Service / Distributed Denial of Service)
  - 108.02 Back Door
  - 108.03 Spoofing
  - 108.04 Man in the Middle
  - 108.05 Replay
  - 108.06 TCP/IP Hijacking
  - 108.07 Weak Keys
  - 108.08 Mathematical
  - 108.09 Social Engineering
  - 108.10 Birthday
  - 108.11 Password Guessing (e.g., Brute Force, Dictionary)
  - 108.12 Software Exploitation
- 109.0 Recognize and understand the processes and risks associated with the following security concerns and tasks. – The student will be able to:
- 109.01 Identify non-essential services and protocols and know what actions to take to reduce the risks of those services and protocols.
  - 109.02 Understand the concept of and know how reduce the risks of social engineering.
  - 109.03 Understand the concept and significance of auditing, logging and system scanning.
  - 109.04 Identify and be able to differentiate different cryptographic standards and protocols.
- 110.0 Recognize and understand the administration of the following types of remote access technologies. – The student will be able to:
- 110.01 802.1x
  - 110.02 VPN (Virtual Private Network)
  - 110.03 RADIUS (Remote Authentication Dial-In User Service)
  - 110.04 TACACS (Terminal Access Controller Access Control System)
  - 110.05 L2TP / PPTP (Layer Two Tunneling Protocol / Point to Point Tunneling Protocol)
  - 110.06 SSH (Secure Shell)
  - 110.07 IPSEC (Internet Protocol Security)
  - 110.08 Vulnerabilities
- 111.0 Recognize and understand the administration of the following email security concepts. – The student will be able to:
- 111.01 S/MIME (Secure Multipurpose Internet Mail Extensions)
  - 111.02 PGP (Pretty Good Privacy) like technologies
  - 111.03 Vulnerabilities
  - 111.04 SPAM
  - 111.05 Hoaxes
- 112.0 Recognize and understand the administration of the following Internet security concepts. – The student will be able to:
- 112.01 SSL / TLS (Secure Sockets Layer / Transport Layer Security)
  - 112.02 HTTP/S (Hypertext Transfer Protocol / Hypertext Transfer Protocol over Secure Sockets Layer)

- 112.03 Instant Messaging (i.e., Vulnerabilities, Packet Sniffing, Privacy)
- 113.0 Recognize and understand the administration of the following vulnerabilities. – The student will be able to:
- 113.01 Java Script
  - 113.02 ActiveX
  - 113.03 Buffer Overflows
  - 113.04 Cookies
  - 113.05 Signed Applets
  - 113.06 CGI (Common Gateway Interface)
  - 113.07 SMTP (Simple Mail Transfer Protocol) Relay
- 114.0 Recognize and understand the administration of the following directory security concepts. – The student will be able to:
- 114.01 SSL / TLS (Secure Sockets Layer / Transport Layer Security)
  - 114.02 LDAP (Lightweight Directory Access Protocol)
- 115.0 Recognize and understand the administration of the following file transfer protocols and concepts. – The student will be able to:
- 115.01 S/FTP (File Transfer Protocol)
  - 115.02 Blind FTP (File Transfer Protocol) / Anonymous
  - 115.03 File Sharing
  - 115.04 Vulnerabilities (i.e., packet sniffing, naming conventions)
- 116.0 Recognize and understand the administration of the following wireless technologies and concepts. – The student will be able to:
- 116.01 WTLS (Wireless Transport Layer Security)
  - 116.02 802.11 and 802.11x
  - 116.03 WEP / WAP (Wired Equivalent Privacy / Wireless Application Protocol)
  - 116.04 Vulnerabilities (i.e., site surveys)
- 117.0 Compare and contrast the following types of intrusion detection in terms of implementation and configuration. – The student will be able to:
- 117.01 Network Based – Active and Passive
  - 117.02 Host Based – Active and Passive
  - 117.03 Honey Pots
  - 117.04 Incident Response
- 118.0 Be able to identify and explain the following different kinds of cryptographic algorithms. – The student will be able to:
- 118.01 Hashing
  - 118.02 Symmetric
  - 118.03 Asymmetric

119.0 Understand how cryptography and digital signatures address the following security concepts. – The student will be able to:

- 119.01 Confidentiality
- 119.02 Integrity
- 119.03 Authentication
- 119.04 Non-Repudiation
- 119.05 Access Control

120.0 Understand and be able to explain the following concepts of PKI (Public Key Infrastructure). – The student will be able to:

- 120.01 Certificates (e.g., policies, practice statements)
- 120.02 Revocation
- 120.03 Trust Models

121.0 Understand and be able to explain the following concepts of Key Management and Certificate Lifecycles. – The student will be able to:

- 121.01 Centralized versus Decentralized
- 121.02 Hardware versus software key storage
- 121.03 Private key storage
- 121.04 Escrow
- 121.05 Expiration
- 121.06 Revocation versus suspension (e.g., status checking)
- 121.07 Recovery authorization schema (e.g., M-of-N Control - Of M appropriate individuals, N must be present to authorize recovery)
- 121.08 Renewal
- 121.09 Destruction
- 121.10 Key Usage
- 121.11 Multiple Key Pairs (Single, Dual)

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Java Development & Programming  
**Program Type:** Career Preparatory  
**Career Cluster:** Information Technology

	<b>Secondary</b>	<b>PSAV</b>
Program Number	9007200	Y700200
CIP Number	0511020313	0511020313
Grade Level	9-12, 30, 31	30, 31
Standard Length	8 credit hours	1200 hours
Teacher Certification	BUS ED 1 @2 COMP SCI 6 COMP PROG 7G	BUS ED 1 @2 COMP SCI 6 COMP PROG 7G
CTSO	FBLA BPA SkillsUSA	Phi Beta Lambda BPA SkillsUSA
SOC Codes (all applicable)	15-1041, 15-1021	15-1041, 15-1021
Facility Code	212 <a href="http://www.fldoe.org/edfacil/sref.asp">http://www.fldoe.org/edfacil/sref.asp</a> (State Requirements for Educational Facilities)	
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>	
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>	
Industry Certifications	<a href="http://www.fldoe.org/workforce/fcpea/default.asp">http://www.fldoe.org/workforce/fcpea/default.asp</a>	
Basic Skills Level	N/A	Mathematics: 9 Language: 9 Reading: 9

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to the fundamentals of programming and software development; procedural and object-oriented programming; creating regular and specialized applications using the Java programming language, including testing, monitoring, debugging, documenting, and maintaining Java computer applications.

## Program Structure

This program is a planned sequence of instruction consisting of four occupational completion points, with OCPs A, B, and C comprising the Software Development Core. Secondary or postsecondary students who have previously completed the Software Development Core will not have to repeat the core. A student who completes the applicable competencies at any occupational completion point may either continue with the training program or exit as an occupational completer.

When offered at the post secondary level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44 (3)(b), F.S.

The following table illustrates the **PSAV** program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	OTA0040	Information Technology Assistant	150	15-1041
B	CTS0041	Computer Programmer Assistant	300	15-1021
C	CTS0044	Computer Programmer	150	15-1021
D	CTS0031	Java Developer	600	15-1021

The following table illustrates the **Secondary** program structure:

OCP	Course Number	Course Title	Length	SOC Code	Level
A	8207310	Introduction to Information Technology	1 credit	15-1041	2
B	9007210	Foundations of Programming	1 credit	15-1021	3
	9007220	Procedural Programming	1 credit		3
C	9007230	Object-Oriented Programming Fundamentals	1 credit	15-1021	3
D	9007240	Java Programming Essentials	1 credit	15-1021	3
	9007250	Applied Object-Oriented Java Programming	1 credit		3
	9007260	Java Database Programming	1 credit		3
	9007270	Java Programming Capstone	1 credit		3

## Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## Special Notes

### Academic Alignment

Some or all of the courses in this program have been aligned to the Next Generation Sunshine State Standards contained in specific math and science core academic courses. This alignment resulted from a collaborative review by Career and Technical Education (CTE) teachers and core academic teachers. The table below contains the results of the alignment efforts. Data shown in the table includes the number of academic standards in the CTE course, the total number of math and science standards contained in the academic course, and the percentage of alignment to the CTE course. The following academic courses were included in the alignment (see code for use in table).

Academic Subject Area	Academic Course
Math	Algebra 1 (ALG1) Algebra 2 (ALG2) Geometry (GEO)
Science	Anatomy/Physiology Honors (APH) Astronomy Solar/Galactic Honors (ASGH) Biology 1 (BIO1) Chemistry 1 (CHM1) Earth-Space Science (ESS) Genetics (GEN) Marine Science 1 Honors (MS1H) Physical Science (PS) Physics 1 (PHY1)

Course	Math			Science								
	ALG1	ALG2	GEO	APH	ASGH	BIO1	CHM1	ESS	GEN	MS1H	PS	PHY1
Introduction to IT	6/36 17%	2/41 5%	1/45 2%	2/53 4%	2/52 4%	2/56 4%	2/55 4%	2/58 3%	2/35 6%	2/42 5%	2/56 4%	2/53 4%

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

### **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA), Business Professionals of America (BPA), and SkillsUSA are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills for secondary students. For postsecondary students, SkillsUSA, Phi Beta Lambda, and BPA are the appropriate student organizations. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the program-specific OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

### **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 9.0, Language 9.0, and Reading 9.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination. Students may be exempt from meeting the Basic Skills requirements by earning an eligible industry certification. See the Basic Skills Exemption List document for a list of eligible industry certifications (<http://www.fldoe.org/workforce/dwdframe/rtf/basic-skills.rtf>).

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination pursuant to Section 1008.29, F.S.; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.)

### **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. Links to instructional resources in support of Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (ESE) will need modifications to meet their special needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular occupational completion point (OCP) or a modified occupational completion point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP(s)/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

## **Articulation**

The PSAV component of this program has no statewide articulation agreement approved by the Florida State Board of Education. However, this does not preclude the awarding of credits by any college through local agreements.

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Bright Futures/Gold Seal Scholarship**

Course substitutions as defined in the Comprehensive Course Table for this program area may be used to qualify a student for Florida's Gold Seal Vocational Scholarship, providing all other eligibility requirements are met. Eligibility requirements are available online at [https://www.osfaffelp.org/bfiehs/fnbpcm02\\_CCTMain.aspx](https://www.osfaffelp.org/bfiehs/fnbpcm02_CCTMain.aspx).

## **Fine Arts/Practical Arts Credit**

Many courses in CTE programs meet the Fine Arts/Practical Arts credit for high school graduation. For additional information refer to <http://www.fldoe.org/schools/pdf/ListPracticalArtsCourses.pdf>.

## Core Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate Comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles.
- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace.
- 11.0 Participate in work-based learning experiences.
- 12.0 Perform e-mail activities.
- 13.0 Demonstrate knowledge of different operating systems.
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW.
- 15.0 Demonstrate proficiency using HTML commands.
- 16.0 Demonstrate proficiency in page design applicable to the WWW.
- 17.0 Demonstrate proficiency using specialized web design software.
- 18.0 Develop an awareness of the information technology industry.
- 19.0 Develop an awareness of microprocessors and digital computers.
- 20.0 Develop an awareness of programming languages.
- 21.0 Develop an awareness of emerging technologies.
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model.
- 23.0 Demonstrate proficiency using common software applications.
- 24.0 Demonstrate proficiency using specialized software applications.
- 25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development.
- 26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types.
- 27.0 Distinguish between iterative and non-iterative program control structures.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages.
- 29.0 Describe the processes, methods, and conventions for software development and maintenance.

- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool.
- 32.0 Describe information security risks, threats, and strategies associated with software development.
- 33.0 Design a computer program to meet specific physical, operational, and interaction criteria.
- 34.0 Create and document a computer program that uses a variety of internal and control structures for manipulating varied data types.
- 35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input.
- 36.0 Create a unit test plan, implement the plan, and report the results of testing.
- 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming.
- 38.0 Create a project plan that defines requirements, structural design, time estimates, and testing elements.
- 39.0 Design, document, and create object-oriented computer programs.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results.

### **Program Standards**

- 41.0 Construct statements that declare, initialize, and modify different types of variables used in Java programs.
- 42.0 Describe the types and characteristics of lexical units in the Java programming language.
- 43.0 Describe the data types employed in Java programs.
- 44.0 Construct Java statements that employ the use of various operators.
- 45.0 Write executable statements using Java.
- 46.0 Describe variable scope and its implications in Java programming.
- 47.0 Apply common Java programming style guidelines and conventions.
- 48.0 Demonstrate use of the compiler and interpreter through command line interface.
- 49.0 Construct conditional control statements in Java.
- 50.0 Construct iterative control statements in Java.
- 51.0 Use nested loop iterative control statements in Java.
- 52.0 Produce input and output for Java programs.
- 53.0 Use packages and import statements in a Java program.
- 54.0 Create a Java program that uses methods.
- 55.0 Create a Java program that uses parameters in methods.
- 56.0 Describe and use recursion in a Java program.
- 57.0 Construct Java statements that use the String class to manipulate String data.
- 58.0 Construct Java statements that use Classes.
- 59.0 Manage class relationships.
- 60.0 Construct Java statements that illustrate the use of multiplicities in class relationships.
- 61.0 Use object references.
- 62.0 Describe the types of arrays and construct Java statements that illustrate the use and manipulation of multi-dimensional and jagged arrays.
- 63.0 Construct Java statements that illustrate different ways of using inheritance.
- 64.0 Construct Java statements that use collections.
- 65.0 Write Java code that uses the Iterator and List interfaces.
- 66.0 Create Java code that includes exception handling code.

- 67.0 Create Java code that uses the Object class.
- 68.0 Use standard library classes that comprise the Java API.
- 69.0 Create Java code that uses exceptions to improve program quality.
- 70.0 Describe Java 2 Micro Edition (J2ME) uses, characteristics, and constraints.
- 71.0 Create and convert classes using Unified Modeling Language (UML).
- 72.0 Create programs that use of Remote Method Invocation (RMI) and other server technologies associated with Relational Database Management Systems (RDMS) and Structured Query Language (SQL).
- 73.0 Demonstrate an understanding of Java Integration APIs, including Java Message Service (JMS), Enterprise JavaBeans (EJB), and Java Naming and Directory Interface (JNDI).
- 74.0 Demonstrate an understanding of Java Client APIs, including the Abstract Window Toolkit (AWT), Swing, and Java applet.
- 75.0 Understand and apply Java 2 Enterprise Edition (J2EE) Server Solutions.
- 76.0 Create a database application using the Java programming language.
- 77.0 Create a graphical user interface application using the Java programming language.
- 78.0 Create a web-based application using the Java programming language.
- 79.0 Write code to perform common and union database queries using SQL and Java.
- 80.0 Implement Java program statements using objects.
- 81.0 Utilize debugging tools and write error handlers.
- 82.0 Demonstrate file I/O.
- 83.0 Utilize API functions.
- 84.0 Test and debug databases.
- 85.0 Successfully work as a member of a software development team.
- 86.0 Manage time according to a plan.
- 87.0 Keep acceptable records of progress, problems and solutions.
- 88.0 Plan, organize and carry out a project plan.
- 89.0 Manage resources.
- 90.0 Use tools, materials, and processes in an appropriate and safe manner.
- 91.0 Demonstrate an understanding of the software development process.
- 92.0 Research content related to the project and document the results.
- 93.0 Use presentation skills, and appropriate media to describe the progress, results and outcome of the experience.
- 94.0 Demonstrate competency in the area of expertise related to developing computer software using the Java programming language.

### **Essential Skills**

- 95.0 Demonstrate language arts knowledge and skills.
- 96.0 Demonstrate mathematics knowledge and skills.
- 97.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 98.0 Solve problems using critical thinking skills, creativity and innovation.
- 99.0 Use information technology tools.
- 100.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 101.0 Describe the importance of professional ethics and legal responsibilities.
- 102.0 Explain the importance of employability skill and entrepreneurship skills.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: Java Development & Programming  
PSAV Number: Y700200**

**Course Number: OTA0040  
Occupational Completion Point: A  
Information Technology Assistant – 150 Hours – SOC Code 15-1041**

**Introduction to Information Technology Standards:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
  - 01.06 Describe ethical issues and problems associated with computers and information systems.
- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
  - 02.02 Use professional business vocabulary appropriate for information technology environments.
  - 02.03 Organize ideas and communicate oral and written messages appropriate for information technology environments.
  - 02.04 Collaborate with individuals and teams to complete tasks and solve information technology problems.
  - 02.05 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
  - 02.06 Apply the writing process to the creation of appropriate documents following designated business formats.
  - 02.07 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).
- 03.0 Use technology to enhance the effectiveness of communication skills. – The student will be able to:

- 03.01 Use database, spreadsheet, and presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
  - 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
  - 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
  - 08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:
- 09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).
  - 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.

- 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:
- 14.01 Identify and describe Web terminology.
  - 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
  - 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, pdf, etc.).
  - 14.08 Identify effective Boolean search strategies.
- 15.0 Demonstrate proficiency using HTML commands. – The student will be able to:
- 15.01 Identify elements of a Web page.
  - 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
  - 15.03 Define basic HTML terminology.
  - 15.04 Analyze HTML source code developed by others.
  - 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
  - 15.07 Edit and test HTML documents for accuracy and validity.
  - 15.08 Use basic functions of WYSIWYG editors.
  - 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 15.10 Enhance web pages through the addition of images and graphics including animation.

- 16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
  - 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
  - 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 16.04 Use image design software to create and edit images.
  - 16.05 Demonstrate proficiency in publishing to the Internet.
  - 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
  - 16.07 Explain the need for web-based applications.
- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).

- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the open systems interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.
  - 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
  - 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
  - 24.03 Demonstrate the ability to incorporate digital sound.
- 95.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 95.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
  - 95.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
  - 95.03 Present information formally and informally for specific purposes and audiences. AF2.9

- 96.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 96.01 Demonstrate knowledge of arithmetic operations. AF3.2
- 96.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
- 96.03 Construct charts/tables/graphs using functions and data. AF3.5
- 102.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 102.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
- 102.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
- 102.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
- 102.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
- 102.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
- 102.06 Identify and exhibit traits for retaining employment. ECD 7.0
- 102.07 Identify opportunities and research requirements for career advancement. ECD 8.0
- 102.08 Research the benefits of ongoing professional development. ECD 9.0
- 102.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0

**Course Number: CTS0041****Occupational Completion Point: B****Computer Programmer Assistant – 300 Hours – SOC Code 15-1021**

- 25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development. – The student will be able to:
- 25.01 Describe the evolution of programming and programming careers.
- 25.02 Identify tasks performed by programmers.
- 25.03 Describe how businesses use computer programming to solve business problems.
- 25.04 Investigate job opportunities in the programming field.
- 25.05 Explain different specializations and the related training in the computer programming field.
- 25.06 Explain the need for continuing education and training of computer programmers.
- 25.07 Explain enterprise software systems and how they impact business.
- 25.08 Describe ethical responsibilities of computer programmers.
- 25.09 Describe the role of customer support to software program quality.
- 25.10 Identify credentials and certifications that may improve employability for a computer programmer.
- 25.11 Identify devices, tools, and other environments for which programmers may develop software.
- 26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types. – The student will be able to:
- 26.01 Identify the characteristics (e.g., size, limits) and uses of different numerical and non-numerical data types.
- 26.02 Explain the types and uses of variables in programs.
- 26.03 Determine the best data type to use for given programming problems.

- 26.04 Identify the types of operations that can be performed on different data types.
  - 26.05 Evaluate arithmetic and logical expressions using appropriate operator precedence.
  - 26.06 Explain how computers store different data types in memory.
  - 26.07 Use different number systems to represent data.
  - 26.08 Explain how national and international standards (*i.e.*, ASCII, UNICODE) are used to represent non-numerical data.
  - 26.09 Use Boolean logic to perform logical operations.
- 27.0 Distinguish between iterative and non-iterative program control structures. – The student will be able to:
- 27.01 Explain non-iterative programming structures (*e.g.*, if, if/else, etc.) and their uses.
  - 27.02 Explain iterative programming structures (*e.g.*, while, do/while, etc.) and their uses.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages. – The student will be able to:
- 28.01 Identify the characteristics, uses, and limits of low-level programming languages.
  - 28.02 Identify the characteristics, uses, and limits of high-level programming languages.
  - 28.03 Identify the characteristics, uses, and limits of rapid development programming languages.
  - 28.04 Describe object-oriented concepts.
  - 28.05 Explain the characteristics of procedural and object-oriented programming languages.
  - 28.06 Compare and contrast programming languages that are compiled (*e.g.*, C++), interpreted (*e.g.*, Basic, HTML), and translated (*e.g.*, Java).
- 29.0 Describe the processes, methods, and conventions for software development and maintenance. – The student will be able to:
- 29.01 Describe and explain tools used in software development.
  - 29.02 Describe the stages of the program life cycle.
  - 29.03 Compare and contrast alternative methods of program development (*e.g.*, rapid prototyping, waterfall, etc.).
  - 29.04 List and explain the steps in the program development cycle.
  - 29.05 Describe different types of documentation used in the program development cycle (*e.g.*, requirements document, program design documents, test plans, etc.).
  - 29.06 Describe the on-going need for program maintenance.
  - 29.07 Describe different methods companies use to facilitate program updates for enhancements and defects (*e.g.*, how customers receive patches, updates, new versions, upgrades).
  - 29.08 Describe different methods used to facilitate version control and change management.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control. – The student will be able to:
- 30.01 Explain the uses and limits of testing in ensuring program quality.

- 30.02 Explain testing performed at different stages of the program development cycle (e.g. unit testing, system testing, user acceptance testing, etc.).
  - 30.03 Describe data and the use of test plans/scripts to be used in program testing.
  - 30.04 Describe and identify types of programming errors (e.g., syntactical, logic, usability, requirements mismatch, etc.).
  - 30.05 Identify the data to be used for boundary conditions.
  - 30.06 Explain different types of testing (e.g., usability, automated, regression, etc.) and testing tools.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool. – The student will be able to:
- 31.01 Describe different design methodologies and their uses (e.g., object-oriented design, structured design, and rapid application development).
  - 31.02 Describe tools for developing a program design (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.03 Explain the role of existing libraries and packages in facilitating programmer productivity.
  - 31.04 Participate and contribute to a design review of a program design developed using a common program design tool (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.05 Write a program design document using UML or other standard design methodology.
  - 31.06 Define input and output for a program module using UML or other standard design methodology.
- 32.0 Describe information security risks, threats, and strategies associated with software development. – The student will be able to:
- 32.01 Explain the security risks to personal and business computer users.
  - 32.02 Identify different types of threats to computer systems.
  - 32.03 Identify methods to protect against different threats to computer systems.
  - 32.04 Understand the importance of a disaster / emergency response plan.
  - 32.05 Identify alternative methods for data storage and backup (e.g., mirroring, fail-over, high availability, types of backups).
- 33.0 Design a computer program to meet specific physical, operational, and interaction criteria. – The student will be able to:
- 33.01 Choose appropriate data types depending on the needs of the program.
  - 33.02 Define appropriate user interface prompts for clarity and usability (e.g., user guidance for data ranges, data types, etc.).
  - 33.03 Design and develop program that are designed for efficiency (e.g., less memory usage, less inputs/outputs, faster processing, etc.).
  - 33.04 Identify the software environment required for a program to run (e.g., operating system required, mobile, Web-based, desktop, delivery method, etc.).
  - 33.05 Identify the tools required to develop a program (e.g., editors, compilers, linkers, integrated development environments, application programming interfaces (APIs), libraries, etc.).
- 34.0 Create and document a computer program that uses a variety of internal and control

structures for manipulating varied data types. – The student will be able to:

- 34.01 Use appropriate naming conventions to define program variables and modules (methods, functions).
  - 34.02 Use a program editor to write the source code for a program.
  - 34.03 Write programs that use selection structures (e.g., if, if/else, etc.).
  - 34.04 Write programs that use repetition structures (e.g., while, do/while, etc.).
  - 34.05 Write programs that use nested structures.
  - 34.06 Use internal documentation (e.g., single-line and multi-line comments, program headers, module descriptions, and meaningful variable and function/module names) to document a program according to accepted standards.
  - 34.07 Compile and run programs.
  - 34.08 Write programs that use standard arithmetic operators with different numerical data types.
  - 34.09 Write programs that use standard logic operators.
  - 34.10 Write programs that use a variety of common data types.
  - 34.11 Write programs that perform data conversion between standard data types.
  - 34.12 Write programs that define, use, search, and sort arrays.
  - 34.13 Write programs that use user-defined data types.
  - 34.14 Demonstrate understanding and use of appropriate variable scope.
- 35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input. – The student will be able to:
- 35.01 Write programs that perform user input and output.
  - 35.02 Write programs that validate user input (e.g., range checking, data formats, valid/invalid characters, etc.).
  - 35.03 Write program modules such as functions, subroutines, or methods.
  - 35.04 Write program modules that accept arguments.
  - 35.05 Write program modules that return values.
  - 35.06 Write program modules that validate arguments and return error codes.
  - 35.07 Write interactive programs.
  - 35.08 Write programs that use standard libraries to enhance program function.
  - 35.09 Participate in a peer code review to verify program functionality, programming styles, program usability, and adherence to common programming standards.
- 36.0 Create a unit test plan, implement the plan, and report the results of testing. – The student will be able to:
- 36.01 Write a unit test plan that identifies the input data and expected results for program tests.
  - 36.02 Test and debug programs, including programs written by others.
  - 36.03 Write a test report that identifies the results of testing.
  - 36.04 Trace through the function of a program to ensure valid operation.
  - 36.05 Identify the system resources used by the program (e.g., memory, disk space, execution time, external devices).
  - 36.06 Create a disaster / emergency response plan for a computer system.
- 97.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:

- 97.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
- 97.02 Locate, organize and reference written information from various sources. CM 3.0
- 97.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
- 97.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
- 97.05 Apply active listening skills to obtain and clarify information. CM 7.0
- 97.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
- 97.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 98.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 98.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
- 98.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
- 98.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
- 98.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 99.0 Use information technology tools. – The student will be able to:
- 99.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 99.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 99.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 99.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 100.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 100.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
- 100.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
- 100.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 101.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 101.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
- 101.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
- 101.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2

**Course Number: CTS0044**  
**Occupational Completion Point: C**  
**Computer Programmer – 150 Hours – SOC Code 15-1021**

- 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming. – The student will be able to:
- 37.01 Demonstrate the understanding and use of classes, objects, attributes, and behaviors.
  - 37.02 Demonstrate the understanding and use of inheritance.
  - 37.03 Demonstrate the understanding and use of data encapsulation.
  - 37.04 Demonstrate the understanding and use of polymorphism.
- 38.0 Create a project plan for an object-oriented programming project that defines requirements, structural design, time estimates, and testing elements. – The student will be able to:
- 38.01 Write a project plan for completion of a project that includes gathering program requirements, developing the program, and testing it.
  - 38.02 Write a program requirements document that identifies business purpose, functional requirements, system requirements, and other common components of a requirements document.
  - 38.03 Design an object-oriented program using UML or another standard design methodology.
  - 38.04 Work with other team members to develop a project plan for a program.
  - 38.05 Work with other team members to write a design document for a program with multiple functions and shared data.
  - 38.06 Participate in design meetings that review program design documents for conformance to program requirements.
  - 38.07 Estimate the time to develop a program or module.
- 39.0 Design, document, and create object-oriented computer programs. – The student will be able to:
- 39.01 Compare and contrast recursive functions to other iterative methods.
  - 39.02 Understand the implementation of character strings in the programming language.
  - 39.03 Write programs that perform string processing (e.g., string manipulation, string compares, concatenation, etc.).
  - 39.04 Write programs that use user-defined data types.
  - 39.05 Write object-oriented programs that use inheritance.
  - 39.06 Write object-oriented programs that use polymorphism.
  - 39.07 Develop class constructors.
  - 39.08 Write programs that define and use program constants.
  - 39.09 Write programs that perform error handling.
  - 39.10 Participate in program code review meetings to evaluate program code for validity, quality, performance, data integrity, and conformance to program design documents.
  - 39.11 Write programs that perform dynamic memory allocation.
  - 39.12 Write programs that perform effective management of dynamically allocated memory.

- 39.13 Update a program module to implement enhancements or corrections and demonstrate appropriate documentation (internal and external) related to version control.
  - 39.14 Write programs that use complex data structures (e.g., stacks, queues, trees, linked lists etc.).
  - 39.15 Write programs that are event-driven.
  - 39.16 Write programs that perform file input and output (i.e., sequential and random access file input/output).
  - 39.17 Perform basic database commands including connect, open, select, and close.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results. – The student will be able to:
- 40.01 Develop a test plan for an object-oriented program.
  - 40.02 Write test plans for event-driven programs.
  - 40.03 Write test plans for programs that perform file input and output.
  - 40.04 Perform test and debug activities on object-oriented programs, including those written by someone else.
  - 40.05 Perform test and debug activities on an event-driven program.
  - 40.06 Perform test and debug activities on programs that perform file input and output and verify the correctness of output files.
  - 40.07 Document the findings of testing in a test report.

**Course Number: CTS0031**  
**Occupational Completion Point – D**  
**Java Developer – 600 Hours – SOC Code 15-1021**

- 41.0 Construct statements that declare, initialize, and modify different types of variables used in Java programs. – The student will be able to:
- 41.01 Describe how variables are used in programs.
  - 41.02 Identify the eight Java primitive data types.
  - 41.03 Identify the minimum and maximum ranges of primitive data types.
  - 41.04 Identify which data type should be used for a given situation.
  - 41.05 Identify the syntax for using variables.
  - 41.06 Declare and initialize variables.
  - 41.07 Assign new values to variables.
  - 41.08 Create and use constant variables.
- 42.0 Describe the types and characteristics of lexical units in the Java programming language. – The student will be able to:
- 42.01 Describe the types of lexical units.
  - 42.02 Describe identifiers and identify valid and invalid identifiers.
  - 42.03 Describe and identify reserved words, delimiters, literals, and comments.
- 43.0 Describe the data types employed in Java programs. – The student will be able to:
- 43.01 Describe the data type categories.
  - 43.02 Give examples of primitives, reference data types.
  - 43.03 Identify and use enumerations.

- 43.04 Understand the use of Wrapper Classes in programs.
- 43.05 Describe the difference between real and integer data types.
- 44.0 Construct Java statements that employ the use of various operators. – The student will be able to:
  - 44.01 Construct statements using arithmetic operators.
  - 44.02 Construct statements using relational operators.
  - 44.03 Construct and use statements using logical operators.
  - 44.04 Construct and use statements using assignment operators.
  - 44.05 Construct and execute statements using operator precedence.
- 45.0 Write executable statements using Java. – The student will be able to:
  - 45.01 Construct variable assignment statements.
  - 45.02 Construct statements using built-in Math functions.
  - 45.03 Differentiate between implicit and explicit data type conversions.
  - 45.04 Describe when implicit data type conversions take place.
  - 45.05 List the drawbacks of implicit data type conversions.
  - 45.06 Describe the process of autoboxing and promotion.
  - 45.07 Construct statements using functions to explicitly convert data types.
- 46.0 Describe variable scope and its implications in Java programming. – The student will be able to:
  - 46.01 Understand the scope and visibility of variables.
  - 46.02 Write programs using local variables.
  - 46.03 Describe the scope of a variable.
  - 46.04 Describe the default value of local, instance, and static scope of variables.
  - 46.05 Describe how compiler uses scope to identify variables with the same name.
- 47.0 Apply common Java programming style guidelines and conventions. – The student will be able to:
  - 47.01 List examples of good programming practices.
  - 47.02 Insert comments into code.
  - 47.03 Follow formatting guidelines when writing code.
  - 47.04 Understand the different types of errors produced by programs.
- 48.0 Demonstrate use of the compiler and interpreter through command line interface. – The student will be able to:
  - 48.01 Describe the use of the Java compiler (javac) and Java interpreter (Java VM).
  - 48.02 Demonstrate the use of the -classpath flag and -d flag to the compiler.
  - 48.03 Identify the environmental variables of PATH and CLASSPATH.
  - 48.04 Describe the process of command line arguments to the program.
  - 48.05 Create programs that take in multiple command line arguments.
- 49.0 Construct conditional control statements in Java. – The student will be able to:

- 49.01 Construct and use an if statement.
  - 49.02 Construct and use a switch statement.
  - 49.03 Construct and use a while, do while, and for loop.
  - 49.04 Construct and use a conditional operator.
- 50.0 Construct iterative control statements in Java. – The student will be able to:
- 50.01 Describe the types of loop statements and their uses.
  - 50.02 Construct and use the while and do while loop.
  - 50.03 Construct and use the for loop.
  - 50.04 Construct and use the enhanced for loop.
  - 50.05 Describe when a while loop is used.
  - 50.06 Describe when a for loop is used.
- 51.0 Use nested loop iterative control statements in Java. – The student will be able to:
- 51.01 Construct and execute a program using nested loops.
  - 51.02 Construct and execute a loop using break and continue.
  - 51.03 Evaluate a nested loop construct and sentinel value.
- 52.0 Produce input and output for Java programs. – The student will be able to:
- 52.01 Describe and use classes (e.g., Scanner, System) to input data into programs.
  - 52.02 Demonstrate the use of different ways to input data into programs using Scanner or System class.
  - 52.03 Describe and demonstrate the use of the System class to produce output to the console.
  - 52.04 Explain the difference between print and println functions in the System class.
  - 52.05 Create and use escape sequences.
- 53.0 Use packages and import statements in a Java program. – The student will be able to:
- 53.01 Describe the use of import statements.
  - 53.02 Describe the use of packages.
  - 53.03 Create code that uses package statements to avoid class conflict.
  - 53.04 Create packages that abide by standard Java naming convention.
  - 53.05 Demonstrate the use of Java-API to search for classes and packages.
- 54.0 Create a Java program that uses methods. – The student will be able to:
- 54.01 Differentiate between anonymous blocks and methods.
  - 54.02 Identify the benefits of using methods.
  - 54.03 Describe a method signature.
  - 54.04 Create a method.
  - 54.05 Describe how a method is invoked.
  - 54.06 Describe the purpose of overloading methods.
  - 54.07 Create overloaded methods in programs.
- 55.0 Create a Java program that uses parameters in methods. – The student will be able to:

- 55.01 Describe how parameters are passed into functions.
  - 55.02 Define a parameter.
  - 55.03 Create a method using a parameter.
  - 55.04 Invoke a method that has parameters.
  - 55.05 Distinguish between formal and actual parameters.
  - 55.06 Demonstrate the use of reference parameters in methods.
- 56.0 Describe and use recursion in a Java program. – The student will be able to:
- 56.01 Describe the use of recursion in solving problems.
  - 56.02 Describe the difference of iterative and recursive methods.
  - 56.03 Demonstrate the use of direct recursion.
  - 56.04 Demonstrate the use of indirect recursion.
- 57.0 Construct Java statements that use the String class to manipulate String data. – The student will be able to:
- 57.01 Explain the use of the String class.
  - 57.02 Create code to concatenate strings using the concatenation operator.
  - 57.03 Demonstrate how to search a string using indexOf method of the String class.
  - 57.04 Explain the effect of immutability of Strings.
  - 57.05 Create Strings using string literals, and through new keyword.
  - 57.06 Demonstrate the use of the following string manipulation methods of the String class: charAt,length ,trim, substring, replace,startsWith and endsWith.
- 58.0 Construct Java statements that use Classes. – The student will be able to:
- 58.01 Describe and identify abstract data types.
  - 58.02 Describe the difference between an object and a class.
  - 58.03 Identify class attributes.
  - 58.04 Create instance variables for a class.
  - 58.05 Use visibility modifiers for attributes.
  - 58.06 Identify constructors and describe their use.
  - 58.07 Describe encapsulation.
  - 58.08 Write class using encapsulation.
  - 58.09 Apply data abstraction through the use of accessor or and mutator methods.
  - 58.10 Describe the equals method.
  - 58.11 Demonstrate the use of classes in methods as both parameters and return types.
  - 58.12 Describe the garbage collection process.
  - 58.13 Demonstrate reusability and extensibility in class creation.
  - 58.14 Demonstrate the use of Comparable interface to compare objects.
- 59.0 Manage class relationships. – The student will be able to:
- 59.01 Explain the association relationship among classes.
  - 59.02 Explain the direct association relationship among classes.
  - 59.03 Explain the composition and aggregation relationship among classes.
  - 59.04 Explain the direct association relationship among classes.
  - 59.05 Write programs that use composition, association.
  - 59.06 Write programs that use direct association.

- 60.0 Construct Java statements that illustrate the use of multiplicities in class relationships. – The student will be able to:
- 60.01 Describe how multiplicities affect class relationships.
  - 60.02 Describe one-to one, one-to-many, and many-to-many relationships.
  - 60.03 Write programs that use multiplicities in class relationships.
- 61.0 Use object references. – The student will be able to:
- 61.01 Identify reference aliases.
  - 61.02 Understand and use null reference.
  - 61.03 Explain the this reference and its use in class creation.
- 62.0 Describe the types of arrays and construct Java statements that illustrate the use and manipulation of multi-dimensional and jagged arrays. – The student will be able to:
- 62.01 Declare and initialize an array.
  - 62.02 Demonstrate the use of initializer lists.
  - 62.03 Demonstrate the use of arrays in methods.
  - 62.04 Demonstrate the updating, populating and destroying arrays.
  - 62.05 Explain linear and binary searching.
  - 62.06 Sort arrays using selection sort, insertion sort, and bubble sort.
  - 62.07 Demonstrate the use of multidimensional arrays.
  - 62.08 Demonstrate the use of jagged arrays.
  - 62.09 Demonstrate basic hashing using arrays.
- 63.0 Construct Java statements that illustrate different ways of using inheritance. – The student will be able to:
- 63.01 Explain the purpose and use of inheritance in object oriented programming.
  - 63.02 Explain the difference between single and multiple inheritance.
  - 63.03 Create parent and child classes.
  - 63.04 Create overloaded methods.
  - 63.05 Describe the has-a and is-a relationship.
  - 63.06 Create class hierarchies.
  - 63.07 Explain the process of generalization to specification.
  - 63.08 Demonstrate the use of abstract classes.
  - 63.09 Explain polymorphism.
  - 63.10 Create a program that uses polymorphism.
  - 63.11 Demonstrate the use of the instanceof method.
- 64.0 Construct Java statements that use collections. – The student will be able to:
- 64.01 Describe data structure of linked lists.
  - 64.02 Create a linked list manually.
  - 64.03 Use the ArrayList class.
  - 64.04 Create a stack and Queue manually.
  - 64.05 Use the Stack and Queue standard class.
  - 64.06 Identify which data structure is best fitted for a situation.
  - 64.07 Use iterators with collections.

- 64.08 Identify how to insert, delete, update, and traverse data structures.
- 65.0 Write Java code that uses the Iterator and List interfaces. – The student will be able to:
- 65.01 Describe the purpose of interfaces.
  - 65.02 Create and use interfaces in programs.
  - 65.03 Use the Comparable interface.
  - 65.04 Use the Iterator interface and List Interface in programs.
  - 65.05 Understand the program to the interface principle.
- 66.0 Create Java code that includes exception handling code. – The student will be able to:
- 66.01 Describe the advantages of including exception handling code.
  - 66.02 Describe the purpose of an EXCEPTION section in a program block.
  - 66.03 Create code to include an EXCEPTION section.
  - 66.04 List the guidelines for exception handling.
- 67.0 Create Java code that uses the Object class. – The student will be able to:
- 67.01 Understand the Object class relationship to other classes.
  - 67.02 Demonstrate the use of toString method.
  - 67.03 Demonstrate the use of clone and finalize methods.
  - 67.04 Write program to use Object class functionality.
- 68.0 Use standard library classes that comprise the Java API. – The student will be able to:
- 68.01 Describe the classes and methods in the basic input/output package.
  - 68.02 Describe the classes and methods in the utilities package.
  - 68.03 Describe the classes and methods in the utilities package.
  - 68.04 Describe the classes and methods in the networking package.
  - 68.05 Describe the classes and methods in the AWT and swing package.
  - 68.06 Describe the classes and methods in the SQL and SQLX package.
- 69.0 Create Java code that uses exceptions to improve program quality. – The student will be able to:
- 69.01 Explain how exception handling works in Java.
  - 69.02 Trap exceptions using try and catch.
  - 69.03 Explain when to use the finally clause.
  - 69.04 Demonstrate handling exceptions through throwing and catching.
  - 69.05 Create and Exception and manage the exception.
  - 69.06 Explain the use of inheritance and exceptions.
- 70.0 Describe Java 2 Micro Edition (J2ME) uses, characteristics, and constraints. – The student will be able to:
- 70.01 Understand midlets.
  - 70.02 Explain CLDC and profiles.
  - 70.03 Explain the constraints specific to J2ME programming when compared to J2SE.
  - 70.04 Understand the high architectural goal of J2ME.
  - 70.05 Create user-defined functions

- 71.0 Create and convert classes using Unified Modeling Language (UML). – The student will be able to:
- 71.01 Identify UML elements Classes, abstract Classes, Interfaces.
  - 71.02 Identify UML attributes, operators, visibility modifiers and UML associations.
  - 71.03 Given a set of classes be able to convert the classes to a UML diagram.
  - 71.04 Given a UML diagram be able to create classes.
- 72.0 Create programs that use of Remote Method Invocation (RMI) and other server technologies associated with Relational Database Management Systems (RDMS) and Structured Query Language (SQL). – The student will be able to:
- 72.01 Understand and describe RMI.
  - 72.02 Write a program to use RMI.
  - 72.03 Understand RDMS and SQL technologies.
  - 72.04 Use the Java Database Connectivity API to connect and execute SQL statements to RDMS.
- 73.0 Demonstrate an understanding of Java Integration APIs, including Java Message Service (JMS), Enterprise JavaBeans (EJB), and Java Naming and Directory Interface (JNDI). – The student will be able to:
- 73.01 Understand and describe JMS.
  - 73.02 Understand and describe EJB technology.
  - 73.03 Understand and describe JNDI technology.
- 74.0 Demonstrate an understanding of Java Client APIs, including the Abstract Window Toolkit (AWT), Swing, and Java applet. – The student will be able to:
- 74.01 Understand and describe AWT and GUI interface
  - 74.02 Understand and describe the use of Swing components and GUI.
  - 74.03 Understand and describe the use of applet technology.
- 75.0 Understand and apply Java 2 Enterprise Edition (J2EE) Server Solutions. – The student will be able to:
- 75.01 Understand java Web Services.
  - 75.02 Underrated and use SMTP and Java Mail technologies.
  - 75.03 Understand how to use JSP and Servlets.
- 76.0 Create a database application using the Java programming language. – The student will be able to:
- 76.01 Utilize loop statements.
  - 76.02 Given a scenario, use arithmetic, comparison, and pattern-matching operators.
  - 76.03 Create user-defined functions.
  - 76.04 Utilize common built-in functions.
  - 76.05 Declare variables in modules and procedures.
  - 76.06 Declare arrays, and initialize elements of arrays.
  - 76.07 Declare and use object variables and collections, and use their associated properties and methods.

- 76.08 Declare symbolic constants, and make them available locally or publicly.
- 76.09 Respond to events.
- 77.0 Create a graphical user interface application using the Java programming language. – The student will be able to:
  - 77.01 Utilize loop statements.
  - 77.02 Given a scenario, use arithmetic, comparison, and pattern-matching operators.
  - 77.03 Create user-defined functions.
  - 77.04 Utilize common built-in functions.
  - 77.05 Declare variables in modules and procedures.
  - 77.06 Declare arrays, and initialize elements of arrays.
  - 77.07 Declare and use object variables and collections, and use their associated properties and methods.
  - 77.08 Declare symbolic constants, and make them available locally or publicly.
  - 77.09 Use the Java Event model to handle user inputs from events.
  - 77.10 Use JComponents and layout managers to create the GUI.
- 78.0 Create a web-based application using the Java programming language. – The student will be able to:
  - 78.01 Utilize loop statements.
  - 78.02 Given a scenario, use arithmetic, comparison, and pattern-matching operators.
  - 78.03 Create user-defined functions.
  - 78.04 Utilize common built-in functions.
  - 78.05 Declare variables in modules and procedures.
  - 78.06 Declare arrays, and initialize elements of arrays.
  - 78.07 Declare and use object variables and collections, and use their associated properties and methods.
  - 78.08 Declare symbolic constants, and make them available locally or publicly.
  - 78.09 Write JSP pages to process user input.
  - 78.10 Write Servlets to provide input and output processing for the web solution.
- 79.0 Write code to perform common and union database queries using SQL and Java. – The student will be able to:
  - 79.01 Utilize SQL to write common queries.
  - 79.02 Refer to objects by using SQL.
  - 79.03 Utilize union queries.
- 80.0 Implement Java program statements using objects. – The student will be able to:
  - 80.01 Determine when to use data access objects.
  - 80.02 Differentiate between objects and collections.
  - 80.03 Write statements that access and modify database objects, EJB objects.
  - 80.04 Select appropriate methods and property settings for use with specified objects.
- 81.0 Utilize debugging tools and write error handlers. – The student will be able to:
  - 81.01 Trap errors.

- 81.02 Utilize debugging tools to suspend program execution, and to examine, step through, and reset execution of code.
  - 81.03 Debug code samples.
  - 81.04 Utilize the Debugger to monitor variable values.
  - 81.05 Write an error handler.
- 82.0 Demonstrate file input/output (I/O). – The student will be able to:
- 82.01 Read from sequential and random access files.
  - 82.02 Write to sequential and random access files.
  - 82.03 Use file serialization.
- 83.0 Utilize API functions. – The student will be able to:
- 83.01 Properly declare functions.
  - 83.02 Use the by value and by reference parameters.
- 84.0 Test and debug databases. – The student will be able to:
- 84.01 Implement error handling.
  - 84.02 Test and debug library databases.
- 85.0 Successfully work as a member of a software development team. – The student will be able to:
- 85.1 Accept responsibility for specific tasks in a given situation.
  - 85.2 Document progress, and provide feedback on work accomplished in a timely manner.
  - 85.3 Complete assigned tasks in a timely and professional manner.
  - 85.4 Reassign responsibilities when the need arises.
  - 85.5 Complete daily tasks as assigned on one's own initiative.
- 86.0 Manage time according to a plan. – The student will be able to:
- 86.1 Set realistic time frames and schedules.
  - 86.2 Keep a written time sheet of work accomplished on a daily basis.
  - 86.3 Meet goals and objectives set by the team.
  - 86.4 Identify individual priorities.
  - 86.5 Complete a weekly evaluation of accomplishments, and reevaluate goals, objectives and priorities as needed.
- 87.0 Keep acceptable records of progress problems and solutions. – The student will be able to:
- 87.1 Develop a record keeping system in the form of a log book to record daily progress.
  - 87.2 Use a project journal to identify problem statement
  - 87.3 Develop a portfolio of work accomplished to include design drawings, flowcharts, drawings and plans, and prototypes.

- 88.0 Plan, organize, and carry out a project plan. – The student will be able to:
- 88.1 Determine the scope of a project.
  - 88.2 Organize the team according to individual strengths.
  - 88.3 Assign specific tasks within a team.
  - 88.4 Determine project priorities.
  - 88.5 Identify required resources.
  - 88.6 Plan research, design, development, and evaluation activities as required.
  - 88.7 Carry out the project plan to successful completion.
- 89.0 Manage resources. – The student will be able to:
- 89.1 Identify required resources for each stage of the project plan.
  - 89.2 Determine the methods needed to acquire needed resources.
  - 89.3 Demonstrate good judgment in the use of resources.
  - 89.4 Recycle and reuse resources where appropriate.
  - 89.5 Demonstrate an understanding of proper legal and ethical treatment of copyrighted material.
- 90.0 Use tools, materials, and processes in an appropriate and safe manner. – The student will be able to:
- 90.1 Identify the proper tool for a given job.
  - 90.2 Use tools and machines in a safe manner.
  - 90.3 Adhere to laboratory or job site safety rules and procedures.
  - 90.4 Identify the application of processes appropriate to the task at hand.
  - 90.5 Identify materials appropriate to their application.
- 91.0 Demonstrate an understanding of the software development process. – The student will be able to:
- 91.1 State the goals of the software application clearly.
  - 91.2 Identify and write a plan to achieve each goal.
  - 91.3 Develop a list of materials and content required for each goal.
  - 91.4 Develop a step by step procedure for developing the application.
  - 91.5 Follow a written procedure.
  - 91.6 Record data from evaluation activities.
  - 91.7 Document conclusions and solutions based on evaluation results, observations and data.
  - 91.8 Document progress using a project log.
  - 91.9 Write an abstract describing the project plan.
- 92.0 Research content related to the project and document the results following industry conventions. – The student will be able to:
- 92.1 Identify the basic research needed to develop the project plan.
  - 92.2 Identify available resources for completing background research required in the project plan.
  - 92.3 Demonstrate the ability to locate resource materials in a library, data base, internet and other research resources.

- 92.4 Demonstrate the ability to organize information retrieval.
  - 92.5 Demonstrate the ability to prepare a topic outline.
  - 92.6 Write a draft of the research report.
  - 92.7 Edit and proof the research report. Use proper form for a bibliography, footnotes, quotations, and references.
  - 92.8 Prepare an electronically composed research paper in proper form.
  - 92.9 Conduct an alpha and beta evaluation of the project's product.
  - 92.10 Write a report on the evaluations, documenting results, data, observations, and design changes based on the results.
- 93.0 Use presentation skills, and appropriate media to describe the progress, results and outcomes of the experience. – The student will be able to:
- 93.1 Prepare a multi-media presentation on the completed project.
  - 93.2 Make an oral presentation, using multi-media materials.
  - 93.3 Review the presentation, and make changes in the delivery method(s) to improve presentation skills.
- 94.0 Demonstrate competency in the area of expertise related to developing computer software using the Java programming language. – The student will be able to:
- 94.1 Demonstrate a mastery of the content of the selected subject area.
  - 94.2 Demonstrate the ability to use related technological tools, materials and processes related to the specific program area.
  - 94.3 Demonstrate the ability to apply the knowledge, experience and skill developed in the previous program completion to the successful completion of this demonstration.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Introduction to Information Technology  
**Course Number:** 8207310  
**Course Credit:** 1

**Course Description:**

This course is designed to provide an introduction to information technology concepts and careers as well as the impact information technology has on the world, people, and industry and basic web design concepts. The content includes information technology career research; operating systems and software applications; electronic communications including e-mail and Internet services; basic HTML, DHTML, and XML web commands and design; emerging technologies, and Web page design.

Standards included in this course of instruction have been aligned to the academic courses shown below. This table shows the number of aligned benchmarks, the total number of academic benchmarks, and the percentage of alignment.

Math		Science					
<b>Algebra 1</b>	6/36 17%	<b>Biology 1</b>	2/56 4%	<b>Anatomy/Physiology Honors</b>	2/53 4%	<b>Astronomy Solar/Galactic Honors</b>	2/52 4%
<b>Algebra 2</b>	2/41 5%	<b>Chemistry 1</b>	2/55 4%	<b>Genetics</b>	2/35 6%	<b>Marine Science 1 Honors</b>	2/42 5%
<b>Geometry</b>	1/45 2%	<b>Physics 1</b>	2/53 4%	<b>Earth-Space Science</b>	2/58 3%	<b>Physical Science</b>	2/56 4%

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Develop keyboarding skills to enter and manipulate text and data.
- 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.03 Identify and describe communications and networking systems used in workplace environments.
- 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.06 Describe ethical issues and problems associated with computers and information systems.

02.0 Demonstrate comprehension and communication skills. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2; MA.912.D.8.1; MA.912.A.3.15; MA.912.G.8.2.

- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
- 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
- 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
- 02.04 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
- 02.05 Apply the writing process to the creation of appropriate documents following designated business formats.
- 02.06 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).

- 03.0 Use technology to enhance the effectiveness of communication skills —The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.2.12.

- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.

- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.3.15.

- 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
- 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
- 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.

- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:

- 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).

05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).

06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:

06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.

07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.5.7; MA.912.F.5.2; MA.912.A.10.1; MA.912.A.10.2; MA.912.S.1.2; MA.912.S.3.2; MA.912.A.3.5; MA.912.G.8.2.

07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.

07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).

07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:

08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.

08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.

09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2.

09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).

- 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).

14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:

- 14.01 Identify and describe Web terminology.
- 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
- 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
- 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
- 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
- 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
- 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
- 14.08 Identify effective Boolean search strategies.

15.0 Demonstrate proficiency using html commands. – The student will be able to:

- 15.01 Identify elements of a Web page.
- 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
- 15.03 Define basic HTML terminology.
- 15.04 Analyze HTML source code developed by others.
- 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
- 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
- 15.07 Edit and test HTML documents for accuracy and validity.
- 15.08 Use basic functions of WYSIWYG editors.
- 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
- 15.10 Enhance web pages through the addition of images and graphics including animation.

16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:

- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
- 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
- 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
- 16.04 Use image design software to create and edit images.
- 16.05 Demonstrate proficiency in publishing to the Internet.
- 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
- 16.07 Explain the need for web-based applications.

- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.

- 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
- 22.05 Identify Intranets, Extranets and how they relate to the Internet.
- 22.06 Demonstrate basic understanding of network administration.
- 22.07 Describe the evolution of OSI from its inception to the present and into the future.
- 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
- 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
- 24.03 Demonstrate the ability to incorporate digital sound.
- 95.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 95.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
- 95.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
- 95.03 Present information formally and informally for specific purposes and audiences. AF2.9
- 96.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 96.01 Demonstrate knowledge of arithmetic operations. AF3.2
- 96.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
- 96.03 Construct charts/tables/graphs using functions and data. AF3.5
- 102.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 102.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
- 102.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
- 102.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0

102.04 Maintain a career portfolio to document knowledge, skills, and experience.	ECD 5.0
102.05 Evaluate and compare employment opportunities that match career goals.	ECD 6.0
102.06 Identify and exhibit traits for retaining employment.	ECD 7.0
102.07 Identify opportunities and research requirements for career advancement.	ECD 8.0
102.08 Research the benefits of ongoing professional development.	ECD 9.0
102.09 Examine and describe entrepreneurship opportunities as a career planning option.	ECD 10.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Foundations of Programming  
**Course Number:** 9007210  
**Course Credit:** 1

**Course Description:**

This course introduces concepts, techniques, and processes associated with computer programming and software development. After successful completion of Programming Foundations and Procedural Programming, students will have met Occupational Completion Point B, Computer Programmer Assistant, SOC Code 15.1021.

25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development. – The student will be able to:

- 25.01 Describe the evolution of programming and programming careers.
- 25.02 Identify tasks performed by programmers.
- 25.03 Describe how businesses use computer programming to solve business problems.
- 25.04 Investigate job opportunities in the programming field.
- 25.05 Explain different specializations and the related training in the computer programming field.
- 25.06 Explain the need for continuing education and training of computer programmers.
- 25.07 Explain enterprise software systems and how they impact business.
- 25.08 Describe ethical responsibilities of computer programmers.
- 25.09 Describe the role of customer support to software program quality.
- 25.10 Identify credentials and certifications that may improve employability for a computer programmer.
- 25.11 Identify devices, tools, and other environments for which programmers may develop software.

26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types. – The student will be able to:

- 26.01 Identify the characteristics (e.g., size, limits) and uses of different numerical and non-numerical data types.
- 26.02 Explain the types and uses of variables in programs.
- 26.03 Determine the best data type to use for given programming problems.
- 26.04 Identify the types of operations that can be performed on different data types.
- 26.05 Evaluate arithmetic and logical expressions using appropriate operator precedence.
- 26.06 Explain how computers store different data types in memory.
- 26.07 Use different number systems to represent data.
- 26.08 Explain how national and international standards (i.e., ASCII, UNICODE) are used to represent non-numerical data.
- 26.09 Use Boolean logic to perform logical operations.

27.0 Distinguish between iterative and non-iterative program control structures.

- 27.01 Explain non-iterative programming structures (e.g., if, if/else, etc.) and their uses.
- 27.02 Explain iterative programming structures (e.g., while, do/while, etc.) and their uses.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages. – The student will be able to:
- 28.01 Identify the characteristics, uses, and limits of low-level programming languages.
- 28.02 Identify the characteristics, uses, and limits of high-level programming languages.
- 28.03 Identify the characteristics, uses, and limits of rapid development programming languages.
- 28.04 Describe object-oriented concepts.
- 28.05 Explain the characteristics of procedural and object-oriented programming languages.
- 28.06 Compare and contrast programming languages that are compiled (e.g., C++), interpreted (e.g., Basic, HTML), and translated (e.g., Java).
- 29.0 Describe the processes, methods, and conventions for software development and maintenance. – The student will be able to:
- 29.01 Describe and explain tools used in software development.
- 29.02 Describe the stages of the program life cycle.
- 29.03 Compare and contrast alternatives methods of program development (e.g., rapid prototyping, waterfall, etc.).
- 29.04 List and explain the steps in the program development cycle.
- 29.05 Describe different types of documentation used in the program development cycle (e.g., requirements document, program design documents, test plans, etc.).
- 29.06 Describe the on-going need for program maintenance.
- 29.07 Describe different methods companies use to facilitate program updates for enhancements and defects (e.g., how customers receive patches, updates, new versions, upgrades).
- 29.08 Describe different methods used to facilitate version control and change management.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control. – The student will be able to:
- 30.01 Explain the uses and limits of testing in ensuring program quality.
- 30.02 Explain testing performed at different stages of the program development cycle (e.g. unit testing, system testing, user acceptance testing, etc.).
- 30.03 Describe data and the use of test plans/scripts to be used in program testing.
- 30.04 Describe and identify types of programming errors (e.g., syntactical, logic, usability, requirements mismatch, etc.).
- 30.05 Identify the data to be used for boundary conditions.
- 30.06 Explain different types of testing (e.g., usability, automated, regression, etc.) and testing tools.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool. – The student will be able to:

- 31.01 Describe different design methodologies and their uses (e.g., object-oriented design, structured design, and rapid application development).
  - 31.02 Describe tools for developing a program design (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.03 Explain the role of existing libraries and packages in facilitating programmer productivity.
  - 31.04 Participate and contribute to a design review of a program design developed using a common program design tool (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.05 Write a program design document using UML or other standard design methodology.
  - 31.06 Define input and output for a program module using UML or other standard design methodology.
- 32.0 Describe information security risks, threats, and strategies associated with software development. – The student will be able to:
- 32.01 Explain the security risks to personal and business computer users.
  - 32.02 Identify different types of threats to computer systems.
  - 32.03 Identify methods to protect against different threats to computer systems.
  - 32.04 Understand the importance of a disaster / emergency response plan.
  - 32.05 Identify alternative methods for data storage and backup (e.g., mirroring, fail-over, high availability, types of backups).
- 97.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 97.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
  - 97.02 Locate, organize and reference written information from various sources. CM 3.0
  - 97.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
  - 97.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
  - 97.05 Apply active listening skills to obtain and clarify information. CM 7.0
  - 97.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
  - 97.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 98.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 98.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
  - 98.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
  - 98.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
  - 98.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 99.0 Use information technology tools. – The student will be able to:

- 99.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 99.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 99.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 99.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:**            **Procedural Programming**  
**Course Number:**       **9007220**  
**Course Credit:**         **1**

**Course Description:**

This course continues the study of computer programming concepts with a focus on the creation of software applications employing procedural programming techniques. After successful completion of Programming Foundations and Procedural Programming, students will have met Occupational Completion Point B, Computer Programmer Assistant, SOC Code 15.1021.

- 33.0 Design a computer program to meet specific physical, operational, and interaction criteria. – The student will be able to:
- 33.01 Choose appropriate data types depending on the needs of the program.
  - 33.02 Define appropriate user interface prompts for clarity and usability (e.g., user guidance for data ranges, data types, etc.).
  - 33.03 Design and develop program that are designed for efficiency (e.g., less memory usage, less inputs/outputs, faster processing, etc.).
  - 33.04 Identify the software environment required for a program to run (e.g., operating system required, mobile, Web-based, desktop, delivery method, etc.).
  - 33.05 Identify the tools required to develop a program (e.g., editors, compilers, linkers, integrated development environments, application programming interfaces (APIs), libraries, etc.).
- 34.0 Create and document a computer program that uses a variety of internal and control structures for manipulating varied data types. – The student will be able to:
- 34.01 Use appropriate naming conventions to define program variables and modules (methods, functions).
  - 34.02 Use a program editor to write the source code for a program.
  - 34.03 Write programs that use selection structures (e.g., if, if/else, etc.).
  - 34.04 Write programs that use repetition structures (e.g., while, do/while, etc.).
  - 34.05 Write programs that use nested structures.
  - 34.06 Use internal documentation (e.g., single-line and multi-line comments, program headers, module descriptions, and meaningful variable and function/module names) to document a program according to accepted standards.
  - 34.07 Compile and run programs.
  - 34.08 Write programs that use standard arithmetic operators with different numerical data types.
  - 34.09 Write programs that use standard logic operators.
  - 34.10 Write programs that use a variety of common data types.
  - 34.11 Write programs that perform data conversion between standard data types.
  - 34.12 Write programs that define, use, search, and sort arrays.
  - 34.13 Write programs that use user-defined data types.
  - 34.14 Demonstrate understanding and use of appropriate variable scope.

- 35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input. – The student will be able to:
- 35.01 Write programs that perform user input and output.
  - 35.02 Write programs that validate user input (e.g., range checking, data formats, valid/invalid characters, etc.).
  - 35.03 Write program modules such as functions, subroutines, or methods.
  - 35.04 Write program modules that accept arguments.
  - 35.05 Write program modules that return values.
  - 35.06 Write program modules that validate arguments and return error codes.
  - 35.07 Write interactive programs.
  - 35.08 Write programs that use standard libraries to enhance program function.
  - 35.09 Participate in a peer code review to verify program functionality, programming styles, program usability, and adherence to common programming standards.
- 36.0 Create a unit test plan, implement the plan, and report the results of testing. – The student will be able to:
- 36.01 Write a unit test plan that identifies the input data and expected results for program tests.
  - 36.02 Test and debug programs, including programs written by others.
  - 36.03 Write a test report that identifies the results of testing.
  - 36.04 Trace through the function of a program to ensure valid operation.
  - 36.05 Identify the system resources used by the program (e.g., memory, disk space, execution time, external devices).
  - 36.06 Create a disaster / emergency response plan for a computer system.
- 100.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 100.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
  - 100.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
  - 100.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 102.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 102.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
  - 102.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
  - 102.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Object-Oriented Programming Fundamentals  
**Course Number:** 9007230  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts with a focus on the creation of software applications employing object-oriented programming techniques. After successful completion of Object-Oriented Programming Fundamentals, students will have met Occupational Completion Point C, Computer Programmer, SOC Code 15.1021.

- 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming. – The student will be able to:
- 37.01 Demonstrate the understanding and use of classes, objects, attributes, and behaviors.
  - 37.02 Demonstrate the understanding and use of inheritance.
  - 37.03 Demonstrate the understanding and use of data encapsulation.
  - 37.04 Demonstrate the understanding and use of polymorphism.
- 38.0 Create a project plan for an object-oriented programming project that defines requirements, structural design, time estimates, and testing elements. – The student will be able to:
- 38.01 Write a project plan for completion of a project that includes gathering program requirements, developing the program, and testing it.
  - 38.02 Write a program requirements document that identifies business purpose, functional requirements, system requirements, and other common components of a requirements document.
  - 38.03 Design an object-oriented program using UML or another standard design methodology.
  - 38.04 Work with other team members to develop a project plan for a program.
  - 38.05 Work with other team members to write a design document for a program with multiple functions and shared data.
  - 38.06 Participate in design meetings that review program design documents for conformance to program requirements.
  - 38.07 Estimate the time to develop a program or module.
- 39.0 Design, document, and create object-oriented computer programs. – The student will be able to:
- 39.01 Compare and contrast recursive functions to other iterative methods.
  - 39.02 Understand the implementation of character strings in the programming language.
  - 39.03 Write programs that perform string processing (e.g., string manipulation, string compares, concatenation, etc.).
  - 39.04 Write programs that use user-defined data types.

- 39.05 Write object-oriented programs that use inheritance.
  - 39.06 Write object-oriented programs that use polymorphism.
  - 39.07 Develop class constructors.
  - 39.08 Write programs that define and use program constants.
  - 39.09 Write programs that perform error handling.
  - 39.10 Participate in program code review meetings to evaluate program code for validity, quality, performance, data integrity, and conformance to program design documents.
  - 39.11 Write programs that perform dynamic memory allocation.
  - 39.12 Write programs that perform effective management of dynamically allocated memory.
  - 39.13 Update a program module to implement enhancements or corrections and demonstrate appropriate documentation (internal and external) related to version control.
  - 39.14 Write programs that use complex data structures (e.g., stacks, queues, trees, linked lists etc.).
  - 39.15 Write programs that are event-driven.
  - 39.16 Write programs that perform file input and output (i.e., sequential and random access file input/output).
  - 39.17 Perform basic database commands including connect, open, select, and close.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results. – The student will be able to:
- 40.01 Develop a test plan for an object-oriented program.
  - 40.02 Write test plans for event-driven programs.
  - 40.03 Write test plans for programs that perform file input and output.
  - 40.04 Perform test and debug activities on object-oriented programs, including those written by someone else.
  - 40.05 Perform test and debug activities on an event-driven program.
  - 40.06 Perform test and debug activities on programs that perform file input and output and verify the correctness of output files.
  - 40.07 Document the findings of testing in a test report.

2012 – 2013  
**Florida Department of Education**  
**Student Performance Standards**

**Course Title:** Java Programming Essentials  
**Course Number:** 9007240  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to the Java programming language.

- 41.0 Construct statements that declare, initialize, and modify different types of variables used in Java programs. – The student will be able to:
- 41.01 Describe how variables are used in programs.
  - 41.02 Identify the eight Java primitive data types.
  - 41.03 Identify the minimum and maximum ranges of primitive data types.
  - 41.04 Identify which data type should be used for a given situation.
  - 41.05 Identify the syntax for using variables.
  - 41.06 Declare and initialize variables.
  - 41.07 Assign new values to variables.
  - 41.08 Create and use constant variables.
- 42.0 Describe the types and characteristics of lexical units in the Java programming language. – The student will be able to:
- 42.01 Describe the types of lexical units.
  - 42.02 Describe identifiers and identify valid and invalid identifiers.
  - 42.03 Describe and identify reserved words, delimiters, literals, and comments.
- 43.0 Describe the data types employed in Java programs. – The student will be able to:
- 43.01 Describe the data type categories.
  - 43.02 Give examples of primitives, reference data types.
  - 43.03 Identify and use enumerations.
  - 43.04 Understand the use of Wrapper Classes in programs.
  - 43.05 Describe the difference between real and integer data types.
- 44.0 Construct Java statements that employ the use of various operators. – The student will be able to:
- 44.01 Construct statements using arithmetic operators.
  - 44.02 Construct statements using relational operators.
  - 44.03 Construct and use statements using logical operators.
  - 44.04 Construct and use statements using assignment operators.
  - 44.05 Construct and execute statements using operator precedence.
- 45.0 Write executable statements using Java. – The student will be able to:

- 45.01 Construct variable assignment statements.
  - 45.02 Construct statements using built-in Math functions.
  - 45.03 Differentiate between implicit and explicit data type conversions.
  - 45.04 Describe when implicit data type conversions take place.
  - 45.05 List the drawbacks of implicit data type conversions.
  - 45.06 Describe the process of autoboxing and promotion.
  - 45.07 Construct statements using functions to explicitly convert data types.
- 46.0 Describe variable scope and its implications in Java programming. – The student will be able to:
- 46.01 Understand the scope and visibility of variables.
  - 46.02 Write programs using local variables.
  - 46.03 Describe the scope of a variable.
  - 46.04 Describe the default value of local, instance, and static scope of variables.
  - 46.05 Describe how compiler uses scope to identify variables with the same name.
- 47.0 Apply common Java programming style guidelines and conventions. – The student will be able to:
- 47.01 List examples of good programming practices.
  - 47.02 Insert comments into code.
  - 47.03 Follow formatting guidelines when writing code.
  - 47.04 Understand the different types of errors produced by programs.
- 48.0 Demonstrate use of the compiler and interpreter through command line interface. – The student will be able to:
- 48.01 Describe the use of the Java compiler (javac) and Java interpreter (Java VM).
  - 48.02 Demonstrate the use of the -classpath flag and -d flag to the compiler.
  - 48.03 Identify the environmental variables of PATH and CLASSPATH.
  - 48.04 Describe the process of command line arguments to the program.
  - 48.05 Create programs that take in multiple command line arguments.
- 49.0 Construct conditional control statements in Java. – The student will be able to:
- 49.01 Construct and use an if statement.
  - 49.02 Construct and use a switch statement.
  - 49.03 Construct and use a while, do while, and for loop.
  - 49.04 Construct and use a conditional operator.
- 50.0 Construct iterative control statements in Java. – The student will be able to:
- 50.01 Describe the types of loop statements and their uses.
  - 50.02 Construct and use the while and do while loop.
  - 50.03 Construct and use the for loop.
  - 50.04 Construct and use the enhanced for loop.
  - 50.05 Describe when a while loop is used.
  - 50.06 Describe when a for loop is used.

- 51.0 Use nested loop iterative control statements in Java. – The student will be able to:
- 51.01 Construct and execute a program using nested loops.
  - 51.02 Construct and execute a loop using break and continue.
  - 51.03 Evaluate a nested loop construct and sentinel value.
- 52.0 Produce input and output for Java programs. – The student will be able to:
- 52.01 Describe and use classes (e.g., Scanner, System) to input data into programs.
  - 52.02 Demonstrate the use of different ways to input data into programs using Scanner or System class.
  - 52.03 Describe and demonstrate the use of the System class to produce output to the console.
  - 52.04 Explain the difference between print and println functions in the System class.
  - 52.05 Create and use escape sequences.
- 53.0 Use packages and import statements in a Java program. – The student will be able to:
- 53.01 Describe the use of import statements.
  - 53.02 Describe the use of packages.
  - 53.03 Create code that uses package statements to avoid class conflict.
  - 53.04 Create packages that abide by standard Java naming convention.
  - 53.05 Demonstrate the use of Java-API to search for classes and packages.
- 54.0 Create a Java program that uses methods. – The student will be able to:
- 54.01 Differentiate between anonymous blocks and methods.
  - 54.02 Identify the benefits of using methods.
  - 54.03 Describe a method signature.
  - 54.04 Create a method.
  - 54.05 Describe how a method is invoked.
  - 54.06 Describe the purpose of overloading methods.
  - 54.07 Create overloaded methods in programs.
- 55.0 Create a Java program that uses parameters in methods. – The student will be able to:
- 55.01 Describe how parameters are passed into functions.
  - 55.02 Define a parameter.
  - 55.03 Create a method using a parameter.
  - 55.04 Invoke a method that has parameters.
  - 55.05 Distinguish between formal and actual parameters.
  - 55.06 Demonstrate the use of reference parameters in methods.
- 56.0 Describe and use recursion in a Java program. – The student will be able to:
- 56.01 Describe the use of recursion in solving problems.
  - 56.02 Describe the difference of iterative and recursive methods.
  - 56.03 Demonstrate the use of direct recursion.
  - 56.04 Demonstrate the use of indirect recursion.

- 57.0 Construct Java statements that use the String class to manipulate String data. – The student will be able to:
- 57.01 Explain the use of the String class.
  - 57.02 Create code to concatenate strings using the concatenation operator.
  - 57.03 Demonstrate how to search a string using indexOf method of the String class.
  - 57.04 Explain the effect of immutability of Strings.
  - 57.05 Create Strings using string literals, and through new keyword.
  - 57.06 Demonstrate the use of the following string manipulation methods of the String class: charAt,length ,trim, substring, replace,startsWith and endsWith.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Applied Object-Oriented Java Programming  
**Course Number:** 9007250  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to the Java programming language.

58.0 Construct Java statements that use Classes. – The student will be able to:

- 58.01 Describe and identify abstract data types.
- 58.02 Describe the difference between an object and a class.
- 58.03 Identify class attributes.
- 58.04 Create instance variables for a class.
- 58.05 Use visibility modifiers for attributes.
- 58.06 Identify constructors and describe their use.
- 58.07 Describe encapsulation.
- 58.08 Write class using encapsulation.
- 58.09 Apply data abstraction through the use of accessor or and mutator methods.
- 58.10 Describe the equals method.
- 58.11 Demonstrate the use of classes in methods as both parameters and return types.
- 58.12 Describe the garbage collection process.
- 58.13 Demonstrate reusability and extensibility in class creation.
- 58.14 Demonstrate the use of Comparable interface to compare objects.

59.0 Manage class relationships. – The student will be able to:

- 59.01 Explain the association relationship among classes.
- 59.02 Explain the direct association relationship among classes.
- 59.03 Explain the composition and aggregation relationship among classes.
- 59.04 Explain the direct association relationship among classes.
- 59.05 Write programs that use composition, association.
- 59.06 Write programs that use direct association.

60.0 Construct Java statements that illustrate the use of multiplicities in class relationships. – The student will be able to:

- 60.01 Describe how multiplicities affect class relationships.
- 60.02 Describe one-to one, one-to-many, and many-to-many relationships.
- 60.03 Write programs that use multiplicities in class relationships.

61.0 Use object references. – The student will be able to:

- 61.01 Identify reference aliases.
- 61.02 Understand and use null reference.
- 61.03 Explain the this reference and its use in class creation.

- 62.0 Describe the types of arrays and construct Java statements that illustrate the use and manipulation of multi-dimensional and jagged arrays. – The student will be able to:
- 62.01 Declare and initialize an array.
  - 62.02 Demonstrate the use of initializer lists.
  - 62.03 Demonstrate the use of arrays in methods.
  - 62.04 Demonstrate the updating, populating and destroying arrays.
  - 62.05 Explain linear and binary searching.
  - 62.06 Sort arrays using selection sort, insertion sort, and bubble sort.
  - 62.07 Demonstrate the use of multidimensional arrays.
  - 62.08 Demonstrate the use of jagged arrays.
  - 62.09 Demonstrate basic hashing using arrays.
- 63.0 Construct Java statements that illustrate different ways of using inheritance. – The student will be able to:
- 63.01 Explain the purpose and use of inheritance in object oriented programming.
  - 63.02 Explain the difference between single and multiple inheritance.
  - 63.03 Create parent and child classes.
  - 63.04 Create overloaded methods.
  - 63.05 Describe the has-a and is-a relationship.
  - 63.06 Create class hierarchies.
  - 63.07 Explain the process of generalization to specification.
  - 63.08 Demonstrate the use of abstract classes.
  - 63.09 Explain polymorphism.
  - 63.10 Create a program that uses polymorphism.
  - 63.11 Demonstrate the use of the instanceof method.
- 64.0 Construct Java statements that use collections. – The student will be able to:
- 64.01 Describe data structure of linked lists.
  - 64.02 Create a linked list manually.
  - 64.03 Use the ArrayList class.
  - 64.04 Create a stack and Queue manually.
  - 64.05 Use the Stack and Queue standard class.
  - 64.06 Identify which data structure is best fitted for a situation.
  - 64.07 Use iterators with collections.
  - 64.08 Identify how to insert, delete, update, and traverse data structures.
- 65.0 Write Java code that uses the Iterator and List interfaces. – The student will be able to:
- 65.01 Describe the purpose of interfaces.
  - 65.02 Create and use interfaces in programs.
  - 65.03 Use the Comparable interface.
  - 65.04 Use the Iterator interface and List Interface in programs.
  - 65.05 Understand the program to the interface principle.
- 66.0 Create Java code that includes exception handling code. – The student will be able to:
- 66.01 Describe the advantages of including exception handling code.

- 66.02 Describe the purpose of an EXCEPTION section in a program block.
  - 66.03 Create code to include an EXCEPTION section.
  - 66.04 List the guidelines for exception handling.
- 67.0 Create Java code that uses the Object class. – The student will be able to:
- 67.01 Understand the Object class relationship to other classes.
  - 67.02 Demonstrate the use of toString method.
  - 67.03 Demonstrate the use of clone and finalize methods.
  - 67.04 Write program to use Object class functionality.
- 68.0 Use standard library classes that comprise the Java API. – The student will be able to:
- 68.01 Describe the classes and methods in the basic input/output package.
  - 68.02 Describe the classes and methods in the utilities package.
  - 68.03 Describe the classes and methods in the utilities package.
  - 68.04 Describe the classes and methods in the networking package.
  - 68.05 Describe the classes and methods in the AWT and swing package.
  - 68.06 Describe the classes and methods in the SQL and SQLX package.
- 69.0 Create Java code that uses exceptions to improve program quality. – The student will be able to:
- 69.01 Explain how exception handling works in Java.
  - 69.02 Trap exceptions using try and catch.
  - 69.03 Explain when to use the finally clause.
  - 69.04 Demonstrate handling exceptions through throwing and catching.
  - 69.05 Create and Exception and manage the exception.
  - 69.06 Explain the use of inheritance and exceptions.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Specialized Java Database Programming  
**Course Number:** 9007260  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to the Java programming language.

- 70.0 Describe Java 2 Micro Edition (J2ME) uses, characteristics, and constraints. – The student will be able to:
- 70.01 Understand midlets.
  - 70.02 Explain CLDC and profiles.
  - 70.03 Explain the constraints specific to J2ME programming when compared to J2SE.
  - 70.04 Understand the high architectural goal of J2ME.
  - 70.05 Create user-defined functions
- 71.0 Create and convert classes using Unified Modeling Language (UML). – The student will be able to:
- 71.01 Identify UML elements Classes, abstract Classes, Interfaces.
  - 71.02 Identify UML attributes, operators, visibility modifiers and UML associations.
  - 71.03 Given a set of classes be able to convert the classes to a UML diagram.
  - 71.04 Given a UML diagram be able to create classes.
- 72.0 Create programs that use of Remote Method Invocation (RMI) and other server technologies associated with Relational Database Management Systems (RDMS) and Structured Query Language (SQL). – The student will be able to:
- 72.01 Understand and describe RMI.
  - 72.02 Write a program to use RMI.
  - 72.03 Understand RDMS and SQL technologies.
  - 72.04 Use the Java Database Connectivity API to connect and execute SQL statements to RDMS.
- 73.0 Demonstrate an understanding of Java Integration APIs, including Java Message Service (JMS), Enterprise JavaBeans (EJB), and Java Naming and Directory Interface (JNDI). – The student will be able to:
- 73.01 Understand and describe JMS.
  - 73.02 Understand and describe EJB technology.
  - 73.03 Understand and describe JNDI technology.
- 74.0 Demonstrate an understanding of Java Client APIs, including the Abstract Window Toolkit (AWT), Swing, and Java applet. – The student will be able to:

- 74.01 Understand and describe AWT and GUI interface
  - 74.02 Understand and describe the use of Swing components and GUI.
  - 74.03 Understand and describe the use of applet technology.
- 75.0 Understand and apply Java 2 Enterprise Edition (J2EE) Server Solutions. – The student will be able to:
- 75.01 Understand java Web Services.
  - 75.02 Underrated and use SMTP and Java Mail technologies.
  - 75.03 Understand how to use JSP and Servlets.
- 76.0 Create a database application using the Java programming language. – The student will be able to:
- 76.01 Utilize loop statements.
  - 76.02 Given a scenario, use arithmetic, comparison, and pattern-matching operators.
  - 76.03 Create user-defined functions.
  - 76.04 Utilize common built-in functions.
  - 76.05 Declare variables in modules and procedures.
  - 76.06 Declare arrays, and initialize elements of arrays.
  - 76.07 Declare and use object variables and collections, and use their associated properties and methods.
  - 76.08 Declare symbolic constants, and make them available locally or publicly.
  - 76.09 Respond to events.
- 77.0 Create a graphical user interface application using the Java programming language. – The student will be able to:
- 77.01 Utilize loop statements.
  - 77.02 Given a scenario, use arithmetic, comparison, and pattern-matching operators.
  - 77.03 Create user-defined functions.
  - 77.04 Utilize common built-in functions.
  - 77.05 Declare variables in modules and procedures.
  - 77.06 Declare arrays, and initialize elements of arrays.
  - 77.07 Declare and use object variables and collections, and use their associated properties and methods.
  - 77.08 Declare symbolic constants, and make them available locally or publicly.
  - 77.09 Use the Java Event model to handle user inputs from events.
  - 77.10 Use JComponents and layout managers to create the GUI.
- 78.0 Create a web-based application using the Java programming language. – The student will be able to:
- 78.01 Utilize loop statements.
  - 78.02 Given a scenario, use arithmetic, comparison, and pattern-matching operators.
  - 78.03 Create user-defined functions.
  - 78.04 Utilize common built-in functions.
  - 78.05 Declare variables in modules and procedures.
  - 78.06 Declare arrays, and initialize elements of arrays.
  - 78.07 Declare and use object variables and collections, and use their associated properties and methods.

- 78.08 Declare symbolic constants, and make them available locally or publicly.
  - 78.09 Write JSP pages to process user input.
  - 78.10 Write Servlets to provide input and output processing for the web solution.
- 79.0 Write code to perform common and union database queries using SQL and Java. – The student will be able to:
- 79.01 Utilize SQL to write common queries.
  - 79.02 Refer to objects by using SQL.
  - 79.03 Utilize union queries.
- 80.0 Implement Java program statements using objects. – The student will be able to:
- 80.01 Determine when to use data access objects.
  - 80.02 Differentiate between objects and collections.
  - 80.03 Write statements that access and modify database objects, EJB objects.
  - 80.04 Select appropriate methods and property settings for use with specified objects.
- 81.0 Utilize debugging tools and write error handlers. – The student will be able to:
- 81.01 Trap errors.
  - 81.02 Utilize debugging tools to suspend program execution, and to examine, step through, and reset execution of code.
  - 81.03 Debug code samples.
  - 81.04 Utilize the Debugger to monitor variable values.
  - 81.05 Write an error handler.
- 82.0 Demonstrate file input/output (I/O). – The student will be able to:
- 82.01 Read from sequential and random access files.
  - 82.02 Write to sequential and random access files.
  - 82.03 Use file serialization.
- 83.0 Utilize API functions. – The student will be able to:
- 83.01 Properly declare functions.
  - 83.02 Use the by value and by reference parameters.
- 84.0 Test and debug databases. – The student will be able to:
- 84.01 Implement error handling.
  - 84.02 Test and debug library databases.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Java Programming Capstone  
**Course Number:** 9007270  
**Course Credit:** 1

**Course Description:**

This course serves as the capstone course, providing students with the opportunity to apply acquired computer programming knowledge and skills specific to the Java programming language. The range of competencies students will be expected to demonstrate include project planning, design, documentation, Java programming, and reporting/presenting the results of the project. Each student will be expected to maintain a portfolio of the project and give a presentation of the completed work at the end of the course.

85.0 Successfully work as a member of a software development team. – The student will be able to:

- 85.1 Accept responsibility for specific tasks in a given situation.
- 85.2 Document progress, and provide feedback on work accomplished in a timely manner.
- 85.3 Complete assigned tasks in a timely and professional manner.
- 85.4 Reassign responsibilities when the need arises.
- 85.5 Complete daily tasks as assigned on one's own initiative.

86.0 Manage time according to a plan. – The student will be able to:

- 86.1 Set realistic time frames and schedules.
- 86.2 Keep a written time sheet of work accomplished on a daily basis.
- 86.3 Meet goals and objectives set by the team.
- 86.4 Identify individual priorities.
- 86.5 Complete a weekly evaluation of accomplishments, and reevaluate goals, objectives and priorities as needed.

87.0 Keep acceptable records of progress problems and solutions. – The student will be able to:

- 87.1 Develop a record keeping system in the form of a log book to record daily progress.
- 87.2 Use a project journal to identify problem statement
- 87.3 Develop a portfolio of work accomplished to include design drawings, flowcharts, drawings and plans, and prototypes.

88.0 Plan, organize, and carry out a project plan. – The student will be able to:

- 88.1 Determine the scope of a project.
- 88.2 Organize the team according to individual strengths.
- 88.3 Assign specific tasks within a team.
- 88.4 Determine project priorities.

- 88.5 Identify required resources.
  - 88.6 Plan research, design, development, and evaluation activities as required.
  - 88.7 Carry out the project plan to successful completion.
- 89.0 Manage resources. – The student will be able to:
- 89.1 Identify required resources for each stage of the project plan.
  - 89.2 Determine the methods needed to acquire needed resources.
  - 89.3 Demonstrate good judgment in the use of resources.
  - 89.4 Recycle and reuse resources where appropriate.
  - 89.5 Demonstrate an understanding of proper legal and ethical treatment of copyrighted material.
- 90.0 Use tools, materials, and processes in an appropriate and safe manner. – The student will be able to:
- 90.1 Identify the proper tool for a given job.
  - 90.2 Use tools and machines in a safe manner.
  - 90.3 Adhere to laboratory or job site safety rules and procedures.
  - 90.4 Identify the application of processes appropriate to the task at hand.
  - 90.5 Identify materials appropriate to their application.
- 91.0 Demonstrate an understanding of the software development process. – The student will be able to:
- 91.1 State the goals of the software application clearly.
  - 91.2 Identify and write a plan to achieve each goal.
  - 91.3 Develop a list of materials and content required for each goal.
  - 91.4 Develop a step by step procedure for developing the application.
  - 91.5 Follow a written procedure.
  - 91.6 Record data from evaluation activities.
  - 91.7 Document conclusions and solutions based on evaluation results, observations and data.
  - 91.8 Document progress using a project log.
  - 91.9 Write an abstract describing the project plan.
- 92.0 Research content related to the project and document the results following industry conventions. – The student will be able to:
- 92.1 Identify the basic research needed to develop the project plan.
  - 92.2 Identify available resources for completing background research required in the project plan.
  - 92.3 Demonstrate the ability to locate resource materials in a library, data base, internet and other research resources.
  - 92.4 Demonstrate the ability to organize information retrieval.
  - 92.5 Demonstrate the ability to prepare a topic outline.
  - 92.6 Write a draft of the research report.
  - 92.7 Edit and proof the research report. Use proper form for a bibliography, footnotes, quotations, and references.
  - 92.8 Prepare an electronically composed research paper in proper form.
  - 92.9 Conduct an alpha and beta evaluation of the project's product.

- 92.10 Write a report on the evaluations, documenting results, data, observations, and design changes based on the results.
- 93.0 Use presentation skills, and appropriate media to describe the progress, results and outcomes of the experience. – The student will be able to:
- 93.1 Prepare a multi-media presentation on the completed project.
  - 93.2 Make an oral presentation, using multi-media materials.
  - 93.3 Review the presentation, and make changes in the delivery method(s) to improve presentation skills.
- 94.0 Demonstrate competency in the area of expertise related to developing computer software using the Java programming language. – The student will be able to:
- 94.1 Demonstrate a mastery of the content of the selected subject area.
  - 94.2 Demonstrate the ability to use related technological tools, materials and processes related to the specific program area.
  - 94.3 Demonstrate the ability to apply the knowledge, experience and skill developed in the previous program completion to the successful completion of this demonstration.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Database Application Development & Programming  
**Program Type:** Career Preparatory  
**Career Cluster:** Information Technology

	<b>Secondary</b>	<b>PSAV</b>
Program Number	9007300	Y700300
CIP Number	0511020315	0511020315
Grade Level	9-12, 30, 31	30, 31
Standard Length	8 credit hours	1200 hours
Teacher Certification	BUS ED 1 @2 COMP SCI 6 COMP PROG 7 G	BUS ED 1 @2 COMP SCI 6 COMP PROG 7 G
CTSO	FBLA BPA SkillsUSA	Phi Beta Lambda BPA SkillsUSA
SOC Codes (all applicable)	15-1041, 15-1021	15-1041, 15-1021
Facility Code	212 <a href="http://www.fldoe.org/edfacil/sref.asp">http://www.fldoe.org/edfacil/sref.asp</a> (State Requirements for Educational Facilities)	
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>	
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>	
Industry Certifications	<a href="http://www.fldoe.org/workforce/fcpea/default.asp">http://www.fldoe.org/workforce/fcpea/default.asp</a>	
Basic Skills Level	N/A	Mathematics: 9 Language: 9 Reading: 9

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to the fundamentals of programming and software development; procedural and object-oriented programming; creating regular and specialized applications using standard and extended Structured Query Language (SQL), including testing, monitoring, debugging, documenting, and maintaining database applications.

## Program Structure

This program is a planned sequence of instruction consisting of four occupational completion points, with OCPs A, B, and C comprising the Software Development Core. Secondary or postsecondary students who have previously completed the Software Development Core will not have to repeat the core. A student who completes the applicable competencies at any occupational completion point may either continue with the training program or exit as an occupational completer.

When offered at the post secondary level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44 (3)(b), F.S.

The following table illustrates the **PSAV** program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	OTA0040	Information Technology Assistant	150	15-1041
B	CTS0041	Computer Programmer Assistant	300	15-1021
C	CTS0044	Computer Programmer	150	15-1021
D	CTS0062	Database Programmer	600	15-1021

The following table illustrates the **Secondary** program structure:

OCP	Course Number	Course Title	Length	SOC Code	Level
A	8207310	Introduction to Information Technology	1 credit	15-1041	2
B	9007210	Foundations of Programming	1 credit	15-1021	3
	9007220	Procedural Programming	1 credit		3
C	9007230	Object-Oriented Programming Fundamentals	1 credit	15-1021	3
D	9007310	Database Design & SQL Programming	1 credit	15-1021	3
	9007320	SQL Extension Languages I	1 credit		3
	9007330	SQL Extension Languages II	1 credit		3
	9007340	Custom Database Programming	1 credit		3

## Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## Special Notes

### Academic Alignment

Some or all of the courses in this program have been aligned to the Next Generation Sunshine State Standards contained in specific math and science core academic courses. This alignment resulted from a collaborative review by Career and Technical Education (CTE) teachers and core academic teachers. The table below contains the results of the alignment efforts. Data shown in the table includes the number of academic standards in the CTE course, the total number of math and science standards contained in the academic course, and the percentage of alignment to the CTE course. The following academic courses were included in the alignment (see code for use in table).

Academic Subject Area	Academic Course
Math	Algebra 1 (ALG1) Algebra 2 (ALG2) Geometry (GEO)
Science	Anatomy/Physiology Honors (APH) Astronomy Solar/Galactic Honors (ASGH) Biology 1 (BIO1) Chemistry 1 (CHM1) Earth-Space Science (ESS) Genetics (GEN) Marine Science 1 Honors (MS1H) Physical Science (PS) Physics 1 (PHY1)

Course	Math			Science								
	ALG1	ALG2	GEO	APH	ASGH	BIO1	CHM1	ESS	GEN	MS1H	PS	PHY1
Introduction to IT	6/36 17%	2/41 5%	1/45 2%	2/53 4%	2/52 4%	2/56 4%	2/55 4%	2/58 3%	2/35 6%	2/42 5%	2/56 4%	2/53 4%
Foundations of Programming	**	**	**	**	**	**	**	**	**	**	**	**
Procedural Programming	**	**	**	**	**	**	**	**	**	**	**	**
Object-Oriented Programming Fundamentals	**	**	**	**	**	**	**	**	**	**	**	**
Database Design & SQL Programming	**	**	**	**	**	**	**	**	**	**	**	**
SQL Extension Languages I	**	**	**	**	**	**	**	**	**	**	**	**
SQL Extension Languages II	**	**	**	**	**	**	**	**	**	**	**	**
Custom Database Programming	**	**	**	**	**	**	**	**	**	**	**	**

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

## **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA), Business Professionals of America (BPA), and SkillsUSA are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills for secondary students. For postsecondary students, Phi Beta Lambda, BPA, and SkillsUSA are the appropriate student organizations. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

## **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the program-specific OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

## **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 9.0, Language 9.0, and Reading 9.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination. Students may be exempt from meeting the Basic Skills requirements by earning an eligible industry certification. See the Basic Skills Exemption List document for a list of eligible industry certifications (<http://www.fldoe.org/workforce/dwdframe/rtf/basic-skills.rtf>).

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination pursuant to Section 1008.29, F.S.; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.)

## **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. Links to instructional resources in

support of Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (ESE) will need modifications to meet their special needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular occupational completion point (OCP) or a modified occupational completion point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP(s)/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

### **Articulation**

The PSAV component of this program has no statewide articulation agreement approved by the Florida State Board of Education. However, this does not preclude the awarding of credits by any college through local agreements.

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Bright Futures/Gold Seal Scholarship**

Course substitutions as defined in the Comprehensive Course Table for this program area may be used to qualify a student for Florida's Gold Seal Vocational Scholarship, providing all other eligibility requirements are met. Eligibility requirements are available online at [https://www.osfaffelp.org/bfiehs/fnbpcm02\\_CCTMain.aspx](https://www.osfaffelp.org/bfiehs/fnbpcm02_CCTMain.aspx).

## **Fine Arts/Practical Arts Credit**

Many courses in CTE programs meet the Fine Arts/Practical Arts credit for high school graduation. For additional information refer to

<http://www.fldoe.org/schools/pdf/ListPracticalArtsCourses.pdf>.

### **Core Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate Comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles.
- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace.
- 11.0 Participate in work-based learning experiences.
- 12.0 Perform e-mail activities.
- 13.0 Demonstrate knowledge of different operating systems.
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW.
- 15.0 Demonstrate proficiency using HTML commands.
- 16.0 Demonstrate proficiency in page design applicable to the WWW.
- 17.0 Demonstrate proficiency using specialized web design software.
- 18.0 Develop an awareness of the information technology industry.
- 19.0 Develop an awareness of microprocessors and digital computers.
- 20.0 Develop an awareness of programming languages.
- 21.0 Develop an awareness of emerging technologies.
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model.
- 23.0 Demonstrate proficiency using common software applications.
- 24.0 Demonstrate proficiency using specialized software applications.
- 25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development.
- 26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types.
- 27.0 Distinguish between iterative and non-iterative program control structures.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages.

- 29.0 Describe the processes, methods, and conventions for software development and maintenance.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool.
- 32.0 Describe information security risks, threats, and strategies associated with software development.
- 33.0 Design a computer program to meet specific physical, operational, and interaction criteria.
- 34.0 Create and document a computer program that uses a variety of internal and control structures for manipulating varied data types.
- 35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input.
- 36.0 Create a unit test plan, implement the plan, and report the results of testing.
- 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming.
- 38.0 Create a project plan that defines requirements, structural design, time estimates, and testing elements.
- 39.0 Design, document, and create object-oriented computer programs.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results.

### **Program Standards**

- 41.0 Develop an awareness of the changes taking place in the information age and how they fit into an evolving society.
- 42.0 Develop the "big picture" of database design and how to best organize data according to business rules and/or client needs.
- 43.0 Develop the process of creating an entity by identifying relationships.
- 44.0 Formulate and assemble initial entity relationship by expanding on modeling concepts.
- 45.0 Consider the degree and optionality of relationships of entities.
- 46.0 Demonstrate proficiency in early construction stages of the data modeling process by using unique identifiers and many-to-many (M:M) relationships for building entity relationship diagrams.
- 47.0 Demonstrate proficiency in advanced data constructs by analyzing business requirements and diagramming entities and relationships.
- 48.0 Demonstrate proficiency in designing and adding complexity to an entity-relationship model (ERM).
- 49.0 Apply complex ERM information by fine-tuning entities and the process for relating them.
- 50.0 Apply initial database design and normalization by following the set of house rules that determine how items are stored and retrieved.
- 51.0 Demonstrate proficiency in the technique of normalization by labeling and organizing all items in a database in such a way as to prevent any confusion or mistakes.
- 52.0 Demonstrate proficiency in table normalization by combining the techniques of an entity relationship model or a top-down, business approach to data with normalization or a bottom-up mathematical approach to data.
- 53.0 Apply blueprint principles to begin designing a tool for creating a web-based interface access to a database.
- 54.0 Extend the logical model presentation model by normalizing the data and mapping the management system.

- 55.0 Apply techniques for building a storage management system by creating a website using templates and wizards.
- 56.0 Demonstrate design and functionality by constructing a group business presentation.
- 57.0 Demonstrate comprehension of database modeling competency through group presentation.
- 58.0 Demonstrate comprehension that the database management software is a system for organizing the storage unit (or database) according to business needs and rules, through data integrity constraints.
- 59.0 Demonstrate comprehension of aspects of SQL language interface by writing basic SQL statements.
- 60.0 Demonstrate proficiency working with columns, characters, and rows in SQL.
- 61.0 Demonstrate proficiency in using SQL comparison operators.
- 62.0 Demonstrate proficiency in using logical comparisons and precedence rules.
- 63.0 Demonstrate proficiency using SQL single row functions.
- 64.0 Demonstrate proficiency displaying data from multiple tables.
- 65.0 Demonstrate proficiency aggregating data using group functions.
- 66.0 Demonstrate proficiency utilizing subqueries.
- 67.0 Demonstrate proficiency producing readable output with SQL language interface, reporting tool, and data manipulation language.
- 68.0 Demonstrate proficiency creating and managing database objects.
- 69.0 Demonstrate proficiency altering tables and constraints implementing views.
- 70.0 Demonstrate mastery of creating and implementing views, synonyms, indexes and other database objects.
- 71.0 Demonstrate ability to control user access and SQL language interface and reporting tool.
- 72.0 Demonstrate comprehension of bundling features of SQL.
- 73.0 Demonstrate comprehension working with composite data types by writing executable script files.
- 74.0 Describe the differences between SQL and SQL extension languages.
- 75.0 Create program blocks.
- 76.0 Use variables in program blocks.
- 77.0 Recognize lexical units.
- 78.0 Recognize data types.
- 79.0 Use scalar data types.
- 80.0 Use various types of joins.
- 81.0 Use SQL group functions and subqueries.
- 82.0 Write executable statements.
- 83.0 Use nested blocks and variable scope.
- 84.0 Use good programming practices.
- 85.0 Write DML statements to manipulate data
- 86.0 Retrieve data
- 87.0 Manipulate data
- 88.0 Use transaction control statements
- 89.0 Use IF conditional control statements.
- 90.0 Use CASE conditional control statements.
- 91.0 Use basic LOOP iterative control statements.
- 92.0 Use WHILE and FOR loop iterative control statements.
- 93.0 Use nested loop iterative control statements.
- 94.0 Use explicit cursors.
- 95.0 Use explicit cursor attributes.
- 96.0 Use cursor FOR loops.

- 97.0 Use cursors with parameters.
- 98.0 Use cursors for update transactions.
- 99.0 Use multiple cursors.
- 100.0 Handle exceptions.
- 101.0 Trap server exceptions.
- 102.0 Trap user-defined exceptions.
- 103.0 Create procedures.
- 104.0 Use parameters in procedures.
- 105.0 Pass parameters.
- 106.0 Create stored functions.
- 107.0 Use functions in SQL statements.
- 108.0 Manage procedures and functions.
- 109.0 Manage object privileges.
- 110.0 Use invoker's rights.
- 111.0 Create packages.
- 112.0 Manage package constructs.
- 113.0 Use advanced package concepts.
- 114.0 Manage persistent state of package variables.
- 115.0 Use vendor-supplied packages.
- 116.0 Understand dynamic SQL.
- 117.0 Understand triggers.
- 118.0 Create DML triggers.
- 119.0 Create DDL and database event triggers.
- 120.0 Manage triggers.
- 121.0 Use large object data types.
- 122.0 Manage binary types.
- 123.0 Manage indexes.
- 124.0 Manage dependencies.
- 125.0 Program a database application.
- 126.0 Utilize the basic concepts of database design.
- 127.0 Utilize SQL and union queries.
- 128.0 Implement program statements using objects.
- 129.0 Utilize debugging tools and write error handlers.
- 130.0 Demonstrate file I/O.
- 131.0 Create forms and identify all the properties of a form.
- 132.0 Manipulate data using object models
- 133.0 Develop custom controls.
- 134.0 Utilize API functions.
- 135.0 Demonstrate database replication and implement database replication using programming tools.
- 136.0 Analyze and implement security options.
- 137.0 Implement client/server applications.
- 138.0 Optimize the performance of a database.
- 139.0 Perform application distribution.
- 140.0 Test and debug databases.

### **Essential Skills**

- 141.0 Demonstrate language arts knowledge and skills.
- 142.0 Demonstrate mathematics knowledge and skills.

- 143.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 144.0 Solve problems using critical thinking skills, creativity and innovation.
- 145.0 Use information technology tools.
- 146.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 147.0 Describe the importance of professional ethics and legal responsibilities.
- 148.0 Explain the importance of employability skill and entrepreneurship skills.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: Database Application Development & Programming**  
**PSAV Number: Y700300**

**Course Number: OTA0040**  
**Occupational Completion Point: A**  
**Information Technology Assistant – 150 Hours – SOC Code 15-1041**

**Introduction to Information Technology Standards:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
  - 01.06 Describe ethical issues and problems associated with computers and information systems.
- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
  - 02.02 Use professional business vocabulary appropriate for information technology environments.
  - 02.03 Organize ideas and communicate oral and written messages appropriate for information technology environments.
  - 02.04 Collaborate with individuals and teams to complete tasks and solve information technology problems.
  - 02.05 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
  - 02.06 Apply the writing process to the creation of appropriate documents following designated business formats.
  - 02.07 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).
- 03.0 Use technology to enhance the effectiveness of communication skills. – The student will be able to:

- 03.01 Use database, spreadsheet, and presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
  - 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
  - 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
  - 08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:
- 09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).
  - 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.

- 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:
- 14.01 Identify and describe Web terminology.
  - 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
  - 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, pdf, etc.).
  - 14.08 Identify effective Boolean search strategies.
- 15.0 Demonstrate proficiency using HTML commands. – The student will be able to:
- 15.01 Identify elements of a Web page.
  - 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
  - 15.03 Define basic HTML terminology.
  - 15.04 Analyze HTML source code developed by others.
  - 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
  - 15.07 Edit and test HTML documents for accuracy and validity.
  - 15.08 Use basic functions of WYSIWYG editors.
  - 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 15.10 Enhance web pages through the addition of images and graphics including animation.

- 16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
  - 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
  - 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 16.04 Use image design software to create and edit images.
  - 16.05 Demonstrate proficiency in publishing to the Internet.
  - 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
  - 16.07 Explain the need for web-based applications.
- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).

- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the open systems interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.
  - 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
  - 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
  - 24.03 Demonstrate the ability to incorporate digital sound.
- 141.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 141.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
  - 141.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
  - 141.03 Present information formally and informally for specific purposes and audiences. AF2.9

- 142.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 142.01 Demonstrate knowledge of arithmetic operations. AF3.2
- 142.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
- 142.03 Construct charts/tables/graphs using functions and data. AF3.5
- 148.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 148.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
- 148.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
- 148.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
- 148.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
- 148.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
- 148.06 Identify and exhibit traits for retaining employment. ECD 7.0
- 148.07 Identify opportunities and research requirements for career advancement. ECD 8.0
- 148.08 Research the benefits of ongoing professional development. ECD 9.0
- 148.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0

**Course Number: CTS0041****Occupational Completion Point: B****Computer Programmer Assistant – 300 Hours – SOC Code 15-1021**

- 25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development. – The student will be able to:
- 25.01 Describe the evolution of programming and programming careers.
- 25.02 Identify tasks performed by programmers.
- 25.03 Describe how businesses use computer programming to solve business problems.
- 25.04 Investigate job opportunities in the programming field.
- 25.05 Explain different specializations and the related training in the computer programming field.
- 25.06 Explain the need for continuing education and training of computer programmers.
- 25.07 Explain enterprise software systems and how they impact business.
- 25.08 Describe ethical responsibilities of computer programmers.
- 25.09 Describe the role of customer support to software program quality.
- 25.10 Identify credentials and certifications that may improve employability for a computer programmer.
- 25.11 Identify devices, tools, and other environments for which programmers may develop software.
- 26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types. – The student will be able to:
- 26.01 Identify the characteristics (e.g., size, limits) and uses of different numerical and non-numerical data types.

- 26.02 Explain the types and uses of variables in programs.
  - 26.03 Determine the best data type to use for given programming problems.
  - 26.04 Identify the types of operations that can be performed on different data types.
  - 26.05 Evaluate arithmetic and logical expressions using appropriate operator precedence.
  - 26.06 Explain how computers store different data types in memory.
  - 26.07 Demonstrate the difference between "data" and "information."
  - 26.08 Use different number systems to represent data.
  - 26.09 Explain how national and international standards (*i.e.*, ASCII, UNICODE) are used to represent non-numerical data.
  - 26.10 Use Boolean logic to perform logical operations.
- 27.0 Distinguish between iterative and non-iterative program control structures. – The student will be able to:
- 27.01 Explain non-iterative programming structures (*e.g.*, if, if/else, etc.) and their uses.
  - 27.02 Explain iterative programming structures (*e.g.*, while, do/while, etc.) and their uses.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages. – The student will be able to:
- 28.01 Identify the characteristics, uses, and limits of low-level programming languages.
  - 28.02 Identify the characteristics, uses, and limits of high-level programming languages.
  - 28.03 Identify the characteristics, uses, and limits of rapid development programming languages.
  - 28.04 Describe object-oriented concepts.
  - 28.05 Explain the characteristics of procedural and object-oriented programming languages.
  - 28.06 Compare and contrast programming languages that are compiled (*e.g.*, C++), interpreted (*e.g.*, Basic, HTML), and translated (*e.g.*, Java).
- 29.0 Describe the processes, methods, and conventions for software development and maintenance. – The student will be able to:
- 29.01 Describe and explain tools used in software development.
  - 29.02 Describe the stages of the program life cycle.
  - 29.03 Compare and contrast alternative methods of program development (*e.g.*, rapid prototyping, waterfall, etc.).
  - 29.04 List and explain the steps in the program development cycle.
  - 29.05 Describe different types of documentation used in the program development cycle (*e.g.*, requirements document, program design documents, test plans, etc.).
  - 29.06 Describe the on-going need for program maintenance.
  - 29.07 Describe different methods companies use to facilitate program updates for enhancements and defects (*e.g.*, how customers receive patches, updates, new versions, upgrades).
  - 29.08 Describe different methods used to facilitate version control and change management.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control. – The

student will be able to:

- 30.01 Explain the uses and limits of testing in ensuring program quality.
  - 30.02 Explain testing performed at different stages of the program development cycle (e.g. unit testing, system testing, user acceptance testing, etc.).
  - 30.03 Describe data and the use of test plans/scripts to be used in program testing.
  - 30.04 Describe and identify types of programming errors (e.g., syntactical, logic, usability, requirements mismatch, etc.).
  - 30.05 Identify the data to be used for boundary conditions.
  - 30.06 Explain different types of testing (e.g., usability, automated, regression, etc.) and testing tools.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool. – The student will be able to:
- 31.01 Describe different design methodologies and their uses (e.g., object-oriented design, structured design, and rapid application development).
  - 31.02 Describe tools for developing a program design (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.03 Explain the role of existing libraries and packages in facilitating programmer productivity.
  - 31.04 Participate and contribute to a design review of a program design developed using a common program design tool (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.05 Write a program design document using UML or other standard design methodology.
  - 31.06 Define input and output for a program module using UML or other standard design methodology.
- 32.0 Describe information security risks, threats, and strategies associated with software development. – The student will be able to:
- 32.01 Explain the security risks to personal and business computer users.
  - 32.02 Identify different types of threats to computer systems.
  - 32.03 Identify methods to protect against different threats to computer systems.
  - 32.04 Understand the importance of a disaster / emergency response plan.
  - 32.05 Identify alternative methods for data storage and backup (e.g., mirroring, fail-over, high availability, types of backups).
- 33.0 Design a computer program to meet specific physical, operational, and interaction criteria. – The student will be able to:
- 33.01 Choose appropriate data types depending on the needs of the program.
  - 33.02 Define appropriate user interface prompts for clarity and usability (e.g., user guidance for data ranges, data types, etc.).
  - 33.03 Design and develop program that are designed for efficiency (e.g., less memory usage, less inputs/outputs, faster processing, etc.).
  - 33.04 Identify the software environment required for a program to run (e.g., operating system required, mobile, Web-based, desktop, delivery method, etc.).

- 33.05 Identify the tools required to develop a program (e.g., editors, compilers, linkers, integrated development environments, application programming interfaces (APIs), libraries, etc.).
- 34.0 Create and document a computer program that uses a variety of internal and control structures for manipulating varied data types. – The student will be able to:
- 34.01 Use appropriate naming conventions to define program variables and modules (methods, functions).
  - 34.02 Use a program editor to write the source code for a program.
  - 34.03 Write programs that use selection structures (e.g., if, if/else, etc.).
  - 34.04 Write programs that use repetition structures (e.g., while, do/while, etc.).
  - 34.05 Write programs that use nested structures.
  - 34.06 Use internal documentation (e.g., single-line and multi-line comments, program headers, module descriptions, and meaningful variable and function/module names) to document a program according to accepted standards.
  - 34.07 Compile and run programs.
  - 34.08 Write programs that use standard arithmetic operators with different numerical data types.
  - 34.09 Write programs that use standard logic operators.
  - 34.10 Write programs that use a variety of common data types.
  - 34.11 Write programs that perform data conversion between standard data types.
  - 34.12 Write programs that define, use, search, and sort arrays.
  - 34.13 Write programs that use user-defined data types.
  - 34.14 Demonstrate understanding and use of appropriate variable scope.
- 35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input. – The student will be able to:
- 35.01 Write programs that perform user input and output.
  - 35.02 Write programs that validate user input (e.g., range checking, data formats, valid/invalid characters, etc.).
  - 35.03 Write program modules such as functions, subroutines, or methods.
  - 35.04 Write program modules that accept arguments.
  - 35.05 Write program modules that return values.
  - 35.06 Write program modules that validate arguments and return error codes.
  - 35.07 Write interactive programs.
  - 35.08 Write programs that use standard libraries to enhance program function.
  - 35.09 Participate in a peer code review to verify program functionality, programming styles, program usability, and adherence to common programming standards.
- 36.0 Create a unit test plan, implement the plan, and report the results of testing. – The student will be able to:
- 36.01 Write a unit test plan that identifies the input data and expected results for program tests.
  - 36.02 Test and debug programs, including programs written by others.
  - 36.03 Write a test report that identifies the results of testing.
  - 36.04 Trace through the function of a program to ensure valid operation.

- 36.05 Identify the system resources used by the program (e.g., memory, disk space, execution time, external devices).
- 36.06 Create a disaster / emergency response plan for a computer system.
- 143.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 143.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
- 143.02 Locate, organize and reference written information from various sources. CM 3.0
- 143.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
- 143.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
- 143.05 Apply active listening skills to obtain and clarify information. CM 7.0
- 143.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
- 143.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 144.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 144.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
- 144.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
- 144.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
- 144.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 145.0 Use information technology tools. – The student will be able to:
- 145.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 145.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 145.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 145.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 146.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 146.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
- 146.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
- 146.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 147.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 147.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0

- 147.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
- 147.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2

**Course Number: CTS0044****Occupational Completion Point: C****Computer Programmer – 150 Hours – SOC Code 15-1021**

- 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming. – The student will be able to:
- 37.01 Demonstrate the understanding and use of classes, objects, attributes, and behaviors.
  - 37.02 Demonstrate the understanding and use of inheritance.
  - 37.03 Demonstrate the understanding and use of data encapsulation.
  - 37.04 Demonstrate the understanding and use of polymorphism.
- 38.0 Create a project plan for an object-oriented programming project that defines requirements, structural design, time estimates, and testing elements. – The student will be able to:
- 38.01 Write a project plan for completion of a project that includes gathering program requirements, developing the program, and testing it.
  - 38.02 Write a program requirements document that identifies business purpose, functional requirements, system requirements, and other common components of a requirements document.
  - 38.03 Design an object-oriented program using UML or another standard design methodology.
  - 38.04 Work with other team members to develop a project plan for a program.
  - 38.05 Work with other team members to write a design document for a program with multiple functions and shared data.
  - 38.06 Participate in design meetings that review program design documents for conformance to program requirements.
  - 38.07 Estimate the time to develop a program or module.
- 39.0 Design, document, and create object-oriented computer programs. – The student will be able to:
- 39.01 Compare and contrast recursive functions to other iterative methods.
  - 39.02 Understand the implementation of character strings in the programming language.
  - 39.03 Write programs that perform string processing (e.g., string manipulation, string compares, concatenation, etc.).
  - 39.04 Write programs that use user-defined data types.
  - 39.05 Write object-oriented programs that use inheritance.
  - 39.06 Write object-oriented programs that use polymorphism.
  - 39.07 Develop class constructors.
  - 39.08 Write programs that define and use program constants.
  - 39.09 Write programs that perform error handling.

- 39.10 Participate in program code review meetings to evaluate program code for validity, quality, performance, data integrity, and conformance to program design documents.
  - 39.11 Write programs that perform dynamic memory allocation.
  - 39.12 Write programs that perform effective management of dynamically allocated memory.
  - 39.13 Update a program module to implement enhancements or corrections and demonstrate appropriate documentation (internal and external) related to version control.
  - 39.14 Write programs that use complex data structures (e.g., stacks, queues, trees, linked lists etc.).
  - 39.15 Write programs that are event-driven.
  - 39.16 Write programs that perform file input and output (i.e., sequential and random access file input/output).
  - 39.17 Perform basic database commands including connect, open, select, and close.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results. – The student will be able to:
- 40.01 Develop a test plan for an object-oriented program.
  - 40.02 Write test plans for event-driven programs.
  - 40.03 Write test plans for programs that perform file input and output.
  - 40.04 Perform test and debug activities on object-oriented programs, including those written by someone else.
  - 40.05 Perform test and debug activities on an event-driven program.
  - 40.06 Perform test and debug activities on programs that perform file input and output and verify the correctness of output files.
  - 40.07 Document the findings of testing in a test report.

**Course Number: CTS0062****Occupational Completion Point – D****Database Programmer – 600 Hours – SOC Code 15-1021**

- 41.0 Develop an awareness of the changes taking place in the information age and how they fit into an evolving society. – The student will be able to:
- 41.01 Cite examples of jobs, salary, and opportunities he/she will have as a database programmer.
  - 41.02 Describe the role a database plays in a business.
  - 41.03 Understand the importance of clear communication when discussing business informational requirements.
  - 41.04 Identify important historical contributions in database development and design.
- 42.0 Develop the "big picture" of database design and how to best organize data according to business rules and/or client needs. – The student will be able to:
- 42.01 Identify and analyze the phases of the database development process.
  - 42.02 Explain what logical data modeling and database design involve.
  - 42.03 Compare database development process with that of the application development process.
  - 42.04 Distinguish between a logical model and a physical implementation.

- 43.0 Develop the process of creating an entity by identifying relationships. – The student will be able to:
- 43.01 Identify and model various types of entities.
  - 43.02 Identify naming and drawing conventions for entities.
  - 43.03 Sequence the steps that are necessary for creation of an entity.
  - 43.04 Analyze and model the relationships between entities.
- 44.0 Formulate and assemble initial entity relationship by expanding on modeling concepts. – The student will be able to:
- 44.01 Analyze and model attributes.
  - 44.02 Identify unique identifiers for each entity.
  - 44.03 Develop an entity relationship diagram tagging attributes with optionality.
- 45.0 Consider the degree and optionality of relationships of entities. – The student will be able to:
- 45.01 Create entity relationship models based on information requirements and interviews.
  - 45.02 Differentiate between one-to-many, many-to-many and one-to-one relationships.
  - 45.03 Identify relationship between two entities by reading a given diagram.
  - 45.04 Create a relationship between instances of the same entity.
  - 45.05 Read an entity relationship model in order to validate it.
- 46.0 Demonstrate proficiency in early construction stages of the data modeling process by using unique identifiers and many-to-many (M:M) relationships for building entity relationship diagrams. – The student will be able to:
- 46.01 Identify the significance of an attribute that has more than one value for each entity instance.
  - 46.02 Evaluate appropriate methods of storing validation rules for attributes.
  - 46.03 Recognize unique identifiers inherited from other entities.
  - 46.04 Sequence the steps involved in resolving a many-to-many relationship.
- 47.0 Demonstrate proficiency in advanced data constructs by analyzing business requirements and diagramming entities and relationships. – The student will be able to:
- 47.01 Validate that an attribute is properly placed based upon its dependence on its entity's unique identifier (UID).
  - 47.02 Resolve many-to-many relationships with intersection entities.
  - 47.03 Model advanced data constructs including recursive relationships, subtypes, and exclusive relationships.
  - 47.04 Create exclusive entities and relationships by using subtypes and arcs, respectively.
  - 47.05 Identify initial layout for presentation and generate a list of action items for members of group.
  - 47.06 Develop an entity relationship model using subtypes, super-types and an exclusive arc.

- 48.0 Demonstrate proficiency in designing and adding complexity to an entity-relationship model (ERM). – The student will be able to:
- 48.01 Revise an entity relationship model according to client requirements.
  - 48.02 Define and give examples of hierarchical and recursive relationships.
  - 48.03 Differentiate between transferable and non-transferable relationships.
  - 48.04 Deliver a professional, formal business style presentation.
  - 48.05 Evaluate and critique presentation layout, design and performance.
  - 48.06 Construct a model using both recursion and hierarchies to express the same logical meaning.
- 49.0 Apply complex ERM information by fine-tuning entities and the process for relating them. – The student will be able to:
- 49.01 Describe a relational database and how it differs from other database systems.
  - 49.02 Define primary keys and foreign keys and describe their purpose.
  - 49.03 Describe what data integrity refers to and list some constraints.
  - 49.04 Explain how database design fits into the database development process.
  - 49.05 Translate an entity-relationship model into a relational database design.
  - 49.06 Document a database design using table instance charts.
- 50.0 Apply initial database design and normalization by following the set of house rules that determine how items are stored and retrieved. – The student will be able to:
- 50.01 Demonstrate ability to implement steps for mapping entity relationship models for implementation.
  - 50.02 Document an initial database design on table instance charts.
  - 50.03 Recognize raw data and evaluate the steps for creating a data group in unnormalized form (UNF).
- 51.0 Demonstrate proficiency in the technique of normalization by labeling and organizing all items in a database in such a way as to prevent any confusion or mistakes. – The student will be able to:
- 51.01 Differentiate between unnormalized data and normalized.
  - 51.02 Move data from an unnormalized form through to a third normal form.
  - 51.03 Demonstrate ability to test data groups for third normal form compliance.
  - 51.04 Identify optimized data groups from given groups of normalized data.
- 52.0 Demonstrate proficiency in table normalization by combining the techniques of an entity relationship model or a top-down, business approach to data with normalization or a bottom-up mathematical approach to data. – The student will be able to:
- 52.01 Compare the normalization and entity relationship modeling (ERM) techniques in terms of strengths and weaknesses.
  - 52.02 Further define normalization and explain its benefits.
  - 52.03 Place tables in third normal form.
  - 52.04 Explain how logical data modeling rules ensure normalized tables.
  - 52.05 Specify referential integrity constraints and design indices.

- 53.0 Apply blueprint principles to begin designing a tool for creating a web-based interface access to a database. – The student will be able to:
- 53.01 Evaluate the transformation of business requirements into an initial layout and design for a database.
  - 53.02 Construct simple web page design for personal work folder.
  - 53.03 Evaluate existing web sites and determine quality of design.
- 54.0 Extend the logical model presentation model by normalizing the data and mapping the management system. – The student will be able to:
- 54.01 Formulate a plan of action for the Database Project using skills previously learned in this course.
  - 54.02 Normalize a logical model to the third normal form (3NF).
  - 54.03 Create a table in the database using a database authoring tool.
  - 54.04 Demonstrate ability to edit tables using a database authoring tool.
  - 54.05 Create forms that will display the table components created with a database authoring tool.
- 55.0 Apply techniques for building a storage management system by creating a website using templates and wizards. – The student will be able to:
- 55.01 Create a web site that displays the database project home.
  - 55.02 Link a web site to create a web-enabled interface to the industry database.
  - 55.03 Edit the forms created and specify appropriate field labels for data entry.
- 56.0 Demonstrate design and functionality by constructing a group business presentation. – The student will be able to:
- 56.01 Evaluate and generate criteria for a formal, business presentation.
  - 56.02 Construct a persuasive group presentation using the guidelines set forth in class.
- 57.0 Demonstrate comprehension of database modeling competency through group presentation. – The student will be able to:
- 57.01 Deliver a formal business presentation for the class that discusses an entity-relationship model and initial database design.
  - 57.02 Demonstrate the functionality of the database and the layout/design capabilities of a database authoring tool.
  - 57.03 Prepare appropriate end-user documentation.
  - 57.04 Self-assess learning experience through the presentation and demonstration of their final database project.
- 58.0 Demonstrate comprehension that the database management software is a system for organizing the storage unit (or database) according to business needs and rules, through data integrity constraints. – The student will be able to:
- 58.01 Identify the structural elements of a relational database table.
  - 58.02 List and describe the system development life cycle.

- 58.03 Describe the industry implementation of the relational database management system (RDBMS) and object relational database management system (ORDBMS).
  - 58.04 Explain how SQL and languages that extend SQL are used in the industry product set.
  - 58.05 Identify the advantages of a database management system.
- 59.0 Demonstrate comprehension of aspects of SQL language interface by writing basic SQL statements. – The student will be able to:
- 59.01 List the capabilities of SQL SELECT statements.
  - 59.02 Execute a basic select statement.
  - 59.03 Differentiate between SQL statements and language commands that extend SQL.
- 60.0 Demonstrate proficiency working with columns, characters, and rows in SQL. – The student will be able to:
- 60.01 Apply the concatenation operator to link columns to other columns, arithmetic expressions, or constant values to create a character expression.
  - 60.02 Use column aliases to rename columns in the query result.
  - 60.03 Eliminate duplicate rows in the query result.
  - 60.04 Display the structure of a table.
  - 60.05 Apply SQL syntax to restrict the rows returned from a query.
  - 60.06 Demonstrate application of the WHERE clause syntax.
  - 60.07 Construct and produce output using a SQL query containing character strings and date values.
- 61.0 Demonstrate proficiency in using SQL comparison operators. – The student will be able to:
- 61.01 Apply the proper comparison operator to return a desired result.
  - 61.02 Demonstrate proper use of BETWEEN, IN, and LIKE conditions to return a desired result.
  - 61.03 Distinguish between zero and the value of NULL as unavailable, unassigned, unknown, or inapplicable.
  - 61.04 Explain the use of comparison conditions and NULL.
- 62.0 Demonstrate proficiency in using logical comparisons and precedence rules. – The student will be able to:
- 62.01 Evaluate logical comparisons to restrict the rows returned based on two or more conditions.
  - 62.02 Apply the rules of precedence to determine the order in which expressions are evaluated and calculated.
  - 62.03 Construct a query to order a results set for single or multiple columns.
  - 62.04 Construct a query to sort a results set in ascending or descending order.
- 63.0 Demonstrate proficiency using SQL single row functions. – The student will be able to:
- 63.01 Perform calculations on data.

- 63.02 Modify individual data items.
  - 63.03 Use character, number and date functions in SELECT statements.
  - 63.04 Format data and numbers for display purposes.
  - 63.05 Convert column data types.
- 64.0 Demonstrate proficiency displaying data from multiple tables. – The student will be able to:
- 64.01 Construct select statements to access data from more than one table using equity and non-equality joins.
  - 64.02 Use outer joins through viewing data that generally does not meet a join condition.
  - 64.03 Join a table to itself.
- 65.0 Demonstrate proficiency aggregating data using group functions. – The student will be able to:
- 65.01 Identify the available group functions and describe their use.
  - 65.02 Demonstrate the ability to group data through the use of the GROUP BY clause.
  - 65.03 Demonstrate the ability to include or exclude grouped rows by using the HAVING clause.
- 66.0 Demonstrate proficiency utilizing subqueries. – The student will be able to:
- 66.01 Write a query with an embedded subquery.
  - 66.02 Evaluate and perform a multiple-column subquery.
  - 66.03 Describe and explain the behavior of subqueries when null values are retrieved.
  - 66.04 Create a subquery in a FROM clause.
- 67.0 Demonstrate proficiency producing readable output with SQL language interface, reporting tool, and data manipulation language. – The student will be able to:
- 67.01 Produce queries that require an input variable.
  - 67.02 Customize the SQL language interface and reporting environment using SET commands for control.
  - 67.03 Produce more readable output through the use of the column and break commands.
  - 67.04 Describe data manipulation language (DML) and describe various DML statements.
  - 67.05 Utilize data manipulation language (DML) through inserting, updating and deleting rows from a table.
  - 67.06 Control transactions using COMMIT and ROLLBACK statements.
- 68.0 Demonstrate proficiency creating and managing database objects. – The student will be able to:
- 68.01 Describe the main database objects.
  - 68.02 Create tables and alter their definitions.
  - 68.03 Describe the data types that can be used when specifying column definition.

- 69.0 Demonstrate proficiency altering tables and constraints implementing views. – The student will be able to:
- 69.01 Create, drop, rename and truncate tables using SQL.
  - 69.02 Identify and describe various constraints including not null, unique, primary key, foreign key, and check.
  - 69.03 Create and maintain constraints including adding, dropping, enabling, disabling, and cascading.
  - 69.04 Recognize views and explain how they are created, how they retrieve data and how they perform DML operations.
- 70.0 Demonstrate mastery of creating and implementing views, synonyms, indexes and other database objects. – The student will be able to:
- 70.01 Create views, retrieve data through a view, alter the definition of a view and drop a view.
  - 70.02 Categorize information by using Top-N queries to retrieve specified data.
  - 70.03 Identify the features of a sequence and display sequence values using a data dictionary view.
  - 70.04 Identify the characteristics of a cached sequence.
  - 70.05 Modify and remove a sequence using a SQL statement.
  - 70.06 Identify the features of private and public synonyms.
  - 70.07 Identify characteristics of an index and describe different types.
  - 70.08 Create and remove an index using a SQL statement.
- 71.0 Demonstrate ability to control user access and SQL language interface and reporting tool. – The student will be able to:
- 71.01 Identify the features of database security.
  - 71.02 Create users using SQL statements.
  - 71.03 Grant and revoke object privileges using a SQL language interface and reporting tool.
- 72.0 Demonstrate comprehension of bundling features of SQL. – The student will be able to:
- 72.01 List and describe the benefits of extension languages to SQL.
  - 72.02 Recognize the basic SQL block and its sections.
  - 72.03 Declare SQL variables and describe their significance.
  - 72.04 Execute a SQL block.
- 73.0 Demonstrate comprehension working with composite data types by writing executable script files. – The student will be able to:
- 73.01 Recognize the significance of the executable section and decide when to use it.
  - 73.02 Write statements in the executable section.
  - 73.03 Describe the rules of nested blocks.
  - 73.04 Identify and utilize appropriate coding conventions.
  - 73.05 Create a script that will select, insert, and update data in a table.
- 74.0 Describe the differences between SQL and SQL extension languages. – The student will be able to:

- 74.01 Describe SQL extension languages.
- 74.02 Differentiate between SQL and SQL extension languages.
- 74.03 Explain the need for and benefits of SQL extension languages.
- 75.0 Create program blocks. – The student will be able to:
  - 75.01 Describe the structure of a program block.
  - 75.02 Identify the different types of program blocks.
  - 75.03 Identify program programming environments.
  - 75.04 Create and execute an anonymous block.
  - 75.05 Output messages in program blocks.
- 76.0 Use variables in program blocks. – The student will be able to:
  - 76.01 Describe how variables are used in program blocks.
  - 76.02 Identify the syntax for using variables.
  - 76.03 Declare and initialize variables.
  - 76.04 Assign new values to variables.
- 77.0 Recognize lexical units. – The student will be able to:
  - 77.01 Describe the types of lexical units.
  - 77.02 Describe identifiers and identify valid and invalid identifiers.
  - 77.03 Describe and identify reserved words, delimiters, literals, and comments.
- 78.0 Recognize data types. – The student will be able to:
  - 78.01 Describe the data type categories.
  - 78.02 Give examples of scalar, composite, and large object (LOB) data types.
  - 78.03 Identify when an object becomes eligible for garbage collection.
- 79.0 Use scalar data types. – The student will be able to:
  - 79.01 Declare and use scalar data types.
  - 79.02 Define guidelines for declaring and initializing variables.
- 80.0 Use various types of joins. – The student will be able to:
  - 80.01 Construct and execute SELECT statements using an equijoin.
  - 80.02 Construct and execute SELECT statements using a non-equijoin.
  - 80.03 Construct and execute SELECT statements using an outer join.
  - 80.04 Construct and execute SELECT statements that result in a Cartesian product.
- 81.0 Use SQL group functions and subqueries. – The student will be able to:
  - 81.01 Construct and execute an SQL query using group functions to determine a sum total, an average amount, and a maximum value.
  - 81.02 Construct and execute an SQL query that groups data based on specified criteria.

- 81.03 Construct and execute an SQL query that contains a WHERE clause using a single-row subquery.
  - 81.04 Construct and execute an SQL query that contains a WHERE clause using a multiple-row subquery.
- 82.0 Write executable statements. – The student will be able to:
- 82.01 Construct variable assignment statements.
  - 82.02 Construct statements using built-in SQL functions.
  - 82.03 Differentiate between implicit and explicit data type conversions.
  - 82.04 Describe when implicit data type conversions take place.
  - 82.05 List the drawbacks of implicit data type conversions.
  - 82.06 Construct statements using functions to explicitly convert data types.
  - 82.07 Construct statements using operators.
- 83.0 Use nested blocks and variable scope. – The student will be able to:
- 83.01 Understand the scope and visibility of variables.
  - 83.02 Write nested blocks and qualify variables with labels.
  - 83.03 Describe the scope of an exception.
  - 83.04 Describe the effect of exception propagation in nested blocks.
- 84.0 Use good programming practices. – The student will be able to:
- 84.01 List examples of good programming practices.
  - 84.02 Insert comments into code.
  - 84.03 Follow formatting guidelines when writing code.
- 85.0 Write DML statements to manipulate data. – The student will be able to:
- 85.01 Construct and execute a statement to insert data into a table.
  - 85.02 Construct and execute a statement to update data in a table.
  - 85.03 Construct and execute a statement to delete data from a table.
  - 85.04 Construct and execute a statement to merge data into a table.
- 86.0 Retrieve data. – The student will be able to:
- 86.01 Identify SQL statements that can be directly included in an executable block.
  - 86.02 Construct and execute an INTO clause to hold values returned by a single-row SELECT statement.
  - 86.03 Construct statements that retrieve data.
- 87.0 Manipulate data. – The student will be able to:
- 87.01 Construct and execute statements that manipulate data with DML statements.
  - 87.02 Describe when to use implicit or explicit cursors.
  - 87.03 Create code to use SQL implicit cursor attributes to evaluate cursor activity.
- 88.0 Use transaction control statements. – The student will be able to:
- 88.01 Define a transaction and give an example.

- 88.02 Construct and execute a transaction control statement.
- 89.0 Use IF conditional control statements. – The student will be able to:
  - 89.01 Construct and use an IF statement.
  - 89.02 Construct and use an IF-THEN-ELSIF-ELSE statement.
  - 89.03 Create PL/SQL to handle null conditions in an IF statement.
- 90.0 Use CASE conditional control statements. – The student will be able to:
  - 90.01 Construct and use CASE statements.
  - 90.02 Construct and use CASE expressions.
  - 90.03 Include syntax to handle null conditions in a CASE statement.
  - 90.04 Include syntax to handle Boolean conditions in IF and CASE statements.
- 91.0 Use basic LOOP iterative control statements. – The student will be able to:
  - 91.01 Describe the types of LOOP statements and their uses.
  - 91.02 Create a program containing a basic loop and an EXIT statement.
  - 91.03 Create a program containing a basic loop and an EXIT statement with conditional termination.
- 92.0 Use WHILE and FOR loop iterative control statements. – The student will be able to:
  - 92.01 Construct and use the WHILE looping construct.
  - 92.02 Construct and use the FOR looping construct.
  - 92.03 Describe when a WHILE loop is used.
  - 92.04 Describe when a FOR loop is used.
- 93.0 Use nested loop iterative control statements. – The student will be able to:
  - 93.01 Construct and execute a program using nested loops.
  - 93.02 Evaluate a nested loop construct and identify the exit point.
- 94.0 Use explicit cursors. – The student will be able to:
  - 94.01 List the guidelines for declaring and controlling explicit cursors.
  - 94.02 Create code to open a cursor and fetch a piece of data into a variable.
  - 94.03 Use a simple loop to fetch multiple rows from a cursor.
  - 94.04 Create code to close a cursor.
- 95.0 Use explicit cursor attributes. – The student will be able to:
  - 95.01 Define a record structure.
  - 95.02 Create code to process the row of an active set using record types in cursors.
  - 95.03 Use cursor attributes to retrieve information about the state of an explicit cursor.
- 96.0 Use cursor FOR loops. – The student will be able to:
  - 96.01 List and explain the benefits of using Cursor FOR loops.
  - 96.02 Create code to declare a cursor and manipulate it in a FOR loop.

- 96.03 Create code containing a Cursor FOR loop using a subquery.
- 97.0 Use cursors with parameters. – The student will be able to:
  - 97.01 List the benefits of using parameters with cursors.
  - 97.02 Create code to declare and manipulate a cursor with a parameter.
- 98.0 Use cursors for update transactions. – The student will be able to:
  - 98.01 Create code to lock rows before an update using the appropriate clause.
  - 98.02 Explain the effect of using NOWAIT in an update cursor declaration.
  - 98.03 Create code to use the current row of the cursor in an UPDATE or DELETE statement.
- 99.0 Use multiple cursors. – The student will be able to:
  - 99.01 Explain the need for using multiple cursors to produce multilevel reports.
  - 99.02 Create code to declare and manipulate multiple cursors within nested loops.
  - 99.03 Create code to declare and manipulate multiple cursors using parameters.
- 100.0 Handle exceptions. – The student will be able to:
  - 100.01 Describe the advantages of including exception handling code.
  - 100.02 Describe the purpose of an EXCEPTION section in a program block.
  - 100.03 Create code to include an EXCEPTION section.
  - 100.04 List the guidelines for exception handling.
- 101.0 Trap server exceptions. – The student will be able to:
  - 101.01 Distinguish between errors defined by the server and those defined by the programmer.
  - 101.02 Differentiate between errors that are handled implicitly and explicitly by the server.
  - 101.03 Write code to trap a predefined server error.
  - 101.04 Write code to trap a non-predefined server error.
  - 101.05 Write code to identify an exception by error code and by error message.
- 102.0 Trap user-defined exceptions. – The student will be able to:
  - 102.01 Write code to name a user-defined exception.
  - 102.02 Write code to raise an exception.
  - 102.03 Write code to handle a raised exception.
- 103.0 Create procedures. – The student will be able to:
  - 103.01 Differentiate between anonymous blocks and subprograms.
  - 103.02 Identify the benefits of using subprograms.
  - 103.03 Describe a stored procedure.
  - 103.04 Create a procedure.
  - 103.05 Describe how a stored procedure is invoked.

- 104.0 Use parameters in procedures. – The student will be able to:
- 104.01 Describe how parameters contribute to a procedure.
  - 104.02 Define a parameter.
  - 104.03 Create a procedure using a parameter.
  - 104.04 Invoke a procedure that has parameters.
  - 104.05 Distinguish between formal and actual parameters.
- 105.0 Pass parameters. – The student will be able to:
- 105.01 List the types of parameter modes.
  - 105.02 Create a procedure that passes parameters.
  - 105.03 Identify methods for passing parameters.
  - 105.04 Describe the default option for parameters.
- 106.0 Create stored functions. – The student will be able to:
- 106.01 Describe the difference between a stored procedure and a stored function.
  - 106.02 Create a program block containing a function.
  - 106.03 Identify ways in which functions may be invoked.
  - 106.04 Create a program block that invokes a function that has parameters.
- 107.0 Use functions in SQL statements. – The student will be able to:
- 107.01 Describe where user-defined functions can be called from within an SQL statement.
  - 107.02 Describe the restrictions on calling functions from SQL statements.
  - 107.03 Describe the purpose of the Data Dictionary.
  - 107.04 Differentiate between the three types of Data Dictionary views.
  - 107.05 Write SQL SELECT statements to retrieve information from the Data Dictionary.
- 108.0 Manage procedures and functions. – The student will be able to:
- 108.01 Describe how exceptions are propagated.
  - 108.02 Remove a function and a procedure.
  - 108.03 Use Data Dictionary views to identify and manage stored procedures.
- 109.0 Manage object privileges. – The student will be able to:
- 109.01 List and explain several object privileges.
  - 109.02 Explain the function of the EXECUTE object privilege.
  - 109.03 Write SQL statements to grant and revoke object privileges.
- 110.0 Use invoker's rights. – The student will be able to:
- 110.01 Contrast invoker's rights with definer's rights.
  - 110.02 Create a procedure that uses invoker's rights.
- 111.0 Create packages. – The student will be able to:
- 111.01 Describe a package, its components, and the reasons for use.

- 111.02 Create packages containing related variables, cursors, constants, exceptions, procedures, and functions.
- 111.03 Create a program block that invokes a package construct.
- 112.0 Manage package constructs. – The student will be able to:
  - 112.01 Explain the difference between public and private package constructs.
  - 112.02 Designate a package construct as either public or private.
  - 112.03 Specify the syntax to drop a package.
  - 112.04 Identify Data Dictionary views used to manage packages.
  - 112.05 Identify the guidelines for using packages.
- 113.0 Use advanced package concepts. – The student will be able to:
  - 113.01 Write packages that use the overloading feature.
  - 113.02 Write packages that use forward declarations.
  - 113.03 Explain the purpose of a package initialization block.
  - 113.04 Identify restrictions on using packaged functions in SQL statements.
- 114.0 Manage persistent state of package variables. – The student will be able to:
  - 114.01 Identify persistent states of package variables.
  - 114.02 Control the persistent state of a package cursor.
- 115.0 Use vendor-supplied packages. – The student will be able to:
  - 115.01 Describe two common uses for vendor-supplied packages.
  - 115.02 Use the syntax to specify messages for a vendor-supplied package.
  - 115.03 Identify the exceptions used in conjunction with vendor-supplied packages.
- 116.0 Understand dynamic SQL. – The student will be able to:
  - 116.01 Identify the stages through which all SQL statements pass.
  - 116.02 Describe the reasons for using dynamic SQL to create an SQL statement.
  - 116.03 List statements supporting Native Dynamic SQL.
- 117.0 Understand triggers. – The student will be able to:
  - 117.01 Describe database triggers and their uses.
  - 117.02 Differentiate between a database trigger and an application trigger.
  - 117.03 List the guidelines for using triggers.
  - 117.04 Compare and contrast database triggers and stored procedures.
- 118.0 Create DML triggers. – The student will be able to:
  - 118.01 Create a DML trigger and identify its components.
  - 118.02 Create a statement level trigger.
  - 118.03 Describe the trigger firing sequence options.
  - 118.04 Create a DML trigger that uses conditional predicates.
  - 118.05 Create a row level trigger.
  - 118.06 Create a row level trigger that uses OLD and NEW qualifiers.

- 118.07 Create an INSTEAD OF trigger.
- 119.0 Create DDL and database event triggers. – The student will be able to:
  - 119.01 Describe the events that cause DDL and database event triggers to fire.
  - 119.02 Create a trigger for a DDL statement.
  - 119.03 Create a trigger for a database event.
  - 119.04 Describe the functionality of the CALL statement.
  - 119.05 Describe the cause of a mutating table.
- 120.0 Manage triggers. – The student will be able to:
  - 120.01 View trigger information in the Data Dictionary.
  - 120.02 Disable and enable a database trigger.
  - 120.03 Remove a trigger from the database.
- 121.0 Use large object data types. – The student will be able to:
  - 121.01 Compare and contrast LONG and LOB data types.
  - 121.02 Describe LOB data types and how they are used.
  - 121.03 Differentiate between internal and external LOBs.
  - 121.04 Create and maintain LOB data types.
  - 121.05 Migrate data from LONG to LOB.
- 122.0 Manage binary types. – The student will be able to:
  - 122.01 Define binary column data type.
  - 122.02 Create directory objects and view them in the Data Dictionary.
  - 122.03 Manage and manipulate binary types.
- 123.0 Manage indexes. – The student will be able to:
  - 123.01 Create and manipulate user-defined records.
  - 123.02 Create an index.
  - 123.03 Describe the difference between records, tables, and indexes.
- 124.0 Manage dependencies. – The student will be able to:
  - 124.01 Describe the implications of procedural dependencies.
  - 124.02 Contrast dependent objects and referenced objects.
  - 124.03 View dependency information in the Data Dictionary.
  - 124.04 Use a script to create the objects required to display dependencies.
  - 124.05 Use views to display dependencies.
  - 124.06 Describe how to minimize dependency failures.
- 125.0 Program a database application. – The student will be able to:
  - 125.01 Utilize loop statements.
  - 125.02 Given a scenario, use arithmetic, comparison, and pattern-matching operators.
  - 125.03 Create user-defined functions.
  - 125.04 Utilize common built-in functions.

- 125.05 Declare variables in modules and procedures.
  - 125.06 Declare arrays, and initialize elements of arrays.
  - 125.07 Declare and use object variables and collections, and use their associated properties and methods.
  - 125.08 Declare symbolic constants, and make them available locally or publicly.
  - 125.09 Respond to events.
- 126.0 Utilize the basic concepts of database design. – The student will be able to:
- 126.01 Apply basic concepts of normalization.
  - 126.02 Utilize the cascade update and cascade delete options.
- 127.0 Utilize SQL and union queries. – The student will be able to:
- 127.01 Utilize SQL to write common queries.
  - 127.02 Refer to objects by using SQL.
  - 127.03 Utilize union queries.
- 128.0 Implement program statements using objects. – The student will be able to:
- 128.01 Determine when to use data access objects.
  - 128.02 Differentiate between objects and collections.
  - 128.03 Write statements that access and modify database objects.
  - 128.04 Utilize data access objects.
  - 128.05 Select appropriate methods and property settings for use with specified objects.
- 129.0 Utilize debugging tools and write error handlers. – The student will be able to:
- 129.01 Trap errors.
  - 129.02 Utilize debugging tools to suspend program execution, and to examine, step through, and reset execution of code.
  - 129.03 Debug code samples.
  - 129.04 Utilize the Debugger to monitor variable values.
  - 129.05 Write an error handler.
- 130.0 Demonstrate file I/O. – The student will be able to:
- 130.01 Read from files.
  - 130.02 Write to files.
  - 130.03 Utilize record locking.
- 131.0 Create forms and identify all the properties of a form. – The student will be able to:
- 131.01 Choose form-specific and report-specific properties to set.
  - 131.02 Choose control properties to set.
  - 131.03 Assign event-handling procedures to controls in a form.
  - 131.04 Define and create form and report modules.
  - 131.05 Identify the scope of a form or report module.
  - 131.06 Open multiple instances of a form, and refer to them.
  - 131.07 Assign values to form properties.
  - 131.08 Use form methods.

- 132.0 Manipulate data using object models. – The student will be able to:
- 132.01 Connect to a data source.
  - 132.02 Open a recordset.
  - 132.03 Insert, update, delete and find data.
- 133.0 Develop custom controls. – The student will be able to:
- 133.01 Set properties for custom controls.
  - 133.02 Customize user interface controls.
- 134.0 Utilize API functions. – The student will be able to:
- 134.01 Properly declare functions.
  - 134.02 Use the by value and by reference parameters.
- 135.0 Demonstrate database replication and implement database replication using programming tools. – The student will be able to:
- 135.01 Make a database replicable.
  - 135.02 View a synchronization schedule.
  - 135.03 Explain how synchronization conflicts are resolved.
  - 135.04 Identify the advantages of using replication of synchronization.
  - 135.05 Identify the changes that the database engine makes when it converts a nonreplicable database into replicable database.
- 136.0 Analyze and implement security options. – The student will be able to:
- 136.01 Analyze a scenario, and recommend an appropriate type of security.
  - 136.02 Explain the steps for implementing security.
  - 136.03 Analyze code to ensure that it sets security options.
  - 136.04 Write code to implement security options.
- 137.0 Implement client/server applications. – The student will be able to:
- 137.01 Demonstrate SQL pass through queries and application queries.
  - 137.02 Access external data.
  - 137.03 Trap errors that are generated by the server.
  - 137.04 Optimize connections.
  - 137.05 Optimize performance for a given client/server application.
- 138.0 Optimize the performance of a database. – The student will be able to:
- 138.01 Differentiate between single-field and multiple-field indexes.
  - 138.02 Optimize queries.
  - 138.03 Restructure queries to allow faster execution.
  - 138.04 Optimize performance in distributed applications.
  - 138.05 Optimize performance for client/server applications.
- 139.0 Perform application distribution. – The student will be able to:

- 139.01 Prepare an application for distribution.
- 139.02 Analyze various methods to distribute a client/server application.
- 139.03 Distribute custom controls with an application.
- 139.04 Provide online help.

140.0 Test and debug databases. – The student will be able to:

- 140.01 Implement error handling.
- 140.02 Test and debug library databases.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Introduction to Information Technology  
**Course Number:** 8207310  
**Course Credit:** 1

**Course Description:**

This course is designed to provide an introduction to information technology concepts and careers as well as the impact information technology has on the world, people, and industry and basic web design concepts. The content includes information technology career research; operating systems and software applications; electronic communications including e-mail and Internet services; basic HTML, DHTML, and XML web commands and design; emerging technologies, and Web page design.

Standards included in this course of instruction have been aligned to the academic courses shown below. This table shows the number of aligned benchmarks, the total number of academic benchmarks, and the percentage of alignment.

Math		Science					
<b>Algebra 1</b>	6/36 17%	<b>Biology 1</b>	2/56 4%	<b>Anatomy/Physiology Honors</b>	2/53 4%	<b>Astronomy Solar/Galactic Honors</b>	2/52 4%
<b>Algebra 2</b>	2/41 5%	<b>Chemistry 1</b>	2/55 4%	<b>Genetics</b>	2/35 6%	<b>Marine Science 1 Honors</b>	2/42 5%
<b>Geometry</b>	1/45 2%	<b>Physics 1</b>	2/53 4%	<b>Earth-Space Science</b>	2/58 3%	<b>Physical Science</b>	2/56 4%

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Develop keyboarding skills to enter and manipulate text and data.
- 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.03 Identify and describe communications and networking systems used in workplace environments.
- 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.06 Describe ethical issues and problems associated with computers and information systems.

02.0 Demonstrate comprehension and communication skills. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2; MA.912.D.8.1; MA.912.A.3.15; MA.912.G.8.2.

- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
- 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
- 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
- 02.04 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
- 02.05 Apply the writing process to the creation of appropriate documents following designated business formats.
- 02.06 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).

- 03.0 Use technology to enhance the effectiveness of communication skills —The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.2.12.

- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.

- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.3.15.

- 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
- 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
- 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.

- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:

- 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).

05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).

06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:

06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.

07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards:  
MA.912.A.5.7; MA.912.F.5.2; MA.912.A.10.1; MA.912.A.10.2; MA.912.S.1.2;  
MA.912.S.3.2; MA.912.A.3.5; MA.912.G.8.2.

07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.

07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).

07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:

08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.

08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.

09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards:  
MA.912.D.7.2.

09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).

- 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).

14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:

- 14.01 Identify and describe Web terminology.
- 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
- 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
- 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
- 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
- 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
- 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
- 14.08 Identify effective Boolean search strategies.

15.0 Demonstrate proficiency using html commands. – The student will be able to:

- 15.01 Identify elements of a Web page.
- 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
- 15.03 Define basic HTML terminology.
- 15.04 Analyze HTML source code developed by others.
- 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
- 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
- 15.07 Edit and test HTML documents for accuracy and validity.
- 15.08 Use basic functions of WYSIWYG editors.
- 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
- 15.10 Enhance web pages through the addition of images and graphics including animation.

16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:

- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
- 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
- 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
- 16.04 Use image design software to create and edit images.
- 16.05 Demonstrate proficiency in publishing to the Internet.
- 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
- 16.07 Explain the need for web-based applications.

- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.

- 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
- 22.05 Identify Intranets, Extranets and how they relate to the Internet.
- 22.06 Demonstrate basic understanding of network administration.
- 22.07 Describe the evolution of OSI from its inception to the present and into the future.
- 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
- 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
- 24.03 Demonstrate the ability to incorporate digital sound.
- 141.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 141.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
- 141.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
- 141.03 Present information formally and informally for specific purposes and audiences. AF2.9
- 142.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 142.01 Demonstrate knowledge of arithmetic operations. AF3.2
- 142.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
- 142.03 Construct charts/tables/graphs using functions and data. AF3.5
- 148.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 148.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
- 148.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
- 148.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0

- |   |          |
|---|----------|
| 148.04 Maintain a career portfolio to document knowledge, skills, and experience.       | ECD 5.0  |
| 148.05 Evaluate and compare employment opportunities that match career goals.           | ECD 6.0  |
| 148.06 Identify and exhibit traits for retaining employment.                            | ECD 7.0  |
| 148.07 Identify opportunities and research requirements for career advancement.         | ECD 8.0  |
| 148.08 Research the benefits of ongoing professional development.                       | ECD 9.0  |
| 148.09 Examine and describe entrepreneurship opportunities as a career planning option. | ECD 10.0 |

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Foundations of Programming  
**Course Number:** 9007210  
**Course Credit:** 1

**Course Description:**

This course introduces concepts, techniques, and processes associated with computer programming and software development. After successful completion of Programming Foundations and Procedural Programming, students will have met Occupational Completion Point B, Computer Programmer Assistant, SOC Code 15.1021.

25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development. – The student will be able to:

- 25.01 Describe the evolution of programming and programming careers.
- 25.02 Identify tasks performed by programmers.
- 25.03 Describe how businesses use computer programming to solve business problems.
- 25.04 Investigate job opportunities in the programming field.
- 25.05 Explain different specializations and the related training in the computer programming field.
- 25.06 Explain the need for continuing education and training of computer programmers.
- 25.07 Explain enterprise software systems and how they impact business.
- 25.08 Describe ethical responsibilities of computer programmers.
- 25.09 Describe the role of customer support to software program quality.
- 25.10 Identify credentials and certifications that may improve employability for a computer programmer.
- 25.11 Identify devices, tools, and other environments for which programmers may develop software.

26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types. – The student will be able to:

- 26.01 Identify the characteristics (e.g., size, limits) and uses of different numerical and non-numerical data types.
- 26.02 Explain the types and uses of variables in programs.
- 26.03 Determine the best data type to use for given programming problems.
- 26.04 Identify the types of operations that can be performed on different data types.
- 26.05 Evaluate arithmetic and logical expressions using appropriate operator precedence.
- 26.06 Explain how computers store different data types in memory.
- 26.07 Demonstrate the difference between "data" and "information."
- 26.08 Use different number systems to represent data.
- 26.09 Explain how national and international standards (i.e., ASCII, UNICODE) are used to represent non-numerical data.
- 26.10 Use Boolean logic to perform logical operations.

- 27.0 Distinguish between iterative and non-iterative program control structures.
- 27.01 Explain non-iterative programming structures (e.g., if, if/else, etc.) and their uses.
  - 27.02 Explain iterative programming structures (e.g., while, do/while, etc.) and their uses.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages. – The student will be able to:
- 28.01 Identify the characteristics, uses, and limits of low-level programming languages.
  - 28.02 Identify the characteristics, uses, and limits of high-level programming languages.
  - 28.03 Identify the characteristics, uses, and limits of rapid development programming languages.
  - 28.04 Describe object-oriented concepts.
  - 28.05 Explain the characteristics of procedural and object-oriented programming languages.
  - 28.06 Compare and contrast programming languages that are compiled (e.g., C++), interpreted (e.g., Basic, HTML), and translated (e.g., Java).
- 29.0 Describe the processes, methods, and conventions for software development and maintenance. – The student will be able to:
- 29.01 Describe and explain tools used in software development.
  - 29.02 Describe the stages of the program life cycle.
  - 29.03 Compare and contrast alternatives methods of program development (e.g., rapid prototyping, waterfall, etc.).
  - 29.04 List and explain the steps in the program development cycle.
  - 29.05 Describe different types of documentation used in the program development cycle (e.g., requirements document, program design documents, test plans, etc.).
  - 29.06 Describe the on-going need for program maintenance.
  - 29.07 Describe different methods companies use to facilitate program updates for enhancements and defects (e.g., how customers receive patches, updates, new versions, upgrades).
  - 29.08 Describe different methods used to facilitate version control and change management.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control. – The student will be able to:
- 30.01 Explain the uses and limits of testing in ensuring program quality.
  - 30.02 Explain testing performed at different stages of the program development cycle (e.g. unit testing, system testing, user acceptance testing, etc.).
  - 30.03 Describe data and the use of test plans/scripts to be used in program testing.
  - 30.04 Describe and identify types of programming errors (e.g., syntactical, logic, usability, requirements mismatch, etc.).
  - 30.05 Identify the data to be used for boundary conditions.
  - 30.06 Explain different types of testing (e.g., usability, automated, regression, etc.) and testing tools.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other

- common design tool. – The student will be able to:
- 31.01 Describe different design methodologies and their uses (e.g., object-oriented design, structured design, and rapid application development).
  - 31.02 Describe tools for developing a program design (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.03 Explain the role of existing libraries and packages in facilitating programmer productivity.
  - 31.04 Participate and contribute to a design review of a program design developed using a common program design tool (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.05 Write a program design document using UML or other standard design methodology.
  - 31.06 Define input and output for a program module using UML or other standard design methodology.
- 32.0 Describe information security risks, threats, and strategies associated with software development. – The student will be able to:
- 32.01 Explain the security risks to personal and business computer users.
  - 32.02 Identify different types of threats to computer systems.
  - 32.03 Identify methods to protect against different threats to computer systems.
  - 32.04 Understand the importance of a disaster / emergency response plan.
  - 32.05 Identify alternative methods for data storage and backup (e.g., mirroring, fail-over, high availability, types of backups).
- 143.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 143.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
  - 143.02 Locate, organize and reference written information from various sources. CM 3.0
  - 143.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
  - 143.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
  - 143.05 Apply active listening skills to obtain and clarify information. CM 7.0
  - 143.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
  - 143.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 144.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 144.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
  - 144.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
  - 144.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
  - 144.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 145.0 Use information technology tools. – The student will be able to:

- 145.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 145.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 145.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 145.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0

**Florida Department of Education  
Student Performance Standards**

**Course Title:**            **Procedural Programming**  
**Course Number:**       **9007220**  
**Course Credit:**         **1**

**Course Description:**

This course continues the study of computer programming concepts with a focus on the creation of software applications employing procedural programming techniques. After successful completion of Programming Foundations and Procedural Programming, students will have met Occupational Completion Point B, Computer Programmer Assistant, SOC Code 15.1021.

33.0 Design a computer program to meet specific physical, operational, and interaction criteria. – The student will be able to:

- 33.01 Choose appropriate data types depending on the needs of the program.
- 33.02 Define appropriate user interface prompts for clarity and usability (e.g., user guidance for data ranges, data types, etc.).
- 33.03 Design and develop program that are designed for efficiency (e.g., less memory usage, less inputs/outputs, faster processing, etc.).
- 33.04 Identify the software environment required for a program to run (e.g., operating system required, mobile, Web-based, desktop, delivery method, etc.).
- 33.05 Identify the tools required to develop a program (e.g., editors, compilers, linkers, integrated development environments, application programming interfaces (APIs), libraries, etc.).

34.0 Create and document a computer program that uses a variety of internal and control structures for manipulating varied data types. – The student will be able to:

- 34.01 Use appropriate naming conventions to define program variables and modules (methods, functions).
- 34.02 Use a program editor to write the source code for a program.
- 34.03 Write programs that use selection structures (e.g., if, if/else, etc.).
- 34.04 Write programs that use repetition structures (e.g., while, do/while, etc.).
- 34.05 Write programs that use nested structures.
- 34.06 Use internal documentation (e.g., single-line and multi-line comments, program headers, module descriptions, and meaningful variable and function/module names) to document a program according to accepted standards.
- 34.07 Compile and run programs.
- 34.08 Write programs that use standard arithmetic operators with different numerical data types.
- 34.09 Write programs that use standard logic operators.
- 34.10 Write programs that use a variety of common data types.
- 34.11 Write programs that perform data conversion between standard data types.
- 34.12 Write programs that define, use, search, and sort arrays.
- 34.13 Write programs that use user-defined data types.
- 34.14 Demonstrate understanding and use of appropriate variable scope.

35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input. – The student will be able to:

- 35.01 Write programs that perform user input and output.
- 35.02 Write programs that validate user input (e.g., range checking, data formats, valid/invalid characters, etc.).
- 35.03 Write program modules such as functions, subroutines, or methods.
- 35.04 Write program modules that accept arguments.
- 35.05 Write program modules that return values.
- 35.06 Write program modules that validate arguments and return error codes.
- 35.07 Write interactive programs.
- 35.08 Write programs that use standard libraries to enhance program function.
- 35.09 Participate in a peer code review to verify program functionality, programming styles, program usability, and adherence to common programming standards.

36.0 Create a unit test plan, implement the plan, and report the results of testing. – The student will be able to:

- 36.01 Write a unit test plan that identifies the input data and expected results for program tests.
- 36.02 Test and debug programs, including programs written by others.
- 36.03 Write a test report that identifies the results of testing.
- 36.04 Trace through the function of a program to ensure valid operation.
- 36.05 Identify the system resources used by the program (e.g., memory, disk space, execution time, external devices).
- 36.06 Create a disaster / emergency response plan for a computer system.

146.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:

- 146.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
- 146.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
- 146.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0

147.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:

- 147.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
- 147.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
- 147.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Object-Oriented Programming Fundamentals  
**Course Number:** 9007230  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts with a focus on the creation of software applications employing object-oriented programming techniques. After successful completion of Object-Oriented Programming, students will have met Occupational Completion Point C, Computer Programmer, SOC Code 15.1021.

- 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming. – The student will be able to:
- 37.01 Demonstrate the understanding and use of classes, objects, attributes, and behaviors.
  - 37.02 Demonstrate the understanding and use of inheritance.
  - 37.03 Demonstrate the understanding and use of data encapsulation.
  - 37.04 Demonstrate the understanding and use of polymorphism.
- 38.0 Create a project plan for an object-oriented programming project that defines requirements, structural design, time estimates, and testing elements. – The student will be able to:
- 38.01 Write a project plan for completion of a project that includes gathering program requirements, developing the program, and testing it.
  - 38.02 Write a program requirements document that identifies business purpose, functional requirements, system requirements, and other common components of a requirements document.
  - 38.03 Design an object-oriented program using UML or another standard design methodology.
  - 38.04 Work with other team members to develop a project plan for a program.
  - 38.05 Work with other team members to write a design document for a program with multiple functions and shared data.
  - 38.06 Participate in design meetings that review program design documents for conformance to program requirements.
  - 38.07 Estimate the time to develop a program or module.
- 39.0 Design, document, and create object-oriented computer programs. – The student will be able to:
- 39.01 Compare and contrast recursive functions to other iterative methods.
  - 39.02 Understand the implementation of character strings in the programming language.
  - 39.03 Write programs that perform string processing (e.g., string manipulation, string compares, concatenation, etc.).
  - 39.04 Write programs that use user-defined data types.

- 39.05 Write object-oriented programs that use inheritance.
  - 39.06 Write object-oriented programs that use polymorphism.
  - 39.07 Develop class constructors.
  - 39.08 Write programs that define and use program constants.
  - 39.09 Write programs that perform error handling.
  - 39.10 Participate in program code review meetings to evaluate program code for validity, quality, performance, data integrity, and conformance to program design documents.
  - 39.11 Write programs that perform dynamic memory allocation.
  - 39.12 Write programs that perform effective management of dynamically allocated memory.
  - 39.13 Update a program module to implement enhancements or corrections and demonstrate appropriate documentation (internal and external) related to version control.
  - 39.14 Write programs that use complex data structures (e.g., stacks, queues, trees, linked lists etc.).
  - 39.15 Write programs that are event-driven.
  - 39.16 Write programs that perform file input and output (i.e., sequential and random access file input/output).
  - 39.17 Perform basic database commands including connect, open, select, and close.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results. – The student will be able to:
- 40.01 Develop a test plan for an object-oriented program.
  - 40.02 Write test plans for event-driven programs.
  - 40.03 Write test plans for programs that perform file input and output.
  - 40.04 Perform test and debug activities on object-oriented programs, including those written by someone else.
  - 40.05 Perform test and debug activities on an event-driven program.
  - 40.06 Perform test and debug activities on programs that perform file input and output and verify the correctness of output files.
  - 40.07 Document the findings of testing in a test report.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Database Design & SQL Programming  
**Course Number:** 9007310  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to the SQL programming language.

- 41.0 Develop an awareness of the changes taking place in the information age and how they fit into an evolving society. – The student will be able to:
- 41.01 Cite examples of jobs, salary, and opportunities he/she will have as a database programmer.
  - 41.02 Describe the role a database plays in a business.
  - 41.03 Understand the importance of clear communication when discussing business informational requirements.
  - 41.04 Identify important historical contributions in database development and design.
- 42.0 Develop the "big picture" of database design and how to best organize data according to business rules and/or client needs. – The student will be able to:
- 42.01 Identify and analyze the phases of the database development process.
  - 42.02 Explain what logical data modeling and database design involve.
  - 42.03 Compare database development process with that of the application development process.
  - 42.04 Distinguish between a logical model and a physical implementation.
- 43.0 Develop the process of creating an entity by identifying relationships. – The student will be able to:
- 43.01 Identify and model various types of entities.
  - 43.02 Identify naming and drawing conventions for entities.
  - 43.03 Sequence the steps that are necessary for creation of an entity.
  - 43.04 Analyze and model the relationships between entities.
- 44.0 Formulate and assemble initial entity relationship by expanding on modeling concepts. – The student will be able to:
- 44.01 Analyze and model attributes.
  - 44.02 Identify unique identifiers for each entity.
  - 44.03 Develop an entity relationship diagram tagging attributes with optionality.
- 45.0 Consider the degree and optionality of relationships of entities. – The student will be able to:

- 45.01 Create entity relationship models based on information requirements and interviews.
  - 45.02 Differentiate between one-to-many, many-to-many and one-to-one relationships.
  - 45.03 Identify relationship between two entities by reading a given diagram.
  - 45.04 Create a relationship between instances of the same entity.
  - 45.05 Read an entity relationship model in order to validate it.
- 46.0 Demonstrate proficiency in early construction stages of the data modeling process by using unique identifiers and many-to-many (M:M) relationships for building entity relationship diagrams. – The student will be able to:
- 46.01 Identify the significance of an attribute that has more than one value for each entity instance.
  - 46.02 Evaluate appropriate methods of storing validation rules for attributes.
  - 46.03 Recognize unique identifiers inherited from other entities.
  - 46.04 Sequence the steps involved in resolving a many-to-many relationship.
- 47.0 Demonstrate proficiency in advanced data constructs by analyzing business requirements and diagramming entities and relationships. – The student will be able to:
- 47.01 Validate that an attribute is properly placed based upon its dependence on its entity's unique identifier (UID).
  - 47.02 Resolve many-to-many relationships with intersection entities.
  - 47.03 Model advanced data constructs including recursive relationships, subtypes, and exclusive relationships.
  - 47.04 Create exclusive entities and relationships by using subtypes and arcs, respectively.
  - 47.05 Identify initial layout for presentation and generate a list of action items for members of group.
  - 47.06 Develop an entity relationship model using subtypes, super-types and an exclusive arc.
- 48.0 Demonstrate proficiency in designing and adding complexity to an entity-relationship model (ERM). – The student will be able to:
- 48.01 Revise an entity relationship model according to client requirements.
  - 48.02 Define and give examples of hierarchical and recursive relationships.
  - 48.03 Differentiate between transferable and non-transferable relationships.
  - 48.04 Deliver a professional, formal business style presentation.
  - 48.05 Evaluate and critique presentation layout, design and performance.
  - 48.06 Construct a model using both recursion and hierarchies to express the same logical meaning.
- 49.0 Apply complex ERM information by fine-tuning entities and the process for relating them. – The student will be able to:
- 49.01 Describe a relational database and how it differs from other database systems.
  - 49.02 Define primary keys and foreign keys and describe their purpose.
  - 49.03 Describe what data integrity refers to and list some constraints.
  - 49.04 Explain how database design fits into the database development process.
  - 49.05 Translate an entity-relationship model into a relational database design.

- 49.06 Document a database design using table instance charts.
- 50.0 Apply initial database design and normalization by following the set of house rules that determine how items are stored and retrieved. – The student will be able to:
- 50.01 Demonstrate ability to implement steps for mapping entity relationship models for implementation.
  - 50.02 Document an initial database design on table instance charts.
  - 50.03 Recognize raw data and evaluate the steps for creating a data group in unnormalized form (UNF).
- 51.0 Demonstrate proficiency in the technique of normalization by labeling and organizing all items in a database in such a way as to prevent any confusion or mistakes. – The student will be able to:
- 51.01 Differentiate between unnormalized data and normalized.
  - 51.02 Move data from an unnormalized form through to a third normal form.
  - 51.03 Demonstrate ability to test data groups for third normal form compliance.
  - 51.04 Identify optimized data groups from given groups of normalized data.
- 52.0 Demonstrate proficiency in table normalization by combining the techniques of an entity relationship model or a top-down, business approach to data with normalization or a bottom-up mathematical approach to data. – The student will be able to:
- 52.01 Compare the normalization and entity relationship modeling (ERM) techniques in terms of strengths and weaknesses.
  - 52.02 Further define normalization and explain its benefits.
  - 52.03 Place tables in third normal form.
  - 52.04 Explain how logical data modeling rules ensure normalized tables.
  - 52.05 Specify referential integrity constraints and design indices.
- 53.0 Apply blueprint principles to begin designing a tool for creating a web-based interface access to a database. – The student will be able to:
- 53.01 Evaluate the transformation of business requirements into an initial layout and design for a database.
  - 53.02 Construct simple web page design for personal work folder.
  - 53.03 Evaluate existing web sites and determine quality of design.
- 54.0 Extend the logical model presentation model by normalizing the data and mapping the management system. – The student will be able to:
- 54.01 Formulate a plan of action for the Database Project using skills previously learned in this course.
  - 54.02 Normalize a logical model to the third normal form (3NF).
  - 54.03 Create a table in the database using a database authoring tool.
  - 54.04 Demonstrate ability to edit tables using a database authoring tool.
  - 54.05 Create forms that will display the table components created with a database authoring tool.

- 55.0 Apply techniques for building a storage management system by creating a website using templates and wizards. – The student will be able to:
- 55.01 Create a web site that displays the database project home.
  - 55.02 Link a web site to create a web-enabled interface to the industry database.
  - 55.03 Edit the forms created and specify appropriate field labels for data entry.
- 56.0 Demonstrate design and functionality by constructing a group business presentation. – The student will be able to:
- 56.01 Evaluate and generate criteria for a formal, business presentation.
  - 56.02 Construct a persuasive group presentation using the guidelines set forth in class.
- 57.0 Demonstrate comprehension of database modeling competency through group presentation. – The student will be able to:
- 57.01 Deliver a formal business presentation for the class that discusses an entity-relationship model and initial database design.
  - 57.02 Demonstrate the functionality of the database and the layout/design capabilities of a database authoring tool.
  - 57.03 Prepare appropriate end-user documentation.
  - 57.04 Self-assess learning experience through the presentation and demonstration of their final database project.
- 58.0 Demonstrate comprehension that the database management software is a system for organizing the storage unit (or database) according to business needs and rules, through data integrity constraints. – The student will be able to:
- 58.01 Identify the structural elements of a relational database table.
  - 58.02 List and describe the system development life cycle.
  - 58.03 Describe the industry implementation of the relational database management system (RDBMS) and object relational database management system (ORDBMS).
  - 58.04 Explain how SQL and languages that extend SQL are used in the industry product set.
  - 58.05 Identify the advantages of a database management system.
- 59.0 Demonstrate comprehension of aspects of SQL language interface by writing basic sql statements. – The student will be able to:
- 59.01 List the capabilities of SQL SELECT statements.
  - 59.02 Execute a basic select statement.
  - 59.03 Differentiate between SQL statements and language commands that extend SQL.
- 60.0 Demonstrate proficiency working with columns, characters, and rows in SQL. – The student will be able to:
- 60.01 Apply the concatenation operator to link columns to other columns, arithmetic expressions, or constant values to create a character expression.
  - 60.02 Use column aliases to rename columns in the query result.

- 60.03 Eliminate duplicate rows in the query result.
  - 60.04 Display the structure of a table.
  - 60.05 Apply SQL syntax to restrict the rows returned from a query.
  - 60.06 Demonstrate application of the WHERE clause syntax.
  - 60.07 Construct and produce output using a SQL query containing character strings and date values.
- 61.0 Demonstrate proficiency in using SQL comparison operators. – The student will be able to:
- 61.01 Apply the proper comparison operator to return a desired result.
  - 61.02 Demonstrate proper use of BETWEEN, IN, and LIKE conditions to return a desired result.
  - 61.03 Distinguish between zero and the value of NULL as unavailable, unassigned, unknown, or inapplicable.
  - 61.04 Explain the use of comparison conditions and NULL.
- 62.0 Demonstrate proficiency in using logical comparisons and precedence rules. – The student will be able to:
- 62.01 Evaluate logical comparisons to restrict the rows returned based on two or more conditions.
  - 62.02 Apply the rules of precedence to determine the order in which expressions are evaluated and calculated.
  - 62.03 Construct a query to order a results set for single or multiple columns.
  - 62.04 Construct a query to sort a results set in ascending or descending order.
- 63.0 Demonstrate proficiency using SQL single row functions. – The student will be able to:
- 63.01 Perform calculations on data.
  - 63.02 Modify individual data items.
  - 63.03 Use character, number and date functions in SELECT statements.
  - 63.04 Format data and numbers for display purposes.
  - 63.05 Convert column data types.
- 64.0 Demonstrate proficiency displaying data from multiple tables. – The student will be able to:
- 64.01 Construct select statements to access data from more than one table using equity and non-equality joins.
  - 64.02 Use outer joins through viewing data that generally does not meet a join condition.
  - 64.03 Join a table to itself.
- 65.0 Demonstrate proficiency aggregating data using group functions. – The student will be able to:
- 65.01 Identify the available group functions and describe their use.
  - 65.02 Demonstrate the ability to group data through the use of the GROUP BY clause.
  - 65.03 Demonstrate the ability to include or exclude grouped rows by using the HAVING clause.

- 66.0 Demonstrate proficiency utilizing subqueries. – The student will be able to:
- 66.01 Write a query with an embedded subquery.
  - 66.02 Evaluate and perform a multiple-column subquery.
  - 66.03 Describe and explain the behavior of subqueries when null values are retrieved.
  - 66.04 Create a subquery in a FROM clause.
- 67.0 Demonstrate proficiency producing readable output with SQL language interface, reporting tool, and data manipulation language. – The student will be able to:
- 67.01 Produce queries that require an input variable.
  - 67.02 Customize the SQL language interface and reporting environment using SET commands for control.
  - 67.03 Produce more readable output through the use of the column and break commands.
  - 67.04 Describe data manipulation language (DML) and describe various DML statements.
  - 67.05 Utilize data manipulation language (DML) through inserting, updating and deleting rows from a table.
  - 67.06 Control transactions using COMMIT and ROLLBACK statements.
- 68.0 Demonstrate proficiency creating and managing database objects. – The student will be able to:
- 68.01 Describe the main database objects.
  - 68.02 Create tables and alter their definitions.
  - 68.03 Describe the data types that can be used when specifying column definition.
- 69.0 Demonstrate proficiency altering tables and constraints implementing views. – The student will be able to:
- 69.01 Create, drop, rename and truncate tables using SQL.
  - 69.02 Identify and describe various constraints including not null, unique, primary key, foreign key, and check.
  - 69.03 Create and maintain constraints including adding, dropping, enabling, disabling, and cascading.
  - 69.04 Recognize views and explain how they are created, how they retrieve data and how they perform DML operations.
- 70.0 Demonstrate mastery of creating and implementing views, synonyms, indexes and other database objects. – The student will be able to:
- 70.01 Create views, retrieve data through a view, alter the definition of a view and drop a view.
  - 70.02 Categorize information by using Top-N queries to retrieve specified data.
  - 70.03 Identify the features of a sequence and display sequence values using a data dictionary view.
  - 70.04 Identify the characteristics of a cached sequence.
  - 70.05 Modify and remove a sequence using a SQL statement.
  - 70.06 Identify the features of private and public synonyms.

- 70.07 Identify characteristics of an index and describe different types.
- 70.08 Create and remove an index using a SQL statement.
- 71.0 Demonstrate ability to control user access and SQL language interface and reporting tool. – The student will be able to:
  - 71.01 Identify the features of database security.
  - 71.02 Create users using SQL statements.
  - 71.03 Grant and revoke object privileges using a SQL language interface and reporting tool.
- 72.0 Demonstrate comprehension of bundling features of SQL. – The student will be able to:
  - 72.01 List and describe the benefits of extension languages to SQL.
  - 72.02 Recognize the basic SQL block and its sections.
  - 72.03 Declare SQL variables and describe their significance.
  - 72.04 Execute a SQL block.
- 73.0 Demonstrate comprehension working with composite data types by writing executable script files. – The student will be able to:
  - 73.01 Recognize the significance of the executable section and decide when to use it.
  - 73.02 Write statements in the executable section.
  - 73.03 Describe the rules of nested blocks.
  - 73.04 Identify and utilize appropriate coding conventions.
  - 73.05 Create a script that will select, insert, and update data in a table.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** SQL Extension Languages I  
**Course Number:** 9007320  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to extensions of the SQL programming language.

74.0 Describe the differences between SQL and SQL extension languages. – The student will be able to:

- 74.01 Describe SQL extension languages.
- 74.02 Differentiate between SQL and SQL extension languages.
- 74.03 Explain the need for and benefits of SQL extension languages.

75.0 Create program blocks. – The student will be able to:

- 75.01 Describe the structure of a program block.
- 75.02 Identify the different types of program blocks.
- 75.03 Identify program programming environments.
- 75.04 Create and execute an anonymous block.
- 75.05 Output messages in program blocks.

76.0 Use variables in program blocks. – The student will be able to:

- 76.01 Describe how variables are used in program blocks.
- 76.02 Identify the syntax for using variables.
- 76.03 Declare and initialize variables.
- 76.04 Assign new values to variables.

77.0 Recognize lexical units. – The student will be able to:

- 77.01 Describe the types of lexical units.
- 77.02 Describe identifiers and identify valid and invalid identifiers.
- 77.03 Describe and identify reserved words, delimiters, literals, and comments.

78.0 Recognize data types. – The student will be able to:

- 78.01 Describe the data type categories.
- 78.02 Give examples of scalar, composite, and large object (LOB) data types.
- 78.03 Identify when an object becomes eligible for garbage collection.

79.0 Use scalar data types. – The student will be able to:

- 79.01 Declare and use scalar data types.
- 79.02 Define guidelines for declaring and initializing variables.

- 80.0 Use various types of joins. – The student will be able to:
- 80.01 Construct and execute SELECT statements using an equijoin.
  - 80.02 Construct and execute SELECT statements using a non-equijoin.
  - 80.03 Construct and execute SELECT statements using an outer join.
  - 80.04 Construct and execute SELECT statements that result in a Cartesian product.
- 81.0 Use SQL group functions and subqueries. – The student will be able to:
- 81.01 Construct and execute an SQL query using group functions to determine a sum total, an average amount, and a maximum value.
  - 81.02 Construct and execute an SQL query that groups data based on specified criteria.
  - 81.03 Construct and execute an SQL query that contains a WHERE clause using a single-row subquery.
  - 81.04 Construct and execute an SQL query that contains a WHERE clause using a multiple-row subquery.
- 82.0 Write executable statements. – The student will be able to:
- 82.01 Construct variable assignment statements.
  - 82.02 Construct statements using built-in SQL functions.
  - 82.03 Differentiate between implicit and explicit data type conversions.
  - 82.04 Describe when implicit data type conversions take place.
  - 82.05 List the drawbacks of implicit data type conversions.
  - 82.06 Construct statements using functions to explicitly convert data types.
  - 82.07 Construct statements using operators.
- 83.0 Use nested blocks and variable scope. – The student will be able to:
- 83.01 Understand the scope and visibility of variables.
  - 83.02 Write nested blocks and qualify variables with labels.
  - 83.03 Describe the scope of an exception.
  - 83.04 Describe the effect of exception propagation in nested blocks.
- 84.0 Use good programming practices. – The student will be able to:
- 84.01 List examples of good programming practices.
  - 84.02 Insert comments into code.
  - 84.03 Follow formatting guidelines when writing code.
- 85.0 Write DML statements to manipulate data. – The student will be able to:
- 85.01 Construct and execute a statement to insert data into a table.
  - 85.02 Construct and execute a statement to update data in a table.
  - 85.03 Construct and execute a statement to delete data from a table.
  - 85.04 Construct and execute a statement to merge data into a table.
- 86.0 Retrieve data. – The student will be able to:

- 86.01 Identify SQL statements that can be directly included in an executable block.
- 86.02 Construct and execute an INTO clause to hold values returned by a single-row SELECT statement.
- 86.03 Construct statements that retrieve data.
- 87.0 Manipulate data. – The student will be able to:
  - 87.01 Construct and execute statements that manipulate data with DML statements.
  - 87.02 Describe when to use implicit or explicit cursors.
  - 87.03 Create code to use SQL implicit cursor attributes to evaluate cursor activity.
- 88.0 Use transaction control statements. – The student will be able to:
  - 88.01 Define a transaction and give an example.
  - 88.02 Construct and execute a transaction control statement.
- 89.0 Use IF conditional control statements. – The student will be able to:
  - 89.01 Construct and use an IF statement.
  - 89.02 Construct and use an IF-THEN-ELSIF-ELSE statement.
  - 89.03 Create PL/SQL to handle null conditions in an IF statement.
- 90.0 Use CASE conditional control statements. – The student will be able to:
  - 90.01 Construct and use CASE statements.
  - 90.02 Construct and use CASE expressions.
  - 90.03 Include syntax to handle null conditions in a CASE statement.
  - 90.04 Include syntax to handle Boolean conditions in IF and CASE statements.
- 91.0 Use basic LOOP iterative control statements. – The student will be able to:
  - 91.01 Describe the types of LOOP statements and their uses.
  - 91.02 Create a program containing a basic loop and an EXIT statement.
  - 91.03 Create a program containing a basic loop and an EXIT statement with conditional termination.
- 92.0 Use WHILE and FOR loop iterative control statements. – The student will be able to:
  - 92.01 Construct and use the WHILE looping construct.
  - 92.02 Construct and use the FOR looping construct.
  - 92.03 Describe when a WHILE loop is used.
  - 92.04 Describe when a FOR loop is used.
- 93.0 Use nested loop iterative control statements. – The student will be able to:
  - 93.01 Construct and execute a program using nested loops.
  - 93.02 Evaluate a nested loop construct and identify the exit point.
- 94.0 Use explicit cursors. – The student will be able to:

- 94.01 List the guidelines for declaring and controlling explicit cursors.
  - 94.02 Create code to open a cursor and fetch a piece of data into a variable.
  - 94.03 Use a simple loop to fetch multiple rows from a cursor.
  - 94.04 Create code to close a cursor.
- 95.0 Use explicit cursor attributes. – The student will be able to:
- 95.01 Define a record structure.
  - 95.02 Create code to process the row of an active set using record types in cursors.
  - 95.03 Use cursor attributes to retrieve information about the state of an explicit cursor.
- 96.0 Use cursor FOR loops. – The student will be able to:
- 96.01 List and explain the benefits of using Cursor FOR loops.
  - 96.02 Create code to declare a cursor and manipulate it in a FOR loop.
  - 96.03 Create code containing a Cursor FOR loop using a subquery.
- 97.0 Use cursors with parameters. – The student will be able to:
- 97.01 List the benefits of using parameters with cursors.
  - 97.02 Create code to declare and manipulate a cursor with a parameter.
- 98.0 Use cursors for update transactions. – The student will be able to:
- 98.01 Create code to lock rows before an update using the appropriate clause.
  - 98.02 Explain the effect of using NOWAIT in an update cursor declaration.
  - 98.03 Create code to use the current row of the cursor in an UPDATE or DELETE statement.
- 99.0 Use multiple cursors. – The student will be able to:
- 99.01 Explain the need for using multiple cursors to produce multilevel reports.
  - 99.02 Create code to declare and manipulate multiple cursors within nested loops.
  - 99.03 Create code to declare and manipulate multiple cursors using parameters.
- 100.0 Handle exceptions. – The student will be able to:
- 100.01 Describe the advantages of including exception handling code.
  - 100.02 Describe the purpose of an EXCEPTION section in a program block.
  - 100.03 Create code to include an EXCEPTION section.
  - 100.04 List the guidelines for exception handling.
- 101.0 Trap server exceptions. – The student will be able to:
- 101.01 Distinguish between errors defined by the server and those defined by the programmer.
  - 101.02 Differentiate between errors that are handled implicitly and explicitly by the server.
  - 101.03 Write code to trap a predefined server error.
  - 101.04 Write code to trap a non-predefined server error.
  - 101.05 Write code to identify an exception by error code and by error message.

102.0 Trap user-defined exceptions. – The student will be able to:

102.01 Write code to name a user-defined exception.

102.02 Write code to raise an exception.

102.03 Write code to handle a raised exception.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** SQL Extension Languages II  
**Course Number:** 9007330  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to extensions of the SQL programming language.

103.0 Create procedures. – The student will be able to:

- 103.01 Differentiate between anonymous blocks and subprograms.
- 103.02 Identify the benefits of using subprograms.
- 103.03 Describe a stored procedure.
- 103.04 Create a procedure.
- 103.05 Describe how a stored procedure is invoked.

104.0 Use parameters in procedures. – The student will be able to:

- 104.01 Describe how parameters contribute to a procedure.
- 104.02 Define a parameter.
- 104.03 Create a procedure using a parameter.
- 104.04 Invoke a procedure that has parameters.
- 104.05 Distinguish between formal and actual parameters.

105.0 Pass parameters. – The student will be able to:

- 105.01 List the types of parameter modes.
- 105.02 Create a procedure that passes parameters.
- 105.03 Identify methods for passing parameters.
- 105.04 Describe the default option for parameters.

106.0 Create stored functions. – The student will be able to:

- 106.01 Describe the difference between a stored procedure and a stored function.
- 106.02 Create a program block containing a function.
- 106.03 Identify ways in which functions may be invoked.
- 106.04 Create a program block that invokes a function that has parameters.

107.0 Use functions in SQL statements. – The student will be able to:

- 107.01 Describe where user-defined functions can be called from within an SQL statement.
- 107.02 Describe the restrictions on calling functions from SQL statements.
- 107.03 Describe the purpose of the Data Dictionary.
- 107.04 Differentiate between the three types of Data Dictionary views.
- 107.05 Write SQL SELECT statements to retrieve information from the Data Dictionary.

- 108.0 Manage procedures and functions. – The student will be able to:
  - 108.01 Describe how exceptions are propagated.
  - 108.02 Remove a function and a procedure.
  - 108.03 Use Data Dictionary views to identify and manage stored procedures.
  
- 109.0 Manage object privileges. – The student will be able to:
  - 109.01 List and explain several object privileges.
  - 109.02 Explain the function of the EXECUTE object privilege.
  - 109.03 Write SQL statements to grant and revoke object privileges.
  
- 110.0 Use invoker's rights. – The student will be able to:
  - 110.01 Contrast invoker's rights with definer's rights.
  - 110.02 Create a procedure that uses invoker's rights.
  
- 111.0 Create packages. – The student will be able to:
  - 111.01 Describe a package, its components, and the reasons for use.
  - 111.02 Create packages containing related variables, cursors, constants, exceptions, procedures, and functions.
  - 111.03 Create a program block that invokes a package construct.
  
- 112.0 Manage package constructs. – The student will be able to:
  - 112.01 Explain the difference between public and private package constructs.
  - 112.02 Designate a package construct as either public or private.
  - 112.03 Specify the syntax to drop a package.
  - 112.04 Identify Data Dictionary views used to manage packages.
  - 112.05 Identify the guidelines for using packages.
  
- 113.0 Use advanced package concepts. – The student will be able to:
  - 113.01 Write packages that use the overloading feature.
  - 113.02 Write packages that use forward declarations.
  - 113.03 Explain the purpose of a package initialization block.
  - 113.04 Identify restrictions on using packaged functions in SQL statements.
  
- 114.0 Manage persistent state of package variables. – The student will be able to:
  - 114.01 Identify persistent states of package variables.
  - 114.02 Control the persistent state of a package cursor.
  
- 115.0 Use vendor-supplied packages. – The student will be able to:
  - 115.01 Describe two common uses for vendor-supplied packages.
  - 115.02 Use the syntax to specify messages for a vendor-supplied package.
  - 115.03 Identify the exceptions used in conjunction with vendor-supplied packages.

- 116.0 Understand dynamic SQL. – The student will be able to:
- 116.01 Identify the stages through which all SQL statements pass.
  - 116.02 Describe the reasons for using dynamic SQL to create an SQL statement.
  - 116.03 List statements supporting Native Dynamic SQL.
- 117.0 Understand triggers. – The student will be able to:
- 117.01 Describe database triggers and their uses.
  - 117.02 Differentiate between a database trigger and an application trigger.
  - 117.03 List the guidelines for using triggers.
  - 117.04 Compare and contrast database triggers and stored procedures.
- 118.0 Create DML triggers. – The student will be able to:
- 118.01 Create a DML trigger and identify its components.
  - 118.02 Create a statement level trigger.
  - 118.03 Describe the trigger firing sequence options.
  - 118.04 Create a DML trigger that uses conditional predicates.
  - 118.05 Create a row level trigger.
  - 118.06 Create a row level trigger that uses OLD and NEW qualifiers.
  - 118.07 Create an INSTEAD OF trigger.
- 119.0 Create DDL and database event triggers. – The student will be able to:
- 119.01 Describe the events that cause DDL and database event triggers to fire.
  - 119.02 Create a trigger for a DDL statement.
  - 119.03 Create a trigger for a database event.
  - 119.04 Describe the functionality of the CALL statement.
  - 119.05 Describe the cause of a mutating table.
- 120.0 Manage triggers. – The student will be able to:
- 120.01 View trigger information in the Data Dictionary.
  - 120.02 Disable and enable a database trigger.
  - 120.03 Remove a trigger from the database.
- 121.0 Use large object data types. – The student will be able to:
- 121.01 Compare and contrast LONG and LOB data types.
  - 121.02 Describe LOB data types and how they are used.
  - 121.03 Differentiate between internal and external LOBs.
  - 121.04 Create and maintain LOB data types.
  - 121.05 Migrate data from LONG to LOB.
- 122.0 Manage binary types. – The student will be able to:
- 122.01 Define binary column data type.
  - 122.02 Create directory objects and view them in the Data Dictionary.
  - 122.03 Manage and manipulate binary types.

123.0 Manage indexes. – The student will be able to:

123.01 Create and manipulate user-defined records.

123.02 Create an index.

123.03 Describe the difference between records, tables, and indexes.

124.0 Manage dependencies. – The student will be able to:

124.01 Describe the implications of procedural dependencies.

124.02 Contrast dependent objects and referenced objects.

124.03 View dependency information in the Data Dictionary.

124.04 Use a script to create the objects required to display dependencies.

124.05 Use views to display dependencies.

124.06 Describe how to minimize dependency failures.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Custom Database Programming  
**Course Number:** 9007340  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to specialized applications of the SQL programming language.

125.0 Program a database application. – The student will be able to:

- 125.01 Utilize loop statements.
- 125.02 Given a scenario, use arithmetic, comparison, and pattern-matching operators.
- 125.03 Create user-defined functions.
- 125.04 Utilize common built-in functions.
- 125.05 Declare variables in modules and procedures.
- 125.06 Declare arrays, and initialize elements of arrays.
- 125.07 Declare and use object variables and collections, and use their associated properties and methods.
- 125.08 Declare symbolic constants, and make them available locally or publicly.
- 125.09 Respond to events.

126.0 Utilize the basic concepts of database design. – The student will be able to:

- 126.01 Apply basic concepts of normalization.
- 126.02 Utilize the cascade update and cascade delete options.

127.0 Utilize SQL and union queries. – The student will be able to:

- 127.01 Utilize SQL to write common queries.
- 127.02 Refer to objects by using SQL.
- 127.03 Utilize union queries.

128.0 Implement program statements using objects. – The student will be able to:

- 128.01 Determine when to use data access objects.
- 128.02 Differentiate between objects and collections.
- 128.03 Write statements that access and modify database objects.
- 128.04 Utilize data access objects.
- 128.05 Select appropriate methods and property settings for use with specified objects.

129.0 Utilize debugging tools and write error handlers. – The student will be able to:

- 129.01 Trap errors.
- 129.02 Utilize debugging tools to suspend program execution, and to examine, step through, and reset execution of code.
- 129.03 Debug code samples.

129.04 Utilize the Debugger to monitor variable values.

129.05 Write an error handler.

130.0 Demonstrate file I/O. – The student will be able to:

130.01 Read from files.

130.02 Write to files.

130.03 Utilize record locking.

131.0 Create forms and identify all the properties of a form. – The student will be able to:

131.01 Choose form-specific and report-specific properties to set.

131.02 Choose control properties to set.

131.03 Assign event-handling procedures to controls in a form.

131.04 Define and create form and report modules.

131.05 Identify the scope of a form or report module.

131.06 Open multiple instances of a form, and refer to them.

131.07 Assign values to form properties.

131.08 Use form methods.

132.0 Manipulate data using object models. – The student will be able to:

132.01 Connect to a data source.

132.02 Open a recordset.

132.03 Insert, update, delete and find data.

133.0 Develop custom controls. – The student will be able to:

133.01 Set properties for custom controls.

133.02 Customize user interface controls.

134.0 Utilize API functions. – The student will be able to:

134.01 Properly declare functions.

134.02 Use the by value and by reference parameters.

135.0 Demonstrate database replication and implement database replication using programming tools. – The student will be able to:

135.01 Make a database replicable.

135.02 View a synchronization schedule.

135.03 Explain how synchronization conflicts are resolved.

135.04 Identify the advantages of using replication of synchronization.

135.05 Identify the changes that the database engine makes when it converts a nonreplicable database into replicable database.

136.0 Analyze and implement security options. – The student will be able to:

136.01 Analyze a scenario, and recommend an appropriate type of security.

136.02 Explain the steps for implementing security.

136.03 Analyze code to ensure that it sets security options.

136.04 Write code to implement security options.

137.0 Implement client/server applications. – The student will be able to:

137.01 Demonstrate SQL pass through queries and application queries.

137.02 Access external data.

137.03 Trap errors that are generated by the server.

137.04 Optimize connections.

137.05 Optimize performance for a given client/server application.

138.0 Optimize the performance of a database. – The student will be able to:

138.01 Differentiate between single-field and multiple-field indexes.

138.02 Optimize queries.

138.03 Restructure queries to allow faster execution.

138.04 Optimize performance in distributed applications.

138.05 Optimize performance for client/server applications.

139.0 Perform application distribution. – The student will be able to:

139.01 Prepare an application for distribution.

139.02 Analyze various methods to distribute a client/server application.

139.03 Distribute custom controls with an application.

139.04 Provide online help.

140.0 Test and debug databases. – The student will be able to:

140.01 Implement error handling.

140.02 Test and debug library databases.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** .NET Application Development & Programming  
**Program Type:** Career Preparatory  
**Career Cluster:** Information Technology

	Secondary	PSAV
Program Number	9007400	Y700400
CIP Number	0511020314	0511020314
Grade Level	9-12, 30, 31	30, 31
Standard Length	7 credit hours	1050 hours
Teacher Certification	BUS ED 1 @2 COMP SCI 6 COMP PROG 7 G	BUS ED 1 @2 COMP SCI 6 COMP PROG 7 G
CTSO	FBLA BPA	Phi Beta Lambda BPA
SOC Codes (all applicable)	15-1041, 15-1021	15-1041, 15-1021
Facility Code	212 <a href="http://www.fldoe.org/edfacil/sref.asp">http://www.fldoe.org/edfacil/sref.asp</a> (State Requirements for Educational Facilities)	
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>	
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>	
Industry Certifications	<a href="http://www.fldoe.org/workforce/fcpea/default.asp">http://www.fldoe.org/workforce/fcpea/default.asp</a>	
Basic Skills Level	N/A	Mathematics: 9 Language: 9 Reading: 9

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to the fundamentals of programming and software

development; procedural and object-oriented programming; creating .NET-based applications, including testing, monitoring, debugging, documenting, and maintaining .NET applications.

## Program Structure

This program is a planned sequence of instruction consisting of four occupational completion points, with OCPs A, B, and C comprising the Software Development Core. Secondary or postsecondary students who have previously completed the Software Development Core will not have to repeat the core. A student who completes the applicable competencies at any occupational completion point may either continue with the training program or exit as an occupational completer.

When offered at the post secondary level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44 (3)(b), F.S.

The following table illustrates the **PSAV** program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	OTA0040	Information Technology Assistant	150	15-1041
B	CTS0041	Computer Programmer Assistant	300	15-1021
C	CTS0044	Computer Programmer	150	15-1021
D	CTS0032	.NET Programmer	450	15-1021

The following table illustrates the **Secondary** program structure:

OCP	Course Number	Course Title	Length	SOC Code	Level
A	8207310	Introduction to Information Technology	1 credit	15-1041	2
B	9007210	Foundations of Programming	1 credit	15-1021	3
	9007220	Procedural Programming	1 credit		3
C	9007230	Object-Oriented Programming Fundamentals	1 credit	15-1021	3
D	9007410	.NET Application Development Foundation	1 credit	15-1021	3
	9007420	.NET Application Development Applied	1 credit		3
	9007430	.NET Application Development Capstone	1 credit		3

## Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## Special Notes

### Academic Alignment

Some or all of the courses in this program have been aligned to the Next Generation Sunshine State Standards contained in specific math and science core academic courses. This alignment resulted from a collaborative review by Career and Technical Education (CTE) teachers and core academic teachers. The table below contains the results of the alignment efforts. Data shown in the table includes the number of academic standards in the CTE course, the total number of math and science standards contained in the academic course, and the percentage of alignment to the CTE course. The following academic courses were included in the alignment (see code for use in table).

Academic Subject Area	Academic Course
Math	Algebra 1 (ALG1) Algebra 2 (ALG2) Geometry (GEO)
Science	Anatomy/Physiology Honors (APH) Astronomy Solar/Galactic Honors (ASGH) Biology 1 (BIO1) Chemistry 1 (CHM1) Earth-Space Science (ESS) Genetics (GEN) Marine Science 1 Honors (MS1H) Physical Science (PS) Physics 1 (PHY1)

Course	Math			Science								
	ALG1	ALG2	GEO	APH	ASGH	BIO1	CHM1	ESS	GEN	MS1H	PS	PHY1
Introduction to IT	6/36 17%	2/41 5%	1/45 2%	2/53 4%	2/52 4%	2/56 4%	2/55 4%	2/58 3%	2/35 6%	2/42 5%	2/56 4%	2/53 4%
Foundations of Programming	**	**	**	**	**	**	**	**	**	**	**	**
Procedural Programming	**	**	**	**	**	**	**	**	**	**	**	**
Object-Oriented Programming Fundamentals	**	**	**	**	**	**	**	**	**	**	**	**
.NET Application Development Foundation	**	**	**	**	**	**	**	**	**	**	**	**

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

## **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills for secondary students. For postsecondary students, Phi Beta Lambda and BPA are the appropriate student organizations. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

## **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the program-specific OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

## **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 9.0, Language 9.0, and Reading 9.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination. Students may be exempt from meeting the Basic Skills requirements by earning an eligible industry certification. See the Basic Skills Exemption List document for a list of eligible industry certifications (<http://www.fldoe.org/workforce/dwdframe/rtf/basic-skills.rtf>).

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination pursuant to Section 1008.29, F.S.; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.)

## **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. Links to instructional resources in

support of Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (ESE) will need modifications to meet their special needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular occupational completion point (OCP) or a modified occupational completion point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP(s)/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

### **Articulation**

The PSAV component of this program has no statewide articulation agreement approved by the Florida State Board of Education. However, this does not preclude the awarding of credits by any college through local agreements.

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Bright Futures/Gold Seal Scholarship**

Course substitutions as defined in the Comprehensive Course Table for this program area may be used to qualify a student for Florida's Gold Seal Vocational Scholarship, providing all other eligibility requirements are met. Eligibility requirements are available online at [https://www.osfaffelp.org/bfiehs/fnbpcm02\\_CCTMain.aspx](https://www.osfaffelp.org/bfiehs/fnbpcm02_CCTMain.aspx).

## **Fine Arts/Practical Arts Credit**

Many courses in CTE programs meet the Fine Arts/Practical Arts credit for high school graduation. For additional information refer to

<http://www.fldoe.org/schools/pdf/ListPracticalArtsCourses.pdf>.

### **Core Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate Comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles.
- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace.
- 11.0 Participate in work-based learning experiences.
- 12.0 Perform e-mail activities.
- 13.0 Demonstrate knowledge of different operating systems.
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW.
- 15.0 Demonstrate proficiency using HTML commands.
- 16.0 Demonstrate proficiency in page design applicable to the WWW.
- 17.0 Demonstrate proficiency using specialized web design software.
- 18.0 Develop an awareness of the information technology industry.
- 19.0 Develop an awareness of microprocessors and digital computers.
- 20.0 Develop an awareness of programming languages.
- 21.0 Develop an awareness of emerging technologies.
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model.
- 23.0 Demonstrate proficiency using common software applications.
- 24.0 Demonstrate proficiency using specialized software applications.
- 25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development.
- 26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types.
- 27.0 Distinguish between iterative and non-iterative program control structures.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages.

- 29.0 Describe the processes, methods, and conventions for software development and maintenance.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool.
- 32.0 Describe information security risks, threats, and strategies associated with software development.
- 33.0 Design a computer program to meet specific physical, operational, and interaction criteria.
- 34.0 Create and document a computer program that uses a variety of internal and control structures for manipulating varied data types.
- 35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input.
- 36.0 Create a unit test plan, implement the plan, and report the results of testing.
- 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming.
- 38.0 Create a project plan that defines requirements, structural design, time estimates, and testing elements.
- 39.0 Design, document, and create object-oriented computer programs.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results.

### **Program Standards**

- 41.0 Develop an awareness of the changes taking place in the information age and how they fit into an evolving society.
- 42.0 Understand .NET primitive data types and their uses.
- 43.0 Describe the types and characteristics of lexical units in the .NET programming language.
- 44.0 Construct statements that use various .NET operators.
- 45.0 Construct and use .NET selection control structures.
- 46.0 Construct and use .NET iterative control structures.
- 47.0 Construct and use .NET structures for error handling.
- 48.0 Write .NET programs that define and use user-defined data types, including classes.
- 49.0 Write .NET programs that define and use methods.
- 50.0 Write programs that perform console input and output in a .NET program.
- 51.0 Use namespaces in a .NET program.
- 52.0 Use arrays in .NET programs.
- 53.0 Write .NET programs that use the object-oriented concept of inheritance.
- 54.0 Write .NET programs that use the object-oriented concept of polymorphism.
- 55.0 Write .NET programs that use the object-oriented concept of encapsulation.
- 56.0 Apply common programming style guidelines and conventions.
- 57.0 Use application life cycle management to develop and maintain .NET programs.
- 58.0 Use nullable values in a .NET program.
- 59.0 Use the .NET String and StringBuilder classes in an application.
- 60.0 Use .NET classes to perform stream input/output.
- 61.0 Use recursive functions to solve problems in .NET programs.
- 62.0 Write .NET programs that use interfaces.
- 63.0 Use .NET collections in applications.
- 64.0 Demonstrate knowledge of different types of .NET applications.
- 65.0 Demonstrate knowledge of .NET architecture and tools.

- 66.0 Demonstrate knowledge of Web applications.
- 67.0 Develop Web pages using HTML, CSS, JavaScript, and ASP.NET.
- 68.0 Develop .NET Windows Form applications.
- 69.0 Develop Windows Service applications and class libraries.
- 70.0 Demonstrate knowledge of database applications.
- 71.0 Demonstrate knowledge of structured query language (SQL) statements.
- 72.0 Develop .NET database applications.
- 73.0 Successfully work as a member of a software development team.
- 74.0 Manage time according to a plan.
- 75.0 Keep acceptable records of progress problems and solutions.
- 76.0 Plan, organize, and carry out a project plan.
- 77.0 Manage resources.
- 78.0 Use tools, materials, and processes in an appropriate and safe manner.
- 79.0 Demonstrate an understanding of the software development process.
- 80.0 Research content related to the project and document the results following industry conventions.
- 81.0 Use presentation skills, and appropriate media to describe the progress, results and outcomes of the experience.
- 82.0 Demonstrate competency in the area of expertise related to developing computer software using the .NET framework.

### **Essential Skills**

- 83.0 Demonstrate language arts knowledge and skills.
- 84.0 Demonstrate mathematics knowledge and skills.
- 85.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 86.0 Solve problems using critical thinking skills, creativity and innovation.
- 87.0 Use information technology tools.
- 88.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 89.0 Describe the importance of professional ethics and legal responsibilities.
- 90.0 Explain the importance of employability skill and entrepreneurship skills.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: .NET Application Development & Programming**  
**PSAV Number: Y700400**

**Course Number: OTA0040**  
**Occupational Completion Point: A**  
**Information Technology Assistant – 150 Hours – SOC Code 15-1041**

**Introduction to Information Technology Standards:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
  - 01.06 Describe ethical issues and problems associated with computers and information systems.
- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
  - 02.02 Use professional business vocabulary appropriate for information technology environments.
  - 02.03 Organize ideas and communicate oral and written messages appropriate for information technology environments.
  - 02.04 Collaborate with individuals and teams to complete tasks and solve information technology problems.
  - 02.05 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
  - 02.06 Apply the writing process to the creation of appropriate documents following designated business formats.
  - 02.07 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).
- 03.0 Use technology to enhance the effectiveness of communication skills. – The student will be able to:

- 03.01 Use database, spreadsheet, and presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
  - 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
  - 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
  - 08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:
- 09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).
  - 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.

- 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:
- 14.01 Identify and describe Web terminology.
  - 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
  - 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, pdf, etc.).
  - 14.08 Identify effective Boolean search strategies.
- 15.0 Demonstrate proficiency using HTML commands. – The student will be able to:
- 15.01 Identify elements of a Web page.
  - 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
  - 15.03 Define basic HTML terminology.
  - 15.04 Analyze HTML source code developed by others.
  - 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
  - 15.07 Edit and test HTML documents for accuracy and validity.
  - 15.08 Use basic functions of WYSIWYG editors.
  - 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 15.10 Enhance web pages through the addition of images and graphics including animation.

- 16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
  - 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
  - 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 16.04 Use image design software to create and edit images.
  - 16.05 Demonstrate proficiency in publishing to the Internet.
  - 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
  - 16.07 Explain the need for web-based applications.
- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).

- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the open systems interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.
  - 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
  - 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
  - 24.03 Demonstrate the ability to incorporate digital sound.
- 83.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 83.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
  - 83.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
  - 83.03 Present information formally and informally for specific purposes and audiences. AF2.9

- 84.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 84.01 Demonstrate knowledge of arithmetic operations. AF3.2
  - 84.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
  - 84.03 Construct charts/tables/graphs using functions and data. AF3.5
- 90.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 90.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
  - 90.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
  - 90.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
  - 90.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
  - 90.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
  - 90.06 Identify and exhibit traits for retaining employment. ECD 7.0
  - 90.07 Identify opportunities and research requirements for career advancement. ECD 8.0
  - 90.08 Research the benefits of ongoing professional development. ECD 9.0
  - 90.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0

**Course Number: CTS0041****Occupational Completion Point: B****Computer Programmer Assistant – 300 Hours – SOC Code 15-1021**

- 25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development. – The student will be able to:
- 25.01 Describe the evolution of programming and programming careers.
  - 25.02 Identify tasks performed by programmers.
  - 25.03 Describe how businesses use computer programming to solve business problems.
  - 25.04 Investigate job opportunities in the programming field.
  - 25.05 Explain different specializations and the related training in the computer programming field.
  - 25.06 Explain the need for continuing education and training of computer programmers.
  - 25.07 Explain enterprise software systems and how they impact business.
  - 25.08 Describe ethical responsibilities of computer programmers.
  - 25.09 Describe the role of customer support to software program quality.
  - 25.10 Identify credentials and certifications that may improve employability for a computer programmer.
  - 25.11 Identify devices, tools, and other environments for which programmers may develop software.
- 26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types. – The student will be able to:
- 26.01 Identify the characteristics (e.g., size, limits) and uses of different numerical and non-numerical data types.

- 26.02 Explain the types and uses of variables in programs.
  - 26.03 Determine the best data type to use for given programming problems.
  - 26.04 Identify the types of operations that can be performed on different data types.
  - 26.05 Evaluate arithmetic and logical expressions using appropriate operator precedence.
  - 26.06 Explain how computers store different data types in memory.
  - 26.07 Use different number systems to represent data.
  - 26.08 Explain how national and international standards (*i.e.*, ASCII, UNICODE) are used to represent non-numerical data.
  - 26.09 Use Boolean logic to perform logical operations.
- 27.0 Distinguish between iterative and non-iterative program control structures. – The student will be able to:
- 27.01 Explain non-iterative programming structures (*e.g.*, if, if/else, etc.) and their uses.
  - 27.02 Explain iterative programming structures (*e.g.*, while, do/while, etc.) and their uses.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages. – The student will be able to:
- 28.01 Identify the characteristics, uses, and limits of low-level programming languages.
  - 28.02 Identify the characteristics, uses, and limits of high-level programming languages.
  - 28.03 Identify the characteristics, uses, and limits of rapid development programming languages.
  - 28.04 Describe object-oriented concepts.
  - 28.05 Explain the characteristics of procedural and object-oriented programming languages.
  - 28.06 Compare and contrast programming languages that are compiled (*e.g.*, C++), interpreted (*e.g.*, Basic, HTML), and translated (*e.g.*, Java).
- 29.0 Describe the processes, methods, and conventions for software development and maintenance. – The student will be able to:
- 29.01 Describe and explain tools used in software development.
  - 29.02 Describe the stages of the program life cycle.
  - 29.03 Compare and contrast alternative methods of program development (*e.g.*, rapid prototyping, waterfall, etc.).
  - 29.04 List and explain the steps in the program development cycle.
  - 29.05 Describe different types of documentation used in the program development cycle (*e.g.*, requirements document, program design documents, test plans, etc.).
  - 29.06 Describe the on-going need for program maintenance.
  - 29.07 Describe different methods companies use to facilitate program updates for enhancements and defects (*e.g.*, how customers receive patches, updates, new versions, upgrades).
  - 29.08 Describe different methods used to facilitate version control and change management.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control. – The student will be able to:

- 30.01 Explain the uses and limits of testing in ensuring program quality.
  - 30.02 Explain testing performed at different stages of the program development cycle (e.g. unit testing, system testing, user acceptance testing, etc.).
  - 30.03 Describe data and the use of test plans/scripts to be used in program testing.
  - 30.04 Describe and identify types of programming errors (e.g., syntactical, logic, usability, requirements mismatch, etc.).
  - 30.05 Identify the data to be used for boundary conditions.
  - 30.06 Explain different types of testing (e.g., usability, automated, regression, etc.) and testing tools.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool. – The student will be able to:
- 31.01 Describe different design methodologies and their uses (e.g., object-oriented design, structured design, and rapid application development).
  - 31.02 Describe tools for developing a program design (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.03 Explain the role of existing libraries and packages in facilitating programmer productivity.
  - 31.04 Participate and contribute to a design review of a program design developed using a common program design tool (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.05 Write a program design document using UML or other standard design methodology.
  - 31.06 Define input and output for a program module using UML or other standard design methodology.
- 32.0 Describe information security risks, threats, and strategies associated with software development. – The student will be able to:
- 32.01 Explain the security risks to personal and business computer users.
  - 32.02 Identify different types of threats to computer systems.
  - 32.03 Identify methods to protect against different threats to computer systems.
  - 32.04 Understand the importance of a disaster / emergency response plan.
  - 32.05 Identify alternative methods for data storage and backup (e.g., mirroring, fail-over, high availability, types of backups).
- 33.0 Design a computer program to meet specific physical, operational, and interaction criteria. – The student will be able to:
- 33.01 Choose appropriate data types depending on the needs of the program.
  - 33.02 Define appropriate user interface prompts for clarity and usability (e.g., user guidance for data ranges, data types, etc.).
  - 33.03 Design and develop program that are designed for efficiency (e.g., less memory usage, less inputs/outputs, faster processing, etc.).
  - 33.04 Identify the software environment required for a program to run (e.g., operating system required, mobile, Web-based, desktop, delivery method, etc.).
  - 33.05 Identify the tools required to develop a program (e.g., editors, compilers, linkers, integrated development environments, application programming interfaces (APIs), libraries, etc.).

- 34.0 Create and document a computer program that uses a variety of internal and control structures for manipulating varied data types. – The student will be able to:
- 34.01 Use appropriate naming conventions to define program variables and modules (methods, functions).
  - 34.02 Use a program editor to write the source code for a program.
  - 34.03 Write programs that use selection structures (e.g., if, if/else, etc.).
  - 34.04 Write programs that use repetition structures (e.g., while, do/while, etc.).
  - 34.05 Write programs that use nested structures.
  - 34.06 Use internal documentation (e.g., single-line and multi-line comments, program headers, module descriptions, and meaningful variable and function/module names) to document a program according to accepted standards.
  - 34.07 Compile and run programs.
  - 34.08 Write programs that use standard arithmetic operators with different numerical data types.
  - 34.09 Write programs that use standard logic operators.
  - 34.10 Write programs that use a variety of common data types.
  - 34.11 Write programs that perform data conversion between standard data types.
  - 34.12 Write programs that define, use, search, and sort arrays.
  - 34.13 Write programs that use user-defined data types.
  - 34.14 Demonstrate understanding and use of appropriate variable scope.
- 35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input. – The student will be able to:
- 35.01 Write programs that perform user input and output.
  - 35.02 Write programs that validate user input (e.g., range checking, data formats, valid/invalid characters, etc.).
  - 35.03 Write program modules such as functions, subroutines, or methods.
  - 35.04 Write program modules that accept arguments.
  - 35.05 Write program modules that return values.
  - 35.06 Write program modules that validate arguments and return error codes.
  - 35.07 Write interactive programs.
  - 35.08 Write programs that use standard libraries to enhance program function.
  - 35.09 Participate in a peer code review to verify program functionality, programming styles, program usability, and adherence to common programming standards.
- 36.0 Create a unit test plan, implement the plan, and report the results of testing. – The student will be able to:
- 36.01 Write a unit test plan that identifies the input data and expected results for program tests.
  - 36.02 Test and debug programs, including programs written by others.
  - 36.03 Write a test report that identifies the results of testing.
  - 36.04 Trace through the function of a program to ensure valid operation.
  - 36.05 Identify the system resources used by the program (e.g., memory, disk space, execution time, external devices).
  - 36.06 Create a disaster / emergency response plan for a computer system.

- 85.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 85.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
  - 85.02 Locate, organize and reference written information from various sources. CM 3.0
  - 85.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
  - 85.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
  - 85.05 Apply active listening skills to obtain and clarify information. CM 7.0
  - 85.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
  - 85.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 86.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 86.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
  - 86.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
  - 86.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
  - 86.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 87.0 Use information technology tools. – The student will be able to:
- 87.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
  - 87.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
  - 87.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
  - 87.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 88.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 88.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
  - 88.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
  - 88.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 89.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 89.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
  - 89.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
  - 89.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2

**Course Number: CTS0044**  
**Occupational Completion Point: C**  
**Computer Programmer – 150 Hours – SOC Code 15-1021**

- 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming. – The student will be able to:
- 37.01 Demonstrate the understanding and use of classes, objects, attributes, and behaviors.
  - 37.02 Demonstrate the understanding and use of inheritance.
  - 37.03 Demonstrate the understanding and use of data encapsulation.
  - 37.04 Demonstrate the understanding and use of polymorphism.
- 38.0 Create a project plan for an object-oriented programming project that defines requirements, structural design, time estimates, and testing elements. – The student will be able to:
- 38.01 Write a project plan for completion of a project that includes gathering program requirements, developing the program, and testing it.
  - 38.02 Write a program requirements document that identifies business purpose, functional requirements, system requirements, and other common components of a requirements document.
  - 38.03 Design an object-oriented program using UML or another standard design methodology.
  - 38.04 Work with other team members to develop a project plan for a program.
  - 38.05 Work with other team members to write a design document for a program with multiple functions and shared data.
  - 38.06 Participate in design meetings that review program design documents for conformance to program requirements.
  - 38.07 Estimate the time to develop a program or module.
- 39.0 Design, document, and create object-oriented computer programs. – The student will be able to:
- 39.01 Compare and contrast recursive functions to other iterative methods.
  - 39.02 Understand the implementation of character strings in the programming language.
  - 39.03 Write programs that perform string processing (e.g., string manipulation, string compares, concatenation, etc.).
  - 39.04 Write programs that use user-defined data types.
  - 39.05 Write object-oriented programs that use inheritance.
  - 39.06 Write object-oriented programs that use polymorphism.
  - 39.07 Develop class constructors.
  - 39.08 Write programs that define and use program constants.
  - 39.09 Write programs that perform error handling.
  - 39.10 Participate in program code review meetings to evaluate program code for validity, quality, performance, data integrity, and conformance to program design documents.
  - 39.11 Write programs that perform dynamic memory allocation.

- 39.12 Write programs that perform effective management of dynamically allocated memory.
  - 39.13 Update a program module to implement enhancements or corrections and demonstrate appropriate documentation (internal and external) related to version control.
  - 39.14 Write programs that use complex data structures (e.g., stacks, queues, trees, linked lists etc.).
  - 39.15 Write programs that are event-driven.
  - 39.16 Write programs that perform file input and output (i.e., sequential and random access file input/output).
  - 39.17 Perform basic database commands including connect, open, select, and close.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results. – The student will be able to:
- 40.01 Develop a test plan for an object-oriented program.
  - 40.02 Write test plans for event-driven programs.
  - 40.03 Write test plans for programs that perform file input and output.
  - 40.04 Perform test and debug activities on object-oriented programs, including those written by someone else.
  - 40.05 Perform test and debug activities on an event-driven program.
  - 40.06 Perform test and debug activities on programs that perform file input and output and verify the correctness of output files.
  - 40.07 Document the findings of testing in a test report.

**Course Number: CTS0032**  
**Occupational Completion Point – D**  
**.NET Programmer – 450 Hours – SOC Code 15-1021**

- 41.0 Develop an awareness of the changes taking place in the information age and how they fit into an evolving society. – The student will be able to:
- 41.01 Cite examples of jobs, salary, and opportunities he/she will have as a .NET programmer.
  - 41.02 Describe the role a database plays in a business.
  - 41.03 Explain the value of middleware, such as the .NET framework, in developing software applications.
  - 41.04 Understand the importance of clear communication when discussing business informational requirements.
- 42.0 Understand .NET primitive data types and their uses. – The student will be able to:
- 42.01 Describe how variables are used in programs.
  - 42.02 Identify the .NET built-in value types, their uses, and the ranges of values supported by each type.
  - 42.03 Identify the default values for built-in value types.
  - 42.04 Write statements that declare and initialize variables.
  - 42.05 Write statements that assign literal values to numeric types.
  - 42.06 Identify the .NET built-in reference types.
  - 42.07 Write statements that assign string literals to string types.
  - 42.08 Explain the memory size requirements for the various data storage types.

- 42.09 Identify which types are stored on the heap and which are stored on the stack.
  - 42.10 Identify which data type should be used for a given purpose in a program.
  - 42.11 Write statements that create variables with values that cannot be changed (*i.e.*, const, final, etc.).
  - 42.12 Identify the syntax for declaring and initializing each of the built-in data types.
  - 42.13 Differentiate between implicit and explicit data type conversions.
  - 42.14 Describe when implicit data type conversions take place.
  - 42.15 Write statements that use explicit type conversion.
  - 42.16 List the drawbacks of implicit data type conversions.
  - 42.17 Compare and contrast boxing and unboxing.
  - 42.18 Describe the scope of a variable.
  - 42.19 Describe how the compiler uses scope to distinguish between variables with the same name.
- 43.0 Describe the types and characteristics of lexical units in the .NET programming language. – The student will be able to:
- 43.01 Describe the types of lexical units (*e.g.*, keywords, directives, operators, etc.).
  - 43.02 Describe identifiers and identify valid and invalid identifiers.
  - 43.03 Describe and identify reserved words, delimiters, literals, and comments.
- 44.0 Construct statements that use various .NET operators. – The student will be able to:
- 44.01 Construct statements using arithmetic operators.
  - 44.02 Construct statements using relational operators.
  - 44.03 Construct and use statements using logical operators.
  - 44.04 Construct and use statements using assignment operators.
  - 44.05 Construct and execute statements using operator precedence.
  - 44.06 Construct and execute statements using methods and fields of the Math class.
- 45.0 Construct and use .NET selection control structures. – The student will be able to:
- 45.01 Construct and use an if structure in a program.
  - 45.02 Construct and use an if/else structure in a program.
  - 45.03 Construct and use multiple-selection structures (*e.g.*, switch, elseif, select) in programs.
  - 45.04 Construct and use nested selection structures in a program.
  - 45.05 Construct and use a conditional operator.
- 46.0 Construct and use .NET iterative control structures. – The student will be able to:
- 46.01 Describe the types of iterative control structures and their uses.
  - 46.02 Construct and use a while structures (*e.g.*, while, do/while, do/until) in a program.
  - 46.03 Construct and use a for structure in a program.
  - 46.04 Construct and use a control structure that iterates over each item in a collection (*e.g.*, foreach, for/each/next).
  - 46.05 Describe the limits and advantages of different iterative control structure (*i.e.*, while, do/while, for, foreach or for/each).
  - 46.06 Construct and use nested structures (iterative and selective) in a program.
  - 46.07 Write programs that alter the execution of program loops (*e.g.*, break, continue, exit).

47.0 Construct and use .NET structures for error handling. – The student will be able to:

- 47.01 Describe the different types of software errors.
- 47.02 Compare and contrast alternatives for handling errors.
- 47.03 Write programs that validate user input and handle errors.
- 47.04 Explain the correct method for using multiple catch blocks for exceptions.
- 47.05 Explain the purpose of the finally block in exception handling.
- 47.06 Write programs that handle exceptions using the try/catch/finally structure.
- 47.07 Write programs with nested exception handling.
- 47.08 Explain the concept of structured exception handling.
- 47.09 Identify common exceptions and their causes.
- 47.10 Explain the concept of throwing a new exception.
- 47.11 Write programs that catch and re-throw exceptions.
- 47.12 Write exception handlers that use characteristics of the exception argument in the program.

48.0 Write .NET programs that define and use user-defined data types, including classes. – The student will be able to:

- 48.01 Explain the concept of a user-defined data type.
- 48.02 Distinguish between structures and classes.
- 48.03 Identify the syntax for declaring enumerations and structures.
- 48.04 Write programs that use declare and use enumerations.
- 48.05 Write programs that declare and use structures.
- 48.06 Explain the characteristics of different class constructs including instance variables, properties, fields, methods, events, object references, and constructors.
- 48.07 Write programs that declare and use classes.
- 48.08 Distinguish between different types of classes, including base class, derived class, abstract class, and sealed class.
- 48.09 Explain the impact of using different access modifiers on user-defined data types.
- 48.10 Use access modifiers in a program to control visibility to variables and user-defined data types.
- 48.11 Explain the **this** reference and its uses.

49.0 Write .NET programs that define and use methods. – The student will be able to:

- 49.01 Identify the benefits of using methods.
- 49.02 Describe the different types of class methods and their purposes.
- 49.03 Create class methods that do and do not return values.
- 49.04 Write statements that invoke a method.
- 49.05 Create a method using arguments.
- 49.06 Invoke a method that has arguments.
- 49.07 Describe a method signature.
- 49.08 Describe the purpose of overloading methods.
- 49.09 Write programs that have overloaded methods.
- 49.10 Define methods that have default arguments.
- 49.11 Describe the conflict between overloaded methods and default arguments.
- 49.12 Explain the impact of using different access modifiers on class methods.
- 49.13 Write methods that use argument modifiers (*e.g.*, out, ref, byref, byval, const).
- 49.14

- 50.0 Write programs that perform console input and output in a .NET program. – The student will be able to:
- 50.01 Use the Console class to read and write data from the console.
  - 50.02 Write statements that use escape sequences.
  - 50.03 Write statements that format string and numeric output.
  - 50.04 Write statements that use the ToString method to output data.
  - 50.05
- 51.0 Use namespaces in a .NET program. – The student will be able to:
- 51.01 Compare and contrast assemblies and namespaces.
  - 51.02 Describe the use of namespaces in .NET programming.
  - 51.03 Describe commonly used .NET namespaces (e.g., System, System.IO, System.Collections, System.Drawing, etc.).
  - 51.04 Identify the correct namespace to include for specified classes.
  - 51.05 Write programs that define a namespace.
  - 51.06 Create namespaces that abide by standard naming convention.
- 52.0 Use arrays in .NET programs. – The student will be able to:
- 52.01 Write statements to declare and initialize an array.
  - 52.02 Demonstrate the use of initializer lists.
  - 52.03 Write methods that take an array as an argument.
  - 52.04 Write methods that return an array to the calling method.
  - 52.05 Write statements to update, and destroy arrays.
  - 52.06 Explain linear and binary searching.
  - 52.07 Use the static methods of the Array class to perform searches, binary searches, and sorts.
  - 52.08 Demonstrate the use of multidimensional arrays.
  - 52.09 Demonstrate the use of jagged arrays (array of arrays).
- 53.0 Write .NET programs that use the object-oriented concept of inheritance. – The student will be able to:
- 57.01 Explain the purpose and use of inheritance in object oriented programming.
  - 53.01 Compare and contrast single and multiple inheritance.
  - 53.02 Explain the purpose and implementation of classes that cannot serve as a base class (a sealed class).
  - 53.03 Describe has-a and is-a relationships.
  - 53.04 Create class hierarchies using inheritance.
  - 53.05 Declare and use a class derived from another class (implementing an is-a relationship).
  - 53.06 Declare and use a class where the derived class overrides methods of the base class.
  - 53.07 Declare and use a class that contains another class as a data member (implementing a has-a relationship).
  - 53.08 Write statements that determine at run time whether an instance of a class is derived from a specific base class or interface.
  - 53.09 Write statements that invoke a method of the base class from a derived class.
  - 53.10 Identify which class methods can be inherited and which cannot.

- 53.11 Explain how access modifiers affect the inheritance of class variables and methods.
- 54.0 Write .NET programs that use the object-oriented concept of polymorphism. – The student will be able to:
- 54.01 Explain the purpose and implementation of classes that cannot be instantiated (an abstract class).
  - 54.02 Explain the purpose and implementation of virtual class methods that must be overridden by derived classes.
  - 54.03 Explain the use of abstract classes in enforcing polymorphism.
  - 54.04 Create an abstract class.
  - 54.05 Create classes that derive from an abstract class.
  - 54.06 Create a program that uses polymorphism.
- 55.0 Write .NET programs that use the object-oriented concept of encapsulation. – The student will be able to:
- 55.01 Define and use classes that use access modifiers (e.g., private, public, protected, internal, internal protected) to provide encapsulation of data.
  - 55.02 Explain the restrictions on using accessibility levels.
  - 55.03 Compare and contrast different types of variable scope, including block, procedure, module/class, and project scope.
  - 55.04 Compare and contrast different types of method scope, including public, private, protected, friend, and protectedfriend.
  - 55.05 Write programs that use local variables.
  - 55.06 Describe the scope of a given variable.
  - 55.07 Describe how the compiler uses scope to distinguish between variables with the same name.
  - 55.08 Explain the purpose and use of static classes, variables and methods.
  - 55.09 Write programs that create and use static classes, variables, and methods.
- 56.0 Apply common programming style guidelines and conventions. – The student will be able to:
- 56.01 List examples of good programming practices.
  - 56.02 Insert comments into code.
  - 56.03 Follow formatting guidelines when writing code.
  - 56.04 Define guidelines for declaring and initializing variables.
- 57.0 Use application life cycle management to develop and maintain .NET programs. – The student will be able to:
- 57.01 Describe the stages in the life cycle of an application.
  - 57.02 Describe tools used to manage each stage in the life cycle of an application and how each is used to ensure the integrity of the product.
  - 57.03 Describe how the needs of the customer affect the development of an application.
  - 57.04 Describe the different types of testing that are performed on an application.
  - 57.05 Describe the role of tools such as UML (Unified Modeling Language) in ensuring the integrity of the application.

- 57.06 Describe different types of UML diagrams and guidelines for their use.
  - 57.07 Develop a class based on its description in a UML diagram.
  - 57.08 Read an application specification and translate it into a working program.
  - 57.09 Describe the characteristics of different types of application development (e.g., Agile development).
  - 57.10 Compare and contrast different methodologies for application development (e.g., Scrum, XP, Crystal, FDD, and DSDM).
  - 57.11 Describe different methods for deploying applications.
- 58.0 Use nullable values in a .NET program. – The student will be able to:
- 58.01 Describe the use of nullable value types.
  - 58.02 Describe the use of the null value in .NET programs.
  - 58.03 Write statements to declare and initialize nullable value types.
  - 58.04 Write statements to determine if a nullable value type currently has a value.
- 59.0 Use the .NET String and StringBuilder classes in an application. – The student will be able to:
- 59.01 Compare and contrast the String and StringBuilder classes.
  - 59.02 Identify the performance implications of using the String and StringBuilder classes for different purposes.
  - 59.03 Use the methods of the String class to compare, search, format, split and join strings.
  - 59.04 Use the methods of the String and StringBuilder classes to find, replace, delete, and insert substrings.
  - 59.05 Use the methods of the String class to translate a string into uppercase or lowercase.
  - 59.06 Use culture information to modify strings.
- 60.0 Use .NET classes to perform stream input/output. – The student will be able to:
- 60.01 Compare and contrast .NET classes used to perform file input/output (e.g., StreamReader, StreamWriter, StringReader, StringWriter, MemoryStream, BinaryReader, BinaryWriter, etc.).
  - 60.02 Compare and contrast .NET classes used to manipulate files and directories (e.g., Directory, DirectoryInfo, File, FileInfo, Path, etc.)
  - 60.03 Use .NET classes to search, add, and delete directories.
  - 60.04 Use .NET classes to search, add, and delete files.
  - 60.05 Use .NET classes to read and write text to a file.
  - 60.06 Use .NET classes to read and write objects of a variety of types to a file.
  - 60.07 Use .NET classes to read and write binary data to a file.
  - 60.08 Compare and contrast .NET classes used to compress data (e.g., GZipStream, DeflateStream).
  - 60.09 Use .NET classes to read and write compressed data to a file.
- 61.0 Use recursive functions to solve problems in .NET programs. – The student will be able to:
- 61.01 Describe the use of recursive methods in solving problems.
  - 61.02 Describe the difference of iterative and recursive methods.

- 61.03 Demonstrate the use of direct recursion.
  - 61.04 Demonstrate the use of indirect recursion
- 62.0 Write .NET programs that use interfaces. – The student will be able to:
- 62.01 Describe interfaces and their use in .NET programming.
  - 62.02 Declare and use a class that implements a standard interface.
  - 62.03 Compare and contrast inheritance from a base class and inheritance of an interface.
  - 62.04 Identify common interfaces and their purposes (e.g., IComparable, IComparer, IEquatable, IDisposable, IFormattable, IConvertible, etc.).
  - 62.05 Define and use a custom interface.
  - 62.06 Write classes that implement common interfaces (e.g., IComparable, IComparer, IEquatable, IDisposable, IFormattable, IConvertible, etc.).
  - 62.07 Describe the program to interface principle and its benefits.
- 63.0 Use .NET collections in applications. – The student will be able to:
- 63.01 Compare and contrast common non-generic collection classes, including ArrayList, BitArray, HashTable, Queue, and Stack.
  - 63.02 Write programs that use common non-generic collection classes.
  - 63.03 Compare and contrast non-generic collection classes to generic collection classes.
  - 63.04 Compare and contrast common generic collection classes, including Dictionary, LinkedList, Queue, SortedDictionary, SortedList, and Stack.
  - 63.05 Write programs that use common generic collection classes.
  - 63.06 Identify the collection class that is the best choice for different application requirements.
  - 63.07 Use iterators to access individual members of different types of collections.
  - 63.08 Use standard methods to add, delete, and modify members of different types of collections.
  - 63.09 Write statements to access members of a dictionary based on a key.
  - 63.10 Write statements to determine the existence of members of a dictionary based on a key or a value.
- 64.0 Demonstrate knowledge of different types of .NET applications. – The student will be able to:
- 64.01 Compare and contrast different types of .NET applications (e.g., Console, Windows Form, WPF, Windows Service, Class Library, Web, and database).
  - 64.02 Choose the best type of application to develop for a given application scenario.
  - 64.03 Describe the characteristics and capabilities of a console application.
  - 64.04 Develop, test, and debug a console application.
  - 64.05 Write a console application that uses command-line arguments.
- 65.0 Demonstrate knowledge of .NET architecture and tools. – The student will be able to:
- 65.01 Describe components of the .NET architecture, including the Common Language Runtime (CLR), just-in-time (JIT) compiler, intermediate language (IL), etc.).
  - 65.02 Describe the steps required for a managed assembly to be built and run in the .NET environment.

- 65.03 Compile single-file and multi-file assemblies using command-line tools.
  - 65.04 Describe common command-line tools used in developing .NET applications (e.g., Al.exe, Caspol.exe, Ildasm.exe, Makecert.exe, Sn.exe, Gacutil.exe, etc.) and their purposes.
  - 65.05 Use a signing tool to sign an assembly.
  - 65.06 Use a disassembly tool to view the classes, members, and methods of an assembly.
  - 65.07 Describe the garbage collection process.
- 66.0 Demonstrate knowledge of Web applications. – The student will be able to:
- 66.01 Describe the Web as a platform for applications.
  - 66.02 Compare and contrast static and dynamic content.
  - 66.03 Describe how Web pages are loaded to a computer from the Internet including the hardware, software, servers, and protocols required.
  - 66.04 Compare and contrast server-side and client-side programming.
  - 66.05 Describe how a Web browser downloads and renders a Web page.
  - 66.06 Describe options and methodology for Web site deployment.
  - 66.07 Compare and contrast different Web development technologies, including HTML, CSS, JavaScript, CGI scripts, XML, and ASP.NET.
  - 66.08 Describe common Web page terminology (e.g., page life cycle, the Web page event model, Web Page state management, cookies, virtual directories, etc.).
  - 66.09 Define the steps in the page life cycle of an ASP.NET Web page.
  - 66.10 Describe state management as it related to maintenance of page information.
  - 66.11 Describe how Web services are accessed from a client application.
  - 66.12 Describe thePostBack mechanism for posting data to a Web page using ASP.NET.
  - 66.13 Describe the role of Internet Information Services (IIS).
  - 66.14 Describe the role of Internet Service Providers (ISP) and the services they provide.
  - 66.15 Describe Web services and related tools (e.g., Extensible Markup Language (XML), Simple Object Access Protocol (SOAP) and Web Service Definition Language (WSDL)).
  - 66.16 Describe the characteristics and purposes of Application objects and Session objects that are maintained by the ASP.NET run-time engine.
  - 66.17 Describe the common ASP.NET events for applications and sessions (i.e., application start, application end, application error, session start, and session end).
  - 66.18 Describe entities that define standards for Internet applications (e.g., WS3, OASIS, WS-I, etc.).
- 67.0 Develop Web pages using HTML, CSS, JavaScript, and ASP.NET. – The student will be able to:
- 67.01 Describe the characteristics and capabilities of a Web application.
  - 67.02 Develop Web pages using HTML (Hyper-text Markup Language) that include commonly used tags to define Web pages with hyperlinks, tables, text, headings, images, backgrounds, and frames.
  - 67.03 Develop Web pages using CSS (cascading style sheets) to define a uniform appearance across multiple Web pages.

- 67.04 Develop Web pages using JavaScript to define and implement interactive content.
  - 67.05 Define and use functions in JavaScript.
  - 67.06 Define and use local and global variables using JavaScript.
  - 67.07 Use conditional operators in JavaScript to selectively perform specific function.
  - 67.08 Use Boolean conditions in JavaScript to selectively perform with multiple conditions.
  - 67.09 Use JavaScript loops to perform iteration.
  - 67.10 Use string objects and escape sequences in a JavaScript.
  - 67.11 Use JavaScript to access, use, and modify HTML elements.
  - 67.12 Use JavaScript to handle common events, including mouse events, key events, and page events.
  - 67.13 Use JavaScript to create and manage forms within a Web page.
  - 67.14 Develop Web pages that use ASP.NET to provide interactivity.
  - 67.15 Describe standards for making Web pages accessible to individuals with disabilities.
  - 67.16 Develop Web pages that conform to accessibility standards.
- 68.0 Develop .NET Windows Form applications. – The student will be able to:
- 68.01 Describe the characteristics and capabilities of a Windows Forms application.
  - 68.02 Compare and contrast common objects used in Windows Forms applications (e.g., Button, CheckBox, ColorDialog, ComboBox, DateTimePicker, GroupBox, Label, LinkLabel, ListBox, MenuStrip, Panel, PictureBox, RadioButton, ToolTip, etc.).
  - 68.03 Develop an interactive Windows Forms application that uses a variety of objects for input and output.
  - 68.04 Perform data validation on input fields.
  - 68.05 Describe the Windows Forms event model.
  - 68.06 Create Windows Forms application that respond to common events, including mouse events, keyboard events, load events, click events, resize events, and drag events.
  - 68.07 Define Windows Forms applications with graphical user interfaces (GUI) that conform to appropriate usability guidelines.
  - 68.08 Create Windows Forms applications that use Multiple Document Interface (MDI) and Single Document Interface (SDI).
  - 68.09 Describe visual inheritance.
  - 68.10 Develop a Windows Forms application that inherits a form from a base application.
- 69.0 Develop Windows Service applications and class libraries. – The student will be able to:
- 69.01 Describe the characteristics and capabilities of a Windows Service application.
  - 69.02 Describe the states in the lifetime of a service.
  - 69.03 Describe the ServiceBase and ServiceController classes and their role in developing and controlling Windows Service applications.
  - 69.04 Develop a Windows Service application.
  - 69.05 Develop an installer for a Windows Service application.
  - 69.06 Install and deploy a Windows Service application.
  - 69.07 Test and debug a Windows Service application.
  - 69.08 Uninstall a Windows Service application.

- 69.09 Develop, test, and debug a Class Library.
- 70.0 Demonstrate knowledge of database applications. – The student will be able to:
- 70.01 Explain common database terminology (e.g., relationships, normalization, fields, records, data integrity, referential integrity, etc.).
  - 70.02 Describe the benefits and characteristics of relational databases.
  - 70.03 Define primary keys and foreign keys and describe their purposes.
  - 70.04 Explain how database design fits into the database application development process.
  - 70.05 Translate an entity-relationship model into a relational database design.
  - 70.06 Differentiate between one-to-one, one-to-many, and many-to-many relationships.
  - 70.07 Move data from an unnormalized form through to a third normal form.
  - 70.08 Based on information requirements, define database tables that ensure data integrity and reduce redundant data.
  - 70.09 Describe routine maintenance for databases.
- 71.0 Demonstrate knowledge of structured query language (SQL) statements. – The student will be able to:
- 71.01 Describe the data manipulation language (DML) and describe various DML statements.
  - 71.02 List the capabilities of SQL SELECT statements.
  - 71.03 Write and execute a basic SELECT statement.
  - 71.04 Write and execute SELECT statements using the WHERE clause with common operators (*i.e.*, =, <>, >, <, >=, <=, BETWEEN, LIKE, IN).
  - 71.05 Write and execute SELECT statements using the WHERE clause with logical operators, including AND and OR.
  - 71.06 Write and execute SELECT statements using the ORDER BY clause.
  - 71.07 Write and execute SELECT statements using wildcards.
  - 71.08 Write and execute UPDATE statements to modify rows in a table.
  - 71.09 Write and execute INSERT statements to insert rows into a table.
  - 71.10 Write and execute DELETE statements to delete rows in a table.
  - 71.11 Write and execute statements using JOIN to select data from two or more related tables.
  - 71.12 Write and execute statements that use SQL to perform common calculations (*e.g.*, AVG, MAX, MIN, SUM, etc.).
- 72.0 Develop .NET database applications. – The student will be able to:
- 72.01 Describe the purpose of ActiveX Data Objects (ADO).
  - 72.02 Describe the purpose of the ADO connection object.
  - 72.03 Write statements to connect to a database.
  - 72.04 Write statements to open a database.
  - 72.05 Write statements to create a recordset.
  - 72.06 Write statements to commit a transaction to a database.
  - 72.07 Write statements to rollback a transaction to a database.
  - 72.08 Write statements to close a connection to a database.
  - 72.09 Develop, test, and debug a database application.
  - 72.10 Develop, test, and debug a WPF application.

- 73.0 Successfully work as a member of a software development team. – The student will be able to:
- 73.1 Accept responsibility for specific tasks in a given situation.
  - 73.2 Document progress, and provide feedback on work accomplished in a timely manner.
  - 73.3 Complete assigned tasks in a timely and professional manner.
  - 73.4 Reassign responsibilities when the need arises.
  - 73.5 Complete daily tasks as assigned on one's own initiative.
- 74.0 Manage time according to a plan. – The student will be able to:
- 74.1 Set realistic time frames and schedules.
  - 74.2 Keep a written record of work accomplished on a daily basis.
  - 74.3 Meet goals and objectives set by the team.
  - 74.4 Identify individual priorities.
  - 74.5 Complete a weekly evaluation of accomplishments, and reevaluate goals, objectives and priorities, as needed.
- 75.0 Keep acceptable records of progress problems and solutions. – The student will be able to:
- 75.1 Develop and use a record keeping system to record daily progress.
  - 75.2 Use a project journal to identify problem statement
  - 75.3 Develop a portfolio of work accomplished to include requirements documents, design documents and UML, project and test plans, and prototypes.
- 76.0 Plan, organize, and carry out a project plan. – The student will be able to:
- 76.1 Identify a substantive problem that can be addressed with a .NET software solution.
  - 76.2 Identify and document the potential customers for the project.
  - 76.3 Identify and document the customer requirements for the project including use case definitions.
  - 76.4 Document the proposed user interface for the project using common tools (e.g., mockups, event planning documents, etc.).
  - 76.5 Identify the hardware and software requirements for the project.
  - 76.6 Identify the programming tools required to develop the project.
  - 76.7 Write a detailed design document for the project.
  - 76.8 Write a detailed test plan for the project that addresses varying levels of testing including system testing and usability testing.
  - 76.9 Determine the scope of a project.
  - 76.10 Organize the team according to individual strengths.
  - 76.11 Assign specific tasks within a team.
  - 76.12 Determine project priorities.
  - 76.13 Identify required resources to complete the project.
  - 76.14 Plan, research, design, develop, and evaluate activities, as required.
  - 76.15 Carry out the project plan to successful completion.
  - 76.16 Document design problems, test results, product defects, and resolutions.
- 77.0 Manage resources. – The student will be able to:

- 77.1 Identify required resources for each stage of the project plan.
  - 77.2 Determine the methods needed to acquire needed resources.
  - 77.3 Demonstrate good judgment in the use of resources.
  - 77.4 Recycle and reuse resources where appropriate.
  - 77.5 Demonstrate an understanding of proper legal and ethical treatment of copyrighted material.
- 78.0 Use tools, materials, and processes in an appropriate and safe manner. – The student will be able to:
- 78.1 Identify the proper tool for a given job.
  - 78.2 Use tools and machines in a safe manner.
  - 78.3 Adhere to laboratory or job site safety rules and procedures.
  - 78.4 Identify the application of processes appropriate to the task at hand.
  - 78.5 Identify materials appropriate to their application.
- 79.0 Demonstrate an understanding of the software development process. – The student will be able to:
- 79.1 State the goals of the software application clearly.
  - 79.2 Identify and write a plan to achieve each goal.
  - 79.3 Develop a list of materials and content required for each goal.
  - 79.4 Develop a step-by-step procedure for developing the application.
  - 79.5 Follow a written procedure.
  - 79.6 Record data from evaluation activities.
  - 79.7 Document conclusions and solutions based on evaluation results, observations and data.
  - 79.8 Document progress using a project log.
  - 79.9 Write an abstract describing the project plan.
- 80.0 Research content related to the project and document the results following industry conventions. – The student will be able to:
- 80.1 Identify the basic research needed to develop the project plan.
  - 80.2 Identify available resources for completing background research required in the project plan.
  - 80.3 Demonstrate the ability to locate resource materials in a library, database, Internet and other research resources.
  - 80.4 Demonstrate the ability to organize information retrieval.
  - 80.5 Demonstrate the ability to prepare a topic outline.
  - 80.6 Write a draft of the research report.
  - 80.7 Edit and proof the research report. Use proper form for a bibliography, footnotes, quotations, and references.
  - 80.8 Prepare an electronically composed research paper in proper form.
  - 80.9 Conduct an alpha and beta evaluation of the project's product.
  - 80.10 Write a report on the evaluations, documenting results, data, observations, and design changes based on the results.
- 81.0 Use presentation skills, and appropriate media to describe the progress, results and outcomes of the experience. – The student will be able to:

- 81.1 Prepare a multi-media presentation on the completed project.
  - 81.2 Make an oral presentation about the project using the multi-media materials.
  - 81.3 Review the presentation, and make changes in the delivery method(s) to improve presentation skills.
- 82.0 Demonstrate competency in the area of expertise related to developing computer software using the .NET framework. – The student will be able to:
- 82.1 Demonstrate a mastery of the content of the selected subject area.
  - 82.2 Demonstrate the ability to use related technological tools, materials and processes related to the specific program area.
  - 82.3 Demonstrate the ability to apply the knowledge, experience and skill developed in the previous program completion to the successful completion of this demonstration.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Introduction to Information Technology  
**Course Number:** 8207310  
**Course Credit:** 1

**Course Description:**

This course is designed to provide an introduction to information technology concepts and careers as well as the impact information technology has on the world, people, and industry and basic web design concepts. The content includes information technology career research; operating systems and software applications; electronic communications including e-mail and Internet services; basic HTML, DHTML, and XML web commands and design; emerging technologies, and Web page design.

Standards included in this course of instruction have been aligned to the academic courses shown below. This table shows the number of aligned benchmarks, the total number of academic benchmarks, and the percentage of alignment.

Math		Science					
<b>Algebra 1</b>	6/36 17%	<b>Biology 1</b>	2/56 4%	<b>Anatomy/Physiology Honors</b>	2/53 4%	<b>Astronomy Solar/Galactic Honors</b>	2/52 4%
<b>Algebra 2</b>	2/41 5%	<b>Chemistry 1</b>	2/55 4%	<b>Genetics</b>	2/35 6%	<b>Marine Science 1 Honors</b>	2/42 5%
<b>Geometry</b>	1/45 2%	<b>Physics 1</b>	2/53 4%	<b>Earth-Space Science</b>	2/58 3%	<b>Physical Science</b>	2/56 4%

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Develop keyboarding skills to enter and manipulate text and data.
- 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.03 Identify and describe communications and networking systems used in workplace environments.
- 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.06 Describe ethical issues and problems associated with computers and information systems.

02.0 Demonstrate comprehension and communication skills. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2; MA.912.D.8.1; MA.912.A.3.15; MA.912.G.8.2.

- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
- 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
- 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
- 02.04 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
- 02.05 Apply the writing process to the creation of appropriate documents following designated business formats.
- 02.06 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).

- 03.0 Use technology to enhance the effectiveness of communication skills —The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.2.12.

- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.

- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.3.15.

- 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
- 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
- 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.

- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:

- 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).

05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).

06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:

06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.

07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.5.7; MA.912.F.5.2; MA.912.A.10.1; MA.912.A.10.2; MA.912.S.1.2; MA.912.S.3.2; MA.912.A.3.5; MA.912.G.8.2.

07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.

07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).

07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:

08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.

08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.

09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2.

09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).

- 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).

14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:

- 14.01 Identify and describe Web terminology.
- 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
- 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
- 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
- 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
- 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
- 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
- 14.08 Identify effective Boolean search strategies.

15.0 Demonstrate proficiency using html commands. – The student will be able to:

- 15.01 Identify elements of a Web page.
- 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
- 15.03 Define basic HTML terminology.
- 15.04 Analyze HTML source code developed by others.
- 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
- 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
- 15.07 Edit and test HTML documents for accuracy and validity.
- 15.08 Use basic functions of WYSIWYG editors.
- 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
- 15.10 Enhance web pages through the addition of images and graphics including animation.

16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:

- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
- 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
- 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
- 16.04 Use image design software to create and edit images.
- 16.05 Demonstrate proficiency in publishing to the Internet.
- 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
- 16.07 Explain the need for web-based applications.

- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.

- 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
- 22.05 Identify Intranets, Extranets and how they relate to the Internet.
- 22.06 Demonstrate basic understanding of network administration.
- 22.07 Describe the evolution of OSI from its inception to the present and into the future.
- 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
- 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
- 24.03 Demonstrate the ability to incorporate digital sound.
- 83.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 83.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
- 83.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
- 83.03 Present information formally and informally for specific purposes and audiences. AF2.9
- 84.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 84.01 Demonstrate knowledge of arithmetic operations. AF3.2
- 84.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
- 84.03 Construct charts/tables/graphs using functions and data. AF3.5
- 90.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 90.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
- 90.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
- 90.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0

90.04	Maintain a career portfolio to document knowledge, skills, and experience.	ECD 5.0
90.05	Evaluate and compare employment opportunities that match career goals.	ECD 6.0
90.06	Identify and exhibit traits for retaining employment.	ECD 7.0
90.07	Identify opportunities and research requirements for career advancement.	ECD 8.0
90.08	Research the benefits of ongoing professional development.	ECD 9.0
90.09	Examine and describe entrepreneurship opportunities as a career planning option.	ECD 10.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Foundations of Programming  
**Course Number:** 9007210  
**Course Credit:** 1

**Course Description:**

This course introduces concepts, techniques, and processes associated with computer programming and software development. After successful completion of Foundations of Programming and Procedural Programming, students will have met Occupational Completion Point B, Computer Programmer Assistant, SOC Code 15.1021.

25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development. – The student will be able to:

- 25.01 Describe the evolution of programming and programming careers.
- 25.02 Identify tasks performed by programmers.
- 25.03 Describe how businesses use computer programming to solve business problems.
- 25.04 Investigate job opportunities in the programming field.
- 25.05 Explain different specializations and the related training in the computer programming field.
- 25.06 Explain the need for continuing education and training of computer programmers.
- 25.07 Explain enterprise software systems and how they impact business.
- 25.08 Describe ethical responsibilities of computer programmers.
- 25.09 Describe the role of customer support to software program quality.
- 25.10 Identify credentials and certifications that may improve employability for a computer programmer.
- 25.11 Identify devices, tools, and other environments for which programmers may develop software.

26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types. – The student will be able to:

- 26.01 Identify the characteristics (e.g., size, limits) and uses of different numerical and non-numerical data types.
- 26.02 Explain the types and uses of variables in programs.
- 26.03 Determine the best data type to use for given programming problems.
- 26.04 Identify the types of operations that can be performed on different data types.
- 26.05 Evaluate arithmetic and logical expressions using appropriate operator precedence.
- 26.06 Explain how computers store different data types in memory.
- 26.07 Use different number systems to represent data.
- 26.08 Explain how national and international standards (i.e., ASCII, UNICODE) are used to represent non-numerical data.
- 26.09 Use Boolean logic to perform logical operations.

27.0 Distinguish between iterative and non-iterative program control structures.

- 27.01 Explain non-iterative programming structures (e.g., if, if/else, etc.) and their uses.
- 27.02 Explain iterative programming structures (e.g., while, do/while, etc.) and their uses.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages. – The student will be able to:
- 28.01 Identify the characteristics, uses, and limits of low-level programming languages.
- 28.02 Identify the characteristics, uses, and limits of high-level programming languages.
- 28.03 Identify the characteristics, uses, and limits of rapid development programming languages.
- 28.04 Describe object-oriented concepts.
- 28.05 Explain the characteristics of procedural and object-oriented programming languages.
- 28.06 Compare and contrast programming languages that are compiled (e.g., C++), interpreted (e.g., Basic, HTML), and translated (e.g., Java).
- 29.0 Describe the processes, methods, and conventions for software development and maintenance. – The student will be able to:
- 29.01 Describe and explain tools used in software development.
- 29.02 Describe the stages of the program life cycle.
- 29.03 Compare and contrast alternatives methods of program development (e.g., rapid prototyping, waterfall, etc.).
- 29.04 List and explain the steps in the program development cycle.
- 29.05 Describe different types of documentation used in the program development cycle (e.g., requirements document, program design documents, test plans, etc.).
- 29.06 Describe the on-going need for program maintenance.
- 29.07 Describe different methods companies use to facilitate program updates for enhancements and defects (e.g., how customers receive patches, updates, new versions, upgrades).
- 29.08 Describe different methods used to facilitate version control and change management.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control. – The student will be able to:
- 30.01 Explain the uses and limits of testing in ensuring program quality.
- 30.02 Explain testing performed at different stages of the program development cycle (e.g. unit testing, system testing, user acceptance testing, etc.).
- 30.03 Describe data and the use of test plans/scripts to be used in program testing.
- 30.04 Describe and identify types of programming errors (e.g., syntactical, logic, usability, requirements mismatch, etc.).
- 30.05 Identify the data to be used for boundary conditions.
- 30.06 Explain different types of testing (e.g., usability, automated, regression, etc.) and testing tools.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool. – The student will be able to:

- 31.01 Describe different design methodologies and their uses (e.g., object-oriented design, structured design, and rapid application development).
  - 31.02 Describe tools for developing a program design (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.03 Explain the role of existing libraries and packages in facilitating programmer productivity.
  - 31.04 Participate and contribute to a design review of a program design developed using a common program design tool (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.05 Write a program design document using UML or other standard design methodology.
  - 31.06 Define input and output for a program module using UML or other standard design methodology.
- 32.0 Describe information security risks, threats, and strategies associated with software development. – The student will be able to:
- 32.01 Explain the security risks to personal and business computer users.
  - 32.02 Identify different types of threats to computer systems.
  - 32.03 Identify methods to protect against different threats to computer systems.
  - 32.04 Understand the importance of a disaster / emergency response plan.
  - 32.05 Identify alternative methods for data storage and backup (e.g., mirroring, fail-over, high availability, types of backups).
- 85.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 85.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
  - 85.02 Locate, organize and reference written information from various sources. CM 3.0
  - 85.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
  - 85.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
  - 85.05 Apply active listening skills to obtain and clarify information. CM 7.0
  - 85.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
  - 85.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 86.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 86.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
  - 86.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
  - 86.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
  - 86.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 87.0 Use information technology tools. – The student will be able to:

- 87.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 87.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 87.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 87.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:**            **Procedural Programming**  
**Course Number:**       **9007220**  
**Course Credit:**         **1**

**Course Description:**

This course continues the study of computer programming concepts with a focus on the creation of software applications employing procedural programming techniques. After successful completion of Programming Foundations and Procedural Programming, students will have met Occupational Completion Point B, Computer Programmer Assistant, SOC Code 15.1021.

33.0 Design a computer program to meet specific physical, operational, and interaction criteria. – The student will be able to:

- 33.01 Choose appropriate data types depending on the needs of the program.
- 33.02 Define appropriate user interface prompts for clarity and usability (e.g., user guidance for data ranges, data types, etc.).
- 33.03 Design and develop program that are designed for efficiency (e.g., less memory usage, less inputs/outputs, faster processing, etc.).
- 33.04 Identify the software environment required for a program to run (e.g., operating system required, mobile, Web-based, desktop, delivery method, etc.).
- 33.05 Identify the tools required to develop a program (e.g., editors, compilers, linkers, integrated development environments, application programming interfaces (APIs), libraries, etc.).

34.0 Create and document a computer program that uses a variety of internal and control structures for manipulating varied data types. – The student will be able to:

- 34.01 Use appropriate naming conventions to define program variables and modules (methods, functions).
- 34.02 Use a program editor to write the source code for a program.
- 34.03 Write programs that use selection structures (e.g., if, if/else, etc.).
- 34.04 Write programs that use repetition structures (e.g., while, do/while, etc.).
- 34.05 Write programs that use nested structures.
- 34.06 Use internal documentation (e.g., single-line and multi-line comments, program headers, module descriptions, and meaningful variable and function/module names) to document a program according to accepted standards.
- 34.07 Compile and run programs.
- 34.08 Write programs that use standard arithmetic operators with different numerical data types.
- 34.09 Write programs that use standard logic operators.
- 34.10 Write programs that use a variety of common data types.
- 34.11 Write programs that perform data conversion between standard data types.
- 34.12 Write programs that define, use, search, and sort arrays.
- 34.13 Write programs that use user-defined data types.
- 34.14 Demonstrate understanding and use of appropriate variable scope.

- 35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input. – The student will be able to:
- 35.01 Write programs that perform user input and output.
  - 35.02 Write programs that validate user input (e.g., range checking, data formats, valid/invalid characters, etc.).
  - 35.03 Write program modules such as functions, subroutines, or methods.
  - 35.04 Write program modules that accept arguments.
  - 35.05 Write program modules that return values.
  - 35.06 Write program modules that validate arguments and return error codes.
  - 35.07 Write interactive programs.
  - 35.08 Write programs that use standard libraries to enhance program function.
  - 35.09 Participate in a peer code review to verify program functionality, programming styles, program usability, and adherence to common programming standards.
- 36.0 Create a unit test plan, implement the plan, and report the results of testing. – The student will be able to:
- 36.01 Write a unit test plan that identifies the input data and expected results for program tests.
  - 36.02 Test and debug programs, including programs written by others.
  - 36.03 Write a test report that identifies the results of testing.
  - 36.04 Trace through the function of a program to ensure valid operation.
  - 36.05 Identify the system resources used by the program (e.g., memory, disk space, execution time, external devices).
  - 36.06 Create a disaster / emergency response plan for a computer system.
- 88.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 88.01 Employ leadership skills to accomplish organizational goals and objectives. LT1.0
  - 88.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT3.0
  - 88.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 89.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 89.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
  - 89.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
  - 89.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Object-Oriented Programming Fundamentals  
**Course Number:** 9007230  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts with a focus on the creation of software applications employing object-oriented programming techniques. After successful completion of Object-Oriented Programming Fundamentals, students will have met Occupational Completion Point C, Computer Programmer, SOC Code 15.1021.

37.0 Explain key concepts that distinguish object-oriented programming from procedural programming. – The student will be able to:

- 37.01 Demonstrate the understanding and use of classes, objects, attributes, and behaviors.
- 37.02 Demonstrate the understanding and use of inheritance.
- 37.03 Demonstrate the understanding and use of data encapsulation.
- 37.04 Demonstrate the understanding and use of polymorphism.

38.0 Create a project plan for an object-oriented programming project that defines requirements, structural design, time estimates, and testing elements. – The student will be able to:

- 38.01 Write a project plan for completion of a project that includes gathering program requirements, developing the program, and testing it.
- 38.02 Write a program requirements document that identifies business purpose, functional requirements, system requirements, and other common components of a requirements document.
- 38.03 Design an object-oriented program using UML or another standard design methodology.
- 38.04 Work with other team members to develop a project plan for a program.
- 38.05 Work with other team members to write a design document for a program with multiple functions and shared data.
- 38.06 Participate in design meetings that review program design documents for conformance to program requirements.
- 38.07 Estimate the time to develop a program or module.

39.0 Design, document, and create object-oriented computer programs. – The student will be able to:

- 39.01 Compare and contrast recursive functions to other iterative methods.
- 39.02 Understand the implementation of character strings in the programming language.
- 39.03 Write programs that perform string processing (e.g., string manipulation, string compares, concatenation, etc.).
- 39.04 Write programs that use user-defined data types.

- 39.05 Write object-oriented programs that use inheritance.
  - 39.06 Write object-oriented programs that use polymorphism.
  - 39.07 Develop class constructors.
  - 39.08 Write programs that define and use program constants.
  - 39.09 Write programs that perform error handling.
  - 39.10 Participate in program code review meetings to evaluate program code for validity, quality, performance, data integrity, and conformance to program design documents.
  - 39.11 Write programs that perform dynamic memory allocation.
  - 39.12 Write programs that perform effective management of dynamically allocated memory.
  - 39.13 Update a program module to implement enhancements or corrections and demonstrate appropriate documentation (internal and external) related to version control.
  - 39.14 Write programs that use complex data structures (e.g., stacks, queues, trees, linked lists etc.).
  - 39.15 Write programs that are event-driven.
  - 39.16 Write programs that perform file input and output (i.e., sequential and random access file input/output).
  - 39.17 Perform basic database commands including connect, open, select, and close.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results. – The student will be able to:
- 40.01 Develop a test plan for an object-oriented program.
  - 40.02 Write test plans for event-driven programs.
  - 40.03 Write test plans for programs that perform file input and output.
  - 40.04 Perform test and debug activities on object-oriented programs, including those written by someone else.
  - 40.05 Perform test and debug activities on an event-driven program.
  - 40.06 Perform test and debug activities on programs that perform file input and output and verify the correctness of output files.
  - 40.07 Document the findings of testing in a test report.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** .NET Application Development Foundation  
**Course Number:** 9007410  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to the Internet and Internet-based software applications.

- 41.0 Develop an awareness of the changes taking place in the information age and how they fit into an evolving society. – The student will be able to:
- 41.01 Cite examples of jobs, salary, and opportunities he/she will have as a .NET programmer.
  - 41.02 Describe the role a database plays in a business.
  - 41.03 Explain the value of middleware, such as the .NET framework, in developing software applications.
  - 41.04 Understand the importance of clear communication when discussing business informational requirements.
- 42.0 Understand .NET primitive data types and their uses. – The student will be able to:
- 42.01 Describe how variables are used in programs.
  - 42.02 Identify the .NET built-in value types, their uses, and the ranges of values supported by each type.
  - 42.03 Identify the default values for built-in value types.
  - 42.04 Write statements that declare and initialize variables.
  - 42.05 Write statements that assign literal values to numeric types.
  - 42.06 Identify the .NET built-in reference types.
  - 42.07 Write statements that assign string literals to string types.
  - 42.08 Explain the memory size requirements for the various data storage types.
  - 42.09 Identify which types are stored on the heap and which are stored on the stack.
  - 42.10 Identify which data type should be used for a given purpose in a program.
  - 42.11 Write statements that create variables with values that cannot be changed (*i.e.*, *const*, *final*, etc.).
  - 42.12 Identify the syntax for declaring and initializing each of the built-in data types.
  - 42.13 Differentiate between implicit and explicit data type conversions.
  - 42.14 Describe when implicit data type conversions take place.
  - 42.15 Write statements that use explicit type conversion.
  - 42.16 List the drawbacks of implicit data type conversions.
  - 42.17 Compare and contrast boxing and unboxing.
  - 42.18 Describe the scope of a variable.
  - 42.19 Describe how the compiler uses scope to distinguish between variables with the same name.
- 43.0 Describe the types and characteristics of lexical units in the .NET programming language. – The student will be able to:

- 43.01 Describe the types of lexical units (e.g., keywords, directives, operators, etc.).
  - 43.02 Describe identifiers and identify valid and invalid identifiers.
  - 43.03 Describe and identify reserved words, delimiters, literals, and comments.
- 44.0 Construct statements that use various .NET operators. – The student will be able to:
- 44.01 Construct statements using arithmetic operators.
  - 44.02 Construct statements using relational operators.
  - 44.03 Construct and use statements using logical operators.
  - 44.04 Construct and use statements using assignment operators.
  - 44.05 Construct and execute statements using operator precedence.
  - 44.06 Construct and execute statements using methods and fields of the Math class.
- 45.0 Construct and use .NET selection control structures. – The student will be able to:
- 45.01 Construct and use an if structure in a program.
  - 45.02 Construct and use an if/else structure in a program.
  - 45.03 Construct and use multiple-selection structures (e.g., switch, elseif, select) in programs.
  - 45.04 Construct and use nested selection structures in a program.
  - 45.05 Construct and use a conditional operator.
- 46.0 Construct and use .NET iterative control structures. – The student will be able to:
- 46.01 Describe the types of iterative control structures and their uses.
  - 46.02 Construct and use a while structures (e.g., while, do/while, do/until) in a program.
  - 46.03 Construct and use a for structure in a program.
  - 46.04 Construct and use a control structure that iterates over each item in a collection (e.g., foreach, for/each/next).
  - 46.05 Describe the limits and advantages of different iterative control structure (i.e., while, do/while, for, foreach or for/each).
  - 46.06 Construct and use nested structures (iterative and selective) in a program.
  - 46.07 Write programs that alter the execution of program loops (e.g., break, continue, exit).
- 47.0 Construct and use .NET structures for error handling. – The student will be able to:
- 47.01 Describe the different types of software errors.
  - 47.02 Compare and contrast alternatives for handling errors.
  - 47.03 Write programs that validate user input and handle errors.
  - 47.04 Explain the correct method for using multiple catch blocks for exceptions.
  - 47.05 Explain the purpose of the finally block in exception handling.
  - 47.06 Write programs that handle exceptions using the try/catch/finally structure.
  - 47.07 Write programs with nested exception handling.
  - 47.08 Explain the concept of structured exception handling.
  - 47.09 Identify common exceptions and their causes.
  - 47.10 Explain the concept of throwing a new exception.
  - 47.11 Write programs that catch and re-throw exceptions.
  - 47.12 Write exception handlers that use characteristics of the exception argument in the program.

48.0 Write .NET programs that define and use user-defined data types, including classes. – The student will be able to:

- 48.01 Explain the concept of a user-defined data type.
- 48.02 Distinguish between structures and classes.
- 48.03 Identify the syntax for declaring enumerations and structures.
- 48.04 Write programs that use declare and use enumerations.
- 48.05 Write programs that declare and use structures.
- 48.06 Explain the characteristics of different class constructs including instance variables, properties, fields, methods, events, object references, and constructors.
- 48.07 Write programs that declare and use classes.
- 48.08 Distinguish between different types of classes, including base class, derived class, abstract class, and sealed class.
- 48.09 Explain the impact of using different access modifiers on user-defined data types.
- 48.10 Use access modifiers in a program to control visibility to variables and user-defined data types.
- 48.11 Explain the **this** reference and its uses.

49.0 Write .NET programs that define and use methods. – The student will be able to:

- 49.01 Identify the benefits of using methods.
- 49.02 Describe the different types of class methods and their purposes.
- 49.03 Create class methods that do and do not return values.
- 49.04 Write statements that invoke a method.
- 49.05 Create a method using arguments.
- 49.06 Invoke a method that has arguments.
- 49.07 Describe a method signature.
- 49.08 Describe the purpose of overloading methods.
- 49.09 Write programs that have overloaded methods.
- 49.10 Define methods that have default arguments.
- 49.11 Describe the conflict between overloaded methods and default arguments.
- 49.12 Explain the impact of using different access modifiers on class methods.
- 49.13 Write methods that use argument modifiers (e.g., out, ref, byref, byval, const).

50.0 Write programs that perform console input and output in a .NET program. – The student will be able to:

- 50.01 Use the Console class to read and write data from the console.
- 50.02 Write statements that use escape sequences.
- 50.03 Write statements that format string and numeric output.
- 50.04 Write statements that use the ToString method to output data.

51.0 Use namespaces in a .NET program. – The student will be able to:

- 51.01 Compare and contrast assemblies and namespaces.
- 51.02 Describe the use of namespaces in .NET programming.
- 51.03 Describe commonly used .NET namespaces (e.g., System, System.IO, System.Collections, System.Drawing, etc.).
- 51.04 Identify the correct namespace to include for specified classes.

- 51.05 Write programs that define a namespace.
  - 51.06 Create namespaces that abide by standard naming convention.
- 52.0 Use arrays in .NET programs. – The student will be able to:
- 52.01 Write statements to declare and initialize an array.
  - 52.02 Demonstrate the use of initializer lists.
  - 52.03 Write methods that take an array as an argument.
  - 52.04 Write methods that return an array to the calling method.
  - 52.05 Write statements to update, and destroy arrays.
  - 52.06 Explain linear and binary searching.
  - 52.07 Use the static methods of the Array class to perform searches, binary searches, and sorts.
  - 52.08 Demonstrate the use of multidimensional arrays.
  - 52.09 Demonstrate the use of jagged arrays (array of arrays).
- 53.0 Write .NET programs that use the object-oriented concept of inheritance. – The student will be able to:
- 53.01 Explain the purpose and use of inheritance in object oriented programming.
  - 53.02 Compare and contrast single and multiple inheritance.
  - 53.03 Explain the purpose and implementation of classes that cannot serve as a base class (a sealed class).
  - 53.04 Describe has-a and is-a relationships.
  - 53.05 Create class hierarchies using inheritance.
  - 53.06 Declare and use a class derived from another class (implementing an is-a relationship).
  - 53.07 Declare and use a class where the derived class overrides methods of the base class.
  - 53.08 Declare and use a class that contains another class as a data member (implementing a has-a relationship).
  - 53.09 Write statements that determine at run time whether an instance of a class is derived from a specific base class or interface.
  - 53.10 Write statements that invoke a method of the base class from a derived class.
  - 53.11 Identify which class methods can be inherited and which cannot.
  - 53.12 Explain how access modifiers affect the inheritance of class variables and methods.
- 54.0 Write .NET programs that use the object-oriented concept of polymorphism. – The student will be able to:
- 54.01 Explain the purpose and implementation of classes that cannot be instantiated (an abstract class).
  - 54.02 Explain the purpose and implementation of virtual class methods that must be overridden by derived classes.
  - 54.03 Explain the use of abstract classes in enforcing polymorphism.
  - 54.04 Create an abstract class.
  - 54.05 Create classes that derive from an abstract class.
  - 54.06 Create a program that uses polymorphism.

- 55.0 Write .NET programs that use the object-oriented concept of encapsulation. – The student will be able to:
- 55.01 Define and use classes that use access modifiers (e.g., private, public, protected, internal, internal protected) to provide encapsulation of data.
  - 55.02 Explain the restrictions on using accessibility levels.
  - 55.03 Compare and contrast different types of variable scope, including block, procedure, module/class, and project scope.
  - 55.04 Compare and contrast different types of method scope, including public, private, protected, friend, and protectedfriend.
  - 55.05 Write programs that use local variables.
  - 55.06 Describe the scope of a given variable.
  - 55.07 Describe how the compiler uses scope to distinguish between variables with the same name.
  - 55.08 Explain the purpose and use of static classes, variables and methods.
  - 55.09 Write programs that create and use static classes, variables, and methods.
- 56.0 Apply common programming style guidelines and conventions. – The student will be able to:
- 56.01 List examples of good programming practices.
  - 56.02 Insert comments into code.
  - 56.03 Follow formatting guidelines when writing code.
  - 56.04 Define guidelines for declaring and initializing variables.
- 57.0 Use application life cycle management to develop and maintain .NET programs. – The student will be able to:
- 57.01 Describe the stages in the life cycle of an application.
  - 57.02 Describe tools used to manage each stage in the life cycle of an application and how each is used to ensure the integrity of the product.
  - 57.03 Describe how the needs of the customer affect the development of an application.
  - 57.04 Describe the different types of testing that are performed on an application.
  - 57.05 Describe the role of tools such as UML (Unified Modeling Language) in ensuring the integrity of the application.
  - 57.06 Describe different types of UML diagrams and guidelines for their use.
  - 57.07 Develop a class based on its description in a UML diagram.
  - 57.08 Read an application specification and translate it into a working program.
  - 57.09 Describe the characteristics of different types of application development (e.g., Agile development).
  - 57.10 Compare and contrast different methodologies for application development (e.g., Scrum, XP, Crystal, FDD, and DSDM).
  - 57.11 Describe different methods for deploying applications.
- 58.0 Use nullable values in a .NET program. – The student will be able to:
- 58.01 Describe the use of nullable value types.
  - 58.02 Describe the use of the null value in .NET programs.
  - 58.03 Write statements to declare and initialize nullable value types.
  - 58.04 Write statements to determine if a nullable value type currently has a value.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** .NET Application Development Applied  
**Course Number:** 9007420  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to the Internet and Internet-based software applications.

59.0 Use the .NET String and StringBuilder classes in an application. – The student will be able to:

- 59.01 Compare and contrast the String and StringBuilder classes.
- 59.02 Identify the performance implications of using the String and StringBuilder classes for different purposes.
- 59.03 Use the methods of the String class to compare, search, format, split and join strings.
- 59.04 Use the methods of the String and StringBuilder classes to find, replace, delete, and insert substrings.
- 59.05 Use the methods of the String class to translate a string into uppercase or lowercase.
- 59.06 Use culture information to modify strings.

60.0 Use .NET classes to perform stream input/output. – The student will be able to:

- 60.01 Compare and contrast .NET classes used to perform file input/output (e.g., StreamReader, StreamWriter, StringReader, StringWriter, MemoryStream, BinaryReader, BinaryWriter, etc.).
- 60.02 Compare and contrast .NET classes used to manipulate files and directories (e.g., Directory, DirectoryInfo, File, FileInfo, Path, etc.)
- 60.03 Use .NET classes to search, add, and delete directories.
- 60.04 Use .NET classes to search, add, and delete files.
- 60.05 Use .NET classes to read and write text to a file.
- 60.06 Use .NET classes to read and write objects of a variety of types to a file.
- 60.07 Use .NET classes to read and write binary data to a file.
- 60.08 Compare and contrast .NET classes used to compress data (e.g., GZipStream, DeflateStream).
- 60.09 Use .NET classes to read and write compressed data to a file.

61.0 Use recursive functions to solve problems in .NET programs. – The student will be able to:

- 61.01 Describe the use of recursive methods in solving problems.
- 61.02 Describe the difference of iterative and recursive methods.
- 61.03 Demonstrate the use of direct recursion.
- 61.04 Demonstrate the use of indirect recursion

- 62.0 Write .NET programs that use interfaces. – The student will be able to:
- 62.01 Describe interfaces and their use in .NET programming.
  - 62.02 Declare and use a class that implements a standard interface.
  - 62.03 Compare and contrast inheritance from a base class and inheritance of an interface.
  - 62.04 Identify common interfaces and their purposes (e.g., IComparable, IComparer, IEquatable, IDisposable, IFormattable, IConvertible, etc.).
  - 62.05 Define and use a custom interface.
  - 62.06 Write classes that implement common interfaces (e.g., IComparable, IComparer, IEquatable, IDisposable, IFormattable, IConvertible, etc.).
  - 62.07 Describe the program to interface principle and its benefits.
- 63.0 Use .NET collections in applications. – The student will be able to:
- 63.01 Compare and contrast common non-generic collection classes, including ArrayList, BitArray, HashTable, Queue, and Stack.
  - 63.02 Write programs that use common non-generic collection classes.
  - 63.03 Compare and contrast non-generic collection classes to generic collection classes.
  - 63.04 Compare and contrast common generic collection classes, including Dictionary, LinkedList, Queue, SortedDictionary, SortedList, and Stack.
  - 63.05 Write programs that use common generic collection classes.
  - 63.06 Identify the collection class that is the best choice for different application requirements.
  - 63.07 Use iterators to access individual members of different types of collections.
  - 63.08 Use standard methods to add, delete, and modify members of different types of collections.
  - 63.09 Write statements to access members of a dictionary based on a key.
  - 63.10 Write statements to determine the existence of members of a dictionary based on a key or a value.
- 64.0 Demonstrate knowledge of different types of .NET applications. – The student will be able to:
- 64.01 Compare and contrast different types of .NET applications (e.g., Console, Windows Form, WPF, Windows Service, Class Library, Web, and database).
  - 64.02 Choose the best type of application to develop for a given application scenario.
  - 64.03 Describe the characteristics and capabilities of a console application.
  - 64.04 Develop, test, and debug a console application.
  - 64.05 Write a console application that uses command-line arguments.
- 65.0 Demonstrate knowledge of .NET architecture and tools. – The student will be able to:
- 65.01 Describe components of the .NET architecture, including the Common Language Runtime (CLR), just-in-time (JIT) compiler, intermediate language (IL), etc.).
  - 65.02 Describe the steps required for a managed assembly to be built and run in the .NET environment.
  - 65.03 Compile single-file and multi-file assemblies using command-line tools.

- 65.04 Describe common command-line tools used in developing .NET applications (e.g., Al.exe, Caspol.exe, Ildasm.exe, Makecert.exe, Sn.exe, Gacutil.exe, etc.) and their purposes.
  - 65.05 Use a signing tool to sign an assembly.
  - 65.06 Use a disassembly tool to view the classes, members, and methods of an assembly.
  - 65.07 Describe the garbage collection process.
- 66.0 Demonstrate knowledge of Web applications. – The student will be able to:
- 66.01 Describe the Web as a platform for applications.
  - 66.02 Compare and contrast static and dynamic content.
  - 66.03 Describe how Web pages are loaded to a computer from the Internet including the hardware, software, servers, and protocols required.
  - 66.04 Compare and contrast server-side and client-side programming.
  - 66.05 Describe how a Web browser downloads and renders a Web page.
  - 66.06 Describe options and methodology for Web site deployment.
  - 66.07 Compare and contrast different Web development technologies, including HTML, CSS, JavaScript, CGI scripts, XML, and ASP.NET.
  - 66.08 Describe common Web page terminology (e.g., page life cycle, the Web page event model, Web Page state management, cookies, virtual directories, etc.).
  - 66.09 Define the steps in the page life cycle of an ASP.NET Web page.
  - 66.10 Describe state management as it related to maintenance of page information.
  - 66.11 Describe how Web services are accessed from a client application.
  - 66.12 Describe thePostBack mechanism for posting data to a Web page using ASP.NET.
  - 66.13 Describe the role of Internet Information Services (IIS).
  - 66.14 Describe the role of Internet Service Providers (ISP) and the services they provide.
  - 66.15 Describe Web services and related tools (e.g., Extensible Markup Language (XML), Simple Object Access Protocol (SOAP) and Web Service Definition Language (WSDL)).
  - 66.16 Describe the characteristics and purposes of Application objects and Session objects that are maintained by the ASP.NET run-time engine.
  - 66.17 Describe the common ASP.NET events for applications and sessions (i.e., application start, application end, application error, session start, and session end).
  - 66.18 Describe entities that define standards for Internet applications (e.g., WS3, OASIS, WS-I, etc.).
- 67.0 Develop Web pages using HTML, CSS, JavaScript, and ASP.NET. – The student will be able to:
- 67.01 Describe the characteristics and capabilities of a Web application.
  - 67.02 Develop Web pages using HTML (Hyper-text Markup Language) that include commonly used tags to define Web pages with hyperlinks, tables, text, headings, images, backgrounds, and frames.
  - 67.03 Develop Web pages using CSS (cascading style sheets) to define a uniform appearance across multiple Web pages.
  - 67.04 Develop Web pages using JavaScript to define and implement interactive content.

- 67.05 Define and use functions in JavaScript.
  - 67.06 Define and use local and global variables using JavaScript.
  - 67.07 Use conditional operators in JavaScript to selectively perform specific function.
  - 67.08 Use Boolean conditions in JavaScript to selectively perform with multiple conditions.
  - 67.09 Use JavaScript loops to perform iteration.
  - 67.10 Use string objects and escape sequences in a JavaScript.
  - 67.11 Use JavaScript to access, use, and modify HTML elements.
  - 67.12 Use JavaScript to handle common events, including mouse events, key events, and page events.
  - 67.13 Use JavaScript to create and manage forms within a Web page.
  - 67.14 Develop Web pages that use ASP.NET to provide interactivity.
  - 67.15 Describe standards for making Web pages accessible to individuals with disabilities.
  - 67.16 Develop Web pages that conform to accessibility standards.
- 68.0 Develop .NET Windows Form applications. – The student will be able to:
- 68.01 Describe the characteristics and capabilities of a Windows Forms application.
  - 68.02 Compare and contrast common objects used in Windows Forms applications (e.g., Button, CheckBox, ColorDialog, ComboBox, DateTimePicker, GroupBox, Label, LinkLabel, ListBox, MenuStrip, Panel, PictureBox, RadioButton, ToolTip, etc.).
  - 68.03 Develop an interactive Windows Forms application that uses a variety of objects for input and output.
  - 68.04 Perform data validation on input fields.
  - 68.05 Describe the Windows Forms event model.
  - 68.06 Create Windows Forms application that respond to common events, including mouse events, keyboard events, load events, click events, resize events, and drag events.
  - 68.07 Define Windows Forms applications with graphical user interfaces (GUI) that conform to appropriate usability guidelines.
  - 68.08 Create Windows Forms applications that use Multiple Document Interface (MDI) and Single Document Interface (SDI).
  - 68.09 Describe visual inheritance.
  - 68.10 Develop a Windows Forms application that inherits a form from a base application.
- 69.0 Develop Windows Service applications and class libraries. – The student will be able to:
- 69.01 Describe the characteristics and capabilities of a Windows Service application.
  - 69.02 Describe the states in the lifetime of a service.
  - 69.03 Describe the ServiceBase and ServiceController classes and their role in developing and controlling Windows Service applications.
  - 69.04 Develop a Windows Service application.
  - 69.05 Develop an installer for a Windows Service application.
  - 69.06 Install and deploy a Windows Service application.
  - 69.07 Test and debug a Windows Service application.
  - 69.08 Uninstall a Windows Service application.
  - 69.09 Develop, test, and debug a Class Library.

- 70.0 Demonstrate knowledge of database applications. – The student will be able to:
- 70.01 Explain common database terminology (e.g., relationships, normalization, fields, records, data integrity, referential integrity, etc.).
  - 70.02 Describe the benefits and characteristics of relational databases.
  - 70.03 Define primary keys and foreign keys and describe their purposes.
  - 70.04 Explain how database design fits into the database application development process.
  - 70.05 Translate an entity-relationship model into a relational database design.
  - 70.06 Differentiate between one-to-one, one-to-many, and many-to-many relationships.
  - 70.07 Move data from an unnormalized form through to a third normal form.
  - 70.08 Based on information requirements, define database tables that ensure data integrity and reduce redundant data.
  - 70.09 Describe routine maintenance for databases.
- 71.0 Demonstrate knowledge of structured query language (SQL) statements. – The student will be able to:
- 71.01 Describe the data manipulation language (DML) and describe various DML statements.
  - 71.02 List the capabilities of SQL SELECT statements.
  - 71.03 Write and execute a basic SELECT statement.
  - 71.04 Write and execute SELECT statements using the WHERE clause with common operators (i.e., =, <>, >, <, >=, <=, BETWEEN, LIKE, IN).
  - 71.05 Write and execute SELECT statements using the WHERE clause with logical operators, including AND and OR.
  - 71.06 Write and execute SELECT statements using the ORDER BY clause.
  - 71.07 Write and execute SELECT statements using wildcards.
  - 71.08 Write and execute UPDATE statements to modify rows in a table.
  - 71.09 Write and execute INSERT statements to insert rows into a table.
  - 71.10 Write and execute DELETE statements to delete rows in a table.
  - 71.11 Write and execute statements using JOIN to select data from two or more related tables.
  - 71.12 Write and execute statements that use SQL to perform common calculations (e.g., AVG, MAX, MIN, SUM, etc.).
- 72.0 Develop .NET database applications. – The student will be able to:
- 72.01 Describe the purpose of ActiveX Data Objects (ADO).
  - 72.02 Describe the purpose of the ADO connection object.
  - 72.03 Write statements to connect to a database.
  - 72.04 Write statements to open a database.
  - 72.05 Write statements to create a recordset.
  - 72.06 Write statements to commit a transaction to a database.
  - 72.07 Write statements to rollback a transaction to a database.
  - 72.08 Write statements to close a connection to a database.
  - 72.09 Develop, test, and debug a database application.
  - 72.10 Develop, test, and debug a WPF application.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** .NET Application Development Capstone  
**Course Number:** 9007430  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to the Internet and Internet-based software applications.

- 73.0 Successfully work as a member of a software development team. – The student will be able to:
- 73.1 Accept responsibility for specific tasks in a given situation.
  - 73.2 Document progress, and provide feedback on work accomplished in a timely manner.
  - 73.3 Complete assigned tasks in a timely and professional manner.
  - 73.4 Reassign responsibilities when the need arises.
  - 73.5 Complete daily tasks as assigned on one's own initiative.
- 74.0 Manage time according to a plan. – The student will be able to:
- 74.1 Set realistic time frames and schedules.
  - 74.2 Keep a written record of work accomplished on a daily basis.
  - 74.3 Meet goals and objectives set by the team.
  - 74.4 Identify individual priorities.
  - 74.5 Complete a weekly evaluation of accomplishments, and reevaluate goals, objectives and priorities, as needed.
- 75.0 Keep acceptable records of progress problems and solutions. – The student will be able to:
- 75.1 Develop and use a record keeping system to record daily progress.
  - 75.2 Use a project journal to identify problem statement
  - 75.3 Develop a portfolio of work accomplished to include requirements documents, design documents and UML, project and test plans, and prototypes.
- 76.0 Plan, organize, and carry out a project plan. – The student will be able to:
- 76.1 Identify a substantive problem that can be addressed with a .NET software solution.
  - 76.2 Identify and document the potential customers for the project.
  - 76.3 Identify and document the customer requirements for the project including use case definitions.
  - 76.4 Document the proposed user interface for the project using common tools (e.g., mockups, event planning documents, etc.).
  - 76.5 Identify the hardware and software requirements for the project.
  - 76.6 Identify the programming tools required to develop the project.

- 76.7 Write a detailed design document for the project.
  - 76.8 Write a detailed test plan for the project that addresses varying levels of testing including system testing and usability testing.
  - 76.9 Determine the scope of a project.
  - 76.10 Organize the team according to individual strengths.
  - 76.11 Assign specific tasks within a team.
  - 76.12 Determine project priorities.
  - 76.13 Identify required resources to complete the project.
  - 76.14 Plan, research, design, develop, and evaluate activities, as required.
  - 76.15 Carry out the project plan to successful completion.
  - 76.16 Document design problems, test results, product defects, and resolutions.
- 77.0 Manage resources. – The student will be able to:
- 77.1 Identify required resources for each stage of the project plan.
  - 77.2 Determine the methods needed to acquire needed resources.
  - 77.3 Demonstrate good judgment in the use of resources.
  - 77.4 Recycle and reuse resources where appropriate.
  - 77.5 Demonstrate an understanding of proper legal and ethical treatment of copyrighted material.
- 78.0 Use tools, materials, and processes in an appropriate and safe manner. – The student will be able to:
- 78.1 Identify the proper tool for a given job.
  - 78.2 Use tools and machines in a safe manner.
  - 78.3 Adhere to laboratory or job site safety rules and procedures.
  - 78.4 Identify the application of processes appropriate to the task at hand.
  - 78.5 Identify materials appropriate to their application.
- 79.0 Demonstrate an understanding of the software development process. – The student will be able to:
- 79.1 State the goals of the software application clearly.
  - 79.2 Identify and write a plan to achieve each goal.
  - 79.3 Develop a list of materials and content required for each goal.
  - 79.4 Develop a step-by-step procedure for developing the application.
  - 79.5 Follow a written procedure.
  - 79.6 Record data from evaluation activities.
  - 79.7 Document conclusions and solutions based on evaluation results, observations and data.
  - 79.8 Document progress using a project log.
  - 79.9 Write an abstract describing the project plan.
- 80.0 Research content related to the project and document the results following industry conventions. – The student will be able to:
- 80.1 Identify the basic research needed to develop the project plan.
  - 80.2 Identify available resources for completing background research required in the project plan.

- 80.3 Demonstrate the ability to locate resource materials in a library, database, Internet and other research resources.
  - 80.4 Demonstrate the ability to organize information retrieval.
  - 80.5 Demonstrate the ability to prepare a topic outline.
  - 80.6 Write a draft of the research report.
  - 80.7 Edit and proof the research report. Use proper form for a bibliography, footnotes, quotations, and references.
  - 80.8 Prepare an electronically composed research paper in proper form.
  - 80.9 Conduct an alpha and beta evaluation of the project's product.
  - 80.10 Write a report on the evaluations, documenting results, data, observations, and design changes based on the results.
- 81.0 Use presentation skills, and appropriate media to describe the progress, results and outcomes of the experience. – The student will be able to:
- 81.1 Prepare a multi-media presentation on the completed project.
  - 81.2 Make an oral presentation about the project using the multi-media materials.
  - 81.3 Review the presentation, and make changes in the delivery method(s) to improve presentation skills.
- 82.0 Demonstrate competency in the area of expertise related to developing computer software using the .NET framework. – The student will be able to:
- 82.1 Demonstrate a mastery of the content of the selected subject area.
  - 82.2 Demonstrate the ability to use related technological tools, materials and processes related to the specific program area.
  - 82.3 Demonstrate the ability to apply the knowledge, experience and skill developed in the previous program completion to the successful completion of this demonstration.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Web Application Development & Programming  
**Program Type:** Career Preparatory  
**Career Cluster:** Information Technology

	<b>Secondary</b>	<b>PSAV</b>
Program Number	9007500	Y700500
CIP Number	0511020102	0511020102
Grade Level	9-12, 30, 31	30, 31
Standard Length	7 credit hours	1050 hours
Teacher Certification	BUS ED 1 @2 COMP SCI 6 COMP PROG 7 G	BUS ED 1 @2 COMP SCI 6 COMP PROG 7 G
CTSO	FBLA BPA	Phi Beta Lambda BPA
SOC Codes (all applicable)	15-1041, 15-1021	15-1041, 15-1021
Facility Code	212 <a href="http://www.fldoe.org/edfacil/sref.asp">http://www.fldoe.org/edfacil/sref.asp</a> (State Requirements for Educational Facilities)	
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>	
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>	
Industry Certifications	<a href="http://www.fldoe.org/workforce/fcpea/default.asp">http://www.fldoe.org/workforce/fcpea/default.asp</a>	
Basic Skills Level	N/A	Mathematics: 9 Language: 9 Reading: 9

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to the fundamentals of programming and software

development; procedural and object-oriented programming; creating web-based applications, including testing, monitoring, debugging, documenting, and maintaining applications.

### Program Structure

This program is a planned sequence of instruction consisting of four occupational completion points, with OCPs A, B, and C comprising the Software Development Core. Secondary or postsecondary students who have previously completed the Software Development Core will not have to repeat the core. A student who completes the applicable competencies at any occupational completion point may either continue with the training program or exit as an occupational completer.

When offered at the post secondary level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44 (3)(b), F.S.

The following table illustrates the **PSAV** program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	OTA0040	Information Technology Assistant	150	15-1041
B	CTS0041	Computer Programmer Assistant	300	15-1021
C	CTS0044	Computer Programmer	150	15-1021
D	CTS0034	Web Programmer	450	15-1021

The following table illustrates the **Secondary** program structure:

OCP	Course Number	Course Title	Length	SOC Code	Level
A	8207310	Introduction to Information Technology	1 credit	15-1041	2
B	9007210	Foundations of Programming	1 credit	15-1021	3
	9007220	Procedural Programming	1 credit		3
C	9007230	Object-Oriented Programming	1 credit	15-1021	3
D	9007510	Web Programming	1 credit	15-1021	3
	9007520	JavaScript Programming	1 credit		3
	9007530	PHP Programming	1 credit		3

### Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## Special Notes

### Academic Alignment

Some or all of the courses in this program have been aligned to the Next Generation Sunshine State Standards contained in specific math and science core academic courses. This alignment resulted from a collaborative review by Career and Technical Education (CTE) teachers and core academic teachers. The table below contains the results of the alignment efforts. Data shown in the table includes the number of academic standards in the CTE course, the total number of math and science standards contained in the academic course, and the percentage of alignment to the CTE course. The following academic courses were included in the alignment (see code for use in table).

Academic Subject Area	Academic Course
Math	Algebra 1 (ALG1) Algebra 2 (ALG2) Geometry (GEO)
Science	Anatomy/Physiology Honors (APH) Astronomy Solar/Galactic Honors (ASGH) Biology 1 (BIO1) Chemistry 1 (CHM1) Earth-Space Science (ESS) Genetics (GEN) Marine Science 1 Honors (MS1H) Physical Science (PS) Physics 1 (PHY1)

Course	Math			Science								
	ALG1	ALG2	GEO	APH	ASGH	BIO1	CHM1	ESS	GEN	MS1H	PS	PHY1
Introduction to IT	6/36 17%	2/41 5%	1/45 2%	2/53 4%	2/52 4%	2/56 4%	2/55 4%	2/58 3%	2/35 6%	2/42 5%	2/56 4%	2/53 4%
Foundations of Programming	**	**	**	**	**	**	**	**	**	**	**	**
Procedural Programming	**	**	**	**	**	**	**	**	**	**	**	**
Object-Oriented Programming Fundamentals	**	**	**	**	**	**	**	**	**	**	**	**
Web Programming	**	**	**	**	**	**	**	**	**	**	**	**
JavaScript Programming	**	**	**	**	**	**	**	**	**	**	**	**
PHP Programming	**	**	**	**	**	**	**	**	**	**	**	**

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

### Career and Technical Student Organization (CTSO)

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills for secondary students. For postsecondary students, Phi Beta Lambda and BPA are the appropriate student organizations. Career and Technical Student Organizations provide activities for students as an integral part of the

instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the program-specific OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

### **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 9.0, Language 9.0, and Reading 9.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination. Students may be exempt from meeting the Basic Skills requirements by earning an eligible industry certification. See the Basic Skills Exemption List document for a list of eligible industry certifications (<http://www.fldoe.org/workforce/dwdframe/rtf/basic-skills.rtf>).

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination pursuant to Section 1008.29, F.S.; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.)

### **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. Links to instructional resources in support of Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if

needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (ESE) will need modifications to meet their special needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular occupational completion point (OCP) or a modified occupational completion point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP(s)/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

### **Articulation**

The PSAV component of this program has no statewide articulation agreement approved by the Florida State Board of Education. However, this does not preclude the awarding of credits by any college through local agreements.

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Bright Futures/Gold Seal Scholarship**

Course substitutions as defined in the Comprehensive Course Table for this program area may be used to qualify a student for Florida's Gold Seal Vocational Scholarship, providing all other eligibility requirements are met. Eligibility requirements are available online at [https://www.osfaffelp.org/bfiehs/fnbpcm02\\_CCTMain.aspx](https://www.osfaffelp.org/bfiehs/fnbpcm02_CCTMain.aspx).

### **Fine Arts/Practical Arts Credit**

Many courses in CTE programs meet the Fine Arts/Practical Arts credit for high school graduation. For additional information refer to <http://www.fldoe.org/schools/pdf/ListPracticalArtsCourses.pdf>.

### **Core Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate Comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles.
- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace.
- 11.0 Participate in work-based learning experiences.
- 12.0 Perform e-mail activities.
- 13.0 Demonstrate knowledge of different operating systems.
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW.
- 15.0 Demonstrate proficiency using HTML commands.
- 16.0 Demonstrate proficiency in page design applicable to the WWW.
- 17.0 Demonstrate proficiency using specialized web design software.
- 18.0 Develop an awareness of the information technology industry.
- 19.0 Develop an awareness of microprocessors and digital computers.
- 20.0 Develop an awareness of programming languages.
- 21.0 Develop an awareness of emerging technologies.
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model.
- 23.0 Demonstrate proficiency using common software applications.
- 24.0 Demonstrate proficiency using specialized software applications.
- 25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development.
- 26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types.
- 27.0 Distinguish between iterative and non-iterative program control structures.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages.
- 29.0 Describe the processes, methods, and conventions for software development and maintenance.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool.
- 32.0 Describe information security risks, threats, and strategies associated with software development.
- 33.0 Design a computer program to meet specific physical, operational, and interaction criteria.
- 34.0 Create and document a computer program that uses a variety of internal and control

- structures for manipulating varied data types.
- 35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input.
  - 36.0 Create a unit test plan, implement the plan, and report the results of testing.
  - 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming.
  - 38.0 Create a project plan that defines requirements, structural design, time estimates, and testing elements.
  - 39.0 Design, document, and create object-oriented computer programs.
  - 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results.

## **Program Standards**

### **Essential Skills**

- 141.0 Demonstrate language arts knowledge and skills.
- 142.0 Demonstrate mathematics knowledge and skills.
- 143.0 Demonstrate science knowledge and skills.
- 144.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 145.0 Solve problems using critical thinking skills, creativity and innovation.
- 146.0 Use information technology tools.
- 147.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.
- 148.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- 149.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 150.0 Describe the importance of professional ethics and legal responsibilities.
- 151.0 Explain the importance of employability skill and entrepreneurship skills.
- 152.0 Demonstrate personal money-management concepts, procedures, and strategies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: Web Application Development & Programming**  
**PSAV Number: Y700500**

**Course Number: OTA0040**  
**Occupational Completion Point: A**  
**Information Technology Assistant – 150 Hours – SOC Code 15-1041**

**Introduction to Information Technology Standards:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
  - 01.06 Describe ethical issues and problems associated with computers and information systems.
- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
  - 02.02 Use professional business vocabulary appropriate for information technology environments.
  - 02.03 Organize ideas and communicate oral and written messages appropriate for information technology environments.
  - 02.04 Collaborate with individuals and teams to complete tasks and solve information technology problems.
  - 02.05 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
  - 02.06 Apply the writing process to the creation of appropriate documents following designated business formats.
  - 02.07 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).
- 03.0 Use technology to enhance the effectiveness of communication skills. – The student will be able to:

- 03.01 Use database, spreadsheet, and presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
  - 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
  - 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
  - 08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:
- 09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).
  - 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.

- 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:
- 14.01 Identify and describe Web terminology.
  - 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
  - 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
  - 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, pdf, etc.).
  - 14.08 Identify effective Boolean search strategies.
- 15.0 Demonstrate proficiency using HTML commands. – The student will be able to:
- 15.01 Identify elements of a Web page.
  - 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
  - 15.03 Define basic HTML terminology.
  - 15.04 Analyze HTML source code developed by others.
  - 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
  - 15.07 Edit and test HTML documents for accuracy and validity.
  - 15.08 Use basic functions of WYSIWYG editors.
  - 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 15.10 Enhance web pages through the addition of images and graphics including animation.

- 16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
  - 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
  - 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 16.04 Use image design software to create and edit images.
  - 16.05 Demonstrate proficiency in publishing to the Internet.
  - 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
  - 16.07 Explain the need for web-based applications.
- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).

- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the open systems interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.
  - 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
  - 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
  - 24.03 Demonstrate the ability to incorporate digital sound.

**Course Number: CTS0041**

**Occupational Completion Point: B**

**Computer Programmer Assistant – 300 Hours – SOC Code 15-1021**

- 25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a

career in software development. – The student will be able to:

- 25.01 Describe the evolution of programming and programming careers.
- 25.02 Identify tasks performed by programmers.
- 25.03 Describe how businesses use computer programming to solve business problems.
- 25.04 Investigate job opportunities in the programming field.
- 25.05 Explain different specializations and the related training in the computer programming field.
- 25.06 Explain the need for continuing education and training of computer programmers.
- 25.07 Explain enterprise software systems and how they impact business.
- 25.08 Describe ethical responsibilities of computer programmers.
- 25.09 Describe the role of customer support to software program quality.
- 25.10 Identify credentials and certifications that may improve employability for a computer programmer.
- 25.11 Identify devices, tools, and other environments for which programmers may develop software.

26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types. – The student will be able to:

- 26.01 Identify the characteristics (e.g., size, limits) and uses of different numerical and non-numerical data types.
- 26.02 Explain the types and uses of variables in programs.
- 26.03 Determine the best data type to use for given programming problems.
- 26.04 Identify the types of operations that can be performed on different data types.
- 26.05 Evaluate arithmetic and logical expressions using appropriate operator precedence.
- 26.06 Explain how computers store different data types in memory.
- 26.07 Use different number systems to represent data.
- 26.08 Explain how national and international standards (i.e., ASCII, UNICODE) are used to represent non-numerical data.
- 26.09 Use Boolean logic to perform logical operations.

27.0 Distinguish between iterative and non-iterative program control structures. – The student will be able to:

- 27.01 Explain non-iterative programming structures (e.g., if, if/else, etc.) and their uses.
- 27.02 Explain iterative programming structures (e.g., while, do/while, etc.) and their uses.

28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages. – The student will be able to:

- 28.01 Identify the characteristics, uses, and limits of low-level programming languages.
- 28.02 Identify the characteristics, uses, and limits of high-level programming languages.
- 28.03 Identify the characteristics, uses, and limits of rapid development programming languages.
- 28.04 Describe object-oriented concepts.

- 28.05 Explain the characteristics of procedural and object-oriented programming languages.
  - 28.06 Compare and contrast programming languages that are compiled (e.g., C++), interpreted (e.g., Basic, HTML), and translated (e.g., Java).
- 29.0 Describe the processes, methods, and conventions for software development and maintenance. – The student will be able to:
- 29.01 Describe and explain tools used in software development.
  - 29.02 Describe the stages of the program life cycle.
  - 29.03 Compare and contrast alternative methods of program development (e.g., rapid prototyping, waterfall, etc.).
  - 29.04 List and explain the steps in the program development cycle.
  - 29.05 Describe different types of documentation used in the program development cycle (e.g., requirements document, program design documents, test plans, etc.).
  - 29.06 Describe the on-going need for program maintenance.
  - 29.07 Describe different methods companies use to facilitate program updates for enhancements and defects (e.g., how customers receive patches, updates, new versions, upgrades).
  - 29.08 Describe different methods used to facilitate version control and change management.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control. – The student will be able to:
- 30.01 Explain the uses and limits of testing in ensuring program quality.
  - 30.02 Explain testing performed at different stages of the program development cycle (e.g. unit testing, system testing, user acceptance testing, etc.).
  - 30.03 Describe data and the use of test plans/scripts to be used in program testing.
  - 30.04 Describe and identify types of programming errors (e.g., syntactical, logic, usability, requirements mismatch, etc.).
  - 30.05 Identify the data to be used for boundary conditions.
  - 30.06 Explain different types of testing (e.g., usability, automated, regression, etc.) and testing tools.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool. – The student will be able to:
- 31.01 Describe different design methodologies and their uses (e.g., object-oriented design, structured design, and rapid application development).
  - 31.02 Describe tools for developing a program design (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.03 Explain the role of existing libraries and packages in facilitating programmer productivity.
  - 31.04 Participate and contribute to a design review of a program design developed using a common program design tool (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.05 Write a program design document using UML or other standard design methodology.
  - 31.06 Define input and output for a program module using UML or other standard design methodology.

- 32.0 Describe information security risks, threats, and strategies associated with software development. – The student will be able to:
- 32.01 Explain the security risks to personal and business computer users.
  - 32.02 Identify different types of threats to computer systems.
  - 32.03 Identify methods to protect against different threats to computer systems.
  - 32.04 Understand the importance of a disaster / emergency response plan.
  - 32.05 Identify alternative methods for data storage and backup (e.g., mirroring, fail-over, high availability, types of backups).
- 33.0 Design a computer program to meet specific physical, operational, and interaction criteria. – The student will be able to:
- 33.01 Choose appropriate data types depending on the needs of the program.
  - 33.02 Define appropriate user interface prompts for clarity and usability (e.g., user guidance for data ranges, data types, etc.).
  - 33.03 Design and develop program that are designed for efficiency (e.g., less memory usage, less inputs/outputs, faster processing, etc.).
  - 33.04 Identify the software environment required for a program to run (e.g., operating system required, mobile, Web-based, desktop, delivery method, etc.).
  - 33.05 Identify the tools required to develop a program (e.g., editors, compilers, linkers, integrated development environments, application programming interfaces (APIs), libraries, etc.).
- 34.0 Create and document a computer program that uses a variety of internal and control structures for manipulating varied data types. – The student will be able to:
- 34.01 Use appropriate naming conventions to define program variables and modules (methods, functions).
  - 34.02 Use a program editor to write the source code for a program.
  - 34.03 Write programs that use selection structures (e.g., if, if/else, etc.).
  - 34.04 Write programs that use repetition structures (e.g., while, do/while, etc.).
  - 34.05 Write programs that use nested structures.
  - 34.06 Use internal documentation (e.g., single-line and multi-line comments, program headers, module descriptions, and meaningful variable and function/module names) to document a program according to accepted standards.
  - 34.07 Compile and run programs.
  - 34.08 Write programs that use standard arithmetic operators with different numerical data types.
  - 34.09 Write programs that use standard logic operators.
  - 34.10 Write programs that use a variety of common data types.
  - 34.11 Write programs that perform data conversion between standard data types.
  - 34.12 Write programs that define, use, search, and sort arrays.
  - 34.13 Write programs that use user-defined data types.
  - 34.14 Demonstrate understanding and use of appropriate variable scope.
- 35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input. – The student will be able to:

- 35.01 Write programs that perform user input and output.
  - 35.02 Write programs that validate user input (e.g., range checking, data formats, valid/invalid characters, etc.).
  - 35.03 Write program modules such as functions, subroutines, or methods.
  - 35.04 Write program modules that accept arguments.
  - 35.05 Write program modules that return values.
  - 35.06 Write program modules that validate arguments and return error codes.
  - 35.07 Write interactive programs.
  - 35.08 Write programs that use standard libraries to enhance program function.
  - 35.09 Participate in a peer code review to verify program functionality, programming styles, program usability, and adherence to common programming standards.
- 36.0 Create a unit test plan, implement the plan, and report the results of testing. – The student will be able to:
- 36.01 Write a unit test plan that identifies the input data and expected results for program tests.
  - 36.02 Test and debug programs, including programs written by others.
  - 36.03 Write a test report that identifies the results of testing.
  - 36.04 Trace through the function of a program to ensure valid operation.
  - 36.05 Identify the system resources used by the program (e.g., memory, disk space, execution time, external devices).
  - 36.06 Create a disaster / emergency response plan for a computer system.

**Course Number: CTS0044**

**Occupational Completion Point: C**

**Computer Programmer – 150 Hours – SOC Code 15-1021**

- 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming. – The student will be able to:
- 37.01 Demonstrate the understanding and use of classes, objects, attributes, and behaviors.
  - 37.02 Demonstrate the understanding and use of inheritance.
  - 37.03 Demonstrate the understanding and use of data encapsulation.
  - 37.04 Demonstrate the understanding and use of polymorphism.
- 38.0 Create a project plan for an object-oriented programming project that defines requirements, structural design, time estimates, and testing elements. – The student will be able to:
- 38.01 Write a project plan for completion of a project that includes gathering program requirements, developing the program, and testing it.
  - 38.02 Write a program requirements document that identifies business purpose, functional requirements, system requirements, and other common components of a requirements document.
  - 38.03 Design an object-oriented program using UML or another standard design methodology.
  - 38.04 Work with other team members to develop a project plan for a program.
  - 38.05 Work with other team members to write a design document for a program with multiple functions and shared data.

- 38.06 Participate in design meetings that review program design documents for conformance to program requirements.
- 38.07 Estimate the time to develop a program or module.
- 39.0 Design, document, and create object-oriented computer programs. – The student will be able to:
  - 39.01 Compare and contrast recursive functions to other iterative methods.
  - 39.02 Understand the implementation of character strings in the programming language.
  - 39.03 Write programs that perform string processing (e.g., string manipulation, string compares, concatenation, etc.).
  - 39.04 Write programs that use user-defined data types.
  - 39.05 Write object-oriented programs that use inheritance.
  - 39.06 Write object-oriented programs that use polymorphism.
  - 39.07 Develop class constructors.
  - 39.08 Write programs that define and use program constants.
  - 39.09 Write programs that perform error handling.
  - 39.10 Participate in program code review meetings to evaluate program code for validity, quality, performance, data integrity, and conformance to program design documents.
  - 39.11 Write programs that perform dynamic memory allocation.
  - 39.12 Write programs that perform effective management of dynamically allocated memory.
  - 39.13 Update a program module to implement enhancements or corrections and demonstrate appropriate documentation (internal and external) related to version control.
  - 39.14 Write programs that use complex data structures (e.g., stacks, queues, trees, linked lists etc.).
  - 39.15 Write programs that are event-driven.
  - 39.16 Write programs that perform file input and output (i.e., sequential and random access file input/output).
  - 39.17 Perform basic database commands including connect, open, select, and close.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results. – The student will be able to:
  - 40.01 Develop a test plan for an object-oriented program.
  - 40.02 Write test plans for event-driven programs.
  - 40.03 Write test plans for programs that perform file input and output.
  - 40.04 Perform test and debug activities on object-oriented programs, including those written by someone else.
  - 40.05 Perform test and debug activities on an event-driven program.
  - 40.06 Perform test and debug activities on programs that perform file input and output and verify the correctness of output files.
  - 40.07 Document the findings of testing in a test report.

**Course Number: CTS0034**  
**Occupational Completion Point – D**  
**Web Programmer – 450 Hours – SOC Code 15-1021**

- 41.0 Demonstrate proficiency using HTML and XHTML to create web content — The student will be able to:
- 41.01 Use storyboarding techniques for designing a Web site (e.g., linear, hierarchical).
  - 41.02 Identify elements of a Web page.
  - 41.03 Create Web pages using HTML and XHTML tags that create basic elements (e.g., links, lists, formatted text, tables).
  - 41.04 Create Web pages that utilize tables to achieve complex layout.
  - 41.05 Add graphic content to Web pages.
  - 41.06 Create Web pages that utilize client-side image maps.
  - 41.07 Develop, integrate, and apply the use of forms in Web site design.
  - 41.08 Optimize Web content for desirable search engine placement.
  - 41.09 Demonstrate an understanding of browser compatibility issues by designing pages that comply with the current Web Content Accessibility Guidelines issued by the World Wide Web Consortium (W3C).
  - 41.10 Demonstrate an understanding of Web accessibility issues by developing pages that meet Bobby accessibility checker criteria.
  - 41.11 Explain basic XML syntax and how XHTML conforms to the XML standard.
  - 41.12 Use a WYSIWYG editor to develop and manage a Web site.
  - 41.13 Use markup validation tools to test HTML and XHTML documents for well-formed elements and make all corrections necessary to ensure compliance with W3C standards.
  - 41.14 Analyze and modify HTML and XHTML source code developed by others.
- 42.0 Demonstrate proficiency using cascading style sheets (CSS) to format web pages. – The student will be able to:
- 42.01 Explain the advantages and disadvantages of using Cascading Style Sheets (CSS) to format Web pages.
  - 42.02 Describe the difference between linked, embedded, imported and inline styles and explain how styles are inherited.
  - 42.03 Explain the difference between classes, id, and span elements.
  - 42.04 Utilize CSS properties within Web pages to control page layout, fonts, colors, backgrounds, and other presentation effects.
  - 42.05 Demonstrate understanding of the Box Model.
  - 42.06 Demonstrate proficiency in creating 1 to 3 column layouts.
  - 42.07 Create navigation system through CSS.
- 43.0 Demonstrate proficiency using basic client-side scripting to control the content and the behavior of HTML and XHTML documents. – The student will be able to:
- 43.01 Describe the difference between server-side and client-side processing.
  - 43.02 Describe the term “scripting language” and explain how scripting languages differ from compiled languages.
  - 43.03 Create web pages that employ client-side scripting to control content and display.
- 44.0 Demonstrate an understanding of JavaScript programming fundamentals. – The student will be able to:

- 44.01 Describe server side versus client side applications including interpreters.
  - 44.02 Describe the purpose and use of an interpreter in relation to JavaScript.
  - 44.03 Describe differences in different types of JavaScript implementations (ie Jscript, ECMA).
  - 44.04 Declare and initialize variables.
  - 44.05 Assign new values to variables.
  - 44.06 Create and use constant variables.
  - 44.07 Describe the difference of programming languages versus scripting languages.
  - 44.08 Describe object based nature and platform independence.
  - 44.09 Describe and demonstrate inline scripting.
- 45.0 Demonstrate proficiency in assigning and handling variables in JavaScript programs and functions. – The student will be able to:
- 45.01 Describe how variables are used in programs.
  - 45.02 Identify which data type should be used for a given value.
  - 45.03 Identify the syntax for using variables.
  - 45.04 Declare and initialize variables.
  - 45.05 Assign new values to variables.
  - 45.06 Create and use constant variables.
  - 45.07 Describe and demonstrate the use of properties
  - 45.08 Describe identifiers and identify valid and invalid identifiers.
  - 45.09 Describe and identify reserved words, delimiters, literals, and comments.
- 46.0 Use event handlers in JavaScript programs and functions. – The student will be able to:
- 46.01 Describe the event model and five events (form, image, map, link, and window) .
  - 46.02 Demonstrate and use the window events load, focus, blur, and unload.
  - 46.03 Demonstrate and use the form events change, reset, and submit.
  - 46.04 Demonstrate and use the text events cut, paste, select, and copy,
  - 46.05 Demonstrate and use the mouse events mousemove, mousedown, click, mousewheel,mouseover, mouseout and mouseover.
  - 46.06 Demonstrate and use the keyboard events keyup, keydown, keypress,
  - 46.07 Demonstrate using the appropriate event handlers with their associated events.
- 47.0 Recognize and assign data types appropriate to their use. – The student will be able to:
- 47.01 Describe the data type categories.
  - 47.02 Give examples of var, primitives, null, and undefined data types.
  - 47.03 Demonstrate the use of var in relation to other datatypes.
- 48.0 Demonstrate proficiency is using appropriate operators to achieve a planned output. – The student will be able to:
- 48.01 Construct statements using arithmetic operators.
  - 48.02 Construct statements using relational operators.
  - 48.03 Construct and use statements using logical operators.
  - 48.04 Construct and use statements using string concatenation, and strict comparison.
  - 48.05 Construct and use statements using assignment operators.
  - 48.06 Construct and execute statements using operator precedence.

- 49.0 Write executable statements. – The student will be able to:
- 49.01 Construct variable assignment statements.
  - 49.02 Construct statements using built-in functions.
  - 49.03 Describe when implicit data type conversions take place.
  - 49.04 List the drawbacks of implicit data type conversions.
  - 49.05 Construct statements using functions to explicitly convert data types.
- 50.0 Demonstrate an understanding of variable scope. – The student will be able to:
- 50.01 Understand the scope and visibility of variables.
  - 50.02 Write programs using local variables.
  - 50.03 Describe the scope of a variable.
- 51.0 Use good programming practices. – The student will be able to:
- 51.01 List examples of good programming practices.
  - 51.02 Insert comments into code
  - 51.03 Demonstrate the use of <no script> tag.
  - 51.04 Follow formatting guidelines when writing code.
  - 51.05 Understand the different types of errors produced by programs.
- 52.0 Demonstrate use of the Document Object Module (DOM). – The student will be able to:
- 52.01 Create and use user defined objects.
  - 52.02 Create user defined objects with properties and methods.
  - 52.03 Describe and Use the Array Object including its parameters, properties, and methods (chop, join, pop, push, splice, split) .
  - 52.04 Describe and Use the Date Object including its multiple constructors, properties, and methods (getDay, getMonth, getYear, getMinutes, getHours, getTime) .
  - 52.05 Describe and use the Window Object including \properties, and methods
  - 52.06 Describe and use the Image Object including its properties, and methods
  - 52.07 Describe and use the History Object including its properties, and methods
  - 52.08 Describe and use the RegExp Object for basic and complex regular expressions.
  - 52.09 Describe and use the String Object including its properties, and methods
  - 52.10 Describe and use the Math Object including its properties, and methods
- 53.0 Use conditional control statements in JavaScript. – The student will be able to:
- 53.01 Construct and use an if statement.
  - 53.02 Construct and use a switch statement.
  - 53.03 Construct and use a while, do while, and for loop.
  - 53.04 Construct and use a conditional operator.
- 54.0 Use iterative control statements in JavaScript. – The student will be able to:
- 55.0 Describe the types of loop statements and their uses.
  - 56.0 Construct and use the while and do while loop.
  - 57.0 Construct and use the for loop.
  - 58.0 Describe when a while loop is used.

- 59.0 Describe when a for loop is used.
- 60.0 Use nested loop iterative control statements in JavaScript. – The student will be able to:
- 60.01 Construct and execute a program using nested loops.
  - 60.02 Construct and execute a loop using break and continue.
  - 60.03 Evaluate a nested loop construct and sentinel value.
- 61.0 Use JavaScript to produce input and output for programs. – The student will be able to:
- 61.01 Describe and use the prompt() and confirm() to input data into programs.
  - 61.02 Describe and demonstrate the use of the alert() to produce output to the console.
  - 61.03 Describe and demonstrate how to input data using JavaScript Events.
  - 61.04 Describe and demonstrate how to output using the document.write().
  - 61.05 Explain the difference of prompt() and confirm() functions.
  - 61.06 Create and use escape sequences.
- 62.0 Demonstrate proficiency in using Form Objects in JavaScript programs and functions. – The student will be able to:
- 62.01 Use Form objects to validate input.
  - 62.02 Access the value of the form object through its associated method.
  - 62.03 Describe and use button, checkbox, textarea, select, radio, hidden, and text objects.
  - 62.04 Access and modify values and attributes at runtime using getElementById, getElementsByName, getElementsByTagName, and inner HTML.
- 63.0 Demonstrate proficiency in using methods in JavaScript programs and functions. – The student will be able to:
- 63.01 Differentiate between anonymous methods and methods.
  - 63.02 Identify the benefits of using methods.
  - 63.03 Describe and use inner method.
  - 63.04 Create a method.
  - 63.05 Describe how a method is invoked.
- 64.0 Demonstrate proficiency in using parameters in JavaScript programs and functions. – The student will be able to:
- 64.01 Describe how parameters are passed into functions.
  - 64.02 Define a parameter.
  - 64.03 Create a method using a parameter.
  - 64.04 Invoke a method that has parameters.
  - 64.05 Distinguish between formal and actual parameters.
- 65.0 Utilize debugging techniques in programs. – The student will be able to:
- 65.01 Use the display property to enable/disable code blocks.
  - 65.02 Use document.write() to log program execution.
  - 65.03 Test program in different browsers and mobile devices for compatibility errors.

- 65.04 Use comments as a flow control while debugging.
- 66.0 Recognize security risks in programs. – The student will be able to:
  - 66.01 Describe the security risk of cookies and browsers.
  - 66.02 Identify security responsibilities of browsers and operating system.
  - 66.03 Describe security systems such as frame to frame URL changing.
  - 66.04 Describe the use of signed scripts.
  - 66.05 Create and use cookies in a secure manner.
- 67.0 Use plug-ins and libraries. – The student will be able to:
  - 67.01 Use external libraries in the program.
  - 67.02 Describe and contrast the following industry libraries JQuery, Dojo, LightBox, and Moo Tools, PhoneGap.
  - 67.03 Describe different types of libraries full, effects, tools, graphing, math, cryptography, and AJAX.
  - 67.04 Identify how load and reference external and user made scripts.
  - 67.05 Describe AJAX elements and procedures.
  - 67.06 Describe XML.
  - 67.07 Demonstrate the use of XMLHttpRequest to retrieve data.
- 68.0 Demonstrate proficiency in programming for mobile delivery technology (e.g., iPhone/Android). – The student will be able to:
  - 68.01 Respond to multi-touch and gesture events.
  - 68.02 Describe and demonstrate the use of webkit CSS.
  - 68.03 Use the meta tag to enable native look and feel.
  - 68.04 Create a splash screen.
  - 68.05 Describe and demonstrate app caching.
  - 68.06 Describe and demonstrate use of JQuery for mobile development.
  - 68.07 Describe how to publish the app using XCode.
- 69.0 Demonstrate an understanding of Personal Home Page (PHP) programming language. – The student will be able to:
  - 69.01 Describe the evolution of PHP as a programming language.
  - 69.02 Discuss the strengths and limitations of PHP.
- 70.0 Demonstrate proficiency in PHP configuration. – The student will be able to:
  - 70.01 Set up a PHP host (wamp, mamp, online).
  - 70.02 Configure PHP for File Transfer Protocol (FTP) access.
  - 70.03 Configure the config.php file.
- 71.0 Demonstrate an understanding of PHP language basics. – The student will be able to:
  - 71.01 Describe how variables are declared, referenced, and passed.
  - 71.02 Describe the control structures inherent with PHP programming.
  - 71.03 Describe the three types of arrays used in PHP.

- 71.04 Describe how functions in PHP are created, called, and controlled.
- 72.0 Demonstrate proficiency in the use of server processes. – The student will be able to:
  - 72.01 Describe a session and explain its importance and use in web programming.
  - 72.02 Describe the server processes associated with forms handling.
  - 72.03 Compare and contrast the use of GET and POST.
  - 72.04 Describe cookies and explain their use, population, control, and risks.
  - 72.05 Describe HTTP Headers and their role in web development.
  - 72.06 Describe HTTP Authentication.
- 73.0 Demonstrate an understanding of object-oriented programming in PHP. – The student will be able to:
  - 73.01 Create classes using PHP.
  - 73.02 Describe inheritance and its role in PHP programming.
  - 73.03 Write PHP code to handle exceptions.
  - 73.04 Write PHP code to accommodate different interfaces.
- 74.0 Demonstrate proficiency in writing PHP code to handle file input/output (I/O) operations. – The student will be able to:
  - 74.01 Write PHP code to perform open, read, and write operations on files.
  - 74.02 Write PHP code to initiate file system functions.
  - 74.03 Write PHP code to handle streams.
- 75.0 Demonstrate proficiency in creating, populating, and using arrays in PHP. – The student will be able to:
  - 75.01 Create, populate and write code to extract information from a numeric array in PHP.
  - 75.02 Create, populate and write code to extract information from an associative array in PHP.
  - 75.03 Create, populate and write code to extract information from a multidimensional array in PHP.
- 76.0 Demonstrate proficiency handling strings in PHP. – The student will be able to:
  - 76.01 Write PHP code to retrieve or extract one or more characters from a string.
  - 76.02 Write PHP code to convert a string from data type to another.
  - 76.03 Write PHP code to manipulate the display characteristics of string data.
  - 76.04 Write PHP code that uses string date to control program flow.
  - 76.05 Write PHP code to join array elements with a string.
- 77.0 Demonstrate proficiency in using PHP to access databases via Open Database Connectivity (ODBC). – The student will be able to:
  - 77.01 Write PHP code to create an ODBC connection and retrieve information from a database using the appropriate Structured Query Language (SQL) statement.

- 77.02 Describe a prepared statement and discuss its primary advantages (e.g., code efficiency, SQL Injection prevention).
- 77.03 Create a prepared statement to perform specific SQL actions.
- 77.04 Describe a PHP Data Object (PDO) transaction and explain its primary advantages.
- 77.05 Create a prepared statement and associated result set using PDOStatement.
- 78.0 Demonstrate proficiency in applying best practices for ensuring creation of a secure program. – The student will be able to:
  - 78.01 Describe an SQL Injection, its consequences, and ways in which it may be prevented via programming.
  - 78.02 Describe the Remote Code Injection vulnerability in PHP and ways in which it may be prevented.
  - 78.03 Describe the risk of session hijacking in PHP and ways to program around it.
  - 78.04 Describe the risks associated with uploading files in PHP and ways in which risks might be mitigated.
  - 78.05 Describe Secure Sockets Layer (SSL) and usage issues related to PHP.
- 79.0 Demonstrate an understanding of key technologies, protocols, and architectures associated with web development and programming. – The student will be able to:
  - 79.01 SimpleXML functions
  - 79.02 Extensible Markup Language (XML) Extension
  - 79.03 XML Path Language (XPath)
  - 79.04 Web Services
  - 79.05 Simple Object Access Protocol (SOAP)
  - 79.06 Representational State Transfer (REST)
  - 79.07 JavaScript Object Notation (JSON)
  - 79.08 Asynchronous JavaScript and XML (AJAX)

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Introduction to Information Technology  
**Course Number:** 8207310  
**Course Credit:** 1

**Course Description:**

This course is designed to provide an introduction to information technology concepts and careers as well as the impact information technology has on the world, people, and industry and basic web design concepts. The content includes information technology career research; operating systems and software applications; electronic communications including e-mail and Internet services; basic HTML, DHTML, and XML web commands and design; emerging technologies, and Web page design.

Standards included in this course of instruction have been aligned to the academic courses shown below. This table shows the number of aligned benchmarks, the total number of academic benchmarks, and the percentage of alignment.

Math		Science					
<b>Algebra 1</b>	6/36 17%	<b>Biology 1</b>	2/56 4%	<b>Anatomy/Physiology Honors</b>	2/53 4%	<b>Astronomy Solar/Galactic Honors</b>	2/52 4%
<b>Algebra 2</b>	2/41 5%	<b>Chemistry 1</b>	2/55 4%	<b>Genetics</b>	2/35 6%	<b>Marine Science 1 Honors</b>	2/42 5%
<b>Geometry</b>	1/45 2%	<b>Physics 1</b>	2/53 4%	<b>Earth-Space Science</b>	2/58 3%	<b>Physical Science</b>	2/56 4%

\*\* Alignment pending

# Alignment attempted, but no correlation to academic course.

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Develop keyboarding skills to enter and manipulate text and data.
- 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.03 Identify and describe communications and networking systems used in workplace environments.
- 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.06 Describe ethical issues and problems associated with computers and information systems.

02.0 Demonstrate comprehension and communication skills. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2; MA.912.D.8.1; MA.912.A.3.15; MA.912.G.8.2.

- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
- 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
- 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
- 02.04 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
- 02.05 Apply the writing process to the creation of appropriate documents following designated business formats.
- 02.06 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).

- 03.0 Use technology to enhance the effectiveness of communication skills —The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.2.12.

- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
- 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.

- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.2.13; MA.912.A.3.15.

- 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
- 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
- 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.

- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:

- 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).

05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).

06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:

06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.

07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.A.5.7; MA.912.F.5.2; MA.912.A.10.1; MA.912.A.10.2; MA.912.S.1.2; MA.912.S.3.2; MA.912.A.3.5; MA.912.G.8.2.

07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.

07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).

07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.

08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:

08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.

08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.

09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:

This standard supports the following Next Generation Sunshine State Standards: MA.912.D.7.2.

09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).

- 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Participate in work-based learning experiences. – The student will be able to:
- 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
- 12.0 Perform e-mail activities. – The student will be able to:
- 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).

14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW. – The student will be able to:

- 14.01 Identify and describe Web terminology.
- 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
- 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
- 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
- 14.05 Trace the evolution of the Internet from its inception to the present and into the future.
- 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
- 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
- 14.08 Identify effective Boolean search strategies.

15.0 Demonstrate proficiency using html commands. – The student will be able to:

- 15.01 Identify elements of a Web page.
- 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
- 15.03 Define basic HTML terminology.
- 15.04 Analyze HTML source code developed by others.
- 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
- 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
- 15.07 Edit and test HTML documents for accuracy and validity.
- 15.08 Use basic functions of WYSIWYG editors.
- 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
- 15.10 Enhance web pages through the addition of images and graphics including animation.

16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:

- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
- 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
- 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
- 16.04 Use image design software to create and edit images.
- 16.05 Demonstrate proficiency in publishing to the Internet.
- 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
- 16.07 Explain the need for web-based applications.

- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential impact on business and society.
  - 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.

- 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
  - 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
  - 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
  - 24.03 Demonstrate the ability to incorporate digital sound.

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Foundations of Programming  
**Course Number:** 9007210  
**Course Credit:** 1

**Course Description:**

This course introduces concepts, techniques, and processes associated with computer programming and software development. After successful completion of Programming Foundations and Procedural Programming, students will have met Occupational Completion Point B, Computer Programmer Assistant, SOC Code 15.1021.

25.0 Explore the characteristics, tasks, work attributes, options, and tools associated with a career in software development. – The student will be able to:

- 25.01 Describe the evolution of programming and programming careers.
- 25.02 Identify tasks performed by programmers.
- 25.03 Describe how businesses use computer programming to solve business problems.
- 25.04 Investigate job opportunities in the programming field.
- 25.05 Explain different specializations and the related training in the computer programming field.
- 25.06 Explain the need for continuing education and training of computer programmers.
- 25.07 Explain enterprise software systems and how they impact business.
- 25.08 Describe ethical responsibilities of computer programmers.
- 25.09 Describe the role of customer support to software program quality.
- 25.10 Identify credentials and certifications that may improve employability for a computer programmer.
- 25.11 Identify devices, tools, and other environments for which programmers may develop software.

26.0 Demonstrate an understanding of the characteristics, use, and selection of numerical, non-numerical, and logical data types. – The student will be able to:

- 26.01 Identify the characteristics (e.g., size, limits) and uses of different numerical and non-numerical data types.
- 26.02 Explain the types and uses of variables in programs.
- 26.03 Determine the best data type to use for given programming problems.
- 26.04 Identify the types of operations that can be performed on different data types.
- 26.05 Evaluate arithmetic and logical expressions using appropriate operator precedence.
- 26.06 Explain how computers store different data types in memory.
- 26.07 Use different number systems to represent data.
- 26.08 Explain how national and international standards (i.e., ASCII, UNICODE) are used to represent non-numerical data.
- 26.09 Use Boolean logic to perform logical operations.

27.0 Distinguish between iterative and non-iterative program control structures.

- 27.01 Explain non-iterative programming structures (e.g., if, if/else, etc.) and their uses.
- 27.02 Explain iterative programming structures (e.g., while, do/while, etc.) and their uses.
- 28.0 Differentiate among high level, low level, procedural, object-oriented, compiled, interpreted, and translated programming languages. – The student will be able to:
  - 28.01 Identify the characteristics, uses, and limits of low-level programming languages.
  - 28.02 Identify the characteristics, uses, and limits of high-level programming languages.
  - 28.03 Identify the characteristics, uses, and limits of rapid development programming languages.
  - 28.04 Describe object-oriented concepts.
  - 28.05 Explain the characteristics of procedural and object-oriented programming languages.
  - 28.06 Compare and contrast programming languages that are compiled (e.g., C++), interpreted (e.g., Basic, HTML), and translated (e.g., Java).
- 29.0 Describe the processes, methods, and conventions for software development and maintenance. – The student will be able to:
  - 29.01 Describe and explain tools used in software development.
  - 29.02 Describe the stages of the program life cycle.
  - 29.03 Compare and contrast alternatives methods of program development (e.g., rapid prototyping, waterfall, etc.).
  - 29.04 List and explain the steps in the program development cycle.
  - 29.05 Describe different types of documentation used in the program development cycle (e.g., requirements document, program design documents, test plans, etc.).
  - 29.06 Describe the on-going need for program maintenance.
  - 29.07 Describe different methods companies use to facilitate program updates for enhancements and defects (e.g., how customers receive patches, updates, new versions, upgrades).
  - 29.08 Describe different methods used to facilitate version control and change management.
- 30.0 Explain the types, uses, and limitations of testing for ensuring quality control. – The student will be able to:
  - 30.01 Explain the uses and limits of testing in ensuring program quality.
  - 30.02 Explain testing performed at different stages of the program development cycle (e.g. unit testing, system testing, user acceptance testing, etc.).
  - 30.03 Describe data and the use of test plans/scripts to be used in program testing.
  - 30.04 Describe and identify types of programming errors (e.g., syntactical, logic, usability, requirements mismatch, etc.).
  - 30.05 Identify the data to be used for boundary conditions.
  - 30.06 Explain different types of testing (e.g., usability, automated, regression, etc.) and testing tools.
- 31.0 Create a program design document using Unified Modeling Language (UML) or other common design tool. – The student will be able to:

- 31.01 Describe different design methodologies and their uses (e.g., object-oriented design, structured design, and rapid application development).
  - 31.02 Describe tools for developing a program design (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.03 Explain the role of existing libraries and packages in facilitating programmer productivity.
  - 31.04 Participate and contribute to a design review of a program design developed using a common program design tool (e.g., UML, flowcharts, design documents, pseudocode).
  - 31.05 Write a program design document using UML or other standard design methodology.
  - 31.06 Define input and output for a program module using UML or other standard design methodology.
- 32.0 Describe information security risks, threats, and strategies associated with software development. – The student will be able to:
- 32.01 Explain the security risks to personal and business computer users.
  - 32.02 Identify different types of threats to computer systems.
  - 32.03 Identify methods to protect against different threats to computer systems.
  - 32.04 Understand the importance of a disaster / emergency response plan.
  - 32.05 Identify alternative methods for data storage and backup (e.g., mirroring, fail-over, high availability, types of backups).

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:**            **Procedural Programming**  
**Course Number:**       **9007220**  
**Course Credit:**         **1**

**Course Description:**

This course continues the study of computer programming concepts with a focus on the creation of software applications employing procedural programming techniques. After successful completion of Programming Foundations and Procedural Programming, students will have met Occupational Completion Point B, Computer Programmer Assistant, SOC Code 15.1021.

33.0 Design a computer program to meet specific physical, operational, and interaction criteria. – The student will be able to:

- 33.01 Choose appropriate data types depending on the needs of the program.
- 33.02 Define appropriate user interface prompts for clarity and usability (e.g., user guidance for data ranges, data types, etc.).
- 33.03 Design and develop program that are designed for efficiency (e.g., less memory usage, less inputs/outputs, faster processing, etc.).
- 33.04 Identify the software environment required for a program to run (e.g., operating system required, mobile, Web-based, desktop, delivery method, etc.).
- 33.05 Identify the tools required to develop a program (e.g., editors, compilers, linkers, integrated development environments, application programming interfaces (APIs), libraries, etc.).

34.0 Create and document a computer program that uses a variety of internal and control structures for manipulating varied data types. – The student will be able to:

- 34.01 Use appropriate naming conventions to define program variables and modules (methods, functions).
- 34.02 Use a program editor to write the source code for a program.
- 34.03 Write programs that use selection structures (e.g., if, if/else, etc.).
- 34.04 Write programs that use repetition structures (e.g., while, do/while, etc.).
- 34.05 Write programs that use nested structures.
- 34.06 Use internal documentation (e.g., single-line and multi-line comments, program headers, module descriptions, and meaningful variable and function/module names) to document a program according to accepted standards.
- 34.07 Compile and run programs.
- 34.08 Write programs that use standard arithmetic operators with different numerical data types.
- 34.09 Write programs that use standard logic operators.
- 34.10 Write programs that use a variety of common data types.
- 34.11 Write programs that perform data conversion between standard data types.
- 34.12 Write programs that define, use, search, and sort arrays.
- 34.13 Write programs that use user-defined data types.
- 34.14 Demonstrate understanding and use of appropriate variable scope.

35.0 Create and document an interactive computer program that employs functions, subroutines, or methods to receive, validate, and process user input. – The student will be able to:

- 35.01 Write programs that perform user input and output.
- 35.02 Write programs that validate user input (e.g., range checking, data formats, valid/invalid characters, etc.).
- 35.03 Write program modules such as functions, subroutines, or methods.
- 35.04 Write program modules that accept arguments.
- 35.05 Write program modules that return values.
- 35.06 Write program modules that validate arguments and return error codes.
- 35.07 Write interactive programs.
- 35.08 Write programs that use standard libraries to enhance program function.
- 35.09 Participate in a peer code review to verify program functionality, programming styles, program usability, and adherence to common programming standards.

36.0 Create a unit test plan, implement the plan, and report the results of testing. – The student will be able to:

- 36.01 Write a unit test plan that identifies the input data and expected results for program tests.
- 36.02 Test and debug programs, including programs written by others.
- 36.03 Write a test report that identifies the results of testing.
- 36.04 Trace through the function of a program to ensure valid operation.
- 36.05 Identify the system resources used by the program (e.g., memory, disk space, execution time, external devices).
- 36.06 Create a disaster / emergency response plan for a computer system.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Object-Oriented Programming  
**Course Number:** 9007230  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts with a focus on the creation of software applications employing object-oriented programming techniques. After successful completion of Object-Oriented Programming, students will have met Occupational Completion Point C, Computer Programmer, SOC Code 15.1021.

- 37.0 Explain key concepts that distinguish object-oriented programming from procedural programming. – The student will be able to:
- 37.01 Demonstrate the understanding and use of classes, objects, attributes, and behaviors.
  - 37.02 Demonstrate the understanding and use of inheritance.
  - 37.03 Demonstrate the understanding and use of data encapsulation.
  - 37.04 Demonstrate the understanding and use of polymorphism.
- 38.0 Create a project plan for an object-oriented programming project that defines requirements, structural design, time estimates, and testing elements. – The student will be able to:
- 38.01 Write a project plan for completion of a project that includes gathering program requirements, developing the program, and testing it.
  - 38.02 Write a program requirements document that identifies business purpose, functional requirements, system requirements, and other common components of a requirements document.
  - 38.03 Design an object-oriented program using UML or another standard design methodology.
  - 38.04 Work with other team members to develop a project plan for a program.
  - 38.05 Work with other team members to write a design document for a program with multiple functions and shared data.
  - 38.06 Participate in design meetings that review program design documents for conformance to program requirements.
  - 38.07 Estimate the time to develop a program or module.
- 39.0 Design, document, and create object-oriented computer programs. – The student will be able to:
- 39.01 Compare and contrast recursive functions to other iterative methods.
  - 39.02 Understand the implementation of character strings in the programming language.
  - 39.03 Write programs that perform string processing (e.g., string manipulation, string compares, concatenation, etc.).
  - 39.04 Write programs that use user-defined data types.

- 39.05 Write object-oriented programs that use inheritance.
  - 39.06 Write object-oriented programs that use polymorphism.
  - 39.07 Develop class constructors.
  - 39.08 Write programs that define and use program constants.
  - 39.09 Write programs that perform error handling.
  - 39.10 Participate in program code review meetings to evaluate program code for validity, quality, performance, data integrity, and conformance to program design documents.
  - 39.11 Write programs that perform dynamic memory allocation.
  - 39.12 Write programs that perform effective management of dynamically allocated memory.
  - 39.13 Update a program module to implement enhancements or corrections and demonstrate appropriate documentation (internal and external) related to version control.
  - 39.14 Write programs that use complex data structures (e.g., stacks, queues, trees, linked lists etc.).
  - 39.15 Write programs that are event-driven.
  - 39.16 Write programs that perform file input and output (i.e., sequential and random access file input/output).
  - 39.17 Perform basic database commands including connect, open, select, and close.
- 40.0 Design a unit test plan for an object-oriented computer program, test and debug the program, and report the results. – The student will be able to:
- 40.01 Develop a test plan for an object-oriented program.
  - 40.02 Write test plans for event-driven programs.
  - 40.03 Write test plans for programs that perform file input and output.
  - 40.04 Perform test and debug activities on object-oriented programs, including those written by someone else.
  - 40.05 Perform test and debug activities on an event-driven program.
  - 40.06 Perform test and debug activities on programs that perform file input and output and verify the correctness of output files.
  - 40.07 Document the findings of testing in a test report.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Web Programming  
**Course Number:** 9007510  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to the Internet and Internet-based software applications.

- 41.0 Demonstrate proficiency using HTML and XHTML to create web content— The student will be able to:
- 41.01 Use storyboarding techniques for designing a Web site (e.g., linear, hierarchical).
  - 41.02 Identify elements of a Web page.
  - 41.03 Create Web pages using HTML and XHTML tags that create basic elements (e.g., links, lists, formatted text, tables).
  - 41.04 Create Web pages that utilize tables to achieve complex layout.
  - 41.05 Add graphic content to Web pages.
  - 41.06 Create Web pages that utilize client-side image maps.
  - 41.07 Develop, integrate, and apply the use of forms in Web site design.
  - 41.08 Optimize Web content for desirable search engine placement.
  - 41.09 Demonstrate an understanding of browser compatibility issues by designing pages that comply with the current Web Content Accessibility Guidelines issued by the World Wide Web Consortium (W3C).
  - 41.10 Demonstrate an understanding of Web accessibility issues by developing pages that meet Bobby accessibility checker criteria.
  - 41.11 Explain basic XML syntax and how XHTML conforms to the XML standard.
  - 41.12 Use a WYSIWYG editor to develop and manage a Web site.
  - 41.13 Use markup validation tools to test HTML and XHTML documents for well-formed elements and make all corrections necessary to ensure compliance with W3C standards.
  - 41.14 Analyze and modify HTML and XHTML source code developed by others.
- 42.0 Demonstrate proficiency using cascading style sheets (CSS) to format web pages. – The student will be able to:
- 42.01 Explain the advantages and disadvantages of using Cascading Style Sheets (CSS) to format Web pages.
  - 42.02 Describe the difference between linked, embedded, imported and inline styles and explain how styles are inherited.
  - 42.03 Explain the difference between classes, id, and span elements.
  - 42.04 Utilize CSS properties within Web pages to control page layout, fonts, colors, backgrounds, and other presentation effects.
  - 42.05 Demonstrate understanding of the Box Model.
  - 42.06 Demonstrate proficiency in creating 1 to 3 column layouts.
  - 42.07 Create navigation system through CSS.

43.0 Demonstrate proficiency using basic client-side scripting to control the content and the behavior of HTML and XHTML documents. – The student will be able to:

- 43.01 Describe the difference between server-side and client-side processing.
- 43.02 Describe the term “scripting language” and explain how scripting languages differ from compiled languages.
- 43.03 Create web pages that employ client-side scripting to control content and display.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** JavaScript Programming  
**Course Number:** 9007520  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to client-side JavaScript.

44.0 Demonstrate an understanding of JavaScript programming fundamentals. – The student will be able to:

- 44.01 Describe server side versus client side applications including interpreters.
- 44.02 Describe the purpose and use of an interpreter in relation to JavaScript.
- 44.03 Describe differences in different types of JavaScript implementations (ie Jscript, ECMA).
- 44.04 Declare and initialize variables.
- 44.05 Assign new values to variables.
- 44.06 Create and use constant variables.
- 44.07 Describe the difference of programming languages versus scripting languages.
- 44.08 Describe object based nature and platform independence.
- 44.09 Describe and demonstrate inline scripting.

45.0 Demonstrate proficiency in assigning and handling variables in JavaScript programs and functions. – The student will be able to:

- 45.01 Describe how variables are used in programs.
- 45.02 Identify which data type should be used for a given value.
- 45.03 Identify the syntax for using variables.
- 45.04 Declare and initialize variables.
- 45.05 Assign new values to variables.
- 45.06 Create and use constant variables.
- 45.07 Describe and demonstrate the use of properties
- 45.08 Describe identifiers and identify valid and invalid identifiers.
- 45.09 Describe and identify reserved words, delimiters, literals, and comments.

46.0 Use event handlers in JavaScript programs and functions. – The student will be able to:

- 46.01 Describe the event model and five events (form, image, map, link, and window) .
- 46.02 Demonstrate and use the window events load, focus, blur, and unload.
- 46.03 Demonstrate and use the form events change, reset, and submit.
- 46.04 Demonstrate and use the text events cut, paste, select, and copy,
- 46.05 Demonstrate and use the mouse events mousemove, mousedown, click, mousewheel,mouseover, mouseout and mouseover.
- 46.06 Demonstrate and use the keyboard events keyup, keydown, keypress,
- 46.07 Demonstrate using the appropriate event handlers with their associated events.

- 47.0 Recognize and assign data types appropriate to their use. – The student will be able to:
- 47.01 Describe the data type categories.
  - 47.02 Give examples of var, primitives, null, and undefined data types.
  - 47.03 Demonstrate the use of var in relation to other datatypes.
- 48.0 Demonstrate proficiency is using appropriate operators to achieve a planned output. – The student will be able to:
- 48.01 Construct statements using arithmetic operators.
  - 48.02 Construct statements using relational operators.
  - 48.03 Construct and use statements using logical operators.
  - 48.04 Construct and use statements using string concatenation, and strict comparison.
  - 48.05 Construct and use statements using assignment operators.
  - 48.06 Construct and execute statements using operator precedence.
- 49.0 Write executable statements. – The student will be able to:
- 49.01 Construct variable assignment statements.
  - 49.02 Construct statements using built-in functions.
  - 49.03 Describe when implicit data type conversions take place.
  - 49.04 List the drawbacks of implicit data type conversions.
  - 49.05 Construct statements using functions to explicitly convert data types.
- 50.0 Demonstrate an understanding of variable scope. – The student will be able to:
- 50.01 Understand the scope and visibility of variables.
  - 50.02 Write programs using local variables.
  - 50.03 Describe the scope of a variable.
- 51.0 Use good programming practices. – The student will be able to:
- 51.01 List examples of good programming practices.
  - 51.02 Insert comments into code
  - 51.03 Demonstrate the use of <no script> tag.
  - 51.04 Follow formatting guidelines when writing code.
  - 51.05 Understand the different types of errors produced by programs.
- 52.0 Demonstrate use of the Document Object Module (DOM). – The student will be able to:
- 52.01 Create and use user defined objects.
  - 52.02 Create user defined objects with properties and methods.
  - 52.03 Describe and Use the Array Object including its parameters, properties, and methods (chop, join, pop, push, splice, split) .
  - 52.04 Describe and Use the Date Object including its multiple constructors, properties, and methods (getDay, getMonth, getYear, getMinutes, getHous, getTime) .
  - 52.05 Describe and use the Window Object including \properties, and methods
  - 52.06 Describe and use the Image Object including its properties, and methods
  - 52.07 Describe and use the History Object including its properties, and methods
  - 52.08 Describe and use the RegEx Object for basic and complex regular expressions.

- 52.09 Describe and use the String Object including its properties, and methods
- 52.10 Describe and use the Math Object including its properties, and methods
- 53.0 Use conditional control statements in JavaScript. – The student will be able to:
  - 53.01 Construct and use an if statement.
  - 53.02 Construct and use a switch statement.
  - 53.03 Construct and use a while, do while, and for loop.
  - 53.04 Construct and use a conditional operator.
- 54.0 Use iterative control statements in JavaScript. – The student will be able to:
  - 55.0 Describe the types of loop statements and their uses.
  - 56.0 Construct and use the while and do while loop.
  - 57.0 Construct and use the for loop.
  - 58.0 Describe when a while loop is used.
  - 59.0 Describe when a for loop is used.
- 60.0 Use nested loop iterative control statements in JavaScript. – The student will be able to:
  - 60.01 Construct and execute a program using nested loops.
  - 60.02 Construct and execute a loop using break and continue.
  - 60.03 Evaluate a nested loop construct and sentinel value.
- 61.0 Use JavaScript to produce input and output for programs. – The student will be able to:
  - 61.01 Describe and use the prompt() and confirm() to input data into programs.
  - 61.02 Describe and demonstrate the use of the alert() to produce output to the console.
  - 61.03 Describe and demonstrate how to input data using JavaScript Events.
  - 61.04 Describe and demonstrate how to output using the document.write().
  - 61.05 Explain the difference of prompt() and confirm() functions.
  - 61.06 Create and use escape sequences.
- 62.0 Demonstrate proficiency in using Form Objects in JavaScript programs and functions. – The student will be able to:
  - 62.01 Use Form objects to validate input.
  - 62.02 Access the value of the form object through its associated method.
  - 62.03 Describe and use button, checkbox, textarea, select, radio, hidden, and text objects.
  - 62.04 Access and modify values and attributes at runtime using getElementById, getElementsByName, getElementsByTagName, and inner HTML.
- 63.0 Demonstrate proficiency in using methods in JavaScript programs and functions. – The student will be able to:
  - 63.01 Differentiate between anonymous methods and methods.
  - 63.02 Identify the benefits of using methods.
  - 63.03 Describe and use inner method.
  - 63.04 Create a method.

- 63.05 Describe how a method is invoked.
- 64.0 Demonstrate proficiency in using parameters in JavaScript programs and functions. – The student will be able to:
  - 64.01 Describe how parameters are passed into functions.
  - 64.02 Define a parameter.
  - 64.03 Create a method using a parameter.
  - 64.04 Invoke a method that has parameters.
  - 64.05 Distinguish between formal and actual parameters.
- 65.0 Utilize debugging techniques in programs. – The student will be able to:
  - 65.01 Use the display property to enable/disable code blocks.
  - 65.02 Use document.write() to log program execution.
  - 65.03 Test program in different browsers and mobile devices for compatibility errors.
  - 65.04 Use comments as a flow control while debugging.
- 66.0 Recognize security risks in programs. – The student will be able to:
  - 66.01 Describe the security risk of cookies and browsers.
  - 66.02 Identify security responsibilities of browsers and operating system.
  - 66.03 Describe security systems such as frame to frame URL changing.
  - 66.04 Describe the use of signed scripts.
  - 66.05 Create and use cookies in a secure manner.
- 67.0 Use plug-ins and libraries. – The student will be able to:
  - 67.01 Use external libraries in the program.
  - 67.02 Describe and contrast the following industry libraries JQuery, Dojo, LightBox, and Moo Tools, PhoneGap.
  - 67.03 Describe different types of libraries full, effects, tools, graphing, math, cryptography, and AJAX.
  - 67.04 Identify how load and reference external and user made scripts.
  - 67.05 Describe AJAX elements and procedures.
  - 67.06 Describe XML.
  - 67.07 Demonstrate the use of XMLHttpRequest to retrieve data.
- 68.0 Demonstrate proficiency in programming for mobile delivery technology (e.g., iPhone/Android). – The student will be able to:
  - 68.01 Respond to multi-touch and gesture events.
  - 68.02 Describe and demonstrate the use of webkit CSS.
  - 68.03 Use the meta tag to enable native look and feel.
  - 68.04 Create a splash screen.
  - 68.05 Describe and demonstrate app caching.
  - 68.06 Describe and demonstrate use of JQuery for mobile development.
  - 68.07 Describe how to publish the app using XCode.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** PHP Programming  
**Course Number:** 9007530  
**Course Credit:** 1

**Course Description:**

This course continues the study of computer programming concepts specific to PHP programming.

69.0 Demonstrate an understanding of Personal Home Page (PHP) programming language.

– The student will be able to:

69.01 Describe the evolution of PHP as a programming language.

69.02 Discuss the strengths and limitations of PHP.

70.0 Demonstrate proficiency in PHP configuration. – The student will be able to:

70.01 Set up a PHP host (wamp, mamp, online).

70.02 Configure PHP for File Transfer Protocol (FTP) access.

70.03 Configure the config.php file.

71.0 Demonstrate an understanding of PHP language basics. – The student will be able to:

71.01 Describe how variables are declared, referenced, and passed.

71.02 Describe the control structures inherent with PHP programming.

71.03 Describe the three types of arrays used in PHP.

71.04 Describe how functions in PHP are created, called, and controlled.

72.0 Demonstrate proficiency in the use of server processes. – The student will be able to:

72.01 Describe a session and explain its importance and use in web programming.

72.02 Describe the server processes associated with forms handling.

72.03 Compare and contrast the use of GET and POST.

72.04 Describe cookies and explain their use, population, control, and risks.

72.05 Describe HTTP Headers and their role in web development.

72.06 Describe HTTP Authentication.

73.0 Demonstrate an understanding of object-oriented programming in PHP. – The student will be able to:

73.01 Create classes using PHP.

73.02 Describe inheritance and its role in PHP programming.

73.03 Write PHP code to handle exceptions.

73.04 Write PHP code to accommodate different interfaces.

74.0 Demonstrate proficiency in writing PHP code to handle file input/output (I/O) operations.

– The student will be able to:

- 74.01 Write PHP code to perform open, read, and write operations on files.
- 74.02 Write PHP code to initiate file system functions.
- 74.03 Write PHP code to handle streams.
- 75.0 Demonstrate proficiency in creating, populating, and using arrays in PHP. – The student will be able to:
  - 75.01 Create, populate and write code to extract information from a numeric array in PHP.
  - 75.02 Create, populate and write code to extract information from an associative array in PHP.
  - 75.03 Create, populate and write code to extract information from a multidimensional array in PHP.
- 76.0 Demonstrate proficiency handling strings in PHP. – The student will be able to:
  - 76.01 Write PHP code to retrieve or extract one or more characters from a string.
  - 76.02 Write PHP code to convert a string from data type to another.
  - 76.03 Write PHP code to manipulate the display characteristics of string data.
  - 76.04 Write PHP code that uses string date to control program flow.
  - 76.05 Write PHP code to join array elements with a string.
- 77.0 Demonstrate proficiency in using PHP to access databases via Open Database Connectivity (ODBC). – The student will be able to:
  - 77.01 Write PHP code to create an ODBC connection and retrieve information from a database using the appropriate Structured Query Language (SQL) statement.
  - 77.02 Describe a prepared statement and discuss its primary advantages (e.g., code efficiency, SQL Injection prevention).
  - 77.03 Create a prepared statement to perform specific SQL actions.
  - 77.04 Describe a PHP Data Object (PDO) transaction and explain its primary advantages.
  - 77.05 Create a prepared statement and associated result set using PDOStatement.
- 78.0 Demonstrate proficiency in applying best practices for ensuring creation of a secure program. – The student will be able to:
  - 78.01 Describe an SQL Injection, its consequences, and ways in which it may be prevented via programming.
  - 78.02 Describe the Remote Code Injection vulnerability in PHP and ways in which it may be prevented.
  - 78.03 Describe the risk of session hijacking in PHP and ways to program around it.
  - 78.04 Describe the risks associated with uploading files in PHP and ways in which risks might be mitigated.
  - 78.05 Describe Secure Sockets Layer (SSL) and usage issues related to PHP.
- 79.0 Demonstrate an understanding of key technologies, protocols, and architectures associated with web development and programming. – The student will be able to:

- 79.01 SimpleXML functions
- 79.02 Extensible Markup Language (XML) Extension
- 79.03 XML Path Language (Xpath)
- 79.04 Web Services
- 79.05 Simple Object Access Protocol (SOAP)
- 79.06 Representational State Transfer (REST)
- 79.07 JavaScript Object Notation (JSON)
- 79.08 Asynchronous JavaScript and XML (AJAX)

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Information & Communications Technology (ICT) Essentials  
**Program Type:** Orientation/Exploratory  
**Career Cluster:** Information Technology

<b>Secondary – Middle School</b>	
Program Number	9009100
CIP Number	149009100M
Grade Level	6-8
Standard Length	Year
Teacher Certification	BUS ED 1 @2 COMPU SCI 6 INFO TECH 7G WEB DEV 7G
CTSO	FBLA/BPA
Facility Code	212; <a href="http://www.fldoe.org/edfacil/sref.asp">http://www.fldoe.org/edfacil/sref.asp</a> (State Requirements for Educational Facilities)

### **Purpose**

The purpose of this course is to provide students with the computer, digital, and information technology skills necessary for success in their future academic and occupational goals. In addition to fundamental computer information, the content includes but is not limited to digital technologies associated with web development, multimedia, word processing, spreadsheet, database, Internet communications, cybersecurity, and computer programming.

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to technologies being taught. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Program Structure**

This program is a planned sequence of instruction consisting of the courses shown in the table below. For optimal success, it is recommended that students' progress through the program in the order presented.

Course Number	Course Title	Course Length
9009110	Information & Communications Technology (ICT) Essentials 1	Year
9009120	Information & Communications Technology (ICT) Essentials 2	Year
9009130	Information & Communications Technology (ICT) Essentials 3	Year

## Special Notes

### Career and Technical Student Organization (CTSO)

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills for secondary students. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### Accommodations

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an individual educational plan (IEP) served in exceptional student education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course.

## Standards

After successfully completing this program, the student will be able to perform the following:

- 01.0 Identify computer components and their functions.
- 02.0 Demonstrate knowledge of different operating systems.
- 03.0 Demonstrate proficiency using the Internet to locate information.
- 04.0 Demonstrate an understanding of Internet safety and ethics.
- 05.0 Develop and apply word processing and document manipulation skills.
- 06.0 Develop and apply fundamental spreadsheet skills.
- 07.0 Demonstrate proficiency in using presentation software.
- 08.0 Demonstrate proficiency in using graphics software.
- 09.0 Demonstrate an understanding of webpage construction, operation, and function.
- 10.0 Demonstrate proficiency in using a GUI authoring tool to create a template-based website.
- 11.0 Demonstrate proficiency in fundamental computer programming and logic.
- 12.0 Conduct basic research using resources located on the Internet.

- 13.0 Demonstrate proficiency with common computer peripherals, including connections to standard input and output devices.
- 14.0 Demonstrate an understanding of Internet safety practices, policies, and ethics.
- 15.0 Demonstrate proficiency in producing moderately complex documents involving one or more office technologies.
- 16.0 Demonstrate proficiency in using moderately complex spreadsheet functions.
- 17.0 Demonstrate proficiency in communication using digital and multimedia technologies.
- 18.0 Demonstrate proficiency in using a web authoring tool.
- 19.0 Demonstrate proficiency in fundamental structured programming.
- 20.0 Demonstrate proficiency locating, gathering, and preparing textual, graphical, and image-based web content.
- 21.0 Demonstrate appropriate use of email.
- 22.0 Use Web 2.0 or Internet-based collaborative technology (e.g., Wikis, Wimba, Moodle, Edmodo, Facebook) to facilitate a web development or research project.
- 23.0 Demonstrate an understanding of computer networks.
- 24.0 Develop and apply database skills.
- 25.0 Demonstrate proficiency in embedding objects into documents and using advanced formatting options.
- 26.0 Demonstrate proficiency in using digital photography and digital imaging.
- 27.0 Demonstrate proficiency in basic video production equipment.
- 28.0 Demonstrate skill in using video editing software.
- 29.0 Demonstrate proficiency in using audio editing software (e.g., Audacity).
- 30.0 Demonstrate proficiency using web development tools and techniques to enhance a website's interactivity, appeal, or performance.
- 31.0 Demonstrate proficiency in basic programming.
- 32.0 Create an interactive program (i.e., a video game or interactive video) based on telling a story.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Information & Communications Technology (ICT) Essentials 1  
**Course Number:** 9009110  
**Course Length:** Year  
**Grade:** 6-8

**Course Description:**

This course introduces students to core concepts associated with computers and their use. The content includes hands-on opportunities to explore various software applications, including the creation of a template-based webpage and a basic computer program. For the programming instruction, the use of Alice from Carnegie Mellon University is encouraged as it is a highly engaging program, includes instructional materials, and is available at no cost.

01.0 Identify computer components and their functions. – The student will be able to:

- 01.01 Identify the internal components of a computer (e.g., power supply, hard drive, mother board, I/O cards/ports, cabling, etc.).
- 01.02 Identify various computer input devices (e.g., mouse, keyboard, phone, camera) and describe their use.
- 01.03 Identify various computer output devices (e.g., monitor, printer, phone) and describe their use.
- 01.04 Identify various storage devices (e.g., flash drive, iPod, phone, external hard drive, etc.)

02.0 Demonstrate knowledge of different operating systems. – The student will be able to:

- 02.01 Identify the most common computer operating systems (i.e., Windows, Apple, UNIX).
- 02.02 Describe and use conventional file naming conventions.
- 02.03 Demonstrate proficiency with file management tasks (e.g., folder creation, file creation, backup, copy, delete, open, save).
- 02.04 Be able to identify file types by extension (e.g., .doc, .txt, .wav, xls, etc.).
- 02.05 Compare and contrast various operating systems used in mobile devices (e.g., iOS, Android).

03.0 Demonstrate proficiency using the Internet to locate information. – The student will be able to:

- 03.01 Identify and use web terminology.
- 03.02 Define Universal Resource Locators (URLs) and associated protocols (e.g., http, ftp, telnet, mailto).
- 03.03 Compare and contrast the types of Internet domains (e.g., .com, .org, .edu, .gov, .net, .mil).
- 03.04 Demonstrate proficiency using search engines, including Boolean search techniques.
- 03.05 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).

- 03.06 Compare and contrast the roles of web servers and web browsers.
  - 03.07 Apply the rules for properly citing works or other information obtained from the Internet.
  - 03.08 Identify and apply Copyright Fair Use guidelines.
  - 03.09 Evaluate online information for credibility and quality using basic guidelines and indicators (e.g. authority, affiliation, purpose, etc.).
- 04.0 Demonstrate an understanding of Internet safety and ethics. – The student will be able to:
- 04.01 Describe cyber-bullying and its impact on perpetrators and victims.
  - 04.02 Differentiate between viruses and malware, specifically their sources, ploys, and impact on personal privacy and computer operation, and ways to avoid infection.
  - 04.03 Demonstrate proficiency running an antivirus scan to remove viruses and malware.
  - 04.04 Describe risks associated with social networking sites (e.g., FaceBook, MySpace, and Twitter) and ways to mitigate these risks.
  - 04.05 Adhere to cyber safety practices with regard to conducting Internet searches, email, chat rooms, and other social network websites.
  - 04.06 Adhere to Acceptable Use Policies when accessing the Internet.
- 05.0 Develop and apply word processing and document manipulation skills. – The student will be able to:
- 05.01 Apply and adjust margins, tabs, line spacing and paragraph indents.
  - 05.02 Insert and manipulate text, graphics/images, and WordArt.
  - 05.03 Format text using the font interface and styles interface.
  - 05.04 Adjust the size, position, and layout wrapping settings of a graphic/image.
  - 05.05 Use the status bar to determine the number of pages, words, and characters in a document.
  - 05.06 Insert codes for current date and time.
  - 05.07 Copy text between documents using mouse, menu, and keyboard techniques.
  - 05.08 Move text in a document using mouse, menu, and keyboard techniques.
  - 05.09 Create bulleted and numbered lists.
  - 05.10 Create a table – Inserting, moving and entering data.
  - 05.11 Create a table – format rows, columns and cells.
  - 05.12 Insert page breaks.
  - 05.13 Adjust magnification of document display single and multiple pages.
  - 05.14 Understand printing options including shrink to fit, gutters, and document orientation.
  - 05.15 Create a report or essay that contains a title page, text, a graphic/image, and WordArt.
  - 05.16 Interpret basic proofreader marks and edit a report or essay accordingly.
- 06.0 Develop and apply fundamental spreadsheet skills. – The student will be able to:
- 06.01 Describe a spreadsheet and the ways in which it may be used.
  - 06.02 Identify the parts of the spreadsheet display.
  - 06.03 Insert and format text information into cells.
  - 06.04 Insert and format numeric information into cells.
  - 06.05 Insert and format date and time information into cells.

- 06.06 Select multiple cells using the mouse.
- 06.07 Copy information from one or more cells to another part of the spreadsheet.
- 06.08 Move information from one or more cells to another part of the spreadsheet.
- 06.09 Sum the numeric values of multiple cells.
- 06.10 Use the sort function to alphabetize a table of information.
- 06.11 Create and navigate through a worksheet.
- 06.12 Change column width and row height.
- 06.13 Insert columns and rows.
- 06.14 Merge cells.
- 06.15 Use Undo and Redo features.
- 06.16 Create and print a table that displays and sums the quantities or values of different categories of data.

07.0 Demonstrate proficiency in using presentation software. – The student will be able to:

- 07.01 Describe presentation software and the ways in which it may be used.
- 07.02 Create a Slide Master.
- 07.03 Adjust presentation format using the Slide Master.
- 07.04 Add and format titles, subtitles, and talking points to a presentation slide.
- 07.05 Insert date and time codes and slide numbers to slides.
- 07.06 Insert and format images/graphics onto slides.
- 07.07 Insert new or duplicate slides.
- 07.08 Adjust slide transition to include animation.
- 07.09 Insert and adjust sound settings and timing in presentation.
- 07.10 Adjust the sequence of slides in the presentation.
- 07.11 Produce a presentation that includes text, graphics, and digital images and present it using a projection system.
- 07.12 Adjust Slide Show Set-up to loop show continuously.

08.0 Demonstrate proficiency in using graphics software. – The student will be able to:

- 08.01 Describe graphics software and the ways in which it may be used.
- 08.02 Compare and contrast vector and bitmap images.
- 08.03 Demonstrate knowledge of image formats related to photos and graphics on the Internet (e.g., Graphic: TIFF, BMP, EPS, Web: JPEG, GIF, PNG, et al).
- 08.04 Create graphic images that demonstrate the digital use of inks, watercolors, acrylics, and oils.
- 08.05 Use terminology appropriate to the creation and display of graphic images.
- 08.06 Create images with effects using different tools and brushes available in the software.
- 08.07 Copy and paste graphic images.
- 08.08 Alter the shapes and colors used in a graphic image.
- 08.09 Save and export a photograph in the format that provides the best image quality and file size for Internet use.

09.0 Demonstrate an understanding of webpage construction, operation, and function. – The student will be able to:

- 09.01 Categorize websites according to their purpose and domain.
- 09.02 Identify elements of a webpage.
- 09.03 Define basic HTML terminology.

- 09.04 Critique the aesthetic and functional operation of sample websites.
- 10.0 Demonstrate proficiency in using a GUI authoring tool to create a template-based website. – The student will be able to:
  - 10.01 Create a website using an available template.
  - 10.02 Build the site navigation schema for a website.
  - 10.03 Create hyperlinks to external sites.
  - 10.04 Use an image or icon as a hyperlink.
  - 10.05 Prepare web pages for publication.
  - 10.06 Publish a website using File Transfer Protocol (FTP).
- 11.0 Demonstrate proficiency in fundamental computer programming and logic. – The student will be able to:
  - 11.01 Define programming and discuss its role in computing.
  - 11.02 Understand the binary representation of data and programs in computers.
  - 11.03 Define the term algorithm and its application to problem-solving.
  - 11.04 Describe basic Boolean concepts, including Boolean algebra, truth tables, operators, and logic.
  - 11.05 Describe the structure of a simple program and why sequencing is important.
  - 11.06 Explain the logic used for IF statements.
  - 11.07 Create a program using a high level programming language (e.g., Alice, DarkBASIC, GameMaker).

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Information & Communications Technology (ICT) Essentials 2  
**Course Number:** 9009120  
**Course Length:** Year  
**Grade:** 6-8

**Course Description:**

This course builds on the previous course and provides greater depth and more complex concepts and the skills/knowledge to master these concepts. Students will be provided opportunities to extend their skills with various software applications by creating more complex documents and using more complex functions. Students will also be exposed to structured programming and the creation of a more complex computer program. For the programming instruction, the use of Alice from Carnegie Mellon University is encouraged as it is a highly engaging program, includes instructional materials, and is available at no cost.

- 12.0 Conduct basic research using resources located on the Internet. – The student will be able to:
- 12.01 Construct an effective Boolean search statement using appropriate keywords.
  - 12.02 Evaluate search results to determine those sites or resources that best meet the research criteria.
  - 12.03 Incorporate the results from the Internet search into a research document (e.g., report, synopsis, et al).
  - 12.04 Download images as needed in support of the research, complying with notices of copyright.
  - 12.05 Properly cite the Internet sources used in the research.
- 13.0 Demonstrate proficiency with common computer peripherals, including connections to standard input and output devices. – The student will be able to:
- 13.01 Identify the types and purposes of common input devices (e.g., mouse, keyboard, camera, microphone, scanner).
  - 13.02 Identify the types and purposes of specialized input devices (e.g., digital cameras, mobile devices, GPS devices).
  - 13.03 Describe the types and purposes of various computer connection ports (e.g., USB, firewire, parallel, serial, Ethernet, et al).
  - 13.04 Connect an input device (e.g., mouse, keyboard, cell phone, camera, et al) and verify proper operation.
  - 13.05 Connect an output device (e.g., printer, monitor, projector, et al) and verify proper operation.
- 14.0 Demonstrate an understanding of Internet safety practices, policies, and ethics. – The student will be able to:
- 14.01 Describe cyber-bullying and its impact on perpetrators and victims.
  - 14.02 Differentiate between viruses and malware, specifically their sources, ploys, and impact on personal privacy and computer operation, and ways to avoid infection.

- 14.03 Describe risks associated with sexting, including related legal issues, social engineering aspects, prevention methods, and reporting of offenses.
  - 14.04 Describe the risks associated with online gaming and ways to mitigate these risks.
  - 14.05 Describe the ethics and copyright legalities of downloading music or videos from the Internet.
  - 14.06 Describe risks associated with social networking sites (e.g., FaceBook, MySpace, and Twitter) and ways to mitigate these risks.
  - 14.07 Adhere to cyber safety practices with regard to conducting Internet searches, email, chat rooms, and other social network websites.
- 15.0 Demonstrate proficiency in producing moderately complex documents involving one or more office technologies. – The student will be able to:
- 15.01 Create a word processed document (e.g., article, newsletter) that employs a column layout.
  - 15.02 Create a word processed document that includes an imbedded image formatted to wrap text tightly around the image.
  - 15.03 Create a word processed document that integrates objects from a spreadsheet.
  - 15.04 Create a word processed document that includes formatted shapes and WordArt.
  - 15.05 Convert a body of text into a multi-column table, sorted by the left-most column.
  - 15.06 Format a word processed document using styles and the Document Map.
  - 15.07 Use numbered and bulleted lists in a document.
  - 15.08 Create a word processed document that uses multi-level outlining.
  - 15.09 Adjust the formatting of a multi-level outline document.
- 16.0 Demonstrate proficiency in using moderately complex spreadsheet functions. – The student will be able to:
- 16.01 Insert arithmetic formulas into a spreadsheet.
  - 16.02 Differentiate between absolute and relative cell addressing.
  - 16.03 Apply and adjust cell formatting to accommodate currency, date, and percentage values.
  - 16.04 Apply shading and borders to a spreadsheet.
  - 16.05 Demonstrate how to use common spreadsheet functions (e.g., SUM, AVERAGE, and COUNT).
  - 16.06 Use Conditional Formatting to highlight text.
  - 16.07 Create a chart based on data sets defined in a spreadsheet.
  - 16.08 Adjust chart types to appropriately represent base data.
- 17.0 Demonstrate proficiency in communication using digital and multimedia technologies. – The student will be able to:
- 17.01 Create a progressive slide presentation featuring the use of SmartArt and animated transitions.
  - 17.02 Use a portable digital video device (e.g., cell phone, Flip camera) to produce video clips for transfer onto a computer.
  - 17.03 Use video editing software to produce a slide show or video movie.
  - 17.04 Create a multimedia presentation that incorporates shot and edited video, animation, music, narration and adheres to good design principles, use of transitions, and effective message conveyance.

18.0 Demonstrate proficiency in using a web authoring tool. – The student will be able to:

- 18.01 Build, optimize, edit, and test web pages for publication.
- 18.02 Demonstrate an understanding of network and web implementation issues (e.g., bandwidth, compression, streaming).
- 18.03 Compare and contrast various methods by which information may be accessed on the Internet/Intranet (e.g., FTP, telnet, browser).
- 18.04 Demonstrate an understanding of file encryption methods (e.g., secure server, unsecured server).
- 18.05 Modify a webpage template to achieve an effective look and feel for a website.
- 18.06 Integrate video and animation files into a webpage.
- 18.07 Prepare web pages for publication.
- 18.08 Publish a website.

19.0 Demonstrate proficiency in fundamental structured programming. – The student will be able to:

- 19.01 Describe structured programming and discuss the advantages of this approach.
- 19.02 Describe and give examples of the three structural components (i.e., decisions, sequences, and loops) used in structured programming.
- 19.03 Write a program in pseudocode that uses structured programming to solve a problem.
- 19.04 Convert a program from pseudocode into a common high level programming language (e.g., Alice, DarkBASIC).

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Information & Communications Technology (ICT) Essentials 3  
**Course Number:** 9009130  
**Course Length:** Year  
**Grade:** 6-8

**Course Description:**

This course builds on the previous two courses and provides greater depth and more complex concepts and the skills/knowledge to master these concepts. In addition to working with network concepts, students will be provided opportunities to further extend their skills with various software applications by creating more complex documents and using more complex functions and technologies. Students will continue their exposure to computer programming and the creation of more complex computer programs. For the programming instruction, the use of Alice from Carnegie Mellon University is encouraged as it is a highly engaging program, includes instructional materials, and is available at no cost.

20.0 Demonstrate proficiency locating, gathering, and preparing textual, graphical, and image-based web content. – The student will be able to:

- 20.01 Characterize effective writing styles and conventions for the web.
- 20.02 Use word processing software to create effective written content for the web.
- 20.03 Use graphics software to create message-driven graphical content for use on a webpage.
- 20.04 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
- 20.05 Create and edit images using image or graphic design software.
- 20.06 Adhere to cyber safety practices with regard to conducting Internet searches, email, chat rooms, and other social network websites.

21.0 Demonstrate appropriate use of email. – The student will be able to:

- 21.01 Describe email capabilities and functions.
- 21.02 Identify components of an email message.
- 21.03 Identify the components of an email address.
- 21.04 Attach a file to an email message.
- 21.05 Forward an email message to one or more addressees.
- 21.06 Use an address book.
- 21.07 Reply to an email message.
- 21.08 Use the Internet to perform email activities (i.e., web-based email).
- 21.09 Identify the appropriate use of email and demonstrate related email etiquette.

22.0 Use Web 2.0 or Internet-based collaborative technology (e.g., Wikis, Wimba, Moodle, Edmodo, Facebook) to facilitate a web development or research project. – The student will be able to:

- 22.01 Create and use a wiki or similar collaborative environment for communicating and sharing among project team members.

22.02 Create and use a social media page (e.g., Facebook, Wimba, Moodle) to share and publish project components (e.g., content, images, graphics, videos) for gauging visitor reaction and obtaining feedback.

23.0 Demonstrate an understanding of computer networks. – The student will be able to:

- 23.01 Define networking and describe the purpose of a network.
- 23.02 Describe the conceptual background of digital networks including terminology and basics.
- 23.03 Describe various types of networks and the advantages and disadvantages of each (e.g. peer to peer, client/server, mainframe/terminal).
- 23.04 Describe the function of various network devices (e.g. hub, switched hub or switch, router bridge, gateway, and access points).
- 23.05 Describe how network devices are identified (i.e., IP addressing).
- 23.06 Explain the protocols commonly used in a network environment.
- 23.07 Describe the purpose of the OSI model and each of its layers.
- 23.08 Understand how two network nodes communicate through the OSI model.
- 23.09 Differentiate between public and private IP addresses.
- 23.10 Describe the difference between the Internet and intranet.
- 23.11 Compare and contrast the different methods for network connectivity (e.g. broadband, wireless, Bluetooth, and cellular).
- 23.12 Discuss the differences between Local Area Network (LAN), Wide Area Network (WAN), Metropolitan Area Network (MAN), and Virtual Private Network (VPN).

24.0 Develop and apply database skills. – The student will be able to:

- 24.01 Define database.
- 24.02 Differentiate between fields and records in a database.
- 24.03 Describe the various data types used in a database.
- 24.04 Create a data table that uses multiple data types.
- 24.05 Add, edit, sort, and delete records in datasheet view.
- 24.06 Differentiate between a table and a query.
- 24.07 Describe Structured Query Language (SQL) and discuss its use with databases.
- 24.08 Create a basic SELECT query.
- 24.09 Export data from a database into a spreadsheet form.
- 24.10 Import data from a spreadsheet.
- 24.11 Create meaningful reports from the database.

25.0 Demonstrate proficiency in embedding objects into documents and using advanced formatting options. – The student will be able to:

- 25.01 Embed a PDF file (e.g., a map, image, et al) into a word processed document and format to wrap text around the object.
- 25.02 Enhance the appearance of WordArt using the shape, spacing, shadow, and 3D effects formatting features.
- 25.03 Create a word processed document that includes SmartArt.
- 25.04 Convert a document from profile to landscape orientation and adjust margins and headers and footers.
- 25.05 Insert citations and a bibliography into a word processed document.
- 25.06 Create an automatic Table of Contents.
- 25.07 Add comments to a document.

- 25.08 Revise a word processed document with Track Changes enabled, then accept and reject changes as appropriate.
- 25.09 Using the Translate feature, translate a document from English to another language and vice versa.
- 26.0 Demonstrate proficiency in using digital photography and digital imaging. – The student will be able to:
  - 26.01 Demonstrate knowledge of ethics related to digital imaging and legal consent issues.
  - 26.02 Apply effective design principles in digital photography compositions.
  - 26.03 Demonstrate skill in using digital imaging software for image manipulation, color correction, and special effects to creatively convey a message or literary interpretation.
  - 26.04 Demonstrate skill in scanning and cropping photographs.
- 27.0 Demonstrate proficiency in basic video production equipment. – The student will be able to:
  - 27.01 Operate video camera (e.g., Flip camera, cell phone).
  - 27.02 Write storyboards to depict a one minute video segment.
  - 27.03 Determine appropriate lighting needs.
  - 27.04 Create video shots sufficient to produce a one minute video.
- 28.0 Demonstrate skill in using video editing software. – The student will be able to:
  - 28.01 Demonstrate knowledge of the digital video software interface.
  - 28.02 Demonstrate ability to edit, cut, erase, and insert video.
  - 28.03 Edit video as needed to achieve desired message and length.
  - 28.04 Describe a first complete run-through of the video production process
  - 28.05 Characterize the qualities of effective communication in a completed video
  - 28.06 Prepare a one minute video project for final compositing and export.
  - 28.07 Upload finished video files to a website.
- 29.0 Demonstrate proficiency in using audio editing software (e.g., Audacity). – The student will be able to:
  - 29.01 Demonstrate knowledge of the audio editing software interface.
  - 29.02 Demonstrate ability to edit, cut, erase, and insert audio.
  - 29.03 Edit audio as needed to achieve desired message and length.
  - 29.04 Prepare a one minute audio commercial project.
- 30.0 Demonstrate proficiency using web development tools and techniques to enhance a website's interactivity, appeal, or performance. – The student will be able to:
  - 30.01 Compare and contrast writing HTML using a text editor versus using a Graphical User Interface (GUI) editor
  - 30.02 Design and create an effective web page template.
  - 30.03 Demonstrate knowledge of color wheel and proper use of color.
  - 30.04 Create attractive, engaging, and efficient web pages using a GUI editor.
  - 30.05 Insert audio files into a Web page.

- 30.06 Create, edit and integrate video files into a webpage.
  - 30.07 Create, edit and integrate animation files into a webpage.
  - 30.08 Use Dynamic HTML (DHTML) to enhance webpage interactivity.
  - 30.09 Create webpages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
- 31.0 Demonstrate proficiency in basic programming. – The student will be able to:
- 31.01 Describe iterative programming structures (e.g., while, do/while, et al) and how they are used in programming.
  - 31.02 Explain the types and uses of variables in programming.
  - 31.03 Describe object-oriented concepts.
  - 31.04 Compare and contrast programming languages that are compiled (e.g., C++), interpreted (e.g., HTML), and translated (e.g., Java).
  - 31.05 Create animated objects using a high level programming language to control their behavior.
  - 31.06 Write a program design document showing program flow using pseudocode.
  - 31.07 Create a program using animated objects.
  - 31.08 Troubleshoot and debug errors in code.
- 32.0 Create an interactive program (i.e., a video game or interactive video) based on telling a story. – The student will be able to:
- 32.01 Apply the design process in solving a problem.
  - 32.02 Identify the design criteria and constraints.
  - 32.03 Create storyboards to model the program flow and functionality.
  - 32.04 Write the appropriate code.
  - 32.05 Test and evaluate the program.
  - 32.06 Modify the program as needed to solve the problem.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Course Title:** Exploring Information Technology Careers  
**Course Type:** Orientation/Exploratory  
**Career Cluster:** Information Technology

<b>Secondary – Middle School</b>	
Program Number	9009350
CIP Number	149009350M
Grade Level	6-8
Standard Length	Semester
Teacher Certification	BUS ED 1 @2 COMPU SCI 6 INFO TECH 7 G WEB DEV 7 G DIGI MEDIA 7 G CYBER TECH 7 G COMP PROG 7 G
CTSO	FBLA BPA
Facility Code	212 <a href="http://www.fldoe.org/edfacil/sref.asp">http://www.fldoe.org/edfacil/sref.asp</a> (State Requirements for Educational Facilities)

### **Purpose**

The purpose of this course is to assist students in making informed decisions regarding their future academic and occupational goals and to provide information regarding careers in the Information Technology career cluster. The content includes but is not limited to terminology, careers, history, required skills, and technologies associated with pathways comprising the Information Technology career cluster. Reinforcement of academic skills occurs through classroom instruction and applied laboratory procedures.

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

The length of this course is one semester. It may be offered for two semesters when appropriate. When offered for one semester, it is recommended that it be at the exploratory level and more in-depth when offered for two semesters.

### **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate Career and Technical Student Organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course.

### **Standards**

After successfully completing this course, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of the Network Systems career pathway.
- 02.0 Demonstrate an understanding of the Information Support and Services career pathway.
- 03.0 Demonstrate an understanding of the Web and Digital Communications career pathway.
- 04.0 Demonstrate an understanding of the Programming and Software Development career pathway.
- 05.0 Apply leadership and communication skills.
- 06.0 Describe how information technology is used in the Information Technology career cluster.
- 07.0 Use information technology tools.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Exploring Information Technology Careers  
**Course Number:** 9009350  
**Course Length:** Semester

**Course Description:**

Beginning with a broad overview of the Information Technology career cluster, students are introduced to the terminology, careers, history, required skills, and technologies associated with each pathway in the Information Technology career cluster. Additionally, they will be provided with opportunities to acquire and demonstrate beginning leadership skills.

- 01.0 Demonstrate an understanding of the Network Systems career pathway--The student will be able to:
- 01.01 Define and use proper terminology associated with the Network Systems career pathway.
  - 01.02 Describe some of the careers available in the Network Systems career pathway.
  - 01.03 Identify common characteristics of the careers in the Network Systems career pathway.
  - 01.04 Research the history of the Network Systems career pathway and describe how the associated careers have evolved and impacted society.
  - 01.05 Identify skills required to successfully enter any career in the Network Systems career pathway.
  - 01.06 Describe technologies associated in careers within the Network Systems career pathway.
- 02.0 Demonstrate an understanding of the Information Support and Services career pathway-The student will be able to:
- 02.01 Define and use proper terminology associated with the Information Support and Services career pathway.
  - 02.02 Describe some of the careers available in the Information Support and Services career pathway.
  - 02.03 Identify common characteristics of the careers in the Information Support and Services career pathway.
  - 02.04 Research the history of the Information Support and Services career pathway and describe how the careers have evolved and impacted society.
  - 02.05 Identify skills required to successfully enter any career in the Information Support and Services career pathway.
  - 02.06 Describe technologies associated in careers within the Information Support and Services career pathway.
- 03.0 Demonstrate an understanding of the Web and Digital Communications career pathway-The student will be able to:
- 03.01 Define and use proper terminology associated with the Web and Digital Communications career pathway.

- 03.02 Describe some of the careers available in the Web and Digital Communications career pathway.
  - 03.03 Identify common characteristics of the careers in the Web and Digital Communications career pathway.
  - 03.04 Research the history of the Web and Digital Communications career pathway and describe how the careers have evolved and impacted society.
  - 03.05 Identify skills required to successfully enter any career in the Web and Digital Communications career pathway.
  - 03.06 Describe technologies associated in careers within the Web and Digital Communications career pathway.
- 04.0 Demonstrate an understanding of the Programming and Software Development career pathway--The student will be able to:
- 04.01 Define and use proper terminology associated with the Programming and Software Development career pathway.
  - 04.02 Describe some of the careers available in the Programming and Software Development career pathway.
  - 04.03 Identify common characteristics of the careers in the Programming and Software Development career pathway.
  - 04.04 Research the history of the Programming and Software Development career pathway and describe how the careers have evolved and impacted society.
  - 04.05 Identify skills required to successfully enter any career in the Programming and Software Development career pathway.
  - 04.06 Describe technologies associated in careers within the Programming and Software Development career pathway.
- 05.0 Apply leadership and communication skills--The student will be able to:
- 05.01 Discuss the establishment and history of the FBLA/BPA student organization.
  - 05.02 Identify the characteristics and responsibilities of organizational leaders.
  - 05.03 Demonstrate parliamentary procedure skills during a meeting.
  - 05.04 Participate on a committee which has an assigned task and report to the class.
  - 05.05 Demonstrate effective communication skills through delivery of a speech, a slide presentation, or conducting a demonstration.
  - 05.06 Use a computer to assist in the completion of a project related to the Information Technology career cluster.
- 06.0 Describe how information technology is used in the Information Technology career cluster. – The student will be able to:
- 06.01 Identify information technology (IT) careers in the Information Technology career cluster, including the responsibilities, tasks and skills they require.
  - 06.02 Relate information technology project management concepts and terms to careers in the Information Technology career cluster.
  - 06.03 Manage information technology components typically used in professions of the Information Technology career cluster.
  - 06.04 Identify security-related ethical and legal IT issues faced by professionals in the Information Technology career cluster.
- 07.0 Use information technology tools. – The student will be able to:

- 07.01 Identify the functions of web browsers, and use them to access the World Wide Web and other computer resources typically used in the Information Technology career cluster.
- 07.02 Use e-mail clients to send simple messages and files to other Internet users.
- 07.03 Demonstrate ways to communicate effectively using Internet technology.
- 07.04 Use different types of web search engines effectively to locate information relevant to the Information Technology career cluster.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Course Title:** Exploring Information Technology Careers & Career Planning  
**Course Type:** Orientation/Exploratory  
**Career Cluster:** Information Technology

<b>Secondary – Middle School</b>

### **Purpose**

The purpose of this course is to assist students in making informed decisions regarding their future academic and occupational goals and to provide information regarding careers in the Information Technology career cluster. The content includes but is not limited to terminology, careers, history, required skills, and technologies associated with pathways comprising the Information Technology career cluster. Reinforcement of academic skills occurs through classroom instruction and applied laboratory procedures.

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

The length of this course is one semester. It may be offered for two semesters when appropriate. When offered for one semester, it is recommended that it be at the exploratory level and more in-depth when offered for two semesters.

### **Career Planning**

The career and education planning course required by Section 1003.4156, Florida Statutes, has been integrated into this course. This course must include career exploration using CHOICES or a comparable cost-effective program and educational planning using the online student advising system known as Florida Academic Counseling and Tracking for Students at the Internet website FACTS.org; and shall result in the completion of a personalized academic and career plan.

### **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA) and Business Professionals of America (BPA) are the appropriate Career and Technical Student Organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course.

### **Standards**

After successfully completing this course, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of the Network Systems career pathway.
- 02.0 Demonstrate an understanding of the Information Support and Services career pathway.
- 03.0 Demonstrate an understanding of the Web and Digital Communications career pathway.
- 04.0 Demonstrate an understanding of the Programming and Software Development career pathway.
- 05.0 Apply leadership and communication skills.
- 06.0 Describe how information technology is used in the Information Technology career cluster.
- 07.0 Use information technology tools.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Exploring Information Technology Careers & Career Planning  
**Course Number:** 9009350  
**Course Length:** Semester

**Course Description:**

Beginning with a broad overview of the Information Technology career cluster, students are introduced to the terminology, careers, history, required skills, and technologies associated with each pathway in the Information Technology career cluster. Additionally, they will be provided with opportunities to acquire and demonstrate beginning leadership skills.

- 01.0 Demonstrate an understanding of the Network Systems career pathway--The student will be able to:
- 01.01 Define and use proper terminology associated with the Network Systems career pathway.
  - 01.02 Describe some of the careers available in the Network Systems career pathway.
  - 01.03 Identify common characteristics of the careers in the Network Systems career pathway.
  - 01.04 Research the history of the Network Systems career pathway and describe how the associated careers have evolved and impacted society.
  - 01.05 Identify skills required to successfully enter any career in the Network Systems career pathway.
  - 01.06 Describe technologies associated in careers within the Network Systems career pathway.
- 02.0 Demonstrate an understanding of the Information Support and Services career pathway-The student will be able to:
- 02.01 Define and use proper terminology associated with the Information Support and Services career pathway.
  - 02.02 Describe some of the careers available in the Information Support and Services career pathway.
  - 02.03 Identify common characteristics of the careers in the Information Support and Services career pathway.
  - 02.04 Research the history of the Information Support and Services career pathway and describe how the careers have evolved and impacted society.
  - 02.05 Identify skills required to successfully enter any career in the Information Support and Services career pathway.
  - 02.06 Describe technologies associated in careers within the Information Support and Services career pathway.
- 03.0 Demonstrate an understanding of the Web and Digital Communications career pathway-The student will be able to:
- 03.01 Define and use proper terminology associated with the Web and Digital Communications career pathway.

- 03.02 Describe some of the careers available in the Web and Digital Communications career pathway.
  - 03.03 Identify common characteristics of the careers in the Web and Digital Communications career pathway.
  - 03.04 Research the history of the Web and Digital Communications career pathway and describe how the careers have evolved and impacted society.
  - 03.05 Identify skills required to successfully enter any career in the Web and Digital Communications career pathway.
  - 03.06 Describe technologies associated in careers within the Web and Digital Communications career pathway.
- 04.0 Demonstrate an understanding of the Programming and Software Development career pathway--The student will be able to:
- 04.01 Define and use proper terminology associated with the Programming and Software Development career pathway.
  - 04.02 Describe some of the careers available in the Programming and Software Development career pathway.
  - 04.03 Identify common characteristics of the careers in the Programming and Software Development career pathway.
  - 04.04 Research the history of the Programming and Software Development career pathway and describe how the careers have evolved and impacted society.
  - 04.05 Identify skills required to successfully enter any career in the Programming and Software Development career pathway.
  - 04.06 Describe technologies associated in careers within the Programming and Software Development career pathway.
- 05.0 Apply leadership and communication skills--The student will be able to:
- 05.01 Discuss the establishment and history of the FBLA/BPA student organization.
  - 05.02 Identify the characteristics and responsibilities of organizational leaders.
  - 05.03 Demonstrate parliamentary procedure skills during a meeting.
  - 05.04 Participate on a committee which has an assigned task and report to the class.
  - 05.05 Demonstrate effective communication skills through delivery of a speech, a slide presentation, or conducting a demonstration.
  - 05.06 Use a computer to assist in the completion of a project related to the Information Technology career cluster.
- 06.0 Describe how information technology is used in the Information Technology career cluster. – The student will be able to:
- 06.01 Identify information technology (IT) careers in the Information Technology career cluster, including the responsibilities, tasks and skills they require.
  - 06.02 Relate information technology project management concepts and terms to careers in the Information Technology career cluster.
  - 06.03 Manage information technology components typically used in professions of the Information Technology career cluster.
  - 06.04 Identify security-related ethical and legal IT issues faced by professionals in the Information Technology career cluster.
- 07.0 Use information technology tools. – The student will be able to:

- 07.01 Identify the functions of web browsers, and use them to access the World Wide Web and other computer resources typically used in the Information Technology career cluster.
- 07.02 Use e-mail clients to send simple messages and files to other Internet users.
- 07.03 Demonstrate ways to communicate effectively using Internet technology.
- 07.04 Use different types of web search engines effectively to locate information relevant to the Information Technology career cluster.

**Listed below are the course outcomes that must be met to satisfy the requirements of Section 1003.4156, Florida Statutes.**

**Understanding the Workplace**

- 08.0 Describe how work relates to the needs and functions of the economy, society, and personal fulfillment.
- 09.0 Describe the influences that societal, economic, and technological changes have on employment trends and future training.
- 10.0 Describe the need for career planning, changing careers, and the concept of lifelong learning and how they relate to personal fulfillment.
- 11.0 Describe how legislation such as the Americans with Disabilities Act and Child Labor Laws regulates employee rights.

**Self-Awareness**

- 12.0 Use results of an interest assessment to describe their top interest areas and relate to careers/career clusters.
- 13.0 Identify five values that they consider important in making a career choice.
- 14.0 Identify skills needed for career choices and match to personal abilities.
- 15.0 Demonstrate the ability to apply skills of self-advocacy and self-determination throughout the career planning process.
- 16.0 Identify strengths and areas in which assistance is needed at school.
- 17.0 Apply results of all assessments to personal abilities in order to make realistic career choices.

**Exploring Careers**

- 18.0 Demonstrate the ability to locate, understand, and use career information.
- 19.0 Use the Internet to access career and education planning information.
- 20.0 Identify skills that are transferable from one occupation to another.
- 21.0 Demonstrate use of career resources to identify occupational clusters, career opportunities within each cluster, employment outlook, and education/ training requirements.
- 22.0 Explain the relationship between educational achievement and career success.

**Goal Setting and Decision-Making**

- 23.0 Identify and demonstrate use of steps to make career decisions.
- 24.0 Identify and demonstrate processes for making short and long term goals.

### **Workplace Skills**

- 25.0 Demonstrate personal qualities (e.g. dependability, punctuality, responsibility, integrity, getting along with others) that are needed to be successful in the workplace.
- 26.0 Demonstrate skills to interact positively with others.
- 27.0 Demonstrate employability skills such as working on a team, problem-solving and organizational skills.

### **Career and Education Planning**

- 28.0 Identify secondary and postsecondary school courses that meet tentative career plans.
- 29.0 Identify advantages and disadvantages of entering various secondary and postsecondary programs for the attainment of career goals.
- 30.0 Demonstrate knowledge of varied types and sources of financial aid to obtain assistance for postsecondary education.
- 31.0 Identify inappropriate discriminatory behaviors that may limit opportunities in the workplace.
- 32.0 Develop a career and education plan that includes short and long-term goals, high school program of study, and postsecondary/work goals.
- 33.0 Describe how extracurricular programs can be incorporated in career and education planning.
- 34.0 Demonstrate knowledge of high school exit options (e.g., standard diploma, certificate of completion, special diploma, GED, etc.) and impact on post-school opportunities.
- 35.0 Describe high school credits and explain how GPAs are calculated.

### **Job Search**

- 36.0 Demonstrate skills to complete a job application.
- 37.0 Demonstrate skills essential for a job interview.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Fundamentals of Networking and Information Support  
**Program Type:** Orientation/Exploratory  
**Career Cluster:** Information Technology

### **Purpose**

The purpose of this course is to assist students in making informed decisions regarding their future academic and occupational goals and to provide information regarding careers in the Information Technology career cluster. The content includes but is not limited to foundational knowledge and skills related to computer networks and information support structure in the information technology industry.

Instruction and learning activities are provided in a laboratory setting using hands-on experiences with the equipment, materials and technology appropriate to the course content and in accordance with current practices.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

#### **Career and Technical Student Organization (CTSO)**

The Future Business Leaders of America (FBLA) and the Business Professionals of America (BPA) are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student

Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an individual educational plan (IEP) served in exceptional student education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course.

### **Standards**

After successfully completing this course, the student will be able to perform the following:

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 04.0 Demonstrate an understanding of Internet safety and ethics.
- 05.0 Perform e-mail activities.
- 06.0 Demonstrate knowledge of different operating systems.
- 07.0 Demonstrate proficiency navigating the Internet and the intranet.
- 08.0 Develop an awareness of microprocessors and digital computers.
- 09.0 Demonstrate an understanding of the Open Systems Interface (OSI) model.
- 10.0 Identify computer components and their functions.
- 11.0 Demonstrate proficiency using computer networks.
- 12.0 Demonstrate an understanding of database design, structure, and operation.
- 13.0 Demonstrate a fundamental understanding of Structured Query Language (SQL).

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Fundamentals of Networking and Information Support  
**Course Number:** 9009400  
**Course Length:** Year

**Course Description:**

This course provides students with opportunities to acquire foundational knowledge and skills suitable for pursuing higher level programs of study related to the information technology industry.

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Describe ethical issues and problems associated with computers and information systems.
- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively.
  - 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
  - 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
  - 02.04 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).
- 03.0 Use technology to enhance the effectiveness of communication skills. —The student will be able to:
- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
  - 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve problems and complete tasks.
- 04.0 Demonstrate an understanding of Internet safety and ethics. – The student will be able to:

- 04.01 Describe cyber-bullying and its impact on perpetrators and victims.
  - 04.02 Differentiate between viruses and malware, specifically their sources, ploys, and impact on personal privacy and computer operation, and ways to avoid infection.
  - 04.03 Describe risks associated with sexting, including related legal issues, social engineering aspects, prevention methods, and reporting of offenses.
  - 04.04 Describe the risks associated with online gaming and ways to mitigate these risks.
  - 04.05 Describe the ethics and copyright legalities of downloading music or videos from the Internet.
  - 04.06 Describe risks associated with social networking sites (e.g., FaceBook, MySpace, and Twitter) and ways to mitigate these risks.
  - 04.07 Adhere to cyber safety practices with regard to conducting Internet searches, email, chat rooms, and other social network websites.
- 05.0 Perform e-mail activities. – The student will be able to:
- 05.01 Describe e-mail capabilities and functions.
  - 05.02 Identify components of an e-mail message.
  - 05.03 Identify the components of an e-mail address.
  - 05.04 Identify when to use different e-mail options.
  - 05.05 Attach a file to an e-mail message.
  - 05.06 Forward an e-mail message.
  - 05.07 Use an address book.
  - 05.08 Reply to an e-mail message.
  - 05.09 Use the Internet to perform e-mail activities.
  - 05.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 05.11 Identify when to include information from an original e-mail message in a response.
  - 05.12 Identify common problems associated with widespread use of e-mail.
- 06.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 06.01 Identify operating system file naming conventions.
  - 06.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 06.03 Demonstrate a working knowledge of standard file formats.
  - 06.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 07.0 Demonstrate proficiency navigating the Internet and the intranet. – The student will be able to:
- 07.01 Identify and describe Web terminology.
  - 07.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 07.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 07.04 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, et al).
  - 07.05 Demonstrate proficiency downloading of files.
  - 07.06 Identify effective Boolean search strategies.

- 08.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 08.01 Describe the evolution of the digital computer.
  - 08.02 Explain the general architecture of a microcomputer system.
  - 08.03 Explain the evolution of microprocessors.
  - 08.04 Explain software hierarchy and its impact on microprocessors.
  - 08.05 Explain the need for and use of peripherals.
  - 08.06 Demonstrate proficiency using peripherals.
  - 08.07 Identify the basic concepts of computer maintenance and upgrades.
  - 08.08 Differentiate between diagnosing and troubleshooting.
- 09.0 Demonstrate an understanding of the Open Systems Interface (OSI) model. – The student will be able to:
- 09.01 Describe the evolution of OSI from its inception to the present and into the future.
  - 09.02 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
  - 09.03 Describe the purpose of the OSI model and each of its layers.
  - 09.04 Explain specific functions belonging to each OSI model layer.
  - 09.05 Understand how two network nodes communicate through the OSI model.
  - 09.06 Discuss the structure and purpose of data packets and frames.
  - 09.07 Describe the two types of addressing covered by the OSI model.
- 10.0 Identify computer components and their functions. – The student will be able to:
- 10.01 Identify the internal components of a computer (e.g., power supply, hard drive, mother board, I/O cards/ports, cabling, etc.).
  - 10.02 Use common computer and programming terminology.
- 11.0 Demonstrate proficiency using computer networks. – The student will be able to:
- 11.01 Define networking and describe the purpose of a network.
  - 11.02 Describe the conceptual background of digital networks including terminology and basics.
  - 11.03 Describe various types of networks and the advantages and disadvantages of each (e.g. peer to peer, client/server, mainframe/terminal).
  - 11.04 Describe the use, advantages, and disadvantages of various network media (e.g. thinnet cable, coaxial), twisted pair (cat 5), fiber optics).
  - 11.05 Describe the function of various network devices (e.g. hub, switched hub or switch, router bridge, gateway, and access points).
  - 11.06 Describe how network devices are identified (i.e., IP addressing).
  - 11.07 Explain the protocols commonly used in a network environment.
  - 11.08 Differentiate between public and private IP addresses.
  - 11.09 Describe the common ports and corresponding protocols used in a network.
  - 11.10 Describe the difference between the Internet and intranet.
  - 11.11 Discuss the differences between Local Area Network (LAN), Wide Area Network (WAN), Metropolitan Area Network (MAN), and Virtual Private Network (VPN).
- 12.0 Demonstrate an understanding of database design, structure, and operation. – The student will be able to:

- 12.01 Describe a relational database and its key elements.
  - 12.02 Describe the Entity Relationship Model (ERM).
  - 12.03 Differentiate between one-to-many, many-to-many and one-to-one relationships.
  - 12.04 Define referential integrity and describe its importance to managing information.
- 13.0 Demonstrate a fundamental understanding of Structured Query Language (SQL). – The student will be able to:
- 13.01 List the capabilities of SQL SELECT statements.
  - 13.02 Execute basic SQL statements, including SELECT, INSERT, and UPDATE.
  - 13.03 Apply the concatenation operator to link columns to other columns, arithmetic expressions, or constant values to create a character expression.
  - 13.04 Use the AS clause to define column aliases to rename columns in the query result.
  - 13.05 Use SQL to display the structure of a table.
  - 13.06 Apply SQL syntax to restrict the rows returned from a query.
  - 13.07 Demonstrate application of the WHERE clause syntax.
  - 13.08 Apply the proper comparison operator to return a desired result.

### **Special Notes**

#### **Career and Technical Student Organization (CTSO)**

The Future Business Leaders of America (FBLA) and the Business Professionals of America (BPA) are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student

Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan to meet individual needs and ensure equal access. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an individual educational plan (IEP) served in exceptional student education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course.

### **Standards**

After successfully completing this course, the student will be able to perform the following:

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 01.0 Demonstrate an understanding of Internet safety and ethics.
- 04.0 Perform e-mail activities.
- 05.0 Demonstrate knowledge of different operating systems.
- 06.0 Demonstrate proficiency navigating the Internet and the intranet.
- 07.0 Demonstrate proficiency using HTML commands.
- 08.0 Demonstrate proficiency in webpage design.
- 09.0 Demonstrate proficiency using specialized web design software.
- 10.0 Develop an awareness of programming languages.
- 11.0 Demonstrate proficiency using common software applications.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Course Title:** Fundamentals of Web and Software Development  
**Course Number:** 9009500  
**Course Length:** Year

**Course Description:**

This course provides students with opportunities to acquire foundational knowledge and skills suitable for pursuing higher level programs of study related to the information technology industry.

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Describe ethical issues and problems associated with computers and information systems.
- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 02.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively.
  - 02.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
  - 02.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
  - 02.04 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).
- 03.0 Use technology to enhance the effectiveness of communication skills —The student will be able to:
- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
  - 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve problems and complete tasks.
- 02.0 Demonstrate an understanding of Internet safety and ethics. – The student will be able to:

- 02.01 Describe cyber-bullying and its impact on perpetrators and victims.
  - 02.02 Differentiate between viruses and malware, specifically their sources, ploys, and impact on personal privacy and computer operation, and ways to avoid infection.
  - 02.03 Describe risks associated with sexting, including related legal issues, social engineering aspects, prevention methods, and reporting of offenses.
  - 02.04 Describe the risks associated with online gaming and ways to mitigate these risks.
  - 02.05 Describe the ethics and copyright legalities of downloading music or videos from the Internet.
  - 02.06 Describe risks associated with social networking sites (e.g., FaceBook, MySpace, and Twitter) and ways to mitigate these risks.
  - 02.07 Adhere to cyber safety practices with regard to conducting Internet searches, email, chat rooms, and other social network websites.
- 04.0 Perform e-mail activities. – The student will be able to:
- 04.01 Describe e-mail capabilities and functions.
  - 04.02 Identify components of an e-mail message.
  - 04.03 Identify the components of an e-mail address.
  - 04.04 Identify when to use different e-mail options.
  - 04.05 Attach a file to an e-mail message.
  - 04.06 Forward an e-mail message.
  - 04.07 Use an address book.
  - 04.08 Reply to an e-mail message.
  - 04.09 Use the Internet to perform e-mail activities.
  - 04.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 04.11 Identify when to include information from an original e-mail message in a response.
  - 04.12 Identify common problems associated with widespread use of e-mail.
- 05.0 Demonstrate knowledge of different operating systems. – The student will be able to:
- 05.01 Identify operating system file naming conventions.
  - 05.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 05.03 Demonstrate a working knowledge of standard file formats.
  - 05.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 06.0 Demonstrate proficiency navigating the Internet and the intranet. – The student will be able to:
- 06.01 Identify and describe Web terminology.
  - 06.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 06.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 06.04 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, et al).
  - 06.05 Demonstrate proficiency downloading of files.
  - 06.06 Identify effective Boolean search strategies.

- 07.0 Demonstrate proficiency using HTML commands. – The student will be able to:
- 07.01 Identify elements of a Web page.
  - 07.02 Define basic HTML terminology.
  - 07.03 Analyze HTML source code developed by others.
  - 07.04 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 07.05 Edit and test HTML documents for accuracy and validity.
  - 07.06 Create a website using basic functions of a WYSIWYG or GUI editor.
  - 07.07 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 07.08 Enhance web pages through the addition of images and graphics including animation.
- 08.0 Demonstrate proficiency in webpage design. – The student will be able to:
- 08.01 Demonstrate an understanding of acceptable webpage design.
  - 08.02 Design a website using storyboarding techniques.
  - 08.03 Describe and apply color theory as it applies to webpage design (e.g., background and text color).
  - 08.04 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 08.05 Use image design software to create and edit images.
  - 08.06 Demonstrate proficiency in publishing to the Internet.
- 09.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 09.01 Compare and contrast various specialized web design software (e.g., Dreamweaver, Flash).
  - 09.02 Demonstrate proficiency using use of various specialized web design software (e.g., Dreamweaver, Flash).
- 10.0 Develop an awareness of programming languages. – The student will be able to:
- 10.01 Explain the history of programming languages.
  - 10.02 Explain the need for and use of compilers.
  - 10.03 Explain how compilers work.
  - 10.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
  - 10.05 Compare the various types or classes of programming languages (e.g., compiled, interpretive, etc.).
  - 10.06 Differentiate among source code, machine code, interpreters, and compilers.
  - 10.07 Characterize the major categories of programming languages and how they are used.
  - 10.08 Create a model flowchart for a computer program.
  - 10.09 Describe the stages in the software development life cycle.
- 11.0 Demonstrate proficiency using common software applications. – The student will be able to:

- 11.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, et al).
- 11.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, et al).

2012 – 2013

**Florida Department of Education

Statewide Articulation	<a href="http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp">http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the Networking Services Technology AS/AAS degree program (1511090101/0511090101).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to plan, install, configure, and monitor computer networks in a LAN/WAN environment. Students will be prepared to apply conceptual and theoretical knowledge to the workplace utilizing technical skills learned during the program.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate understanding of networked environments
- 02.0 Demonstrate understanding of data communications.
- 03.0 Understand, Install and configure computer hardware.
- 04.0 Understand, install and configure computer software.
- 05.0 Understand, install and configure network hardware.
- 06.0 Understand, install and configure network software.
- 07.0 Perform internetworking activities.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Information Technology Technician  
**CIP Number:** 0511010303  
**Program Length:** 21 Credit Hours  
**SOC Code(s):** 15-1041

This certificate program is part of the Networking Services Technology AS/AAS degree program (1511090101/0511090101). At the completion of this program, the student will be able to:

01.0 Demonstrate understanding of networked environments – The student will be able to:

- 01.01 Explain the use of binary numbers to represent instructions and data.
- 01.02 Describe the hardware implications of the use of binary representation of instructions and data.
- 01.03 Convert numbers among decimal, binary, and hexadecimal representation.
- 01.04 Perform binary arithmetic.
- 01.05 Identify various coding schemes (ASCII, etc.).
- 01.06 Discuss various data types (signed and unsigned integers, floating point, etc).
- 01.07 Identify several advantages and disadvantages of networked and non-networked environments.
- 01.08 Describe current network environments, such as peer-to-peer and client/server.
- 01.09 Identify and discuss issues (such as security, privacy, redundancy, etc.) related to networked environments.
- 01.10 Identify and discuss issues related to naming conventions for user-ids, e-mail, passwords, and network devices.
- 01.11 List and define layers in the OSI and TCP/IP network protocol models.
- 01.12 Identify and describe current relevant IEEE network standards.
- 01.13 Illustrate typical network topologies.
- 01.14 Identify advantages and disadvantages of each topology.
- 01.15 Describe the major functions of LAN hardware protocols such as Ethernet, token ring, FDDI, and arcnet.
- 01.16 Describe LAN software protocols such as IPX/SPX, TCP/IP, and NetBEUI.
- 01.17 Discuss the nature of IP addresses and MAC addresses, and mapping between protocol addressing schemes.
- 01.18 Identify major emerging technologies (such as ATM, VPN, and voice over IP).
- 01.19 Identify and discuss technical issues related to emerging technologies (such as security, bandwidth capability, and gigabit transmission rates).
- 01.20 Discuss the design and function of a storage-area network (SAN).
- 01.21 Design a LAN, including the specification of architecture, hardware, software, etc.
- 01.22 Identify the advantages of VLANs.
- 01.23 Characterize a VLAN implementation.
- 01.24 Describe the function of a spanning tree algorithm.
- 01.25 Identify a proper network design with a spanning tree component.
- 01.26 Use effectively two different and current network modeling tools.
- 01.27 Produce effective documentation.

02.0 Demonstrate understanding of data communications – The student will be able to:

- 02.01 Differentiate between telecommunications and data communications.
- 02.02 Describe the main functions of each relevant current standard setting organization (IEEE, TIA, etc.).
- 02.03 Compare and contrast digital communications lines and cable characteristics (e.g. ISDN, DSL, T-1 and T-3).
- 02.04 Describe ATM technology; discuss the functions and applications of this technology.
- 02.05 Describe the functioning of modems, their features and operating characteristics.
- 02.06 Define the features of an ASCII terminal.
- 02.07 Describe the function of a UART.
- 02.08 Discuss signal representation and modulation.
- 02.09 Describe current data code systems used in data communication.
- 02.10 Compare and contrast synchronous and asynchronous serial transmission.
- 02.11 Compare and contrast major data communications media in terms of data flow, data codes, and codes.
- 02.12 Define common error detection and correction mechanisms.
- 02.13 Identify LAN access control methods (CSMA/CD, token passing, etc.).
- 02.14 Compare and contrast the major features of the LAN access methods.
- 02.15 Describe asynchronous protocols.
- 02.16 Describe synchronous serial link protocols.
- 02.17 Identify and describe file transfer protocols and methodologies.
- 02.18 Describe data compression methodologies used for file transfer.
- 02.19 Identify evolving issues, such as gigabit transmission requirements, voice over IP, and wireless technologies.

03.0 Understand, Install and configure computer hardware – The student will be able to:

- 03.01 Identify and describe distinguishing features of the major hardware platforms.
- 03.02 Describe the functions of major hardware components of a computer system.
- 03.03 Recognize and correctly identify computing hardware components.
- 03.04 Describe emerging hardware technologies and discuss their potential impact.
- 03.05 Implement proper procedures for handling and safeguarding equipment.
- 03.06 Describe procedures for proper disposal of computer components.
- 03.07 Analyze the user's needs
- 03.08 Set up and configure systems and peripherals following institutional protocol.
- 03.09 Set up BIOS.
- 03.10 Install and configure storage and I/O device interfaces.
- 03.11 Install and configure multimedia devices and interfaces.
- 03.12 Install and configure network hardware components.
- 03.13 Design and implement test procedure.
- 03.14 Document systems.
- 03.15 Configure systems and establish baseline.
- 03.16 Design and implement work order procedures.
- 03.17 Design and implement systems backups

04.0 Understand, install and configure computer software- The student will be able to:

- 04.01 Describe the functions and major components (BIOS, task management, etc.) of a computer operating system.
- 04.02 Identify current operating systems and describe their important features.
- 04.03 Use an operating system for activities such as data and file management.

- 04.04 Identify current systems utilities and describe their functions.
  - 04.05 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
  - 04.06 Use operating systems of different brands and platforms.
  - 04.07 Use both stand-alone operating systems and network operating systems.
  - 04.08 Create, use, and maintain system configuration files.
  - 04.09 Describe the primary features and functions of the major categories of applications software (word processing, database, spreadsheet, presentation, e-mail, browsers, etc.).
  - 04.10 Use basic features of office productivity software.
  - 04.11 Independently learn to perform (previously untaught) tasks using office productivity software.
  - 04.12 Use software produced by multiple vendors.
  - 04.13 Transmit and exchange data in a multiple vendor software environment.
  - 04.14 Install and configure a microcomputer operating system, system, and application software.
  - 04.15 Describe procedures for uninstalling operating system software.
  - 04.16 Configure software for accessibility by disabled individuals.
  - 04.17 Install and configure applications software upgrades.
  - 04.18 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing, configuring and upgrading typical applications software.
  - 04.19 Install and configure client software for connecting to LANs, WANs, and the Internet (network client, WWW browser, terminal emulation, file transfer, etc.).
  - 04.20 Install and configure client software for client/server and network-based applications (e-mail, videoconferencing, database, etc.).
  - 04.21 Install applications on a server and configure clients for network access.
- 05.0 Understand, install and configure network hardware.- The student will be able to:
- 05.01 Describe the major functions of network server hardware components.
  - 05.02 Describe server hardware requirements.
  - 05.03 Describe the hardware needed for hosting a Web site.
  - 05.04 Identify a variety of specialized servers (e.g. proxy, e-mail, DHCP, Web, etc.) and describe the hardware requirements.
  - 05.05 Describe the major functions of network client hardware components.
  - 05.06 Describe client hardware requirements.
  - 05.07 Differentiate between hardware used to implement different topologies such as token ring and Ethernet.
  - 05.08 Recognize and describe current cable technologies such as twisted-pair, coaxial, and fiber optic, and identifying issues associated with plenum versus non-plenum cable plants.
  - 05.09 Describe current wireless technologies such as satellite, microwave, spread spectrum RF, and infrared.
  - 05.10 Identify advantages and disadvantages of wireless and cable technologies.
  - 05.11 Cite appropriate uses of wireless and cable technologies.
  - 05.12 Fabricate patch, crossover and console cables.
  - 05.13 Terminate cable using connectors and punch down panels.
  - 05.14 Pull cable according to cabling plan.
  - 05.15 Test the cable using industry standard measurements.
  - 05.16 Label and document the wiring system.

- 05.17 Set up a network using cable technology.
- 05.18 Set up a network using wireless technology.

06.0 Understand, install and configure network software –The student will be able to:

- 06.01 Describe the major functions of network server software components.
- 06.02 Compare and contrast major functions and features of current network operating systems (including directory services).
- 06.03 Design a directory and security structure.
- 06.04 Install and configure a LAN server.
- 06.05 Configure protocol stacks.
- 06.06 Configure a server for multiple network protocols and frame types.
- 06.07 Configure a server to handle multiple languages for international applications.
- 06.08 Set up and configure network routing, using appropriate documentation.
- 06.09 Describe management issues and procedures for handling multiple servers on a network.
- 06.10 Install and connect multiple servers (including different platforms).
- 06.11 Install and configure client-auditing software.
- 06.12 Install and configure software to build client-side images.
- 06.13 Describe the major functions of network client software components.
- 06.14 Install and configure client software on multiple hardware platforms.
- 06.15 Test and document client software installation.
- 06.16 Install and configure drivers for NICs and network peripherals (including printers).
- 06.17 Install and configure client/server applications (such as e-mail, scheduling, etc) on a server.
- 06.18 Install and configure network-based services such as videoconferencing, integrated voicemail/email/fax, large document storage and retrieval, etc.
- 06.19 Set up a proxy server and a gateway.
- 06.20 Set up a server for remote access.
- 06.21 Document client server application installation and establish baselines.
- 06.22 Monitor client server application and database.
- 06.23 Document and enforce software licensing.

07.0 Perform internetworking activities – The student will be able to:

- 07.01 Describe WAN topologies and MAN topologies.
- 07.02 Differentiate between WAN topologies and LAN topologies.
- 07.03 Compare and contrast routing protocols (e.g., RIP, OSPF).
- 07.04 Describe the general routing problem and common solutions (including routing versus bridging).
- 07.05 Identify and describe WAN protocols.
- 07.06 Explain how the first three layers of the OSI model relate to routing and switching.
- 07.07 Describe various routing protocols such as RIP, OSPF.
- 07.08 Differentiate among routing, switching and bridging.
- 07.09 Install routers to simulate a WAN/LAN network.
- 07.10 Explain each step necessary for connecting a network to the Internet.
- 07.11 Explain the differences between connecting to the Internet via a dial-up connection vs. a dedicated connection.
- 07.12 Identify two major network issues associated with each of Internet, intranet, and extranet.

- 07.13 Implement LAN/WAN connections, including virtual private networks (VPN), permanent virtual circuits (PVC), frame relay, tunneling, remote and mobile user access, etc.
- 07.14 Define the basic software components of a WAN.
- 07.15 Configure routers to simulate a WAN/LAN network.
- 07.16 Explain the function and purpose of firewalls and firebreaks and their purpose.
- 07.17 Configure access lists to limit traffic and enhance security.
- 07.18 Explain three major security concerns relating to data communications.

### **Purpose**

This certificate program is part of the Networking Services Technology AS/AAS degree program (1511090101/0511090101).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to plan, install, configure, monitor, troubleshoot and manage computer networks in a LAN/WAN environment. Students will be prepared to apply conceptual and theoretical knowledge to the workplace utilizing technical skills learned during the program.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate understanding of networked environments
- 02.0 Demonstrate understanding of data communications.
- 03.0 Understand, Install and configure computer hardware.
- 04.0 Understand, install and configure computer software.
- 05.0 Understand, install and configure network hardware.
- 06.0 Understand, install and configure network software.
- 07.0 Perform internetworking activities.
- 08.0 Perform network administration and management activities.
- 09.0 Perform troubleshooting and maintenance activities.

**SOC Code(s):** 11-3021

This certificate program is part of the Networking Services Technology AS/AAS degree program (1511090101/0511090101). At the completion of this program, the student will be able to:

01.0 Demonstrate understanding of networked environments – The student will be able to:

- 01.01 Explain the use of binary numbers to represent instructions and data.
- 01.02 Describe the hardware implications of the use of binary representation of instructions and data.
- 01.03 Convert numbers among decimal, binary, and hexadecimal representation.
- 01.04 Perform binary arithmetic.
- 01.05 Identify various coding schemes (ASCII, etc.).
- 01.06 Discuss various data types (signed and unsigned integers, floating point, etc).
- 01.07 Identify several advantages and disadvantages of networked and non-networked environments.
- 01.08 Describe current network environments, such as peer-to-peer and client/server.
- 01.09 Identify and discuss issues (such as security, privacy, redundancy, etc.) related to networked environments.
- 01.10 Identify and discuss issues related to naming conventions for user-ids, e-mail, passwords, and network devices.
- 01.11 List and define layers in the OSI and TCP/IP network protocol models.
- 01.12 Identify and describe current relevant IEEE network standards.
- 01.13 Illustrate typical network topologies.
- 01.14 Identify advantages and disadvantages of each topology.
- 01.15 Describe the major functions of LAN hardware protocols such as Ethernet, token ring, FDDI, and arcnet.
- 01.16 Describe LAN software protocols such as IPX/SPX, TCP/IP, and NetBEUI.
- 01.17 Discuss the nature of IP addresses and MAC addresses, and mapping between protocol addressing schemes.
- 01.18 Identify major emerging technologies (such as ATM, VPN, and voice over IP).
- 01.19 Identify and discuss technical issues related to emerging technologies (such as security, bandwidth capability, and gigabit transmission rates).
- 01.20 Discuss the design and function of a storage-area network (SAN).
- 01.21 Design a LAN, including the specification of architecture, hardware, software, etc.
- 01.22 Identify the advantages of VLANs.
- 01.23 Characterize a VLAN implementation.
- 01.24 Describe the function of a spanning tree algorithm.
- 01.25 Identify a proper network design with a spanning tree component.
- 01.26 Use effectively two different and current network modeling tools.
- 01.27 Produce effective documentation.

02.0 Demonstrate understanding of data communications – The student will be able to:

- 02.01 Differentiate between telecommunications and data communications.
- 02.02 Describe the main functions of each relevant current standard setting organization (IEEE, TIA, etc.).
- 02.03 Compare and contrast digital communications lines and cable characteristics (e.g. ISDN, DSL, T-1 and T-3).
- 02.04 Describe ATM technology; discuss the functions and applications of this technology.
- 02.05 Describe the functioning of modems, their features and operating characteristics.
- 02.06 Define the features of an ASCII terminal.
- 02.07 Describe the function of a UART.
- 02.08 Discuss signal representation and modulation.
- 02.09 Describe current data code systems used in data communication.
- 02.10 Compare and contrast synchronous and asynchronous serial transmission.
- 02.11 Compare and contrast major data communications media in terms of data flow, data codes, and transmission codes.
- 02.12 Define common error detection and correction mechanisms.
- 02.13 Identify LAN access control methods (CSMA/CD, token passing, etc.).
- 02.14 Compare and contrast the major features of the LAN access methods.
- 02.15 Describe asynchronous protocols.
- 02.16 Describe synchronous serial link protocols.
- 02.17 Identify and describe file transfer protocols and methodologies.
- 02.18 Describe data compression methodologies used for file transfer.
- 02.19 Identify evolving issues, such as gigabit transmission requirements, voice over IP, and wireless technologies.

03.0 Understand, install and configure computer hardware – The student will be able to:

- 03.01 Identify and describe distinguishing features of the major hardware platforms.
- 03.02 Describe the functions of major hardware components of a computer system.
- 03.03 Recognize and correctly identify computing hardware components.
- 03.04 Describe emerging hardware technologies and discuss their potential impact.
- 03.05 Implement proper procedures for handling and safeguarding equipment.
- 03.06 Describe procedures for proper disposal of computer components.
- 03.07 Analyze the user's needs
- 03.08 Set up and configure systems and peripherals following institutional protocol.
- 03.09 Set up BIOS.
- 03.10 Install and configure storage and I/O device interfaces.
- 03.11 Install and configure multimedia devices and interfaces.
- 03.12 Install and configure network hardware components.
- 03.13 Design and implement test procedure.
- 03.14 Document systems.
- 03.15 Configure systems and establish baseline.
- 03.16 Design and implement work order procedures.
- 03.17 Design and implement systems backups

04.0 Understand, install and configure computer software- The student will be able to:

- 04.01 Describe the functions and major components (BIOS, task management, etc.) of a computer operating system.
- 04.02 Identify current operating systems and describe their important features.
- 04.03 Use an operating system for activities such as data and file management.

- 04.04 Identify current systems utilities and describe their functions.
  - 04.05 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
  - 04.06 Use operating systems of different brands and platforms.
  - 04.07 Use both stand-alone operating systems and network operating systems.
  - 04.08 Create, use, and maintain system configuration files.
  - 04.09 Describe the primary features and functions of the major categories of applications software (word processing, database, spreadsheet, presentation, e-mail, browsers, etc.).
  - 04.10 Use basic features of office productivity software.
  - 04.11 Independently learn to perform (previously untaught) tasks using office productivity software.
  - 04.12 Use software produced by multiple vendors.
  - 04.13 Transmit and exchange data in a multiple vendor software environment.
  - 04.14 Install and configure a microcomputer operating system, system, and application software.
  - 04.15 Describe procedures for uninstalling operating system software.
  - 04.16 Configure software for accessibility by disabled individuals.
  - 04.17 Install and configure applications software upgrades.
  - 04.18 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing, configuring and upgrading typical applications software.
  - 04.19 Install and configure client software for connecting to LANs, WANs, and the Internet (network client, WWW browser, terminal emulation, file transfer, etc.).
  - 04.20 Install and configure client software for client/server and network-based applications (e-mail, videoconferencing, database, etc.).
  - 04.21 Install applications on a server and configure clients for network access.
- 05.0 Understand, install and configure network hardware.- The student will be able to:
- 05.01 Describe the major functions of network server hardware components.
  - 05.02 Describe server hardware requirements.
  - 05.03 Describe the hardware needed for hosting a Web site.
  - 05.04 Identify a variety of specialized servers (e.g. proxy, e-mail, DHCP, Web, etc.) and describe the hardware requirements.
  - 05.05 Describe the major functions of network client hardware components.
  - 05.06 Describe client hardware requirements.
  - 05.07 Differentiate between hardware used to implement different topologies such as token ring and Ethernet.
  - 05.08 Recognize and describe current cable technologies such as twisted-pair, coaxial, and fiber optic, and identifying issues associated with plenum versus non-plenum cable plants.
  - 05.09 Describe current wireless technologies such as satellite, microwave, spread spectrum RF, and infrared.
  - 05.10 Identify advantages and disadvantages of wireless and cable technologies.
  - 05.11 Cite appropriate uses of wireless and cable technologies.
  - 05.12 Fabricate patch, crossover and console cables.
  - 05.13 Terminate cable using connectors and punch down panels.
  - 05.14 Pull cable according to cabling plan.
  - 05.15 Test the cable using industry standard measurements.
  - 05.16 Label and document the wiring system.

- 05.17 Set up a network using cable technology.
- 05.18 Set up a network using wireless technology.

06.0 Understand, install and configure network software –The student will be able to:

- 06.01 Describe the major functions of network server software components.
- 06.02 Compare and contrast major functions and features of current network operating systems (including directory services).
- 06.03 Design a directory and security structure.
- 06.04 Install and configure a LAN server.
- 06.05 Configure protocol stacks.
- 06.06 Configure a server for multiple network protocols and frame types.
- 06.07 Configure a server to handle multiple languages for international applications.
- 06.08 Set up and configure network routing, using appropriate documentation.
- 06.09 Describe management issues and procedures for handling multiple servers on a network.
- 06.10 Install and connect multiple servers (including different platforms).
- 06.11 Install and configure client-auditing software.
- 06.12 Install and configure software to build client-side images.
- 06.13 Describe the major functions of network client software components.
- 06.14 Install and configure client software on multiple hardware platforms.
- 06.15 Test and document client software installation.
- 06.16 Install and configure drivers for NICs and network peripherals (including printers).
- 06.17 Install and configure client/server applications (such as e-mail, scheduling, etc) on a server.
- 06.18 Install and configure network-based services such as videoconferencing, integrated voicemail/email/fax, large document storage and retrieval, etc.
- 06.19 Set up a proxy server and a gateway.
- 06.20 Set up a server for remote access.
- 06.21 Document client server application installation and establish baselines.
- 06.22 Monitor client server application and database.
- 06.23 Document and enforce software licensing.

07.0 Perform internetworking activities – The student will be able to:

- 07.01 Describe WAN topologies and MAN topologies.
- 07.02 Differentiate between WAN topologies and LAN topologies.
- 07.03 Compare and contrast routing protocols (e.g., RIP, OSPF).
- 07.04 Describe the general routing problem and common solutions (including routing versus bridging).
- 07.05 Identify and describe WAN protocols.
- 07.06 Explain how the first three layers of the OSI model relate to routing and switching.
- 07.07 Describe various routing protocols such as RIP, OSPF.
- 07.08 Differentiate among routing, switching and bridging.
- 07.09 Install routers to simulate a WAN/LAN network.
- 07.10 Explain each step necessary for connecting a network to the Internet.
- 07.11 Explain the differences between connecting to the Internet via a dial-up connection vs. a dedicated connection.
- 07.12 Identify two major network issues associated with each of Internet, intranet, and extranet.

- 07.13 Implement LAN/WAN connections, including virtual private networks (VPN), permanent virtual circuits (PVC), frame relay, tunneling, remote and mobile user access, etc.
  - 07.14 Define the basic software components of a WAN.
  - 07.15 Configure routers to simulate a WAN/LAN network.
  - 07.16 Explain the function and purpose of firewalls and firebreaks and their purpose.
  - 07.17 Configure access lists to limit traffic and enhance security.
  - 07.18 Explain three major security concerns relating to data communications.
- 08.0 Perform Network administration and management activities– The student will be able to:
- 08.01 Create and manage user accounts based on standard criteria including department, application needs, and permissions.
  - 08.02 Establish, document and disseminate user security guidelines.
  - 08.03 Create and test account templates and policies.
  - 08.04 Document account setup
  - 08.05 Grant/deny access to peripherals.
  - 08.06 Grant/deny access to logins.
  - 08.07 Grant/deny access to file systems.
  - 08.08 Perform network monitoring activities to ensure account integrity.
  - 08.09 Establish procedures for termination of user accounts.
  - 08.10 Manage software licensing based on user requirements.
  - 08.11 Document security policies and violations.
  - 08.12 Install and update anti-virus software.
  - 08.13 Describe current encryption standards - public vs. private key, NSA DES, PGP.
  - 08.14 Describe the functions and characteristics of firewalls.
  - 08.15 Address security issues raised by the ability to access server remotely.
  - 08.16 Discuss the functions of authentication servers, RADIUS, and VPN.
  - 08.17 Establish files backup procedures.
  - 08.18 Develop and publish backup schedule.
  - 08.19 Implement back up procedures.
  - 08.20 Design test procedures.
  - 08.21 Test backup by performing restore of sample data.
  - 08.22 Document backup.
  - 08.23 Monitor backup.
  - 08.24 Coordinate off-site storage of backup files.
  - 08.25 Establish a baseline for optimal network performance.
  - 08.26 Capture sample data and compare to baseline.
  - 08.27 Recommend changes to enhance network performance.
  - 08.28 Configure time synchronization and troubleshoot inconsistencies.
  - 08.29 Use network management tools effectively to integrate and manage network resources.
  - 08.30 Explain RMON and SNMP and their use in monitoring a network.
  - 08.31 Demonstrate the use of a network management package.
  - 08.32 Configure network devices to send SNMP traps or alerts to network management systems.
  - 08.33 Discuss quality-of-service considerations and switching prioritization.
  - 08.34 Describe routing metrics such as hop counts, cost, etc.
  - 08.35 Describe typical WAN links and discuss bandwidth considerations.
  - 08.36 Provide examples of WAN backup techniques such as dial-backup that illustrate when they are appropriate.

09.0 Perform troubleshooting and maintenance activities – The student will be able to:

- 09.01 Describe the use and features of diagnostic test equipment.\*
- 09.02 Describe effective troubleshooting strategies and techniques to resolve basic hardware, software, and network problems.\*
- 09.03 Recognize and resolve basic hardware and software configuration problems.
- 09.04 Eliminate the obvious using techniques such as substitution.
- 09.05 Trace for connectivity issues through each system component.
- 09.06 Identify resources for troubleshooting including online documentation.
- 09.07 Follow standard operating procedures for troubleshooting hardware and software.
- 09.08 Implement restoration of critical resources.
- 09.09 Determine when to escalate issues based on predefined guidelines.
- 09.10 Document problems and solutions for future reference.
- 09.11 Assemble reference manual including frequently asked questions.
- 09.12 Define windows of opportunity for maintenance tasks.
- 09.13 Determine type of maintenance programs needed to ensure maximum system performance.
- 09.14 Determine service intervals and publish maintenance schedule.
- 09.15 Document maintenance performed.
- 09.16 Establish a plan of obsolescence.

**Appendix "A"**  
**Distance Learning Sample Courses with Objective Mapping**

The purpose of this appendix is to provide a sample of currently available distance learning products, which can be used to enhance the Computer Networking program. It is not intended to recommend one specific vendor of online curriculum. The decision of which vendor to use should be made based upon familiarity, availability, and cost.

<b>Online Course</b>	<b>Framework Objective</b>
A+ Certification Series	01.0, 02.0, 09.0
A+: Customer Satisfaction	
A+: LANs, WANs, and the Internet	
A+: Navigating DOS and Windows	
A+: Navigating Windows	
A+: PC Technologies	
Windows 2000: Network Infrastructure Implementation	05.0
Windows 2000: Installation & Admin	05.0
Network+ Certification Series	06.0, 03.0, 04.0, 09.0
Microsoft Internet Information Server	07.0
Netware 5.0 Principles of Internetworking	07.0
Microsoft Exchange Server 5.5 Sys Admin	08.0
Windows 2000 for NT Admin	08.0
Windows 2000: Network & OS Basics	08.0
Netware 5.0 Networking Fundamentals	08.0
Netware 5.0: Designing & Implementing NDS	08.0
Netware 5.0: NDS Administration & NT Integration	08.0
Netware 5.0 Service and Support	08.0
Netware 5.0 System Administration	08.0

\* Courses from the Element K Computer Professional and Office Productivity Libraries

2012 – 2013

**Florida Department of Education

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as a PC Support Technician, help desk technician, user support analyst, applications system analyst, information systems specialist, technical support analyst, computer information manager user support supervisor, computer systems analyst, customer service representative, computer operator, computer repair technicians, computer sales person, help desk office supervisor, office systems support specialist, software tester, software trainer, user support specialist in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to analyze microcomputer oriented operating procedures, software applications packages, and hardware in order to devise efficient methods to manage a microcomputer-based work environment; develop new systems to meet projected needs; select and install information technology equipment, troubleshoot information technology equipment, manage and support information technology users.

## **Program Structure**

This program is a planned sequence of instruction consisting of 63 hours.

## **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and Business Professionals of America are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

The following PSAV programs have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

PC Support Services (B070400) – 9 credits

The following industry certifications have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

CompTIA A+ (COMPT001) – 3 credits

CompTIA Server+ (COMPT009) – 3 credits  
MCIT Certified IT Professional – Consumer Support Technician (MICRO027) – 3 credits  
MCIT Professional - Enterprise Support Technician (MICRO033) – 3 credits  
Microsoft Certified Desktop Support Technician (MICRO006) – 3 credits  
Microsoft Certified Systems Engineer – 2003 (MICRO013) – 3 credits  
Microsoft Certified Technology Specialist - Distributed Applications (MICRO047) – 3 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. The standard length of this program is 63 credit hours according to Rule 6A-14.030, F.A.C.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS/AAS degree program includes the following College Credit Certificates:

Information Technology Support Specialist (0511010311) – 18 credit hours  
Information Technology Analysis (0511010312) – 27/28 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

### **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Understand, install and configure computer hardware.
- 02.0 Understand, Install and configure computer software
- 03.0 Demonstrate understanding of networked environments
- 04.0 Demonstrate understanding of internet structure, organization and navigation.
- 05.0 Perform technical system support functions.
- 06.0 Perform troubleshooting activities.
- 07.0 Perform systems monitoring activities.
- 08.0 Perform customer service skills.
- 09.0 Perform user-training activities.
- 10.0 Perform computer information systems analysis activities.
- 11.0 Demonstrate professional development skills.
- 12.0 Demonstrate employability skills.
- 13.0 Demonstrate general organization computing workplace competencies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Computer Information Technology  
**CIP Numbers:** 1511010305 A.S.  
 0511010305 A.A.S.  
**Program Length:** 63 credit hours  
**SOC Code(s):** 11-3021

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

01.0 Understand, install and configure computer hardware. – The student will be able to:

- 01.01 Explain the use of binary numbers to represent instructions and data.
- 01.02 Describe the hardware implications of the use of binary representation of instructions and data.
- 01.03 Convert numbers among decimal, binary, and hexadecimal representation.
- 01.04 Perform binary arithmetic.
- 01.05 Identify various coding schemes (ASCII, etc.).
- 01.06 Discuss various data types (signed and unsigned integers, floating point, etc).
- 01.07 Identify the major hardware platforms.
- 01.08 Describe distinguishing features of the major hardware platforms.
- 01.09 Set up and use multiple hardware platforms built on various processor architectures.
- 01.10 Describe the functions of major hardware components of a computer system.
- 01.11 Recognize and correctly identify computing hardware components.
- 01.12 Set up and configure systems and peripherals.
- 01.13 Set up and upgrade BIOS.
- 01.14 Install and configure storage and I/O device interfaces.
- 01.15 Install and configure multimedia devices and interfaces.
- 01.16 Describe emerging hardware technologies and discuss their potential impact.
- 01.17 Implement proper procedures for handling and safeguarding equipment.
- 01.18 Perform preventive maintenance tasks on microcomputer systems.
- 01.19 Describe procedures for proper disposal of computer components.
- 01.20 Review installation specifications
- 01.21 Unpack all components, file and disseminate all inventory and warrant information.
- 01.22 Assure all components are present and functional
- 01.23 Install and configure network hardware components.
- 01.24 Perform component and system level upgrades.
- 01.25 Disassemble and re-assemble a microcomputer system completely.
- 01.26 Describe principles of computer organization as they apply to typical microcomputer equipment.
- 01.27 Draw a schematic of a typical microcomputer system.
- 01.28 Describe the architecture of a typical microcomputer system.
- 01.29 Discuss issues that affect system design and construction (redundancy, fault tolerance, etc.)

02.0 Understand, Install and configure computer software. – The student will be able to:

- 02.01 Describe the functions and major components (BIOS, task management, etc.) of a computer operating system.
- 02.02 Identify current operating systems and describe their vital features.
- 02.03 Use an operating system for activities such as data and file management.
- 02.04 Identify current systems utilities and describe their functions.
- 02.05 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
- 02.06 Use operating systems of different brands and platforms.
- 02.07 Use both stand-alone operating systems and network operating systems.
- 02.08 Create, use, and maintain system configuration files.
- 02.09 Make configuration changes to an operating system to optimize performance.
- 02.10 Transmit and exchange data files in a multiple platform hardware environment.
- 02.11 Describe the primary features and functions of the major categories of applications software (word processing, database, spreadsheet, presentation, email, browsers, etc.).
- 02.12 Use basic features of office productivity software.
- 02.13 Learn independently to perform (previously untaught) tasks using office productivity software.
- 02.14 Use software produced by multiple vendors.
- 02.15 Transmit and exchange data in a multiple vendor software environment.
- 02.16 Use integration features of different office productivity applications software.
- 02.17 Use office productivity or other applications.
- 02.18 Install and configure a microcomputer operating system.
- 02.19 Describe procedures for uninstalling operating system software.
- 02.20 Install and configure system software.
- 02.21 Install and configure applications software.
- 02.22 Configure software for accessibility by disabled individuals.
- 02.23 Install and configure applications software upgrades.
- 02.24 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing, configuring and upgrading typical applications software.
- 02.25 Install and configure client software for connecting to LANs, WANs, and the Internet (network client, WWW browser, terminal emulation, file transfer, etc.).
- 02.26 Install and configure client software for client/server and network-based applications (e-mail, videoconferencing, database, etc.)
- 02.27 Install applications on a server and configure clients for network access.
- 02.28 Install and configure applications software at an advanced level, such as one of the following: Computer-Aided Design (CAD), Geographical Information System (GIS), statistical software, desktop publishing, music editing system or game software.
- 02.29 Identify several of the most prominent current programming languages.
- 02.30 Characterize the stages of the system development life cycle.
- 02.31 Differentiate between two common strategies for problem solving.
- 02.32 Describe the program design and development process.
- 02.33 Differentiate between structured programming and object-oriented programming.
- 02.34 Apply principles of good design and documentation when analyzing programs.
- 02.35 Name several emerging software technologies.
- 02.36 Describe the potential impact of the named emerging software technologies.

03.0 Demonstrate understanding of networked environments. – The student will be able to:

- 03.01 Identify several advantages and disadvantages of networked and non-network environments.
- 03.02 Describe current network environments, such as peer-to-peer and client/server.
- 03.03 Identify and discuss issues (such as security, privacy, redundancy, etc.) related to networked environments.
- 03.04 Identify and discuss issues related to naming conventions for user-ids, email, passwords, and network devices.
- 03.05 List and define layers in the OSI and TCP/IP network protocol models.
- 03.06 Identify and describe current relevant IEEE network standards.
- 03.07 Illustrate typical network topologies.
- 03.08 Identify advantages and disadvantages of each topology.
- 03.09 Describe the major functions of LAN hardware protocols such as Ethernet, token ring, FDDI, and arcnet.
- 03.10 Describe LAN software protocols such as IPX/SPX, TCP/IP, and NetBEUI.
- 03.11 Discuss the nature of IP addresses and MAC addresses, and mapping between protocol addressing schemes.
- 03.12 Describe the major functions of network server hardware components.
- 03.13 Describe server and client hardware requirements.
- 03.14 Describe the major functions of network client hardware components.
- 03.15 Differentiate between hardware used to implement different topologies such as token ring and Ethernet.
- 03.16 Recognize and describe current cable technologies (such as twisted-pair, coaxial, and fiber optic) and identifying issues associated with plenum versus and non-plenum cable plants.
- 03.17 Describe current wireless technologies such as satellite, microwave, spread spectrum RF, and infrared.
- 03.18 Identify advantages and disadvantages of wireless and cable technologies.
- 03.19 Cite appropriate uses of wireless and cable technologies.
- 03.20 Describe the major functions of network connectivity hardware, such as hubs, repeaters, bridges, routers, switches, and gateways.
- 03.21 Describe the hardware needed to connect a LAN to the Internet.
- 03.22 Describe the function of network storage devices and other peripherals (RAID, CD towers, printers, fax machines, scanners, printer/fax/copiers, imaging devices, and document center equipment, etc.).
- 03.23 Set up and configure a server (including installation of NICs and NIC drivers).
- 03.24 Set up and configure client hardware (including installation of NICs and NIC drivers).
- 03.25 Set up network storage devices and other peripherals and connect to the network.
- 03.26 Describe the major functions of network server software components.
- 03.27 Compare and contrast major functions and features of current network operating systems (including directory services).
- 03.28 Install and configure a LAN server.
- 03.29 Install and configure drivers for NICs and network peripherals.
- 03.30 Configure protocol stacks.
- 03.31 Describe the major functions of network client software components.
- 03.32 Install and configure client software on multiple hardware platforms.
- 03.33 Install and configure drivers for NICs and network peripherals (including printers).

- 03.34 Configure the client to support multiple protocols.
  - 03.35 Differentiate between telecommunications and data communications.
  - 03.36 Compare and contrast digital communications lines and cable characteristics (e.g. ISDN, DSL, T-1 and T-3).
- 04.0 Demonstrate understanding of internet structure, organization and navigation. – The student will be able to:
- 04.01 Describe the origin, structure, and history of the Internet.
  - 04.02 Describe Internet organization, such as the Internic, domains and requests for comments (RFCs).
  - 04.03 Differentiate between the Internet and the WWW.
  - 04.04 Define Internet push technologies, such as e-mail marketing vs. Web page banner advertising.
  - 04.05 Describe Web e-commerce.
  - 04.06 Differentiate among an Intranet site, an extranet site, and an Internet site.
  - 04.07 Characterize the role of the Internet in today's society.
  - 04.08 Describe several major ethical issues related to Internet use.
  - 04.09 Identify several legal issues related to Internet use.
  - 04.10 Cite several examples to demonstrate how the Internet has affected intellectual property rights.
  - 04.11 Identify several examples to demonstrate how the Internet has affected personal security and privacy.
  - 04.12 Describe the World Wide Web (WWW).
  - 04.13 Cite several examples to show how the WWW has affected our society.
  - 04.14 Demonstrate the use of typical file types and protocols (http:, ftp:, mailto:, gopher:, telnet:, etc.).
  - 04.15 Demonstrate the use of typical remote access mechanisms.
  - 04.16 Describe components of URL and their meanings (including types).
  - 04.17 Use Internet tools effectively and utilities such as e-mail, browsers, search engines, news groups, list serves, chat rooms, file transfers.
  - 04.18 Install and configure an Internet browser.
  - 04.19 Install and configure browser add-ons and plug-ins.
  - 04.20 Describe the Human-Computer Interaction (HCI) factors that impact the design of a Web page and Web site
  - 04.21 Describe and use the process of storyboarding a Web site.
  - 04.22 Describe format, structure and design principles for Web sites.
  - 04.23 Evaluate Web sites using principles of good format, structure, and design.
  - 04.24 List several Web authoring tools in order of complexity of use.
  - 04.25 Describe handicapped-accessibility features for a Web site.
  - 04.26 Evaluate a Web site for handicapped accessibility.
- 05.0 Perform technical system support functions. – The student will be able to:
- 05.01 Create and follow established procedures and guidelines to manage user accounts.
  - 05.02 Identify network security systems
  - 05.03 Install system and application upgrades and patches as required.
  - 05.04 Create documentation to establish baselines for maintenance and repairs.
  - 05.05 Update documentation including warranty and maintenance agreements.
  - 05.06 Create and perform back-ups following organizational plan.

- 05.07 Test contingency systems to reduce damage due to disaster
- 05.08 Perform data recovery as needed.
- 05.09 Document statistics to identify problems and plans for systems upgrades.

06.0 Perform troubleshooting activities. – The student will be able to:

- 06.01 Describe the use of diagnostic test equipment.
- 06.02 Describe features of diagnostic software.
- 06.03 Use system, software, and network documentation.
- 06.04 Locate and use online documentation resources.
- 06.05 Describe effective troubleshooting strategies and techniques to resolve basic hardware problems including interviewing and observation.
- 06.06 Recognize and resolve basic hardware problems.
- 06.07 Recognize and resolve basic software configuration problems.
- 06.08 Recognize and resolve system level software conflicts (e.g., IRQ conflicts).
- 06.09 Recognize and resolve problems originating from software interaction.
- 06.10 Recognize and resolve problems originating from software/hardware interaction.
- 06.11 Isolate and replace faulty components (board level only).
- 06.12 Effectively use appropriate research tools to locate information needed to solve system problems.
- 06.13 Perform systems troubleshooting tasks on multiple platforms.
- 06.14 Follow a structured methodology and use effective troubleshooting strategies and techniques to resolve problems with systems, peripheral devices and/or drivers, and network problems.
- 06.15 Use sniffers, cable testers, and other network troubleshooting tools.
- 06.16 Use utilities such as ping, telnet, and trace route in testing a network.
- 06.17 Test WAN links using loop back techniques.
- 06.18 Identify when to escalate the issue, including determining appropriate entities involved.
- 06.19 Observe and document results.
- 06.20 Test the solution to ensure quality.
- 06.21 Document the final solution.
- 06.22 Disseminate the solution.
- 06.23 Follow up with the customer.

07.0 Perform systems monitoring activities. – The student will be able to:

- 07.01 Create and review back up log.
- 07.02 Create and review server log.
- 07.03 Create and review application logs.
- 07.04 Create and review resolution logs.
- 07.05 Create and review security logs.
- 07.06 Prepare a schedule to verify applications status.
- 07.07 Prepare a schedule to verify backup status.
- 07.08 Prepare a schedule to verify server status.
- 07.09 Track network performance as compare to an established baseline.
- 07.10 Identify problem trends and create resolution plans.
- 07.11 Document statistical analysis and monitoring activities.

08.0 Perform customer service skills. – The student will be able to:

- 08.01 Identify and recognize user's state of mind and attitude.
- 08.02 Determine the customer needs using system analysis strategies.
- 08.03 Listen to the customer and ask appropriate questions.
- 08.04 Maintain a professional demeanor when dealing with difficult customers.
- 08.05 Provide suggested solutions using knowledge base.
- 08.06 Project professional appearance and demeanor.
- 08.07 Promote company services, products, and policies when appropriate.
- 08.08 Use tact when dealing with customers and competitors.
- 08.09 Maintain professional work ethics and follow policies and procedures.
- 08.10 Respect customer work space/environment.
- 08.11 Relate all information to customer in a manner that the customer can understand.
- 08.12 Set realistic expectations when establishing deadlines for customer solutions.
- 08.13 Communicate action plan including timelines.
- 08.14 Recognize the existence of internal/external customers and follow appropriate guidelines for each.

09.0 Perform user-training activities. – The student will be able to:

- 09.01 Establish training needs based on systems analysis techniques
- 09.02 Direct user to appropriate resources based on established needs.
- 09.03 Demonstrate skill sets expected of the user
- 09.04 Evaluate user's ability to perform required tasks
- 09.05 Obtain customer feedback on training
- 09.06 Provide one-on-one basic training when needed/appropriate
- 09.07 Explain computer-related corporate user policies
- 09.08 Demonstrate basic resource usage
- 09.09 Share relevant knowledge

10.0 Perform computer information systems analysis activities. – The student will be able to:

- 10.01 Prepare appropriate systems and analysis charts and other visual aids.
- 10.02 Describe the major steps in the systems development cycle.
- 10.03 Perform basic business related tasks using the most appropriate software applications.
- 10.04 Identify situations where software packages and/or custom developed packages need to be integrated with each other.
- 10.05 Identify situations where software packages and/or hardware need to be integrated with software/hardware available on other types of computers.
- 10.06 Select appropriate hardware devices to accomplish assigned tasks.
- 10.07 Identify appropriate vendor sources for software, hardware and auxiliary supplies.

11.0 Demonstrate professional development skills. – The student will be able to:

- 11.01 Identify corporate strategies and policies.
- 11.02 Maintain professional contact for future projects.
- 11.03 Build mentor relationships.
- 11.04 Anticipate future industry trends.
- 11.05 Continue education.
- 11.06 Review and analyze other industry productions.
- 11.07 Use and experiment with the technology.

- 11.08 Network with local professionals in the industry..
- 11.09 Read industry journals and magazines.
- 11.10 Attend seminars, workshops, and tradeshow.

12.0 Demonstrate employability skills. – The student will be able to:

- 12.01 Identify appropriate attire and grooming for a business office.
- 12.02 Identify sources of employment opportunities.
- 12.03 Discuss employer expectations regarding attendance, punctuality, initiative, teamwork, etc.
- 12.04 Discuss employee rights regarding privacy, discrimination, due process, safety, etc.
- 12.05 Explain the importance of having a written job description.
- 12.06 List several functions of each representative computer service oriented job and career path.
- 12.07 List several functions of each representative computer service oriented job and career path.
- 12.08 Complete employment forms.
- 12.09 Classify behaviors considered to be appropriate or inappropriate in a job interview situation.
- 12.10 Compose and type a follow-up letter.
- 12.11 Compose and type a letter of application and a resume.
- 12.12 Compose and type a letter of resignation.
- 12.13 Demonstrate job interview skills.
- 12.14 Identify methods for securing and employment reference.

13.0 Demonstrate general organizational computing workplace competencies. – The student will be able to:

- 13.01 Follow oral and written instructions.
- 13.02 Prepare, outline, and deliver a short oral presentation.
- 13.03 Participate in group discussion as a member and as a leader.
- 13.04 Obtain appropriate information from graphics, maps, or signs.
- 13.05 Prepare visual material to support an oral presentation.
- 13.06 Demonstrate self-motivation and responsibility to complete an assigned task.
- 13.07 List the steps in problem solving.
- 13.08 Choose appropriate action in situations requiring effective time management.
- 13.09 Identify and discuss issues contained within professional codes of conduct.
- 13.10 Identify and discuss software licensing issues.
- 13.11 Identify and discuss property rights and licensing issues.
- 13.12 Identify and discuss privacy issues.
- 13.13 Identify and discuss encryption issues.
- 13.14 Identify legal liability issues.
- 13.15 Describe appropriate measures for planning and managing a large project.
- 13.16 Define an implementation schedule for a large project.
- 13.17 Describe appropriate measures for planning and implementing corporate wide upgrade of hardware and software.

2012 – 2013

Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>	
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>	

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as Database Administrators and Developers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

This program focuses on specific, transferable skills and stresses understanding and demonstration of the following elements of the database management and development industry: database creation, database management, database tuning, database software development, and database recovery.

### **Program Structure**

This program is a planned sequence of instruction consisting of 63 hours.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

The following industry certifications have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

Oracle Certified Associate (ORACL001) – 6 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. The standard length of this program is 63 credit hours according to Rule 6A-14.030, F.A.C.

## **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS/AAS degree program includes the following College Credit Certificates:

- Microsoft Certified Database Administrator (0511020309) – 15/16 credit hours
- Microsoft Certified Systems Developer (0511020310) – 15 credit hours
- Oracle Certified Administrator (0511020312) – 33 credit hours
- Oracle Certified Database Administrator (0511020307) – 15/16 credit hours
- Oracle Certified Database Developer (0511020308) – 15/16 credit hours
- Oracle Software Engineering (0511020311) – 33 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate proficiency in developing and operating a database.
- 02.0 Demonstrate proficiency in manipulating a database and creating tables and data structures.
- 03.0 Demonstrate proficiency in developing applications and using the procedure builder tool.
- 04.0 Demonstrate proficiency in creating SQL procedural language blocks of application code that can be shared by multiple forms, reports and data management applications.
- 05.0 Demonstrate proficiency in creating a complete Forms application using Developer/2000 while working in a graphical user interface (GUI) development environment.
- 06.0 Demonstrate proficiency in designing multiple forms applications.
- 07.0 Demonstrate proficiency in developing a variety of standard and custom reports using the reports component of Developer/2000 in a client/server environment.
- 08.0 Demonstrate proficiency in identifying the Server Physical and Logical architecture.
- 09.0 Demonstrate proficiency in implementing and planning backup and recovery for the Server.
- 10.0 Demonstrate proficiency in implementing a Net8 configuration on a workstation and server.
- 11.0 Demonstrate proficiency in tuning a Server.
- 12.0 Demonstrate proficiency in implementing Database Security.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Database Technology  
**CIP Numbers:** 1511010306 A.S.  
 0511010306 A.A.S.  
**Program Length:** 63 credit hours  
**SOC Code(s):** 15-1061

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

- 01.0 Demonstrate proficiency in developing and operating a database. – The student will be able to:
- 01.01 Build a relational database.
  - 01.02 Query, display, and format data.
  - 01.03 Save, retrieve, and run queries.
  - 01.04 Build and format reports.
  - 01.05 Group and summarize data.
- 02.0 Demonstrate proficiency in manipulating a database and creating tables and data structures. – The student will be able to:
- 02.01 Insert, update, automatically generate, and delete data.
  - 02.02 Control transaction processing.
  - 02.03 Create, confirm, modify and remove tables to store data.
  - 02.04 Apply business rules to ensure data integrity.
  - 02.05 Restrict user access to tables.
  - 02.06 Improve query performance.
- 03.0 Demonstrate proficiency in developing applications and using the procedure builder tool. – The student will be able to:
- 03.01 Develop programs in PL/SQL.
  - 03.02 Insert and manipulate data with PL/SQL.
  - 03.03 Manage and execute program units using the Object Navigator and the PL/SQL Interpreter.
  - 03.04 Define and compile procedures using the Program Unit Editor.
  - 03.05 Control the execution of a PL/SQL program unit.
  - 03.06 Test possible solutions by making changes to variables and procedures at runtime.
- 04.0 Demonstrate proficiency in creating PL/SQL procedural language blocks of application code that can be shared by multiple forms, reports and data management applications. – The student will be able to:
- 04.01 Nest sub-queries within another SQL procedural language command.

- 04.02 Develop applications using procedural capabilities.
  - 04.03 Insert and manipulate data with SQL procedural language.
  - 04.04 Use the procedure builder tool to develop and debug SQL procedure language code.
  - 04.05 Manage and execute program units using the object navigator and the SQL procedural language interpreter.
  - 04.06 Define environmental requirements for peripherals and media.
  - 04.07 Define and compile procedures using the program unit editor.
  - 04.08 Control the execution of an SQL procedural language program unit.
- 05.0 Demonstrate proficiency in creating a complete forms application using Developer/2000 while working in a graphical user interface (GUI) development environment. – The student will be able to:
- 05.01 Build a new data block using an existing table specification.
  - 05.02 Save and run a form module from the designer.
  - 05.03 Develop a master/detail form module.
  - 05.04 Identify characteristics of each forms file storage type.
  - 05.05 Create forms containing check boxes, radio groups, containing list items, display items, image items and buttons.
  - 05.06 Start additional forms with the same transaction and session.
  - 05.07 Enhance the default menu.
  - 05.08 Add basic menu items.
  - 05.09 Attach a menu module to a forms module.
  - 05.10 Saving and running a form module from the designer.
- 06.0 Demonstrate proficiency in designing multiple forms applications. – The student will be able to:
- 06.01 Redefine function keys and determining when key triggers should be used or avoided.
  - 06.02 Cause a form module to respond to mouse movement and mouse button actions.
  - 06.03 Creating trigger code to interact with windows.
  - 06.04 Build robust multiple form transactions.
  - 06.05 Choose between different ways of invoking forms.
  - 06.06 Pass data between forms using parameter lists.
  - 06.07 Control coded events and methods.
- 07.0 Demonstrate proficiency in developing a variety of standard and custom reports using the reports component of Developer/2000 in a client/server environment. – The student will be able to:
- 07.01 Design and execute a simple report.
  - 07.02 Manage the appearance and display of data in reports with layout objects.
  - 07.03 Customize the display of data in reports.
  - 07.04 Tailor the appearance of simple and advanced business reports.
  - 07.05 Integrating text and graphics in reports.
  - 07.06 Import charts and graphs from the graphics component of Developer/2000.
  - 07.07 Applying the packaged functions and procedures supplied with the reports component of Developer/2000.
  - 07.08 Write queries to retrieve data.

- 07.09 Manage the structure of data in reports using data objects.
  - 07.10 Determine how to best produce reports by analyzing report structures.
  - 07.11 Filter report information from the database server.
  - 07.12 Implement graphics into reports.
  - 07.13 Build modules in Developer 2000 Reports for use with other Developer/2000 tools.
  - 07.14 Manage module storage and security.
  - 07.15 Build reports in which the end user supplies values at runtime to control report output.
- 08.0 Demonstrate proficiency in identifying the server physical and logical architecture. – The student will be able to:
- 08.01 Identify and define the Server architecture.
  - 08.02 Identify and utilize the functions and processes of the Server.
  - 08.03 Create a database and construct the base data dictionary.
  - 08.04 Start up and shut down a database and instance.
- 09.0 Demonstrate proficiency in implementing and backup and recovery planning and backup of a server. – The student will be able to:
- 09.01 Identifying backup and recovery techniques.
  - 09.02 Define architecture implications for backup and recovery.
  - 09.03 Examining various failure scenarios and determining proper recovery strategies.
  - 09.04 Identify methods for restoration and recovery.
- 10.0 Demonstrate proficiency in implementing a Net8 configuration on the server and workstation. – The student will be able to:
- 10.01 Establishing a connection from the Net8 client and server using connection methods.
  - 10.02 Implement troubleshooting strategies for the Networking environment.
  - 10.03 Explain security features in networking products.
  - 10.04 Identify network problems using log and trace files.
  - 10.05 Set logging and tracing parameters.
  - 10.06 Start and stop the Intelligent Agent using the Listener Control utility.
  - 10.07 Identify the configuration files used to define the intelligent agent.
- 11.0 Demonstrate proficiency in tuning a server. – The student will be able to:
- 11.01 Explain the nature of Server tuning.
  - 11.02 Outline the tuning methodology.
  - 11.03 List and define available diagnostic tools.
  - 11.04 Running the UTLBSTAT/UTLESTAT utility.
  - 11.05 Exam latch contention.
  - 11.06 Diagnose inappropriate use of the SYSTEM and TEMP tablespaces.
  - 11.07 Ensure that files are distributed to minimize I/O contention.
- 12.0 Demonstrate proficiency in implementing database security. – The student will be able to:

- 12.01 Demonstrate an understanding of essential database security concepts.
- 12.02 Set up and administer users and groups.
- 12.03 Use appropriate procedures to secure database resources.

### **Purpose**

This certificate program is part of the Internet Services Technology AS/AAS degree program (1511080102/0511080102).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to Internet, Intranet, and Extranet environments; installing and configuring Intranet and web-based resources.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate proficiency with Internet structure, organization, and navigation
- 02.0 Demonstrate understanding of networked environments, hardware and software
- 03.0 Understand, install and configure computer hardware
- 04.0 Understand, install and configure computer software
- 05.0 Perform web design/development activities.
- 06.0 Perform web site management activities
- 07.0 Perform e-commerce-related tasks.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Information Technology Administration  
**CIP Number:** 0511010307  
**Program Length:** 18 credit hours  
**SOC Code(s):** 11-3021

This certificate program is part of the Internet Services Technology AS/AAS degree program (1511080102/0511080102). At the completion of this program, the student will be able to:

01.0 Demonstrate proficiency with internet structure, organization, and navigation - The student will be able to:

- 01.01 Describe the origin of the Internet.
- 01.02 Outline the history of the Internet.
- 01.03 Describe Internet organization, such as the Internic, domains and requests for comments (RFCs).
- 01.04 Describe the structure of the Internet.
- 01.05 Differentiate between the Internet and the WWW.
- 01.06 Define Internet push technologies, such as e-mail marketing vs. Web page banner advertising.
- 01.07 Differentiate among an Intranet site, an extranet site, and an Internet site.
- 01.08 Characterize the role of the Internet in today's society.
- 01.09 Describe several major ethical issues related to Internet use.
- 01.10 Identify several legal issues related to Internet use.
- 01.11 Identify several examples to show how the Internet has affected intellectual property rights.
- 01.12 Identify several examples to show how the Internet has affected personal security and privacy.
- 01.13 Describe the World Wide Web (WWW).
- 01.14 Provide several examples to show how the WWW has affected our society.
- 01.15 Demonstrate the use of typical file types and protocols (http:, ftp:, mailto:, gopher:, telnet:, etc.).
- 01.16 Demonstrate the use of typical remote access mechanisms.
- 01.17 Differentiate among all valid WWW file types.
- 01.18 Differentiate among all WWW multimedia file types.
- 01.19 Describe components of URL and their meanings (including types).
- 01.20 Effectively use Internet tools and utilities such as e-mail, browsers, search engines, news groups, list serves, chat rooms, file transfers.
- 01.21 Install and configure an Internet browser.
- 01.22 Install and configure browser add-ons and plug-ins.
- 01.23 Install and configure a newsgroup reader.
- 01.24 Install and configure a chat group client.

02.0 Demonstrate understanding of networked environments, hardware, and software - The student will be able to:

- 02.01 Give several advantages and disadvantages of networked and non-networked environments.

- 02.02 Describe current network environments, such as peer-to-peer and client/server.
  - 02.03 Identify and discuss issues (such as security, privacy, redundancy, etc.) related to networked environments.
  - 02.04 Identify and discuss issues related to naming conventions for user-ids, e-mail, passwords, and network devices.
  - 02.05 List and define layers in the OSI and TCP/IP network protocol models.
  - 02.06 Identify and describe current relevant IEEE network standards.
  - 02.07 Illustrate typical network topologies.
  - 02.08 Identify advantages and disadvantages of each topology.
  - 02.09 Describe the major functions of LAN hardware protocols such as Ethernet, token ring, FDDI, and arcnet.
  - 02.10 Describe LAN software protocols such as IPX/SPX, TCP/IP, and NetBEUI.
  - 02.11 Discuss the nature of IP addresses and MAC addresses, and mapping between protocol addressing schemes.
  - 02.12 Describe the major functions of network server hardware and software components.
  - 02.13 Describe server hardware requirements.
  - 02.14 Describe the hardware needed for hosting a Web site.
  - 02.15 Identify a variety of specialized servers (e.g. proxy, e-mail, DHCP, Web, etc.)
  - 02.16 Describe the hardware requirements for specialized servers (such as e-mail, database).
  - 02.17 Describe the major functions of network client hardware components.
  - 02.18 Describe client hardware requirements.
  - 02.19 Differentiate between hardware used to implement different topologies such as token ring and Ethernet.
  - 02.20 Recognize and describe current cable technologies such as twisted-pair, coaxial, and fiber optic, and identifying issues associated with plenum verses non-plenum cable plants.
  - 02.21 Describe current wireless technologies such as satellite, microwave, spread spectrum RF, and infrared.
  - 02.22 Identify advantages and disadvantages of wireless and cable technologies.
  - 02.23 Cite appropriate uses of wireless and cable technologies.
  - 02.24 Describe the major functions of network connectivity hardware, such as hubs, repeaters, bridges, routers, switches, and gateways.
  - 02.25 Describe the hardware needed to connect a LAN to the Internet.
  - 02.26 Describe the function of network storage devices and other peripherals (RAID, CD towers, printers, fax machines, scanners, printer/fax/copiers, imaging devices, and document center equipment, etc.).
  - 02.27 Compare and contrast major functions and features of current network operating systems (including directory services).
  - 02.28 Differentiate between telecommunications and data communications.
  - 02.29 Compare and contrast digital communications lines and cable characteristics (e.g. ISDN, DSL, T-1 and T-3).
- 03.0 Understand, install and configure computer hardware - The student will be able to:
- 03.01 Explain the use of binary numbers to represent instructions and data.
  - 03.02 Describe the hardware implications of the use of binary representation of instructions and data.
  - 03.03 Convert numbers among decimal, binary, and hexadecimal representation.

- 03.04 Perform binary arithmetic.
- 03.05 Identify various coding schemes (ASCII, etc.).
- 03.06 Discuss various data types (signed and unsigned integers, floating point, etc)
- 03.07 Identify the major hardware platforms
- 03.08 Describe distinguishing features of the major hardware platforms
- 03.09 Describe the functions of major hardware components of a computer system
- 03.10 Recognize and correctly identify computing hardware components.
- 03.11 Describe emerging hardware technologies and discuss their potential impact
- 03.12 Implement proper procedures for handling and safeguarding equipment.
- 03.13 Perform preventive maintenance tasks on microcomputer systems.
- 03.14 Describe procedures for proper disposal of computer components.
- 03.15 Set up and configure systems and peripherals.
- 03.16 Set up BIOS.
- 03.17 Install and configure storage and I/O device interfaces.
- 03.18 Install and configure multimedia devices and interfaces.
- 03.19 Install and configure network interface cards.

04.0 Understand, install and configure computer software - The student will be able to:

- 04.01 Describe the functions and major components (BIOS, task management, etc.) of a computer operating system.
- 04.02 Identify current operating systems and describe their important features.
- 04.03 Use an operating system for activities such as data and file management.
- 04.04 Identify current systems utilities and describe their functions.
- 04.05 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
- 04.06 Use operating systems of different brands and platforms.
- 04.07 Use both stand-alone operating systems and network operating systems.
- 04.08 Create, use, and maintain system configuration files.
- 04.09 Describe the major features and functions of the major categories of applications software (word processing, database, spreadsheet, presentation, e-mail, browsers, etc.).
- 04.10 Use basic features of office productivity software.
- 04.11 Learn to perform independently (previously untaught) tasks using office productivity software.
- 04.12 Use software produced by multiple vendors.
- 04.13 Transmit and exchange data in a multiple vendor software environment.
- 04.14 Install and configure a microcomputer operating system.
- 04.15 Describe procedures for uninstalling operating system software.
- 04.16 Install and configure system software.
- 04.17 Install and configure applications software.
- 04.18 Configure software for accessibility by disabled individuals.
- 04.19 Install and configure applications software upgrades.
- 04.20 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing, configuring and upgrading typical applications software.
- 04.21 Install and configure client software for connecting to LANs, WANs, and the Internet (network client, WWW browser, terminal emulation, file transfer, etc.).
- 04.22 Install and configure client software for client/server and network-based applications (e-mail, videoconferencing, database, etc.).
- 04.23 Install internetworking applications on a server and configure clients for network

access.

- 04.24 Describe the major functions of network client software components.
- 04.25 Install and configure client software on multiple hardware platforms.
- 04.26 Install and configure drivers for NICs and network peripherals (including printers).
- 04.27 Configure the client to support multiple protocols.
- 04.28 Install and configure client/server applications (such as e-mail, scheduling, etc) on a server.
- 04.29 Install and configure network-based services such as videoconferencing, integrated voicemail/email/fax, large document storage and retrieval, etc.

05.0 Perform web design/development activities – The student will be able to:

- 05.01 Create a Web database interface.
- 05.02 Discuss the issue of ODBC compliance.

06.0 Perform web site management activities - The student will be able to:

- 06.01 Describe the process of obtaining an Internet domain address.
- 06.02 Register an Internet site.
- 06.03 Notify appropriate external search engines of the Web site.
- 06.04 Compare features of currently available site management tools.
- 06.05 Install and configure Web site management software.
- 06.06 Create and maintain a Web site using a Web management tool.
- 06.07 Implement appropriate Web site security measures.
- 06.08 Use and evaluate the results of a Web site visit-recording tool.

07.0 Perform e-commerce-related tasks – The student will be able to:

- 07.01 Describe Web e-commerce.
- 07.02 Analyze e-commerce models.
- 07.03 Develop an e-commerce business plan.
- 07.04 Develop e-commerce marketing plan.
- 07.05 Identify components and procedures necessary to process credit card transactions
- 07.06 Integrate credit card transaction process.
- 07.07 Implement shopping cart software.
- 07.08 Set up and configure online catalog to market products.
- 07.09 Establish transaction storage and reporting system
- 07.10 Publish web site.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Information Technology Support Specialist  
**Career Cluster:** Information Technology

<b>CCC</b>	
CIP Number	0511010311
Program Type	College Credit Certificate (CCC)
Program Length	18 credit hours
CTSO	Phi Beta Lambda, BPA (Business Professionals of America)
SOC Codes (all applicable)	15-1041
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the Computer Information Technology AS/AAS degree program (1511010305/0511010305).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to installation of information technology equipment, troubleshooting information technology equipment, and supporting information technology users.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Understand, install and configure computer hardware.
- 02.0 Understand, Install and configure computer software
- 03.0 Demonstrate understanding of networked environments
- 04.0 Perform technical system support functions
- 05.0 Perform troubleshooting activities.
- 06.0 Perform systems monitoring activities.
- 07.0 Perform customer service skills.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Information Technology Support Specialist  
**CIP Number:** 0511010311  
**Program Length:** 18 credit hours  
**SOC Code(s):** 15-1041

This certificate program is part of the Computer Information Technology AS/AAS degree program (1511010305/0511010305). At the completion of this program, the student will be able to:

- 01.0 Understand, install and configure computer hardware. The student will be able to:
- 01.01 Explain the use of binary numbers to represent instructions and data.
  - 01.02 Describe the hardware implications of the use of binary representation of instructions and data.
  - 01.03 Convert numbers among decimal, binary, and hexadecimal representation.
  - 01.04 Perform binary arithmetic.
  - 01.05 Identify various coding schemes (ASCII, etc.).
  - 01.06 Discuss various data types (signed and unsigned integers, floating point, etc).
  - 01.07 Identify the major hardware platforms.
  - 01.08 Describe distinguishing features of the major hardware platforms.
  - 01.09 Set up and use multiple hardware platforms built on various processor architectures.
  - 01.10 Describe the functions of major hardware components of a computer system.
  - 01.11 Recognize and correctly identify computing hardware components.
  - 01.12 Set up and configure systems and peripherals.
  - 01.13 Set up and upgrade BIOS.
  - 01.14 Install and configure storage and I/O device interfaces.
  - 01.15 Install and configure multimedia devices and interfaces.
  - 01.16 Describe emerging hardware technologies and discuss their potential impact.
  - 01.17 Implement proper procedures for handling and safeguarding equipment.
  - 01.18 Perform preventive maintenance tasks on microcomputer systems.
  - 01.19 Describe procedures for proper disposal of computer components.
  - 01.20 Review installation specifications
  - 01.21 Unpack all components, file and disseminate all inventory and warranty information.
  - 01.22 Assure all components are present and functional
  - 01.23 Install and configure network hardware components.
  - 01.24 Perform component and system level upgrades.
  - 01.25 Disassemble and re-assemble a microcomputer system completely.
  - 01.26 Describe principles of computer organization as they apply to typical microcomputer equipment.
  - 01.27 Draw a schematic of a typical microcomputer system.
  - 01.28 Describe the architecture of a typical microcomputer system.
  - 01.29 Discuss issues that affect system design and construction (redundancy, fault tolerance, etc.)
- 02.0 Understand, Install and configure computer software. The student will be able to:

- 02.01 Describe the functions and major components (BIOS, task management, etc.) of a computer operating system.
  - 02.02 Identify current operating systems and describe their vital features.
  - 02.03 Use an operating system for activities such as data and file management.
  - 02.04 Identify current systems utilities and describe their functions.
  - 02.05 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
  - 02.06 Use operating systems of different brands and platforms.
  - 02.07 Use both stand-alone operating systems and network operating systems.
  - 02.08 Create, use, and maintain system configuration files.
  - 02.09 Make configuration changes to an operating system to optimize performance.
  - 02.10 Transmit and exchange data files in a multiple platform hardware environment.
  - 02.11 Describe the primary features and functions of the major categories of applications software (word processing, database, spreadsheet, presentation, e-mail, browsers, etc.).
  - 02.12 Use basic features of office productivity software.
  - 02.13 Learn independently to perform (previously untaught) tasks using office productivity software.
  - 02.14 Use software produced by multiple vendors.
  - 02.15 Transmit and exchange data in a multiple vendor software environment.
  - 02.16 Use integration features of different office productivity applications software.
  - 02.17 Use office productivity or other applications
  - 02.18 Install and configure a microcomputer operating system.
  - 02.19 Describe procedures for uninstalling operating system software.
  - 02.20 Install and configure system software.
  - 02.21 Install and configure applications software.
  - 02.22 Configure software for accessibility by disabled individuals.
  - 02.23 Install and configure applications software upgrades.
  - 02.24 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing, configuring and upgrading typical applications software.
  - 02.25 Install and configure client software for connecting to LANs, WANs, and the Internet (network client, WWW browser, terminal emulation, file transfer, etc.).
  - 02.26 Install and configure client software for client/server and network-based applications (e-mail, videoconferencing, database, etc.).
  - 02.27 Install applications on a server and configure clients for network access.
  - 02.28 Install and configure applications software at an advanced level, such as one of the following: Computer-Aided Design (CAD), Geographical Information System (GIS), statistical software, desktop publishing, music editing system or game software.
  - 02.29 Identify several of the most prominent current programming languages.
  - 02.30 Characterize the stages of the system development life cycle.
  - 02.31 Differentiate between two common strategies for problem solving.
  - 02.32 Describe the program design and development process.
  - 02.33 Differentiate between structured programming and object-oriented programming.
  - 02.34 Apply principles of good design and documentation when analyzing programs.
  - 02.35 Name several emerging software technologies.
  - 02.36 Describe the potential impact of the named emerging software technologies.
- 03.0 Demonstrate understanding of networked environments. The student will be able to:

- 03.01 Identify several advantages and disadvantages of networked and non-networked environments.
- 03.02 Describe current network environments, such as peer-to-peer and client/server.
- 03.03 Identify and discuss issues (such as security, privacy, redundancy, etc.) related to networked environments.
- 03.04 Identify and discuss issues related to naming conventions for user-ids, e-mail, passwords, and network devices.
- 03.05 List and define layers in the OSI and TCP/IP network protocol models.
- 03.06 Identify and describe current relevant IEEE network standards.
- 03.07 Illustrate typical network topologies.
- 03.08 Identify advantages and disadvantages of each topology.
- 03.09 Describe the major functions of LAN hardware protocols such as Ethernet, token ring, FDDI, and arcnet.
- 03.10 Describe LAN software protocols such as IPX/SPX, TCP/IP, and NetBEUI.
- 03.11 Discuss the nature of IP addresses and MAC addresses, and mapping between protocol addressing schemes.
- 03.12 Describe the major functions of network server hardware components.
- 03.13 Describe server and client hardware requirements.
- 03.14 Describe the major functions of network client hardware components.
- 03.15 Differentiate between hardware used to implement different topologies such as token ring and Ethernet.
- 03.16 Recognize and describe current cable technologies (such as twisted-pair, coaxial, and fiber optic) and identifying issues associated with plenum verses and non-plenum cable plants.
- 03.17 Describe current wireless technologies such as satellite, microwave, spread spectrum RF, and infrared.
- 03.18 Identify advantages and disadvantages of wireless and cable technologies.
- 03.19 Cite appropriate uses of wireless and cable technologies.
- 03.20 Describe the major functions of network connectivity hardware, such as hubs, repeaters, bridges, routers, switches, and gateways.
- 03.21 Describe the hardware needed to connect a LAN to the Internet.
- 03.22 Describe the function of network storage devices and other peripherals (RAID, CD towers, printers, fax machines, scanners, printer/fax/copiers, imaging devices, and document center equipment, etc.).
- 03.23 Set up and configure a server (including installation of NICs and NIC drivers).
- 03.24 Set up and configure client hardware (including installation of NICs and NIC drivers).
- 03.25 Set up network storage devices and other peripherals and connect to the network.
- 03.26 Describe the major functions of network server software components.
- 03.27 Compare and contrast major functions and features of current network operating systems (including directory services).
- 03.28 Install and configure a LAN server.
- 03.29 Install and configure drivers for NICs and network peripherals.
- 03.30 Configure protocol stacks.
- 03.31 Describe the major functions of network client software components.
- 03.32 Install and configure client software on multiple hardware platforms.
- 03.33 Install and configure drivers for NICs and network peripherals (including printers).
- 03.34 Configure the client to support multiple protocols.
- 03.35 Differentiate between telecommunications and data communications.

03.36 Compare and contrast digital communications lines and cable characteristics (e.g. ISDN, DSL, T-1 and T-3).

04.0 Perform technical system support functions. The student will be able to:

- 04.01 Create and follow established procedures and guidelines to manage user accounts
- 04.02 Identify network security systems
- 04.03 Install system and application upgrades and patches as required
- 04.04 Create documentation to establish baselines for maintenance and repairs.
- 04.05 Update documentation including warranty and maintenance agreements.
- 04.06 Create and perform back-ups following organizational plan
- 04.07 Test contingency systems to reduce damage due to disaster
- 04.08 Perform data recovery as needed
- 04.09 Document statistics to identify problems and plans for systems upgrades

05.0 Perform troubleshooting activities. The student will be able to:

- 05.01 Describe the use of diagnostic test equipment.
- 05.02 Describe features of diagnostic software.
- 05.03 Use system, software, and network documentation.
- 05.04 Locate and use online documentation resources.
- 05.05 Describe effective troubleshooting strategies and techniques to resolve basic hardware problems including interviewing and observation
- 05.06 Recognize and resolve basic hardware problems.
- 05.07 Recognize and resolve basic software configuration problems.
- 05.08 Recognize and resolve system level software conflicts (e.g., IRQ conflicts).
- 05.09 Recognize and resolve problems originating from software interaction.
- 05.10 Recognize and resolve problems originating from software/hardware interaction.
- 05.11 Isolate and replace faulty components (board level only).
- 05.12 Effectively use appropriate research tools to locate information needed to solve system problems.
- 05.13 Perform systems troubleshooting tasks on multiple platforms
- 05.14 Follow a structured methodology and use effective troubleshooting strategies and techniques to resolve problems with systems, peripheral devices and/or drivers, and network problems
- 05.15 Use sniffers, cable testers, and other network troubleshooting tools.
- 05.16 Use utilities such as ping, telnet, and trace route in testing a network.
- 05.17 Test WAN links using loop back techniques.
- 05.18 Identify when to escalate the issue, including determining appropriate entities involved.
- 05.19 Observe and document results
- 05.20 Test the solution to ensure quality
- 05.21 Document the final solution
- 05.22 Disseminate the solution
- 05.23 Follow up with the customer

06.0 Perform systems monitoring activities. The student will be able to:

- 06.01 Create and review back up log
- 06.02 Create and review server log

- 06.03 Create and review application logs
- 06.04 Create and review resolution logs
- 06.05 Create and review security logs
- 06.06 Prepare a schedule to verify applications status
- 06.07 Prepare a schedule to verify backup status
- 06.08 Prepare a schedule to verify server status
- 06.09 Track network performance as compare to an established baseline
- 06.10 Identify problem trends and create resolution plans.
- 06.11 Document statistical analysis and monitoring activities

07.0 Perform Customer Service Skills – The student will be able to:

- 07.01 Identify and recognize user's state of mind and attitude
- 07.02 Determine the customer needs using system analysis strategies
- 07.03 Listen to the customer and ask appropriate questions
- 07.04 Maintain a professional demeanor when dealing with difficult customers
- 07.05 Provide suggested solutions using knowledge base
- 07.06 Project professional appearance and demeanor
- 07.07 Promote company services, products, and policies when appropriate
- 07.08 Use tact when dealing with customers and competitors.
- 07.09 Maintain professional work ethics and follow policies and procedures
- 07.10 Respect customer work space/environment.
- 07.11 Relate all information to customer in a manner that the customer can understand.
- 07.12 Set realistic expectations when establishing deadlines for customer solutions
- 07.13 Communicate action plan including timelines
- 07.14 Recognize the existence of internal/external customers and follow appropriate guidelines for each

2012 – 2013

Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the Computer Information Technology AS/AAS degree program (1511010305/0511010305).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to microcomputer oriented operating procedures, software applications packages, and hardware in order to select the appropriate information technology equipment for a particular microcomputer-based work environment; install information technology equipment, troubleshoot information technology equipment, support information technology users.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Understand, install and configure computer hardware.
- 02.0 Understand, Install and configure computer software
- 03.0 Demonstrate understanding of networked environments
- 04.0 Demonstrate understanding of internet structure, organization and navigation.
- 05.0 Perform technical system support functions
- 06.0 Perform troubleshooting activities.
- 07.0 Perform systems monitoring activities.
- 08.0 Perform computer information systems analysis activities.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Information Technology Analysis  
**CIP Number:** 0511010312  
**Program Length:** 27 credit hours / **Secondary Length:** 28 credit hours  
**SOC Code(s):** 15-1051

This certificate program is part of the Computer Information Technology AS/AAS degree program (1511010305/0511010305). At the completion of this program, the student will be able to:

01.0 Understand, install and configure computer hardware. The student will be able to:

- 01.01 Explain the use of binary numbers to represent instructions and data.
- 01.02 Describe the hardware implications of the use of binary representation of instructions and data.
- 01.03 Convert numbers among decimal, binary, and hexadecimal representation.
- 01.04 Perform binary arithmetic.
- 01.05 Identify various coding schemes (ASCII, etc.).
- 01.06 Discuss various data types (signed and unsigned integers, floating point, etc).
- 01.07 Identify the major hardware platforms.
- 01.08 Describe distinguishing features of the major hardware platforms.
- 01.09 Set up and use multiple hardware platforms built on various processor architectures.
- 01.10 Describe the functions of major hardware components of a computer system.
- 01.11 Recognize and correctly identify computing hardware components.
- 01.12 Set up and configure systems and peripherals.
- 01.13 Set up and upgrade BIOS.
- 01.14 Install and configure storage and I/O device interfaces.
- 01.15 Install and configure multimedia devices and interfaces.
- 01.16 Describe emerging hardware technologies and discuss their potential impact.
- 01.17 Implement proper procedures for handling and safeguarding equipment.
- 01.18 Perform preventive maintenance tasks on microcomputer systems.
- 01.19 Describe procedures for proper disposal of computer components.
- 01.20 Review installation specifications
- 01.21 Unpack all components, file and disseminate all inventory and warranty information.
- 01.22 Assure all components are present and functional
- 01.23 Install and configure network hardware components.
- 01.24 Perform component and system level upgrades.
- 01.25 Disassemble and re-assemble a microcomputer system completely.
- 01.26 Describe principles of computer organization as they apply to typical microcomputer equipment.
- 01.27 Draw a schematic of a typical microcomputer system.
- 01.28 Describe the architecture of a typical microcomputer system.
- 01.29 Discuss issues that affect system design and construction (redundancy, fault tolerance, etc.)

02.0 Understand, Install and configure computer software. The student will be able to:

- 02.01 Describe the functions and major components (BIOS, task management, etc.) of a computer operating system.
  - 02.02 Identify current operating systems and describe their vital features.
  - 02.03 Use an operating system for activities such as data and file management.
  - 02.04 Identify current systems utilities and describe their functions.
  - 02.05 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
  - 02.06 Use operating systems of different brands and platforms.
  - 02.07 Use both stand-alone operating systems and network operating systems.
  - 02.08 Create, use, and maintain system configuration files.
  - 02.09 Make configuration changes to an operating system to optimize performance.
  - 02.10 Transmit and exchange data files in a multiple platform hardware environment.
  - 02.11 Describe the primary features and functions of the major categories of applications software (word processing, database, spreadsheet, presentation, e-mail, browsers, etc.).
  - 02.12 Use basic features of office productivity software.
  - 02.13 Learn independently to perform (previously untaught) tasks using office productivity software.
  - 02.14 Use software produced by multiple vendors.
  - 02.15 Transmit and exchange data in a multiple vendor software environment.
  - 02.16 Use integration features of different office productivity applications software.
  - 02.17 Use office productivity or other applications
  - 02.18 Install and configure a microcomputer operating system.
  - 02.19 Describe procedures for uninstalling operating system software.
  - 02.20 Install and configure system software.
  - 02.21 Install and configure applications software.
  - 02.22 Configure software for accessibility by disabled individuals.
  - 02.23 Install and configure applications software upgrades.
  - 02.24 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing, configuring and upgrading typical applications software.
  - 02.25 Install and configure client software for connecting to LANs, WANs, and the Internet (network client, WWW browser, terminal emulation, file transfer, etc.).
  - 02.26 Install and configure client software for client/server and network-based applications (e-mail, videoconferencing, database, etc.).
  - 02.27 Install applications on a server and configure clients for network access.
  - 02.28 Install and configure applications software at an advanced level, such as one of the following: Computer-Aided Design (CAD), Geographical Information System (GIS), statistical software, desktop publishing, music editing system or game software.
  - 02.29 Identify several of the most prominent current programming languages.
  - 02.30 Characterize the stages of the system development life cycle.
  - 02.31 Differentiate between two common strategies for problem solving.
  - 02.32 Describe the program design and development process.
  - 02.33 Differentiate between structured programming and object-oriented programming.
  - 02.34 Apply principles of good design and documentation when analyzing programs.
  - 02.35 Name several emerging software technologies.
  - 02.36 Describe the potential impact of the named emerging software technologies.
- 03.0 Demonstrate understanding of networked environments. The student will be able to:

- 03.01 Identify several advantages and disadvantages of networked and non-networked environments.
- 03.02 Describe current network environments, such as peer-to-peer and client/server.
- 03.03 Identify and discuss issues (such as security, privacy, redundancy, etc.) related to networked environments.
- 03.04 Identify and discuss issues related to naming conventions for user-ids, e-mail, passwords, and network devices.
- 03.05 List and define layers in the OSI and TCP/IP network protocol models.
- 03.06 Identify and describe current relevant IEEE network standards.
- 03.07 Illustrate typical network topologies.
- 03.08 Identify advantages and disadvantages of each topology.
- 03.09 Describe the major functions of LAN hardware protocols such as Ethernet, token ring, FDDI, and arcnet.
- 03.10 Describe LAN software protocols such as IPX/SPX, TCP/IP, and NetBEUI.
- 03.11 Discuss the nature of IP addresses and MAC addresses, and mapping between protocol addressing schemes.
- 03.12 Describe the major functions of network server hardware components.
- 03.13 Describe server and client hardware requirements.
- 03.14 Describe the major functions of network client hardware components.
- 03.15 Differentiate between hardware used to implement different topologies such as token ring and Ethernet.
- 03.16 Recognize and describe current cable technologies (such as twisted-pair, coaxial, and fiber optic) and identifying issues associated with plenum verses and non-plenum cable plants.
- 03.17 Describe current wireless technologies such as satellite, microwave, spread spectrum RF, and infrared.
- 03.18 Identify advantages and disadvantages of wireless and cable technologies.
- 03.19 Cite appropriate uses of wireless and cable technologies.
- 03.20 Describe the major functions of network connectivity hardware, such as hubs, repeaters, bridges, routers, switches, and gateways.
- 03.21 Describe the hardware needed to connect a LAN to the Internet.
- 03.22 Describe the function of network storage devices and other peripherals (RAID, CD towers, printers, fax machines, scanners, printer/fax/copiers, imaging devices, and document center equipment, etc.).
- 03.23 Set up and configure a server (including installation of NICs and NIC drivers).
- 03.24 Set up and configure client hardware (including installation of NICs and NIC drivers).
- 03.25 Set up network storage devices and other peripherals and connect to the network.
- 03.26 Describe the major functions of network server software components.
- 03.27 Compare and contrast major functions and features of current network operating systems (including directory services).
- 03.28 Install and configure a LAN server.
- 03.29 Install and configure drivers for NICs and network peripherals.
- 03.30 Configure protocol stacks.
- 03.31 Describe the major functions of network client software components.
- 03.32 Install and configure client software on multiple hardware platforms.
- 03.33 Install and configure drivers for NICs and network peripherals (including printers).
- 03.34 Configure the client to support multiple protocols.
- 03.35 Differentiate between telecommunications and data communications.

03.36 Compare and contrast digital communications lines and cable characteristics (e.g. ISDN, DSL, T-1 and T-3).

04.0 Demonstrate understanding of internet structure, organization and navigation. The student will be able to:

- 04.01 Describe the origin, structure, and history of the Internet.
- 04.02 Describe Internet organization, such as the Internic, domains and requests for comments (RFCs).
- 04.03 Differentiate between the Internet and the WWW.
- 04.04 Define Internet push technologies, such as e-mail marketing vs. Web page banner advertising.
- 04.05 Describe Web e-commerce.
- 04.06 Differentiate among an Intranet site, an extranet site, and an Internet site.
- 04.07 Characterize the role of the Internet in today's society.
- 04.08 Describe several major ethical issues related to Internet use.
- 04.09 Identify several legal issues related to Internet use.
- 04.10 Cite several examples to demonstrate how the Internet has affected intellectual property rights.
- 04.11 Identify several examples to demonstrate how the Internet has affected personal security and privacy.
- 04.12 Describe the World Wide Web (WWW).
- 04.13 Cite several examples to show how the WWW has affected our society.
- 04.14 Demonstrate the use of typical file types and protocols (http:, ftp:, mailto:, gopher:, telnet:, etc.).
- 04.15 Demonstrate the use of typical remote access mechanisms.
- 04.16 Describe components of URL and their meanings (including types).
- 04.17 Use Internet tools effectively and utilities such as e-mail, browsers, search engines, news groups, list serves, chat rooms, file transfers.
- 04.18 Install and configure an Internet browser.
- 04.19 Install and configure browser add-ons and plug-ins.
- 04.20 Describe the Human-Computer Interaction (HCI) factors that impact the design of a Web page and Web site
- 04.21 Describe and use the process of storyboarding a Web site.
- 04.22 Describe format, structure and design principles for Web sites.
- 04.23 Evaluate Web sites using principles of good format, structure, and design.
- 04.24 List several Web authoring tools in order of complexity of use.
- 04.25 Describe handicapped-accessibility features for a Web site.
- 04.26 Evaluate a Web site for handicapped accessibility.

05.0 Perform technical system support functions. The student will be able to:

- 05.01 Create and follow established procedures and guidelines to manage user accounts
- 05.02 Identify network security systems
- 05.03 Install system and application upgrades and patches as required
- 05.04 Create documentation to establish baselines for maintenance and repairs.
- 05.05 Update documentation including warranty and maintenance agreements.
- 05.06 Create and perform back-ups following organizational plan
- 05.07 Test contingency systems to reduce damage due to disaster
- 05.08 Perform data recovery as needed

05.09 Document statistics to identify problems and plans for systems upgrades.

06.0 Perform troubleshooting activities. The student will be able to:

- 06.01 Describe the use of diagnostic test equipment.
- 06.02 Describe features of diagnostic software.
- 06.03 Use system, software, and network documentation.
- 06.04 Locate and use online documentation resources.
- 06.05 Describe effective troubleshooting strategies and techniques to resolve basic hardware problems including interviewing and observation
- 06.06 Recognize and resolve basic hardware problems.
- 06.07 Recognize and resolve basic software configuration problems.
- 06.08 Recognize and resolve system level software conflicts (e.g., IRQ conflicts).
- 06.09 Recognize and resolve problems originating from software interaction.
- 06.10 Recognize and resolve problems originating from software/hardware interaction.
- 06.11 Isolate and replace faulty components (board level only).
- 06.12 Effectively use appropriate research tools to locate information needed to solve system problems.
- 06.13 Perform systems troubleshooting tasks on multiple platforms
- 06.14 Follow a structured methodology and use effective troubleshooting strategies and techniques to resolve problems with systems, peripheral devices and/or drivers, and network problems
- 06.15 Use sniffers, cable testers, and other network troubleshooting tools.
- 06.16 Use utilities such as ping, telnet, and trace route in testing a network.
- 06.17 Test WAN links using loop back techniques.
- 06.18 Identify when to escalate the issue, including determining appropriate entities involved.
- 06.19 Observe and document results
- 06.20 Test the solution to ensure quality
- 06.21 Document the final solution
- 06.22 Disseminate the solution
- 06.23 Follow up with the customer.

07.0 Perform systems monitoring activities. The student will be able to:

- 07.01 Create and review back up log
- 07.02 Create and review server log
- 07.03 Create and review application logs
- 07.04 Create and review resolution logs
- 07.05 Create and review security logs
- 07.06 Prepare a schedule to verify applications status
- 07.07 Prepare a schedule to verify backup status
- 07.08 Prepare a schedule to verify server status
- 07.09 Track network performance as compare to an established baseline
- 07.10 Identify problem trends and create resolution plans.
- 07.11 Document statistical analysis and monitoring activities

08.0 Perform Computer Information systems Analysis Activities – The student will be able to:

- 08.01 Prepare appropriate systems and analysis charts and other visual aids.
- 08.02 Describe the major steps in the systems development cycle.

- 08.03 Perform basic business related tasks using the most appropriate software applications.
- 08.04 Identify situations where software packages and/or custom developed packages need to be integrated with each other.
- 08.05 Identify situations where software packages and/or hardware need to be integrated with software/hardware available on other types of computers.
- 08.06 Select appropriate hardware devices to accomplish assigned tasks.
- 08.07 Identify appropriate vendor sources for software, hardware and auxiliary supplies.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Computer Programming and Analysis  
**Career Cluster:** Information Technology

	<b>AS</b>	<b>AAS</b>
CIP Number	1511020100	0511020100
Program Type	College Credit	College Credit
Standard Length	63 credit hours	63 credit hours

SOC Codes (all applicable)	15-1021	15-1021
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>	
Perkins Technical Skill Attainment Inventory	<a href="http://www.fl DOE.org/workforce/perkins/perkins_resources.asp">http://www.fl DOE.org/workforce/perkins/perkins_resources.asp</a>	
Statewide Articulation	<a href="http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp">http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp</a>	

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as entry level programmers, programmer specialists, computer programmers, senior programmers, chief business programmers, programmer analysts, and information systems programmers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content prepares individuals to analyze business situations and to design, develop and write computer programs; to store, locate, and retrieve specific documents, data, and information; analyze problems using logic/analysis tools, code into computer language; test, monitor, debug, document and maintain computer programs.

More than one programming language should be addressed in this degree program.

### **Program Structure**

This program is a planned sequence of instruction consisting of 68 hours.

## **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and Business Professionals of America are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

The following PSAV programs have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

Business Computer Programming (B070320) – 15 credits  
Web Programming Services (B079200) – 12 credits

The following industry certifications have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

Certified Internet Web (CIW) - Application Developer (PROSO005) – 3 credits  
Certified Internet Web (CIW) - Associate Design Specialist (PROSO001) – 3 credits  
CompTIA Linux+ (COMPT005) – 3 credits

Microsoft Certified Professional Developer (MCPD) - Windows Developer (MICRO044) – 3 credits  
Microsoft Certified Technology Specialist - Web Applications (MICRO048) – 3 credits  
Microsoft Certified Technology Specialist - Windows Applications (MICRO049) – 3 credits  
Sun Certified Java Associate (SUNMI002) – 3 credits  
Sun Certified Java Programmer (SUNMI001) – 3 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. The standard length of this program is 63 credit hours according to Rule 6A-14.030, F.A.C.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS/AAS degree program includes the following College Credit Certificates:

Computer Programming Specialist (0511020103) – 18 credit hours  
Computer Programmer (0511020200) – 33/36 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

### **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Perform data file activities.
- 02.0 Perform analysis activities
- 03.0 Perform program design activities
- 04.0 Perform coding activities.
- 05.0 Perform testing activities
- 06.0 Perform user-training activities.
- 07.0 Perform implementation activities.
- 08.0 Perform user support activities.
- 09.0 Perform evaluation activities.
- 10.0 Demonstrate professional development skills.
- 11.0 Demonstrate employability skills.
- 12.0 Demonstrate general organizational computing workplace competencies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Computer Programming and Analysis  
**CIP Numbers:** 1511020100 A.S.  
 0511020100 A.A.S.  
**Program Length:** 63 credit hours  
**SOC Code(s):** 15-1021

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

- 01.0 Perform data file activities. – The student will be able to:
- 01.01 Select the most efficient method of file organization for a given situation.
  - 01.02 Identify security procedures to maintain integrity of files.
- 02.0 Perform analysis activities. – The student will demonstrate proficiency in analysis of information technology systems and be able to:
- 02.01 Communicate with users to ascertain system requirements.
  - 02.02 Develop information system requirements to accomplish specific task.
  - 02.03 Analyze and document user requirements.
  - 02.04 Evaluate alternative solutions.
  - 02.05 Analyze and document system requirements.
  - 02.06 Create a plan for the design phase of an information technology system.
  - 02.07 Develop a timeline for system development.
  - 02.08 Communicate the plan.
  - 02.09 Develop systems specifications.
  - 02.10 Develop systems documentation.
  - 02.11 Evaluate system performance.
  - 02.12 Demonstrate understanding of technical and operational feasibility issues in determining a system solution.
  - 02.13 Demonstrate knowledge, skills, and application of information systems to accomplish specific job objectives.
- 03.0 Perform program design activities. – The student will be able to demonstrate proficiency in design of information technology systems and:
- 03.01 Demonstrate knowledge of computer concepts and terminology
  - 03.02 Demonstrate understanding of computer systems architecture including components, networked environments, and operating systems.
  - 03.03 Develop design specifications.
  - 03.04 Select a feasible development environment.
  - 03.05 Validate design specifications.
  - 03.06 Document design.
  - 03.07 Communicate design specifications
  - 03.08 Develop prototype.

04.0 Perform coding activities. – The student will be able to demonstrate proficiency in software fundamentals including control and data structures utilizing structured and object-oriented programming methodologies and will be able to:

- 04.01 Identify modules.
- 04.02 Design module.
- 04.03 Code module.
- 04.04 Document module.
- 04.05 Test module.
- 04.06 Debugging code.
- 04.07 Revise module code.
- 04.08 Assemble modules.
- 04.09 Demonstrate proficient use of programming development tools.

05.0 Perform testing activities. – The student will be able to:

- 05.01 Develop test plan.
- 05.02 Develop test data.
- 05.03 Validate input(s).
- 05.04 Perform test(s).
- 05.05 Validate expected outcomes.
- 05.06 Determine boundary test cases.
- 05.07 Load-test the system.
- 05.08 Revise program code.
- 05.09 Document results.

06.0 Perform user-training activities. – The student will be able to:

- 06.01 Assist in development of user documentation.
- 06.02 Assist in development of training plan.
- 06.03 Demonstrate appropriate user training techniques.

07.0 Perform implementation activities. – The student will be able to:

- 07.01 Develop an implementation plan.
- 07.02 Install system.
- 07.03 Validate system.
- 07.04 Troubleshooting methodologies.
- 07.05 Document implementation.

08.0 Perform user-support activities. – The student will be able to:

- 08.01 Demonstrate proficient use of productivity software (word processing, spreadsheets, databases, presentation) skills
- 08.02 Demonstrate appropriate communication and interpersonal skills.
- 08.03 Determine the customer needs using system analysis strategies.
- 08.04 Listen to the customer and ask appropriate questions
- 08.05 Persist when dealing with difficult customers maintaining a professional demeanor.
- 08.06 Provide suggested information technology solutions using knowledge base

- 08.07 Understand how to research and understand specific corporate culture.
  - 08.08 Use tact when dealing with customer and competitors.
  - 08.09 Maintain professional work ethics and follow policies and procedures
  - 08.10 Respect customer work space/environment.
  - 08.11 Set realistic expectations when establishing deadlines for customer solutions
  - 08.12 Communicate action plan including timelines
  - 08.13 Recognize the existence of internal/external customers and follow appropriate guidelines for each
- 09.0 Perform evaluation activities. – The student will be able to:
- 09.01 Review software development plans
  - 09.02 Assess validity and performance of software systems.
  - 09.03 Identify improvements to software systems.
  - 09.04 Assist in revisions and enhancements of software systems.
  - 09.05 Assist in project evaluation.
  - 09.06 Recommend improvements.
  - 09.07 Provide feedback to management, users and peer groups.
- 10.0 Demonstrate professional development skills. – The student will be able to:
- 10.01 Use on-line resources related to employee job requirements
  - 10.02 Understand the importance of continuing development activities such as reading industry journals and magazines; attending trade shows, seminars and other continuing professional development activities; participating in professional organizations and developing professional contacts for future projects.
  - 10.03 Develop insights and skills through structured experimentation
  - 10.04 Anticipate future industry trends.
  - 10.05 Understand the evolving nature of information technology systems and necessity of flexibility and willingness to implement needed changes.
  - 10.06 Set career goals/directions.
  - 10.07 Build mentor relationships.
- 11.0 Demonstrate employability skills. – The student will be able to:
- 11.01 Demonstrate business communication skills such as producing applications, business letters and memos, and resumes.
  - 11.02 Understand appropriate workplace dress and demeanor for specific corporate cultures.
  - 11.03 List representative jobs and career paths for people trained in the computer programming field.
  - 11.04 List several functions of each representative computer programming job and career path.
- 12.0 Demonstrate general organizational computing workplace competencies. – The student will be able to:
- 12.01 Follow oral and written instructions.
  - 12.02 Prepare, outline, and deliver a short oral presentation.
  - 12.03 Participate in analysis, design, coding, implementation and documentation activities as a team member and as a group leader.

- 12.04 Utilize research skills to obtain appropriate information, graphics and other data needed.
- 12.05 Prepare visual material to support an oral presentation.
- 12.06 Demonstrate self-motivation and responsibility to complete an activity.
- 12.07 List the steps in problem solving.
- 12.08 Choose appropriate action in situations requiring effective time management.
- 12.09 Identify and discuss issues contained within professional codes of conduct.
- 12.10 Identify and discuss software licensing issues.
- 12.11 Identify and discuss property rights and licensing issues.
- 12.12 Identify and discuss privacy issues.
- 12.13 Identify and discuss encryption issues.
- 12.14 Identify legal liability issues.

2012 – 2013

Program Type	College Credit Certificate (CCC)
Program Length	18 credit hours
CTSO	Phi Beta Lambda, BPA (Business Professionals of America)
SOC Codes (all applicable)	15-1021
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the Computer Programming and Analysis AS/AAS degree program (1511020100/0511020100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to analyze business situations and to design, develop and write computer programs; to store, locate, and retrieve specific documents, data, and information; analyze problems using logic/analysis tools, code into computer language; test, monitor, debug, document and maintain computer programs.

More than one programming language should be addressed in this certificate program.

## **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Perform data file activities.
- 03.0 Perform program design activities
- 04.0 Perform coding activities.
- 05.0 Perform testing activities
- 07.0 Perform implementation activities.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Computer Programming Specialist  
**CIP Number:** 0511020103  
**Program Length:** 18 Credit Hours  
**SOC Code(s):** 15-1021

This certificate program is part of the Computer Programming and Analysis AS/AAS degree program (1511020100/0511020100). At the completion of this program, the student will be able to:

- 01.0 Perform data file activities – The student will be able to:
- 01.01 Select the most efficient method of file organization for a given situation.
  - 01.02 Identify security procedures to maintain integrity of files.
- 03.0 Perform program design activities – The student will be able to demonstrate proficiency in design of information technology systems and:
- 03.01 Demonstrate knowledge of computer concepts and terminology
  - 03.02 Demonstrate understanding of computer systems architecture including components, networked environments, and operating systems.
  - 03.03 Develop design specifications.
  - 03.04 Select a feasible development environment.
  - 03.05 Validate design specifications.
  - 03.06 Document design.
  - 03.07 Communicate design specifications
  - 03.08 Develop prototype.
- 04.0 Perform coding activities - The student will be able to demonstrate proficiency in software fundamentals including control and data structures utilizing structured and object-oriented programming methodologies and will be able to:
- 04.01 Identify modules.
  - 04.02 Design module.
  - 04.03 Code module.
  - 04.04 Document module.
  - 04.05 Test module.
  - 04.06 Debugging code.
  - 04.07 Revise module code.
  - 04.08 Assemble modules.
  - 04.09 Demonstrate proficient use of programming development tools.
- 05.0 Perform testing activities - The student will be able to:
- 05.01 Develop test plan.
  - 05.02 Develop test data.
  - 05.03 Validate input(s).
  - 05.04 Perform test(s).

- 05.05 Validate expected outcomes.
- 05.06 Determine boundary test cases.
- 05.07 Load-test the system.
- 05.08 Revise program code.
- 05.09 Document results.

07.0 Perform implementation activities - The student will be able to:

- 07.01 Develop an implementation plan.
- 07.02 Install system.
- 07.03 Validate system.
- 07.04 Troubleshooting methodologies.
- 07.05 Document implementation.

**Program Title:** Computer Programmer  
**CIP Number:** 0511020200  
**Program Length:** 33 credit hours / **Secondary Length:** 36 credit hours  
**SOC Code(s):** 15-1021

This certificate program is part of the Computer Programming and Analysis AS/AAS degree program (1511020100/0511020100). At the completion of this program, the student will be able to:

- 01.0 Perform data file activities – The student will be able to:
- 01.01 Select the most efficient method of file organization for a given situation.
  - 01.02 Identify security procedures to maintain integrity of files.
- 02.0 Perform analysis activities – The student will demonstrate proficiency in analysis of information technology systems and be able to:
- 02.01 Communicate with users to ascertain system requirements.
  - 02.02 Develop information system requirements to accomplish specific task.
  - 02.03 Analyze and document user requirements.
  - 02.04 Evaluate alternatives solutions.
  - 02.05 Analyze and document system requirements.
  - 02.06 Create a plan for the design phase of an information technology system.
  - 02.07 Develop a timeline for system development.
  - 02.08 Communicate the plan.
  - 02.09 Develop systems specifications.
  - 02.10 Develop systems documentation.
  - 02.11 Evaluate system performance.
  - 02.12 Demonstrate understanding of technical and operational feasibility issues in determining a system solution.
  - 02.13 Demonstrate knowledge, skills, and application of information systems to accomplish specific job objectives.
- 03.0 Perform program design activities – The student will be able to demonstrate proficiency in design of information technology systems and:
- 03.01 Demonstrate knowledge of computer concepts and terminology
  - 03.02 Demonstrate understanding of computer systems architecture including components, networked environments, and operating systems.
  - 03.03 Develop design specifications.
  - 03.04 Select a feasible development environment.
  - 03.05 Validate design specifications.
  - 03.06 Document design.
  - 03.07 Communicate design specifications
  - 03.08 Develop prototype.

04.0 Perform coding activities - The student will be able to demonstrate proficiency in software fundamentals including control and data structures utilizing structured and object-oriented programming methodologies and will be able to:

- 04.01 Identify modules.
- 04.02 Design module.
- 04.03 Code module.
- 04.04 Document module.
- 04.05 Test module.
- 04.06 Debugging code.
- 04.07 Revise module code.
- 04.08 Assemble modules.
- 04.09 Demonstrate proficient use of programming development tools.

05.0 Perform testing activities - The student will be able to:

- 05.01 Develop test plan.
- 05.02 Develop test data.
- 05.03 Validate input(s).
- 05.04 Perform test(s).
- 05.05 Validate expected outcomes.
- 05.06 Determine boundary test cases.
- 05.07 Load-test the system.
- 05.08 Revise program code.
- 05.09 Document results.

06.0 Perform user-training activities - The student will be able to:

- 06.01 Assist in development of user documentation.
- 06.02 Assist in development of training plan.
- 06.03 Demonstrate appropriate user training techniques.

07.0 Perform implementation activities - The student will be able to:

- 07.01 Develop an implementation plan.
- 07.02 Install system.
- 07.03 Validate system.
- 07.04 Troubleshooting methodologies.
- 07.05 Document implementation.

08.0 Perform user-support activities - The student will be able to:

- 08.01 Demonstrate proficient use of productivity software (word processing, spreadsheets, databases, presentation) skills
- 08.02 Demonstrate appropriate communication and interpersonal skills.
- 08.03 Determine the customer needs using system analysis strategies
- 08.04 Listen to the customer and ask appropriate questions
- 08.05 Persist when dealing with difficult customers maintaining a professional demeanor.
- 08.06 Provide suggested information technology solutions using knowledge base
- 08.07 Understand how to research and understand specific corporate culture.

- 08.08 Use tact when dealing with customer and competitors.
  - 08.09 Maintain professional work ethics and follow policies and procedures
  - 08.10 Respect customer work space/environment.
  - 08.11 Set realistic expectations when establishing deadlines for customer solutions
  - 08.12 Communicate action plan including timelines
  - 08.13 Recognize the existence of internal/external customers and follow appropriate guidelines for each
- 09.0 Perform evaluation activities - The student will be able to:
- 09.01 Review software development plans
  - 09.02 Assess validity and performance of software systems.
  - 09.03 Identify improvements to software systems.
  - 09.04 Assist in revisions and enhancements of software systems.
  - 09.05 Assist in project evaluation.
  - 09.06 Recommend improvements.
  - 09.07 Provide feedback to management, users and peer groups.
- 10.0 Demonstrate professional development skills - The student will be able to:
- 10.01 Use on-line resources related to employee job requirements
  - 10.02 Understand the importance of continuing development activities such as reading industry journals and magazines; attending trade shows, seminars and other continuing professional development activities; participating in professional organizations and developing professional contacts for future projects.
  - 10.03 Develop insights and skills through structured experimentation
  - 10.04 Anticipate future industry trends.
  - 10.05 Understand the evolving nature of information technology systems and necessity of flexibility and willingness to implement needed changes
  - 10.06 Set career goals/directions.
  - 10.07 Build mentor relationships.
- 11.0 Demonstrate general organizational computing workplace competencies – The student will be able to:
- 11.01 Follow oral and written instructions.
  - 11.02 Prepare, outline, and deliver a short oral presentation.
  - 11.03 Participate in analysis, design, coding, implementation and documentation activities as a team member and as a group leader.
  - 11.04 Utilize research skills to obtain appropriate information, graphics, and other data needed.
  - 11.05 Prepare visual material to support an oral presentation.
  - 11.06 Demonstrate self-motivation and responsibility to complete an assigned task.
  - 11.07 List the steps in problem solving.
  - 11.08 Choose appropriate action in situations requiring effective time management.
  - 11.09 Identify and discuss issues contained within professional codes of conduct.
  - 11.10 Identify and discuss software licensing issues.
  - 11.11 Identify and discuss property rights and licensing issues.
  - 11.12 Identify and discuss privacy issues.
  - 11.13 Identify and discuss encryption issues.
  - 11.14 Identify legal liability issues.

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate proficiency in developing and operating a database.
- 02.0 Demonstrate proficiency in manipulating a database and creating tables and data structures.
- 03.0 Demonstrate proficiency in developing applications and using the procedure builder tool.
- 04.0 Demonstrate proficiency in creating SQL procedural language blocks of application code that can be shared by multiple forms, reports and data management applications.
- 05.0 Demonstrate proficiency in creating a complete Forms application using Developer/2000 while working in a graphical user interface (GUI) development environment.
- 06.0 Demonstrate proficiency in designing multiple forms applications.
- 07.0 Demonstrate proficiency in developing a variety of standard and custom reports using the reports component of Developer/2000 in a client/server environment.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Oracle Certified Database Administrator  
**CIP Number:** 0511020307  
**Program Length:** 15 credit hours / **Secondary Length:** 16 credit hours  
**SOC Code(s):** 15-1061

This certificate program is part of the Database Technology AS/AAS degree program (1511010306/0511010306). At the completion of this program, the student will be able to:

- 01.0 Demonstrate proficiency in developing and operating a database --The student will be able to:
- 01.01 Build a relational database.
  - 01.02 Query, display, and format data.
  - 01.03 Save, retrieve, and run queries.
  - 01.04 Build and format reports.
  - 01.05 Group and summarize data.
- 02.0 Demonstrate proficiency in manipulating a database and creating tables and data structures --The student will be able to:
- 02.01 Insert, update, automatically generate, and delete data.
  - 02.02 Control transaction processing.
  - 02.03 Create, confirm, modify and remove tables to store data.
  - 02.04 Apply business rules to ensure data integrity.
  - 02.05 Restrict user access to tables.
  - 02.06 Improve query performance.
- 03.0 Demonstrate proficiency in developing applications and using the procedure builder tool --The student will be able to:
- 03.01 Develop programs in PL/SQL.
  - 03.02 Insert and manipulate data with PL/SQL.
  - 03.03 Manage and execute program units using the Object Navigator and the PL/SQL Interpreter.
  - 03.04 Define and compile procedures using the Program Unit Editor.
  - 03.05 Control the execution of a PL/SQL program unit.
  - 03.06 Test possible solutions by making changes to variables and procedures at runtime.
- 04.0 Demonstrate proficiency in creating PL/SQL procedural language blocks of application code that can be shared by multiple forms, reports and data management applications --The student will be able to:
- 04.01 Nest sub-queries within another SQL procedural language command.
  - 04.02 Develop applications using procedural capabilities.
  - 04.03 Insert and manipulate data with SQL procedural language.
  - 04.04 Use the procedure builder tool to develop and debug SQL procedure language

- code.
- 04.05 Manage and execute program units using the object navigator and the SQL procedural language interpreter.
- 04.06 Define environmental requirements for peripherals and media.
- 04.07 Define and compile procedures using the program unit editor.
- 04.08 Control the execution of an SQL procedural language program unit.
- 05.0 Demonstrate proficiency in creating a complete forms application using Developer/2000 while working in a graphical user interface (GUI) development environment-The student will be able to:
  - 05.01 Build a new data block using an existing table specification.
  - 05.02 Save and run a form module from the designer.
  - 05.03 Develop a master/detail form module.
  - 05.04 Identify characteristics of each forms file storage type.
  - 05.05 Create forms containing check boxes, radio groups, containing list items, display items, image items and buttons.
  - 05.06 Start additional forms with the same transaction and session.
  - 05.07 Enhance the default menu.
  - 05.08 Add basic menu items.
  - 05.09 Attach a menu module to a forms module.
  - 05.10 Saving and running a form module from the designer.
- 06.0 Demonstrate proficiency in designing multiple forms applications--The student will be able to:
  - 06.01 Redefine function keys and determining when key triggers should be used or avoided.
  - 06.02 Cause a form module to respond to mouse movement and mouse button actions.
  - 06.03 Creating trigger code to interact with windows.
  - 06.04 Build robust multiple form transactions.
  - 06.05 Choose between different ways of invoking forms.
  - 06.06 Pass data between forms using parameter lists.
  - 06.07 Control coded events and methods.
- 07.0 Demonstrate proficiency in developing a variety of standard and custom reports using the reports component of Developer/2000 in a client/server environment-The student will be able to:
  - 07.01 Design and execute a simple report.
  - 07.02 Manage the appearance and display of data in reports with layout objects.
  - 07.03 Customize the display of data in reports.
  - 07.04 Tailor the appearance of simple and advanced business reports.
  - 07.05 Integrating text and graphics in reports.
  - 07.06 Import charts and graphs from the graphics component of Developer/2000.
  - 07.07 Applying the packaged functions and procedures supplied with the reports component of Developer/2000.
  - 07.08 Write queries to retrieve data.
  - 07.09 Manage the structure of data in reports using data objects.
  - 07.10 Determine how to best produce reports by analyzing report structures.
  - 07.11 Filter report information from the database server.

- 07.12 Implement graphics into reports.
- 07.13 Build modules in Developer 2000 Reports for use with other Developer/2000 tools.
- 07.14 Manage module storage and security.
- 07.15 Build reports in which the end user supplies values at runtime to control report output.

2012 – 2013

### **Purpose**

This certificate program is part of the Database Technology AS/AAS degree program (1511010306/ 0511010306).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to database systems, software, programming and analysis and design of databases.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate proficiency in developing and operating a database.
- 02.0 Demonstrate proficiency in manipulating a database and creating tables and data structures.
- 03.0 Demonstrate proficiency in developing applications and using the procedure builder tool.
- 04.0 Demonstrate proficiency in creating SQL procedural language blocks of application code that can be shared by multiple forms, reports and data management applications.
- 05.0 Demonstrate proficiency in creating a complete Forms application using Developer/2000 while working in a graphical user interface (GUI) development environment.
- 06.0 Demonstrate proficiency in designing multiple forms applications.
- 07.0 Demonstrate proficiency in developing a variety of standard and custom reports using the reports component of Developer/2000 in a client/server environment.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Oracle Certified Database Developer  
**CIP Number:** 0511020308  
**Program Length:** 15 Credit Hours / **Secondary Length:** 16 credit hours  
**SOC Code(s):** 15-1061

This certificate program is part of the Database Technology AS/AAS degree program (1511010306/ 0511010306). At the completion of this program, the student will be able to:

- 01.0 Demonstrate proficiency in developing and operating a database --The student will be able to:
- 01.01 Build a relational database.
  - 01.02 Query, display, and format data.
  - 01.03 Save, retrieve, and run queries.
  - 01.04 Build and format reports.
  - 01.05 Group and summarize data.
- 02.0 Demonstrate proficiency in manipulating a database and creating tables and data structures --The student will be able to:
- 02.01 Insert, update, automatically generate, and delete data.
  - 02.02 Control transaction processing.
  - 02.03 Create, confirm, modify and remove tables to store data.
  - 02.04 Apply business rules to ensure data integrity.
  - 02.05 Restrict user access to tables.
  - 02.06 Improve query performance.
- 03.0 Demonstrate proficiency in developing applications and using the procedure builder tool --The student will be able to:
- 03.01 Develop programs in PL/SQL.
  - 03.02 Insert and manipulate data with PL/SQL.
  - 03.03 Manage and execute program units using the Object Navigator and the PL/SQL Interpreter.
  - 03.04 Define and compile procedures using the Program Unit Editor.
  - 03.05 Control the execution of a PL/SQL program unit.
  - 03.06 Test possible solutions by making changes to variables and procedures at runtime.
- 04.0 Demonstrate proficiency in creating PL/SQL procedural language blocks of application code that can be shared by multiple forms, reports and data management applications --The student will be able to:
- 04.01 Nest sub-queries within another SQL procedural language command.
  - 04.02 Develop applications using procedural capabilities.
  - 04.03 Insert and manipulate data with SQL procedural language.
  - 04.04 Use the procedure builder tool to develop and debug SQL procedure language

- code.
- 04.05 Manage and execute program units using the object navigator and the SQL procedural language interpreter.
- 04.06 Define environmental requirements for peripherals and media.
- 04.07 Define and compile procedures using the program unit editor.
- 04.08 Control the execution of an SQL procedural language program unit.
- 05.0 Demonstrate proficiency in creating a complete forms application using Developer/2000 while working in a graphical user interface (GUI) development environment-The student will be able to:
  - 05.01 Build a new data block using an existing table specification.
  - 05.02 Save and run a form module from the designer.
  - 05.03 Develop a master/detail form module.
  - 05.04 Identify characteristics of each forms file storage type.
  - 05.05 Create forms containing check boxes, radio groups, containing list items, display items, image items and buttons.
  - 05.06 Start additional forms with the same transaction and session.
  - 05.07 Enhance the default menu.
  - 05.08 Add basic menu items.
  - 05.09 Attach a menu module to a forms module.
  - 05.10 Saving and running a form module from the designer.
- 06.0 Demonstrate proficiency in designing multiple forms applications--The student will be able to:
  - 06.01 Redefine function keys and determining when key triggers should be used or avoided.
  - 06.02 Cause a form module to respond to mouse movement and mouse button actions.
  - 06.03 Creating trigger code to interact with windows.
  - 06.04 Build robust multiple form transactions.
  - 06.05 Choose between different ways of invoking forms.
  - 06.06 Pass data between forms using parameter lists.
  - 06.07 Control coded events and methods.
- 07.0 Demonstrate proficiency in developing a variety of standard and custom reports using the reports component of Developer/2000 in a client/server environment-The student will be able to:
  - 07.01 Design and execute a simple report.
  - 07.02 Manage the appearance and display of data in reports with layout objects.
  - 07.03 Customize the display of data in reports.
  - 07.04 Tailor the appearance of simple and advanced business reports.
  - 07.05 Integrating text and graphics in reports.
  - 07.06 Import charts and graphs from the graphics component of Developer/2000.
  - 07.07 Applying the packaged functions and procedures supplied with the reports component of Developer/2000.
  - 07.08 Write queries to retrieve data.
  - 07.09 Manage the structure of data in reports using data objects.
  - 07.10 Determine how to best produce reports by analyzing report structures.
  - 07.11 Filter report information from the database server.

- 07.12 Implement graphics into reports.
- 07.13 Build modules in Developer 2000 Reports for use with other Developer/2000 tools.
- 07.14 Manage module storage and security.
- 07.15 Build reports in which the end user supplies values at runtime to control report output.

**CIP Number:** 0511020309  
**Program Length:** 15 credit hours / **Secondary Length:** 16 credit hours  
**SOC Code(s):** 15-1061

This certificate program is part of the Database Technology AS/AAS degree program (1511010306/0511010306). At the completion of this program, the student will be able to:

- 01.0 Demonstrate proficiency in developing and operating a database --The student will be able to:
- 01.01 Build a relational database.
  - 01.02 Query, display, and format data.
  - 01.03 Save, retrieve, and run queries.
  - 01.04 Build and format reports.
  - 01.05 Group and summarize data.
- 02.0 Demonstrate proficiency in manipulating a database and creating tables and data structures --The student will be able to:
- 02.01 Insert, update, automatically generate, and delete data.
  - 02.02 Control transaction processing.
  - 02.03 Create, confirm, modify and remove tables to store data.
  - 02.04 Apply business rules to ensure data integrity.
  - 02.05 Restrict user access to tables.
  - 02.06 Improve query performance.
- 03.0 Demonstrate proficiency in developing applications and using the procedure builder tool --The student will be able to:
- 03.01 Develop programs in PL/SQL.
  - 03.02 Insert and manipulate data with PL/SQL.
  - 03.03 Manage and execute program units using the Object Navigator and the PL/SQL Interpreter.
  - 03.04 Define and compile procedures using the Program Unit Editor.
  - 03.05 Control the execution of a PL/SQL program unit.
  - 03.06 Test possible solutions by making changes to variables and procedures at runtime.
- 04.0 Demonstrate proficiency in creating PL/SQL procedural language blocks of application code that can be shared by multiple forms, reports and data management applications --The student will be able to:
- 04.01 Nest sub-queries within another SQL procedural language command.
  - 04.02 Develop applications using procedural capabilities.
  - 04.03 Insert and manipulate data with SQL procedural language.
  - 04.04 Use the procedure builder tool to develop and debug SQL procedure language

- code.
  - 04.05 Manage and execute program units using the object navigator and the SQL procedural language interpreter.
  - 04.06 Define environmental requirements for peripherals and media.
  - 04.07 Define and compile procedures using the program unit editor.
  - 04.08 Control the execution of an SQL procedural language program unit.
- 05.0 Demonstrate proficiency in creating a complete forms application using developer/ 2000 while working in a graphical user interface (GUI) development environment--The student will be able to:
- 05.01 Build a new data block using an existing table specification.
  - 05.02 Save and run a form module from the designer.
  - 05.03 Develop a master/detail form module.
  - 05.04 Identify characteristics of each forms file storage type.
  - 05.05 Create forms containing check boxes, radio groups, containing list items, display items, image items and buttons.
  - 05.06 Start additional forms with the same transaction and session.
  - 05.07 Enhance the default menu.
  - 05.08 Add basic menu items.
  - 05.09 Attach a menu module to a forms module.
  - 05.10 Saving and running a form module from the designer.
- 06.0 Demonstrate proficiency in designing multiple forms applications --The student will be able to:
- 06.01 Redefine function keys and determining when key triggers should be used or avoided.
  - 06.02 Cause a form module to respond to mouse movement and mouse button actions.
  - 06.03 Creating trigger code to interact with windows.
  - 06.04 Build robust multiple form transactions.
  - 06.05 Choose between different ways of invoking forms.
  - 06.06 Pass data between forms using parameter lists.
  - 06.07 Control coded events and methods.
- 07.0 Demonstrate proficiency in developing a variety of standard and custom reports using the reports component of developer/2000 in a client / server environment --The student will be able to:
- 07.01 Design and execute a simple report.
  - 07.02 Manage the appearance and display of data in reports with layout objects.
  - 07.03 Customize the display of data in reports.
  - 07.04 Tailor the appearance of simple and advanced business reports.
  - 07.05 Integrating text and graphics in reports.
  - 07.06 Import charts and graphs from the graphics component of
    - 07.06.01 Developer/2000.
  - 07.07 Applying the packaged functions and procedures supplied with the reports component of Developer/2000.
  - 07.08 Write queries to retrieve data.
  - 07.09 Manage the structure of data in reports using data objects.
  - 07.10 Determine how to best produce reports by analyzing report structures.

- 07.11 Filter report information from the database server.
  - 07.12 Implement graphics into reports.
  - 07.13 Build modules in Developer 2000 Reports for use with other
    - 07.13.01 Developer/2000 tools.
  - 07.14 Manage module storage and security.
  - 07.15 Build reports in which the end user supplies values at runtime to control report output.
- 08.0 Demonstrate proficiency in identifying the server physical and logical architecture --The student will be able to:
- 08.01 Identify and define the Server architecture.
  - 08.02 08.02 Identify and utilize the functions and processes of the Server.
  - 08.03 Create a database and construct the base data dictionary.
  - 08.04 Start up and shut down a database and instance.
- 09.0 Demonstrate proficiency in implementing and backup and recovery planning and backup of a server --The student will be able to:
- 09.01 Identifying backup and recovery techniques.
  - 09.02 Define architecture implications for backup and recovery.
  - 09.03 09.03 Examining various failure scenarios and determining proper recovery strategies.
  - 09.04 Identify methods for restoration and recovery.
- 10.0 Demonstrate proficiency in implementing a Net8 configuration on the server and workstation --The student will be able to:
- 10.01 Establishing a connection from the Net8 client and server using connection methods.
  - 10.02 Implement troubleshooting strategies for the Networking environment.
  - 10.03 Explain security features in Networking products.
  - 10.04 Identify network problems using log and trace files.
  - 10.05 Set logging and tracing parameters.
  - 10.06 Start and stop the Intelligent Agent using the Listener Control utility.
  - 10.07 Identify the configuration files used to define the intelligent agent.
- 11.0 Demonstrate proficiency in tuning a server --The student will be able to:
- 11.01 Explain the nature of Server tuning.
  - 11.02 Outline the tuning methodology.
  - 11.03 List and define available diagnostic tools.
  - 11.04 Running the UTLBSTAT/UTLESTAT utility.
  - 11.05 Exam latch contention.
  - 11.06 Diagnose inappropriate use of the SYSTEM and TEMP tablespaces.
  - 11.07 Ensure that files are distributed to minimize I/O contention.
- 12.0 Demonstrate proficiency in implementing database security --The student will be able to:
- 12.01 Demonstrate an understanding of essential database security concepts.
  - 12.02 Set up and administer users and groups.

12.03 Use appropriate procedures to secure database resources.

  - 05.08 Add basic menu items.
  - 05.09 Attach a menu module to a forms module.
  - 05.10 Saving and running a form module from the designer.
- 06.0 Demonstrate proficiency in designing multiple forms applications--The student will be able to:
  - 06.01 Redefine function keys and determining when key triggers should be used or avoided.
  - 06.02 Cause a form module to respond to mouse movement and mouse button actions.
  - 06.03 Creating trigger code to interact with windows.
  - 06.04 Build robust multiple form transactions.
  - 06.05 Choose between different ways of invoking forms.
  - 06.06 Pass data between forms using parameter lists.
  - 06.07 Control coded events and methods.
- 08.0 Demonstrate proficiency in identifying the server physical and logical architecture-The student will be able to:
  - 08.01 Identify and define the Server architecture.
  - 08.02 Identify and utilize the functions and processes of the Server.
  - 08.03 Create a database and construct the base data dictionary.
  - 08.04 Start up and shut down a database and instance.
- 09.0 Demonstrate proficiency in implementing and backup and recovery planning and backup of a server-The student will be able to:
  - 09.01 Identifying backup and recovery techniques.
  - 09.02 Define architecture implications for backup and recovery.
  - 09.03 Examining various failure scenarios and determining proper recovery strategies.
  - 09.04 Identify methods for restoration and recovery.

- 10.0 Demonstrate proficiency in implementing a Net8 configuration on the server and workstation-The student will be able to:
- 10.01 Establishing a connection from the Net8 client and server using connection methods.
  - 10.02 Implement troubleshooting strategies for the Networking environment.
  - 10.03 Explain security features in networking products.
  - 10.04 Identify network problems using log and trace files.
  - 10.05 Set logging and tracing parameters.
  - 10.06 Start and stop the Intelligent Agent using the Listener Control utility.
  - 10.07 Identify the configuration files used to define the intelligent agent.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Oracle Software Engineering  
**Career Cluster:** Information Technology

<b>CCC</b>	
CIP Number	0511020311
Program Type	College Credit Certificate (CCC)
Program Length	33 credit hours
CTSO	Phi Beta Lambda, BPA (Business Professionals of America)
SOC Codes (all applicable)	15-1031
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the Database Technology AS/AAS degree program (1511010306/0511010306).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to database systems, software, programming and analysis and design of databases.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate proficiency in developing and operating a database.
- 02.0 Demonstrate proficiency in manipulating a database and creating tables and data structures.
- 03.0 Demonstrate proficiency in developing applications and using the procedure builder tool.
- 04.0 Demonstrate proficiency in creating SQL procedural language blocks of application code that can be shared by multiple forms, reports and data management applications.
- 05.0 Demonstrate proficiency in creating a complete Forms application using Developer/2000 while working in a graphical user interface (GUI) development environment.
- 06.0 Demonstrate proficiency in designing multiple forms applications.
- 07.0 Demonstrate proficiency in developing a variety of standard and custom reports using the reports component of Developer/2000 in a client/server environment.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Oracle Software Engineer  
**CIP Number:** 0511020311  
**Program Length:** 33 credit hours  
**SOC Code(s):** 15-1031

This certificate program is part of the Database Technology AS/AAS degree program (1511010306/0511010306). At the completion of this program, the student will be able to:

- 01.0 Demonstrate proficiency in developing and operating a database --The student will be able to:
- 01.01 Build a relational database.
  - 01.02 Query, display, and format data.
  - 01.03 Save, retrieve, and run queries.
  - 01.04 Build and format reports.
  - 01.05 Group and summarize data.
- 02.0 Demonstrate proficiency in manipulating a database and creating tables and data structures--The student will be able to:
- 02.01 Insert, update, automatically generate, and delete data.
  - 02.02 Control transaction processing.
  - 02.03 Create, confirm, modify and remove tables to store data.
  - 02.04 Apply business rules to ensure data integrity.
  - 02.05 Restrict user access to tables.
  - 02.06 Improve query performance.
- 03.0 Demonstrate proficiency in developing applications and using the procedure builder tool-The student will be able to:
- 03.01 Develop programs in PL/SQL.
  - 03.02 Insert and manipulate data with PL/SQL.
  - 03.03 Manage and execute program units using the Object Navigator and the PL/SQL Interpreter.
  - 03.04 Define and compile procedures using the Program Unit Editor.
  - 03.05 Control the execution of a PL/SQL program unit.
  - 03.06 Test possible solutions by making changes to variables and procedures at runtime.
- 04.0 Demonstrate proficiency in creating PL/SQL procedural language blocks of application code that can be shared by multiple forms, reports and data management applications --The student will be able to:
- 04.01 Nest sub-queries within another SQL procedural language command.
  - 04.02 Develop applications using procedural capabilities.
  - 04.03 Insert and manipulate data with SQL procedural language.
  - 04.04 Use the procedure builder tool to develop and debug SQL procedural language

- code.
- 04.05 Manage and execute program units using the object navigator and the SQL procedural language interpreter.
  - 04.06 Define environmental requirements for peripherals and media.
  - 04.07 Define and compile procedures using the program unit editor.
  - 04.08 Control the execution of an SQL procedural language program unit
- 05.0 Demonstrate proficiency in creating a complete forms application using Developer/2000 while working in a graphical user interface (GUI) development environment--The student will be able to:
- 05.01 Build a new data block using an existing table specification.
  - 05.02 Save and run a form module from the designer.
  - 05.03 Develop a master/detail form module.
  - 05.04 Identify characteristics of each forms file storage type.
  - 05.05 Create forms containing check boxes, radio groups, containing list items, display items, image items and buttons.
  - 05.06 Start additional forms with the same transaction and session.
  - 05.07 Enhance the default menu.
  - 05.08 Add basic menu items.
  - 05.09 Attach a menu module to a forms module.
  - 05.10 Saving and running a form module from the designer.
- 06.0 Demonstrate proficiency in designing multiple forms applications--The student will be able to:
- 06.01 Redefine function keys and determining when key triggers should be used or avoided.
  - 06.02 Cause a form module to respond to mouse movement and mouse button actions.
  - 06.03 Creating trigger code to interact with windows.
  - 06.04 Build robust multiple form transactions.
  - 06.05 Choose between different ways of invoking forms.
  - 06.06 Pass data between forms using parameter lists.
  - 06.07 Control coded events and methods.
- 07.0 Demonstrate proficiency in developing a variety of standard and custom reports using the reports component of Developer/2000 in a client/server environment --The student will be able to:
- 07.01 Design and execute a simple report.
  - 07.02 Manage the appearance and display of data in reports with layout objects.
  - 07.03 Customize the display of data in reports.
  - 07.04 Tailor the appearance of simple and advanced business reports.
  - 07.05 Integrating text and graphics in reports.
  - 07.06 Import charts and graphs from the graphics component of Developer/2000.
  - 07.07 Applying the packaged functions and procedures supplied with the reports component of Developer/2000.
  - 07.08 Write queries to retrieve data.
  - 07.09 Manage the structure of data in reports using data objects.
  - 07.10 Determine how to best produce reports by analyzing report structures.
  - 07.11 Filter report information from the database server.

- 07.12 Implement graphics into reports.
- 07.13 Build modules in Developer 2000 Reports for use with other Developer/2000 tools.
- 07.14 Manage module storage and security.
- 07.15 Build reports in which the end user supplies values at runtime to control report output.

  - 02.05 Restrict user access to tables.
  - 02.06 Improve query performance.
- 03.0 Demonstrate proficiency in identifying the Server Physical and Logical architecture-The student will be able to:
- 03.01 Identify and define the Server architecture.
  - 03.02 Identify and utilize the functions and processes of the Server.
  - 03.03 Create a database and construct the base data dictionary.
  - 03.04 Start up and shut down a database and instance.
- 04.0 Demonstrate proficiency in implementing and backup and recovery planning and backup of a server --The student will be able to:
- 04.01 Identifying backup and recovery techniques.
  - 04.02 Define architecture implications for backup and recovery.
  - 04.03 Examining various failure scenarios and determining proper recovery strategies.
  - 04.04 Identify methods for restoration and recovery.
- 05.0 Demonstrate proficiency in implementing a Net8 configuration on the server and workstation--The student will be able to:
- 05.01 Establishing a connection from the Net8 client and server using connection

methods.

- 05.02 Implement troubleshooting strategies for the Networking environment.
- 05.03 Explain security features in networking products.
- 05.04 Identify network problems using log and trace files.
- 05.05 Set logging and tracing parameters.
- 05.06 Start and stop the Intelligent Agent using the Listener Control utility.
- 05.07 Identify the configuration files used to define the intelligent agent.

06.0 Demonstrate proficiency in tuning a server--The student will be able to:

- 06.01 Explain the nature of Server tuning.
- 06.02 Outline the tuning methodology.
- 06.03 List and define available diagnostic tools.
- 06.04 Running the UTLBSTAT/UTLESTAT utility.
- 06.05 Exam latch contention.
- 06.06 Diagnose inappropriate use of the SYSTEM and TEMP
- 06.07 Tablespaces.
- 06.08 Ensure that files are distributed to minimize I/O contention.

07.0 Demonstrate proficiency in implementing database security--The student will be able to:

- 07.01 Demonstrate an understanding of essential database security.
- 07.02 Set up and administer users and groups.
- 07.03 Use appropriate procedures to secure database resources.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as Internet/Intranet Technicians, Web Technicians, Internet/Intranet Administrators, Web Administrators, Internet/Intranet Developers, Web Site Developers, Internet/Intranet Masters, Web Masters, Internet support specialists, Web page designers, Web database administrators, Internet managers, Web technicians, Web site developers, Web managers, or Web architects in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to work in Internet, Intranet, and Extranet environments; installing, configuring, designing and managing Intranet and web-based resources.

### **Program Structure**

This program is a planned sequence of instruction consisting of 63 hours.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

The following PSAV programs have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

Web Design (B070500) – 9 credits  
Web Programming Services (B079200) – 9 credits

The following industry certifications have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

Adobe Certified Associate - Dreamweaver (ADOBE010) – 3 credits  
Adobe Certified Associate - Flash (ADOBE011) – 3 credits  
Certified Internet Web (CIW) – Associate Design Specialist (PROSO001) – 6 credits  
Certified Internet Web (CIW) – Master Designer (PROSO004) – 6 credits  
Microsoft Certified Professional Developer (MCPD) – ASP.NET Developer (MICRO062)  
– 3 credits

Microsoft Certified Professional Developer (MCPD) – Web Developer (MICRO043) – 3 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

**Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. The standard length of this program is 63 credit hours according to Rule 6A-14.030, F.A.C.

**Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS/AAS degree program includes the following College Credit Certificates:

- Information Technology Administration (0511010307) – 18 credit hours
- Web Development Specialist (0511080103) – 35/36 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

**Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate proficiency with Internet structure, organization, and navigation.
- 02.0 Demonstrate understanding of networked environments, hardware and software.
- 03.0 Perform server installation and configuration activities.
- 04.0 Understand, install and configure computer hardware
- 05.0 Understand, install and configure computer software
- 06.0 Perform enterprise architecture-related tasks.
- 07.0 Perform web design/development activities.
- 08.0 Perform programming and scripting activities.
- 09.0 Perform testing/troubleshooting activities.
- 10.0 Perform security activities.
- 11.0 Perform web site management activities
- 12.0 Perform e-commerce-related tasks.
- 13.0 Perform quantitative analysis activities.
- 14.0 Demonstrate professional development skills.
- 15.0 Perform Documentation and Technical reference activities
- 16.0 Demonstrate employability skills.
- 17.0 Perform general organizational computing workplace competencies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Internet Services Technology  
**CIP Numbers:** 1511080102 A.S.  
 0511080102 A.A.S.  
**Program Length:** 63 credit hours  
**SOC Code(s):** 15-1099.04

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

01.0 Demonstrate proficiency with Internet structure, organization, and navigation. – The student will be able to:

- 01.01 Describe the origin of the Internet.
- 01.02 Outline the history of the Internet.
- 01.03 Describe Internet organization, such as the Internic, domains and requests for comments (RFCs).
- 01.04 Describe the structure of the Internet.
- 01.05 Differentiate between the Internet and the WWW.
- 01.06 Define Internet push technologies, such as e-mail marketing vs. Web page banner advertising.
- 01.07 Differentiate among an Intranet site, an extranet site, and an Internet site.
- 01.08 Characterize the role of the Internet in today's society.
- 01.09 Describe several major ethical issues related to Internet use.
- 01.10 Identify several legal issues related to Internet use.
- 01.11 Identify several examples to show how the Internet has affected intellectual property rights.
- 01.12 Identify several examples to show how the Internet has affected personal security and privacy.
- 01.13 Describe the World Wide Web (WWW).
- 01.14 Provide several examples to show how the WWW has affected our society.
- 01.15 Demonstrate the use of typical file types and protocols (http:, ftp:, mailto:, gopher:, telnet:, etc.).
- 01.16 Demonstrate the use of typical remote access mechanisms.
- 01.17 Differentiate among all valid WWW file types.
- 01.18 Differentiate among all WWW multimedia file types.
- 01.19 Describe components of URL and their meanings (including types).
- 01.20 Effectively use Internet tools and utilities such as e-mail, browsers, search engines, news groups, list serves, chat rooms, file transfers.
- 01.21 Install and configure an Internet browser.
- 01.22 Install and configure browser add-ons and plug-ins.
- 01.23 Install and configure a newsgroup reader.
- 01.24 Install and configure a chat group client.

02.0 Demonstrate understanding of networked environments, hardware, and software. – The student will be able to:

- 02.01 Give several advantages and disadvantages of networked and non-networked environments.
  - 02.02 Describe current network environments, such as peer-to-peer and client/server.
  - 02.03 Identify and discuss issues (such as security, privacy, redundancy, etc.) related to networked environments.
  - 02.04 Identify and discuss issues related to naming conventions for user-ids, email, passwords, and network devices.
  - 02.05 List and define layers in the OSI and TCP/IP network protocol models.
  - 02.06 Identify and describe current relevant IEEE network standards.
  - 02.07 Illustrate typical network topologies.
  - 02.08 Identify advantages and disadvantages of each topology.
  - 02.09 Describe the major functions of LAN hardware protocols such as Ethernet, token ring, FDDI, and arcnet.
  - 02.10 Describe LAN software protocols such as IPX/SPX, TCP/IP, and NetBEUI.
  - 02.11 Discuss the nature of IP addresses and MAC addresses, and mapping between protocol addressing schemes.
  - 02.12 Describe the major functions of network server hardware and software components.
  - 02.13 Describe server hardware requirements.
  - 02.14 Describe the hardware needed for hosting a Web site.
  - 02.15 Identify a variety of specialized servers (e.g. proxy, e-mail, DHCP, Web, etc.)
  - 02.16 Describe the hardware requirements for specialized servers (such as e-mail, database).
  - 02.17 Describe the major functions of network client hardware components.
  - 02.18 Describe client hardware requirements.
  - 02.19 Differentiate between hardware used to implement different topologies such as token ring and Ethernet.
  - 02.20 Recognize and describe current cable technologies such as twisted-pair, coaxial, and fiber optic, and identifying issues associated with plenum versus non-plenum cable plants.
  - 02.21 Describe current wireless technologies such as satellite, microwave, spread spectrum RF, and infrared.
  - 02.22 Identify advantages and disadvantages of wireless and cable technologies.
  - 02.23 Cite appropriate uses of wireless and cable technologies.
  - 02.24 Describe the major functions of network connectivity hardware, such as hubs, repeaters, bridges, routers, switches, and gateways.
  - 02.25 Describe the hardware needed to connect a LAN to the Internet.
  - 02.26 Describe the function of network storage devices and other peripherals (RAID, CD towers, printers, fax machines, scanners, printer/fax/copiers, imaging devices, and document center equipment, etc.).
  - 02.27 Compare and contrast major functions and features of current network operating systems (including directory services).
  - 02.28 Differentiate between telecommunications and data communications.
  - 02.29 Compare and contrast digital communications lines and cable characteristics (e.g. ISDN, DSL, T-1 and T-3).
- 03.0 Perform server installation and configuration activities. – The student will be able to:
- 03.01 Evaluate, install and configure software for Web page authoring.
  - 03.02 Install and configure drivers for NICs and network peripherals.

- 03.03 Configure protocol stacks.
- 03.04 Configure a server for multiple network protocols and frame types.
- 03.05 Configure a server to handle multiple languages for international applications.
- 03.06 Install and configure an Internet server.
- 03.07 Install, configure and set up a proxy server and a gateway.
- 03.08 Set up a server for remote access.
- 03.09 Address security issues raised by the ability to access server remotely.
- 03.10 Discuss the functions of authentication servers, RADIUS, and VPN.
- 03.11 Configure commerce server and database
- 03.12 Install and configure list-serve, chat, and news group servers.
- 03.13 Plan component integration.
- 03.14 Test component integration.
- 03.15 Integrate components.

04.0 Understand, Install and configure computer hardware. – The student will be able to:

- 04.01 Explain the use of binary numbers to represent instructions and data.
- 04.02 Describe the hardware implications of the use of binary representation of instructions and data.
- 04.03 Convert numbers among decimal, binary, and hexadecimal representation.
- 04.04 Perform binary arithmetic.
- 04.05 Identify various coding schemes (ASCII, etc.).
- 04.06 Discuss various data types (signed and unsigned integers, floating point, etc.
- 04.07 Identify the major hardware platforms
- 04.08 Describe distinguishing features of the major hardware platforms
- 04.09 Describe the functions of major hardware components of a computer system.
- 04.10 Recognize and correctly identify computing hardware components.
- 04.11 Describe emerging hardware technologies and discuss their potential impact.
- 04.12 Implement proper procedures for handling and safeguarding equipment.
- 04.13 Perform preventive maintenance tasks on microcomputer systems.
- 04.14 Describe procedures for proper disposal of computer components.
- 04.15 Set up and configure systems and peripherals.
- 04.16 Set up BIOS.
- 04.17 Install and configure storage and I/O device interfaces.
- 04.18 Install and configure multimedia devices and interfaces.
- 04.19 Install and configure network interface cards

05.0 Understand, Install and configure computer software. – The student will be able to:

- 05.01 Describe the functions and major components (BIOS, task management, etc.) of a computer operating system.
- 05.02 Identify current operating systems and describe their important features.
- 05.03 Use an operating system for activities such as data and file management.
- 05.04 Identify current systems utilities and describe their functions.
- 05.05 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
- 05.06 Use operating systems of different brands and platforms.
- 05.07 Use both stand-alone operating systems and network operating systems.
- 05.08 Create, use, and maintain system configuration files.
- 05.09 Describe the major features and functions of the major categories of applications software (word processing, database, spreadsheet, presentation, email,

- browsers, etc.).
  - 05.10 Use basic features of office productivity software.
  - 05.11 Learn to perform independently (previously untaught) tasks using office productivity software.
  - 05.12 Use software produced by multiple vendors.
  - 05.13 Transmit and exchange data in a multiple vendor software environment.
  - 05.14 Install and configure a microcomputer operating system.
  - 05.15 Describe procedures for uninstalling operating system software.
  - 05.16 Install and configure system software.
  - 05.17 Install and configure applications software.
  - 05.18 Configure software for accessibility by disabled individuals.
  - 05.19 Install and configure applications software upgrades.
  - 05.20 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing, configuring and upgrading typical applications software.
  - 05.21 Install and configure client software for connecting to LANs, WANs, and the Internet (network client, WWW browser, terminal emulation, file transfer, etc.).
  - 05.22 Install and configure client software for client/server and network-based applications (e-mail, videoconferencing, database, etc.).
  - 05.23 Install internetworking applications on a server and configure clients for network access.
  - 05.24 Describe the major functions of network client software components.
  - 05.25 Install and configure client software on multiple hardware platforms.
  - 05.26 Install and configure drivers for NICs and network peripherals (including, printers).
  - 05.27 Configure the client to support multiple protocols.
  - 05.28 Install and configure client/server applications (such as e-mail, scheduling, etc) on a server.
  - 05.29 Install and configure network-based services such as videoconferencing, integrated voicemail/email/fax, large document storage and retrieval, etc.
- 06.0 Perform enterprise architecture-related tasks. – The student will be able to:
- 06.01 Describe the Human-Computer Interaction (HCI) factors that impact the design of a Web page and Web site.
  - 06.02 Determine the purpose of establishing an Internet site
  - 06.03 Identify the intended audience that will access the Internet site
  - 06.04 Determine user needs including secondary applications including database needs and select appropriate applications
  - 06.05 Identify business processes to be automated.
  - 06.06 Determine client specifications.
  - 06.07 Determine design standards based on intended audience
  - 06.08 Formulate architecture including bandwidth specifications
  - 06.09 Establish performance standards and set baseline
  - 06.10 Determine security standards that will meet business requirements.
  - 06.11 Install and configure system based on planning
- 07.0 Perform web design/development activities. – The student will be able to:
- 07.01 Describe and use the process of storyboarding a Web site.
  - 07.02 Describe format, structure and design principles for Web sites.

- 07.03 Evaluate Web graphic utilities and creation tools, including those for animated graphics.
  - 07.04 Identify existing resources and constraints.
  - 07.05 Evaluate design based on current industry and in-house standards
  - 07.06 Create site navigation plan including directory structure
  - 07.07 Procure and incorporate standard and animated graphics into a Web page.
  - 07.08 Obtain in-house content and determine needs for secondary content providers.
  - 07.09 Design page templates to implement on final site
  - 07.10 Create a Web page using authoring tools.
  - 07.11 Code page(s) using current Web programming languages.
  - 07.12 Check page for cross-browser capability and other access issues
  - 07.13 Upload pages and run site analysis
  - 07.14 Incorporate sound files onto a Web page.
  - 07.15 Incorporate a streaming video file onto a Web page.
  - 07.16 Incorporate a video file for download into a Web page.
  - 07.17 Create an animated graphic.
  - 07.18 Perform simple graphic modifications using a graphics utility.
  - 07.19 Create virtual Web pages using a virtual reality modeling language.
  - 07.20 Incorporate an e-mail link on a Web page.
  - 07.21 Incorporate internal and external links on a Web page.
  - 07.22 Incorporate frames, tables, and file transfer capabilities on a Web page.
  - 07.23 Incorporate handicapped-accessibility options into the Web site.
  - 07.24 Set up and configure a search engine for a Web site.
  - 07.25 Create a Web form and produce e-mail results.
  - 07.26 Create a Web database interface.
  - 07.27 Discuss the issue of ODBC compliance.
- 08.0 Perform programming and scripting activities. – The student will be able to:
- 08.01 Identify several of the most prominent current programming languages.
  - 08.02 Characterize the stages of the system development life cycle.
  - 08.03 Differentiate between two common strategies for problem solving.
  - 08.04 Describe the program design and development process.
  - 08.05 Differentiate between structured programming and object-oriented programming.
  - 08.06 Use procedural and object-oriented constructs of programming, scripting, and/or macro languages to create and test programs including batch files and menu programs.
  - 08.07 Apply principles of good design and documentation when developing programs.
  - 08.08 Write scripting code to handle error checking in client forms.
  - 08.09 Write CGI programs to allow for interactions between the client and server.
  - 08.10 Write Java applets.
  - 08.11 Identify development tools and list in order of complexity of use.
  - 08.12 Review design specifications.
  - 08.13 Design and test algorithms.
  - 08.14 Write program according to specs.
  - 08.15 Test and debug code.
  - 08.16 Revise code based on testing procedures
- 09.0 Perform testing/troubleshooting activities. – The student will be able to:
- 09.01 Describe the use of diagnostic test equipment.

- 09.02 Describe features of diagnostic software.
  - 09.03 Use system, software, and network documentation.
  - 09.04 Locate and use online documentation resources.
  - 09.05 Describe effective troubleshooting strategies and techniques to resolve basic hardware, software, and network problems.
  - 09.06 Recognize and resolve basic hardware, software configuration, and peripheral device problems.
  - 09.07 Use effective troubleshooting strategies and techniques to resolve network problems, including network interfaces, cabling, or other network components (hubs, switches, etc.).
  - 09.08 Describe handicapped-accessibility features for a Web site.
  - 09.09 Describe appropriate procedures and techniques for disaster prevention and recovery (surge suppressors, UPS, use of anti-virus software, replacement equipment plans, backups of software and data, offsite storage of backup media, etc.).
  - 09.10 Describe appropriate security procedures and practices, including physical security and protection of resources through software measures (passwords, antivirus software, data encryption, etc.).
  - 09.11 Develop testing plan and procedures.
  - 09.12 Develop a system baseline.
  - 09.13 Perform capacity testing against system baseline.
  - 09.14 Evaluate network performance based on test outcomes.
  - 09.15 Evaluate database performance based on test outcomes.
  - 09.16 Evaluate server performance based on test outcomes.
  - 09.17 Evaluate client performance based on test outcomes.
  - 09.18 Identify bottlenecks and create a plan to improve throughput.
  - 09.19 Optimize system based on total system evaluation.
  - 09.20 Assess accessibility standards
  - 09.21 Evaluate security system.
  - 09.22 Conduct ongoing systems analysis.
  - 09.23 Revise system as required.
  - 09.24 Obtain final client approval for implementation and system changes.
- 10.0 Perform security activities. – The student will be able to:
- 10.01 Complete a security needs evaluation.
  - 10.02 Design security architecture.
  - 10.03 Select security protocol.
  - 10.04 Select and set encryption methodology.
  - 10.05 Incorporate password protection on a Web page.
  - 10.06 Incorporate Internet cookies into a Web page.
  - 10.07 Configure firewall.
- 11.0 Perform web site management activities. – The student will be able to:
- 11.01 Describe the process of obtaining an Internet domain address.
  - 11.02 Register an Internet site.
  - 11.03 Notify appropriate external search engines of the Web site.
  - 11.04 Compare features of currently available site management tools.
  - 11.05 Install and configure Web site management software.
  - 11.06 Create and maintain a Web site using a Web management tool.

- 11.07 Implement appropriate Web site security measures.
- 11.08 Use and evaluate the results of a Web site visit-recording tool.
- 12.0 Perform e-commerce-related tasks. – The student will be able to:
  - 12.01 Describe Web e-commerce.
  - 12.02 Analyze e-commerce models.
  - 12.03 Develop an e-commerce business plan.
  - 12.04 Develop e-commerce marketing plan.
  - 12.05 Identify components and procedures necessary to process credit card transactions
  - 12.06 Integrate credit card transaction process.
  - 12.07 Implement shopping cart software.
  - 12.08 Set up and configure online catalog to market products.
  - 12.09 Establish transaction storage and reporting system
  - 12.10 Publish web site.
- 13.0 Perform quantitative analysis activities. – The student will be able to:
  - 13.01 Determine type/tools available for analysis.
  - 13.02 Determine traffic patterns.
  - 13.03 Gather user data.
  - 13.04 Analyze data.
  - 13.05 Make recommendations for site improvements.
- 14.0 Demonstrate professional development skills. – The student will be able to:
  - 14.01 Identify corporate strategies and policies.
  - 14.02 Maintain professional contact for future projects.
  - 14.03 Build mentor relationships.
  - 14.04 Anticipate future industry trends.
  - 14.05 Continue education.
  - 14.06 Review and analyze other industry productions.
  - 14.07 Use and experiment with the technology.
  - 14.08 Network with local professionals in the industry.
  - 14.09 Read industry journals and magazines.
  - 14.10 Attend seminars, workshops, and tradeshow.
- 15.0 Perform Documentation and Technical reference activities. – The student will be able to:
  - 15.01 Use technical vocabulary appropriately.
  - 15.02 Locate information in technical references.
  - 15.03 Prepare technical reports.
  - 15.04 Describe appropriate documentation procedures and practices.
  - 15.05 Effectively use locally maintained systems, software, and network documentation.
  - 15.06 Produce and maintain system documentation, such as inventory, costs, installed software, and procedures.
  - 15.07 Perform Documentation and Technical reference activities.
  - 15.08 Understand, Install and configure computer hardware.
  - 15.09 Understand, Install and configure computer software

- 15.10 Perform Troubleshooting activities.
  - 15.11 Demonstrate understanding of networked environments.
  - 15.12 Demonstrate proficiency with Internet structure, organization, and navigation.
  - 15.13 Maintain visual network documentation, such as cabling diagrams.
  - 15.14 Describe effective strategies for online research.
  - 15.15 Locate technical information online.
  - 15.16 Evaluate information located through online research.
  - 15.17 Cite correctly Internet-based resources.
- 16.0 Demonstrate employment skills. – The student will be able to:
- 16.01 Identify appropriate attire and grooming for a business office.
  - 16.02 Identify sources of employment opportunities.
  - 16.03 Discuss employer expectations regarding attendance, punctuality, initiative, teamwork, etc.
  - 16.04 Discuss employee rights regarding privacy, discrimination, due process, safety, etc.
  - 16.05 Explain the importance of having a written job description.
  - 16.06 List representative jobs and career paths for people trained in the computer networking support area.
  - 16.07 List several functions of each representative computer service oriented job and career path.
  - 16.08 Complete employment forms.
  - 16.09 Classify behaviors considered to be appropriate or inappropriate in a job interview situation.
  - 16.10 Compose and type a follow-up letter.
  - 16.11 Compose and type a letter of application and a resume.
  - 16.12 Compose and Type a letter of resignation.
  - 16.13 Demonstrate job interview skills.
  - 16.14 Identify methods for securing an employment reference.
- 17.0 Perform general organizational computing workplace competencies. – The student will be able to:
- 17.01 Follow oral and written instructions.
  - 17.02 Prepare, outline, and deliver a short oral presentation.
  - 17.03 Participate in group discussion as a member and as a leader.
  - 17.04 Obtain appropriate information form graphics, maps, or signs.
  - 17.05 Prepare visual material to support an oral presentation.
  - 17.06 Demonstrate self-motivation and responsibility to complete an assigned task.
  - 17.07 List the steps in problem solving.
  - 17.08 Choose appropriate action in situations requiring effective time management.
  - 17.09 Identify and discuss issues contained within professional codes of conduct.
  - 17.10 Identify and discuss software licensing issues.
  - 17.11 Identify and discuss property rights and licensing issues.
  - 17.12 Identify and discuss privacy issues.
  - 17.13 Identify and discuss encryption issues.
  - 17.14 Identify legal liability issues.
  - 17.15 Describe appropriate measures for planning and managing a large project.
  - 17.16 Define an implementation schedule for a large project.
  - 17.17 Describe appropriate measures for planning and implementing corporate wide

- upgrade of hardware and software.
- 17.18 Identify potential sources of employee/employer or employee/employee conflict and discuss possible approaches to resolve such disagreements.
  - 17.19 Use appropriate communication skills, courtesy, manners, and dress in the workplace.
  - 17.20 Apply principles and techniques for being a productive, contributing member of a team.
  - 17.21 Identify and use acceptable strategies for resolving conflict in the workplace
  - 17.22 Apply principles and techniques for working productively with people of diverse cultures and backgrounds.
  - 17.23 Identify techniques for stress management and prevention of job burn-out.
  - 17.24 Use appropriate communication skills, telephone etiquette, courtesy, and manners when dealing with customers.
  - 17.25 Communicate effectively with individuals lacking a technical background.
  - 17.26 Identify clear detailed technical oral instructions.
  - 17.27 Identify examples of effective end-user training strategies and techniques.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Web Development Specialist  
**Career Cluster:** Information Technology

<b>CCC</b>	
CIP Number	0511080103
Program Type	College Credit Certificate (CCC)
Program Length	35 credit hours (Secondary Length: 36 credit hours)
CTSO	Phi Beta Lambda, BPA (Business Professionals of America)
SOC Codes (all applicable)	15-1099.04
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the Internet Services Technology AS/AAS degree program (1511080102/0511080102).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to Internet, Intranet, and Extranet environments; installing, configuring, designing and managing Intranet and web-based resources.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate proficiency with Internet structure, organization, and navigation.
- 04.0 Understand, install and configure computer hardware.
- 05.0 Understand, install and configure computer software.
- 06.0 Perform enterprise architecture-related tasks.
- 07.0 Perform web design/development activities.
- 08.0 Perform programming and scripting activities.
- 09.0 Perform testing/troubleshooting activities.
- 10.0 Perform web site management activities.
- 11.0 Perform e-commerce-related tasks.
- 14.0 Demonstrate professional development skills.
- 15.0 Perform Documentation and Technical reference activities.
- 16.0 Perform general organizational computing workplace competencies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Web Development Specialist  
**CIP Number:** 0511080103  
**Program Length:** 35 credit hours / **Secondary Length:** 36 credit hours  
**SOC Code(s):** 15-1099.04

This certificate program is part of the Internet Services Technology AS/AAS degree program (1511080102/0511080102). At the completion of this program, the student will be able to:

01.0 Demonstrate proficiency with Internet structure, organization, and navigation - The student will be able to:

- 01.01 Describe the structure of the Internet.
- 01.02 Define Internet push technologies, such as e-mail marketing vs. Web page banner advertising.
- 01.03 Differentiate among an Intranet site, an Extranet site, and an Internet site.
- 01.04 Describe several major ethical issues related to Internet use.
- 01.05 Identify several legal issues related to Internet use.
- 01.06 Identify several examples to show how the Internet has affected intellectual property rights.
- 01.07 Identify several examples to show how the Internet has affected personal security and privacy.
- 01.08 Demonstrate the use of typical file types and protocols (http:, ftp:, mailto:, gopher:, telnet:, etc.).
- 01.09 Demonstrate the use of typical remote access mechanisms.
- 01.10 Differentiate among all valid WWW file types.
- 01.11 Differentiate among all WWW multimedia file types.
- 01.12 Describe components of URL and their meanings (including types).
- 01.13 Install and configure browser add-ons and plug-ins.

04.0 Understand, install and configure computer hardware - The student will be able to:

- 04.01 Identify various coding schemes (ASCII, etc.).

05.0 Understand, install and configure computer software - The student will be able to:

- 05.01 Describe procedures for uninstalling operating system software.
- 05.02 Install and configure system software.
- 05.03 Install and configure applications software.
- 05.04 Configure software for accessibility by disabled individuals.
- 05.05 Install and configure applications software upgrades.

06.0 Perform enterprise architecture-related tasks – The student will be able to:

- 06.01 Describe the Human-Computer Interaction (HCI) factors that impact the design of a Web page and Web site.
- 06.02 Determine the purpose of establishing an Internet site
- 06.03 Identify the intended audience that will access the Internet site.

- 06.04 Determine user needs including secondary applications including database needs and select appropriate applications
- 06.05 Identify business processes to be automated.
- 06.06 Determine client specifications.
- 06.07 Determine design standards based on intended audience
- 06.08 Determine security standards that will meet business requirements.
- 06.09 Install and configure system based on planning

07.0 Perform web design/development activities – The student will be able to:

- 07.01 Describe and use the process of storyboarding a Web site.
- 07.02 Describe format, structure and design principles for Web sites.
- 07.03 Identify existing resources and constraints.
- 07.04 Evaluate design based on current industry and in-house standards.
- 07.05 Create site navigation plan including directory structure.
- 07.06 Obtain in-house content and determine needs for secondary content providers.
- 07.07 Design page templates to implement on final site.
- 07.08 Create a Web page using authoring tools.
- 07.09 Code page(s) using current Web programming languages.
- 07.10 Check page for cross-browser capability and other access issues.
- 07.11 Upload pages and run site analysis.
- 07.12 Incorporate sound files onto a Web page.
- 07.13 Incorporate a streaming video file onto a Web page.
- 07.14 Incorporate a video file for download into a Web page.
- 07.15 Perform simple graphic modifications using a graphics utility.
- 07.16 Create virtual Web pages using a virtual reality modeling language.
- 07.17 Incorporate an e-mail link on a Web page.
- 07.18 Incorporate internal and external links on a Web page.
- 07.19 Incorporate frames, tables, and file transfer capabilities on a Web page.
- 07.20 Incorporate handicapped-accessibility options into the Web site.
- 07.21 Create a Web form and produce e-mail results.
- 07.22 Create a Web database interface.
- 07.23 Discuss the issue of ODBC compliance.

08.0 Perform programming and scripting activities – The student will be able to:

- 08.01 Identify several of the most prominent current programming languages.
- 08.02 Characterize the stages of the system development life cycle.
- 08.03 Differentiate between structured programming and object-oriented programming.
- 08.04 Use procedural and object-oriented constructs of programming, scripting, and/or macro languages to create and test programs including batch files and menu programs.
- 08.05 Apply principles of good design and documentation when developing programs.
- 08.06 Write scripting code to handle error checking in client forms.
- 08.07 Write CGI programs to allow for interactions between the client and server.
- 08.08 Write Java applets.
- 08.09 Identify development tools and list in order of complexity of use.
- 08.10 Review design specifications.
- 08.11 Design and test algorithms.
- 08.12 Write program according to specs.
- 08.13 Test and debug code.

- 08.14 Revise code based on testing procedures
- 09.0 Perform testing/troubleshooting activities – The student will be able to:
  - 09.01 Locate and use online documentation resources.
  - 09.02 Describe effective troubleshooting strategies and techniques to resolve basic hardware, software, and network problems.
  - 09.03 Recognize and resolve basic hardware, software configuration, and peripheral device problems.
  - 09.04 Describe handicapped-accessibility features for a Web site.
  - 09.05 Describe appropriate security procedures and practices, including physical security and protection of resources through software measures (passwords, antivirus software, data encryption, etc.).
  - 09.06 Revise system as required.
- 10.0 Perform web site management activities - The student will be able to:
  - 10.01 Install and configure Web site management software.
  - 10.02 Implement appropriate Web site security measures.
- 11.0 Perform e-commerce-related tasks – The student will be able to:
  - 11.01 Describe Web e-commerce.
  - 11.02 Analyze e-commerce models.
  - 11.03 Develop an e-commerce business plan.
- 14.0 Demonstrate professional development skills – The student will be able to:
  - 14.01 Identify corporate strategies and policies.
  - 14.02 Anticipate future industry trends.
  - 14.03 Continue education.
  - 14.04 Review and analyze other industry productions.
  - 14.05 Use and experiment with the technology.
- 15.0 Perform documentation and technical reference activities– The student will be able to:
  - 15.01 Use technical vocabulary appropriately.
  - 15.02 Locate information in technical references.
  - 15.03 Describe appropriate documentation procedures and practices.
  - 15.04 Effectively use locally maintained systems, software, and network documentation.
  - 15.05 Produce and maintain system documentation, such as inventory, costs, installed software, and procedures.
  - 15.06 Perform Documentation and Technical reference activities.
  - 15.07 Understand, Install and configure computer software
  - 15.08 Perform Troubleshooting activities.
  - 15.09 Demonstrate understanding of networked environments.
  - 15.10 Demonstrate proficiency with Internet structure, organization, and navigation.
  - 15.11 Locate technical information online.
  - 15.12 Evaluate information located through online research.

- 16.0 Perform general organizational computing workplace competencies – The student will be able to:
- 16.01 Follow oral and written instructions.
  - 16.02 Prepare, outline, and deliver a short oral presentation.
  - 16.03 Participate in group discussion as a member and as a leader.
  - 16.04 Obtain appropriate information from graphics, maps, or signs.
  - 16.05 Prepare visual material to support an oral presentation.
  - 16.06 Demonstrate self-motivation and responsibility to complete an assigned task.
  - 16.07 Choose appropriate action in situations requiring effective time management.
  - 16.08 Identify and discuss software licensing issues.
  - 16.09 Identify and discuss property rights and licensing issues.
  - 16.10 Identify and discuss privacy issues.
  - 16.11 Identify and discuss encryption issues.
  - 16.12 Identify legal liability issues.
  - 16.13 Apply principles and techniques for being a productive, contributing member of a team.
  - 16.14 Identify and use acceptable strategies for resolving conflict in the workplace.
  - 16.15 Apply principles and techniques for working productively with people of diverse cultures and backgrounds.
  - 16.16 Communicate effectively with individuals lacking a technical background.
  - 16.17 Identify clear detailed technical oral instructions.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:**            **Networking Services Technology**  
**Career Cluster:**       **Information Technology**

	<b>AS</b>	<b>AAS</b>
CIP Number	1511090101	0511090101
Program Type	College Credit	College Credit
Standard Length	63 credit hours	63 credit hours
CTSO	Phi Beta Lambda, BPA (Business Professionals of America)	Phi Beta Lambda, BPA (Business Professionals of America)
SOC Codes (all applicable)	15-1071	15-1071
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>	
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>	
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>	

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as cabling specialists, PC support technician, network control operators, data communications analysts, help desk specialists, network technicians, computer security specialists, network specialists, network managers, network systems analysts, network systems technicians, network troubleshooters, WAN/LAN managers, or systems administrators in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to plan, install, configure, monitor, troubleshoot and manage computer networks in a LAN/WAN environment. Students will be prepared to apply conceptual and theoretical knowledge to the workplace utilizing technical skills learned during the program.

### **Program Structure**

This program is a planned sequence of instruction consisting of 63 hours.

## **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

The following PSAV programs have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

- Computer Systems Technology (I470104) – 9 credits
- Computer Systems Technology 1 (J500100) combined with Computer Systems Technology (J500200) – 9 credits
- Network Support Services (B078000) – 9 credits
- Network Systems Administration (B079300) – 9 credits
- PC Support Services (B070400) – 6 credits
- Wireless Telecommunications (I470305) – 9 credits

The following industry certifications have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

Certified Wireless Network Administrator (CWNPT001) – 3 credits  
Cisco Certified Network Associate (CISCO004) – 12 credits  
Cisco Certified Network Associate Security (CCNA® Security) (CISCO011) – 3 credits  
Cisco Certified Network Professional (CISCO005) – 6 credits  
CompTIA Network+ (COMPT006) – 3 credits  
CompTIA Server+ (COMPT009) – 3 credits  
MCIT Professional - Server Administrator (MICRO034) – 3credits  
Microsoft Certified Desktop Support Technician (MICRO006) – 3 credits  
Microsoft Certified Systems Administrator – Windows 2003 (MICRO046) – 3 credits  
Microsoft Certified Systems Engineer – 2003 (MICRO013) – 9 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. The standard length of this program is 63 credit hours according to Rule 6A-14.030, F.A.C.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS/AAS degree program includes the following College Credit Certificates:

Information Technology Management (0511010304) – 30 credit hours  
Information Technology Technician (0511010303) – 21 credit hours  
Unix/Linux System Administrator (0511090106) – 18 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

### **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate understanding of networked environments.
- 02.0 Demonstrate understanding of data communications.
- 03.0 Understand, install and configure computer hardware.
- 04.0 Understand, install and configure computer software.
- 05.0 Understand, install and configure network hardware.
- 06.0 Understand, install and configure network software.
- 07.0 Perform internetworking activities.
- 08.0 Perform network administration and management activities.
- 09.0 Perform troubleshooting and maintenance activities.
- 10.0 Perform documentation and technical reference activities.
- 11.0 Perform user-training activities.

- 12.0 Demonstrate professional development skills.
- 13.0 Demonstrate employability skills.
- 14.0 Perform general organizational computing workplace competencies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:**        **Networking Services Technology**  
**CIP Numbers:**       **1511090101 A.S.**  
                                  **0511090101 A.A.S.**  
**Program Length:**    **68 credit hours**  
**SOC Code(s):**       **15-1071**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

01.0 Demonstrate understanding of networked environments. – The student will be able to:

- 01.01 Explain the use of binary numbers to represent instructions and data.
- 01.02 Describe the hardware implications of the use of binary representation of instructions and data.
- 01.03 Convert numbers among decimal, binary, and hexadecimal representation.
- 01.04 Perform binary arithmetic.
- 01.05 Identify various coding schemes (ASCII, etc.).
- 01.06 Discuss various data types (signed and unsigned integers, floating point, etc.).
- 01.07 Identify several advantages and disadvantages of networked and non-networked environments.
- 01.08 Describe current network environments, such as peer-to-peer and client/server.
- 01.09 Identify and discuss issues (such as security, privacy, redundancy, etc.) related to networked environments.
- 01.10 Identify and discuss issues related to naming conventions for user ids, email, passwords, and network devices.
- 01.11 List and define layers in the OSI and TCP/IP network protocol models.
- 01.12 Identify and describe current relevant IEEE network standards.
- 01.13 Illustrate typical network topologies.
- 01.14 Identify advantages and disadvantages of each topology.
- 01.15 Describe the major functions of LAN hardware protocols such as Ethernet, token ring, FDDI, and arcnet.
- 01.16 Describe LAN software protocols such as IPX/SPX, TCP/IP, and NetBEUI.
- 01.17 Discuss the nature of IP addresses and MAC addresses, and mapping between protocol addressing schemes.
- 01.18 Identify major emerging technologies (such as ATM, VPN, and voice over IP).
- 01.19 Identify and discuss technical issues related to emerging technologies (such as security, bandwidth capability, and gigabit transmission rates).
- 01.20 Discuss the design and function of a storage-area network (SAN).
- 01.21 Design a LAN, including the specification of architecture, hardware, software, etc.
- 01.22 Identify the advantages of VLANs.
- 01.23 Characterize a VLAN implementation.
- 01.24 Describe the function of a spanning tree algorithm.
- 01.25 Identify a proper network design with a spanning tree component.
- 01.26 Use effectively two different and current network modeling tools.

- 01.27 Produce effective documentation.
- 02.0 Demonstrate understanding of data communications. – The student will be able to:
  - 02.01 Differentiate between telecommunications and data communications.
  - 02.02 Describe the main functions of each relevant current standard setting organization (IEEE, TIA, etc.).
  - 02.03 Compare and contrast digital communications lines and cable characteristics (e.g. ISDN, DSL, T-1 and T-3).
  - 02.04 Describe ATM technology; discuss the functions and applications of this technology.
  - 02.05 Describe the functioning of modems, their features and operating characteristics.
  - 02.06 Define the features of an ASCII terminal.
  - 02.07 Describe the function of a UART.
  - 02.08 Discuss signal representation and modulation.
  - 02.09 Describe current data code systems used in data communication.
  - 02.10 Compare and contrast synchronous and asynchronous serial transmission.
  - 02.11 Compare and contrast major data communications media in terms of data flow, data codes, and transmission codes.
  - 02.12 Define common error detection and correction mechanisms.
  - 02.13 Identify LAN access control methods (CSMA/CD, token passing, etc.).
  - 02.14 Compare and contrast the major features of the LAN access methods.
  - 02.15 Describe asynchronous protocols.
  - 02.16 Describe synchronous serial link protocols.
  - 02.17 Identify and describe file transfer protocols and methodologies.
  - 02.18 Describe data compression methodologies used for file transfer.
  - 02.19 Identify evolving issues, such as gigabit transmission requirements, voice over IP, and wireless technologies.
- 03.0 Understand, install and configure computer hardware. – The student will be able to:
  - 03.01 Identify and describe distinguishing features of the major hardware platforms.
  - 03.02 Describe the functions of major hardware components of a computer system.
  - 03.03 Recognize and correctly identify computing hardware components.
  - 03.04 Describe emerging hardware technologies and discuss their potential impact.
  - 03.05 Implement proper procedures for handling and safeguarding equipment.
  - 03.06 Describe procedures for proper disposal of computer components.
  - 03.07 Analyze the user's needs
  - 03.08 Set up and configure systems and peripherals following institutional protocol.
  - 03.09 Set up BIOS.
  - 03.10 Install and configure storage and I/O device interfaces.
  - 03.11 Install and configure multimedia devices and interfaces.
  - 03.12 Install and configure network hardware components.
  - 03.13 Design and implement test procedure.
  - 03.14 Document systems.
  - 03.15 Configure systems and establish baseline.
  - 03.16 Design and implement work order procedures.
  - 03.17 Design and implement systems backups.
- 04.0 Understand, install and configure computer software. – The student will be able to:

- 04.01 Describe the functions and major components (BIOS, task management, etc.) of a computer operating system.
  - 04.02 Identify current operating systems and describe their important features.
  - 04.03 Use an operating system for activities such as data and file management.
  - 04.04 Identify current systems utilities and describe their functions.
  - 04.05 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
  - 04.06 Use operating systems of different brands and platforms.
  - 04.07 Use both stand-alone operating systems and network operating systems.
  - 04.08 Create, use, and maintain system configuration files.
  - 04.09 Describe the primary features and functions of the major categories of applications software (word processing, database, spreadsheet, presentation, email, browsers, etc.).
  - 04.10 Use basic features of office productivity software.
  - 04.11 Independently learn to perform (previously untaught) tasks using office productivity software.
  - 04.12 Use software produced by multiple vendors.
  - 04.13 Transmit and exchange data in a multiple vendor software environment.
  - 04.14 Install and configure a microcomputer operating system, system, and application software.
  - 04.15 Describe procedures for uninstalling operating system software.
  - 04.16 Configure software for accessibility by disabled individuals.
  - 04.17 Install and configure applications software upgrades.
  - 04.18 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing, configuring and upgrading typical applications software.
  - 04.19 Install and configure client software for connecting to LANs, WANs, and the Internet (network client, WWW browser, terminal emulation, file transfer, etc.).
  - 04.20 Install and configure client software for client/server and network-based applications (e-mail, videoconferencing, database, etc.).
  - 04.21 Install applications on a server and configure clients for network access.
- 05.0 Understand, install and configure network hardware. – The student will be able to:
- 05.01 Describe the major functions of network server hardware components.
  - 05.02 Describe the server hardware requirements.
  - 05.03 Describe the hardware needed for hosting a Web site.
  - 05.04 Identify a variety of specialized servers (e.g. proxy, e-mail, DHCP, Web, etc.) and describe the hardware requirements.
  - 05.05 Describe the major functions of network client hardware components.
  - 05.06 Describe client hardware requirements.
  - 05.07 Differentiate between hardware used to implement different topologies such as token ring and Ethernet.
  - 05.08 Recognize and describe current cable technologies such as twisted-pair, coaxial, and fiber optic, and identifying issues associated with plenum versus non-plenum cable plants.
  - 05.09 Describe current wireless technologies such as satellite, microwave, spread spectrum RF, and infrared.
  - 05.10 Identify advantages and disadvantages of wireless and cable technologies.
  - 05.11 Cite appropriate uses of wireless and cable technologies.

- 05.12 Describe the major functions of network connectivity hardware, such as hubs, repeaters, bridges, routers, switches, and gateways.
- 05.13 Describe the hardware needed to connect a LAN to the Internet.
- 05.14 Describe the function of network storage devices and other peripherals (RAID, CD towers, printers, fax machines, scanners, printer/fax/copiers, imaging devices, and document center equipment, etc.).
- 05.15 Describe the requirements for connecting peripherals directly to a network.
- 05.16 Set up and configure a server (including installation of NICs and NIC drivers).
- 05.17 Set up and configure client hardware (including installation of NICs and NIC drivers).
- 05.18 Set up network storage devices and other peripherals and connect to the network.
- 05.19 Fabricate patch, crossover and console cables.
- 05.20 Terminate cable using connectors and punch down panels.
- 05.21 Pull cable according to cabling plan.
- 05.22 Test the cable using industry standard measurements.
- 05.23 Label and document the wiring system.
- 05.24 Set up a network using cable technology.
- 05.25 Set up a network using wireless technology.
- 05.26 Use current connectivity devices such as hubs, repeaters, bridges, routers, switches, and gateways.

06.0 Understand, install and configure network software. – The student will be able to:

- 06.01 Describe the major functions of network server software components.
- 06.02 Compare and contrast major functions and features of current network operating systems (including directory services).
- 06.03 Design a directory and security structure.
- 06.04 Install and configure a LAN server.
- 06.05 Configure protocol stacks.
- 06.06 Configure a server for multiple network protocols and frame types.
- 06.07 Configure a server to handle multiple languages for international applications.
- 06.08 Set up and configure network routing, using appropriate documentation.
- 06.09 Describe management issues and procedures for handling multiple servers on a network.
- 06.10 Install and connect multiple servers (including different platforms).
- 06.11 Install and configure client-auditing software.
- 06.12 Install and configure software to build client-side images.
- 06.13 Describe the major functions of network client software components.
- 06.14 Install and configure client software on multiple hardware platforms.
- 06.15 Test and document client software installation.
- 06.16 Install and configure drivers for NICs and network peripherals (including printers).
- 06.17 Install and configure client/server applications (such as e-mail, scheduling, etc) on a server.
- 06.18 Install and configure network-based services such as videoconferencing, integrated voicemail/email/fax, large document storage and retrieval, etc.
- 06.19 Set up a proxy server and a gateway.
- 06.20 Set up a server for remote access.
- 06.21 Document client server application installation and establish baselines.
- 06.22 Monitor client server application and database.
- 06.23 Document and enforce software licensing.

07.0 Perform internetworking activities. – The student will be able to:

- 07.01 Describe WAN topologies and MAN topologies.
- 07.02 Differentiate between WAN topologies and LAN topologies.
- 07.03 Compare and contrast routing protocols (e.g., RIP, OSPF).
- 07.04 Describe the general routing problem and common solutions (including routing verses bridging).
- 07.05 Identify and describe WAN protocols.
- 07.06 Explain how the first three layers of the OSI model relate to routing and switching.
- 07.07 Describe various routing protocols such as RIP, OSPF.
- 07.08 Differentiate among routing, switching and bridging.
- 07.09 Install routers to simulate a WAN/LAN network.
- 07.10 Explain each step necessary for connecting a network to the Internet.
- 07.11 Explain the differences between connecting to the Internet via a dial-up connection vs. a dedicated connection.
- 07.12 Identify two major network issues associated with each of Internet, intranet, and extranet.
- 07.13 Implement LAN/WAN connections, including virtual private networks (VPN), permanent virtual circuits (PVC), frame relay, tunneling, remote and mobile user access, etc.
- 07.14 Define the basic software components of a WAN.
- 07.15 Configure routers to simulate a WAN/LAN network.
- 07.16 Explain the function and purpose of firewalls and firebreaks and their purpose.
- 07.17 Configure access lists to limit traffic and enhance security.
- 07.18 Explain three major security concerns relating to data communications.

08.0 Perform Network administration and management activities. – The student will be able to:

- 08.01 Create and manage user accounts based on standard criteria including department, application needs, and permissions.
- 08.02 Establish, document and disseminate user security guidelines.
- 08.03 Create and test account templates and policies.
- 08.04 Document account setup
- 08.05 Grant/deny access to peripherals.
- 08.06 Grant/deny access to logins.
- 08.07 Grant/deny access to file systems.
- 08.08 Perform network monitoring activities to ensure account integrity.
- 08.09 Establish procedures for termination of user accounts.
- 08.10 Manage software licensing based on user requirements.
- 08.11 Document security policies and violations.
- 08.12 Install and update anti-virus software.
- 08.13 Describe current encryption standards - public vs. private key, NSA DES, PGP.
- 08.14 Describe the functions and characteristics of firewalls.
- 08.15 Address security issues raised by the ability to access server remotely.
- 08.16 Discuss the functions of authentication servers, RADIUS, and VPN.
- 08.17 Establish files backup procedures.
- 08.18 Develop and publish backup schedule.
- 08.19 Implement back up procedures.

- 08.20 Design test procedures.
  - 08.21 Test backup by performing restore of sample data.
  - 08.22 Document backup.
  - 08.23 Monitor backup.
  - 08.24 Coordinate off-site storage of backup files.
  - 08.25 Establish a baseline for optimal network performance.
  - 08.26 Capture sample data and compare to baseline.
  - 08.27 Recommend changes to enhance network performance.
  - 08.28 Configure time synchronization and troubleshoot inconsistencies.\
  - 08.29 Use network management tools effectively to integrate and manage network resources.
  - 08.30 Explain RMON and SNMP and their use in monitoring a network.
  - 08.31 Demonstrate the use of a network management package.
  - 08.32 Configure network devices to send SNMP traps or alerts to network management systems.
  - 08.33 Discuss quality-of-service considerations and switching prioritization.
  - 08.34 Describe routing metrics such as hop counts, cost, etc.
  - 08.35 Describe typical WAN links and discuss bandwidth considerations.
  - 08.36 Provide examples of WAN backup techniques such as dial-backup that illustrate when they are appropriate.
- 09.0 Perform troubleshooting and maintenance activities. – The student will be able to:
- 09.01 Describe the use and features of diagnostic test equipment.\*
  - 09.02 Describe effective troubleshooting strategies and techniques to resolve basic hardware, software, and network problems.\*
  - 09.03 Recognize and resolve basic hardware and software configuration problems.
  - 09.04 Eliminate the obvious using techniques such as substitution.
  - 09.05 Trace for connectivity issues through each system component.
  - 09.06 Identify resources for troubleshooting including online documentation.
  - 09.07 Follow standard operating procedures for troubleshooting hardware and software.
  - 09.08 Implement restoration of critical resources.
  - 09.09 Determine when to escalate issues based on predefined guidelines.
  - 09.10 Document problems and solutions for future reference.
  - 09.11 Assemble reference manual including frequently asked questions.
  - 09.12 Define windows of opportunity for maintenance tasks.
  - 09.13 Determine type of maintenance programs needed to ensure maximum system performance.
  - 09.14 Determine service intervals and publish maintenance schedule.
  - 09.15 Document maintenance performed.
  - 09.16 Establish a plan of obsolescence.
- 10.0 Perform documentation and technical reference activities. – The student will be able to:
- 10.01 Describe appropriate documentation procedures and practices.
  - 10.02 Effectively use locally maintained systems, software, and network documentation.
  - 10.03 Produce and maintain system documentation, such as inventory, costs, installed software, and procedures.

- 10.04 Maintain network documentation, including server and workstation hardware and software specifications.
  - 10.05 Document the router configuration.
  - 10.06 Effectively use several standard visual modeling tools.
  - 10.07 Maintain visual network documentation, such as cabling diagrams.
  - 10.08 Describe effective strategies for online research.
  - 10.09 Locate technical information online.
  - 10.10 Evaluate information located through online research.
  - 10.11 Correctly cite Internet-based resources.
- 11.0 Perform user-training activities. – The student will be able to:
- 11.01 Instruct user in login procedure.
  - 11.02 Explain downloading procedure and policy.
  - 11.03 Orient user to company LAN and workstation policies.
  - 11.04 Orient user to applications.
  - 11.05 Management and backup procedures.
  - 11.06 Develop an ongoing training program.
- 12.0 Demonstrate professional development skills. – The student will be able to understand the importance of:
- 12.01 Attending classes, seminars, and workshops.
  - 12.02 Reviewing literature and reading current literature.
  - 12.03 Evaluating skills and taking necessary steps to upgrade.
- 13.0 Demonstrate employability skills. – The student will be to:
- 13.01 Identify appropriate attire and grooming for a business office.
  - 13.02 Identify sources of employment opportunities.
  - 13.03 Discuss employer expectations regarding attendance, punctuality, initiative, teamwork, etc.
  - 13.04 Discuss employee rights regarding privacy, discrimination, due process, safety, etc.
  - 13.05 Explain the importance of having a written job description.
  - 13.06 List representative jobs and career paths for people trained in the computer networking support area.
  - 13.07 List several functions of each representative computer service oriented job and career path.
  - 13.08 Complete employment forms.
  - 13.09 Classify behaviors considered to be appropriate or inappropriate in a job interview situation.
  - 13.10 Compose and type a follow-up letter.
  - 13.11 Compose and type a letter of application and a resume.
  - 13.12 Compose and type a letter of resignation.
  - 13.13 Demonstrate job interview skills.
  - 13.14 Identify methods for securing an employment reference.
- 14.0 Perform general organizational computing workplace competencies. – The student will be able to:

- 14.01 Follow oral and written instructions.
- 14.02 Prepare, outline, and deliver a short oral presentation.
- 14.03 Participate in group discussion as a member and as a leader.
- 14.04 Obtain appropriate information from graphics, maps, or signs.
- 14.05 Prepare visual material to support an oral presentation.
- 14.06 Demonstrate self-motivation and responsibility to complete an assigned task.
- 14.07 List the steps in problem solving.
- 14.08 Choose appropriate action in situations requiring effective time management.
- 14.09 Identify and discuss issues contained within professional codes of conduct.
- 14.10 Identify and discuss software-licensing issues.
- 14.11 Identify and discuss property rights and licensing issues.
- 14.12 Identify and discuss privacy issues.
- 14.13 Identify and discuss encryption issues.
- 14.14 Identify legal liability issues.
- 14.15 Describe appropriate measures for planning and managing a large project.
- 14.16 Define an implementation schedule for a large project.
- 14.17 Describe appropriate measures for planning and implementing corporate wide upgrade of hardware and software.
- 14.18 Identify potential sources of employee/employer or employee/employee conflict and discuss possible approaches to resolve such disagreements.
- 14.19 Use appropriate communication skills, courtesy, manners, and dress in the workplace.
- 14.20 Apply principles and techniques for being a productive, contributing member of a team.
- 14.21 Identify and use acceptable strategies for resolving conflict in the workplace
- 14.22 Apply principles and techniques for working productively with people of diverse cultures and backgrounds.
- 14.23 Identify techniques for stress management and prevention of job burn-out.
- 14.24 Use appropriate communication skills, telephone etiquette, courtesy, and manners when dealing with customers.
- 14.25 Communicate effectively with individuals lacking a technical background.
- 14.26 Give clear detailed technical oral instructions.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:**            **Unix/Linux System Administrator**  
**Career Cluster:**       **Information Technology**

<b>CCC</b>	
CIP Number	0511090106
Program Type	College Credit Certificate (CCC)
Program Length	18 credit hours
CTSO	Phi Beta Lambda, BPA (Business Professionals of America)
SOC Codes (all applicable)	15-1071
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the Networking Services Technology AS/AAS degree program (1511090101/0511090101).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to installation of information technology equipment, troubleshooting information technology equipment, and supporting information technology users.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate understanding of networked environments.
- 02.0 Demonstrate understanding of data communications.
- 03.0 Understand, install and configure computer hardware.
- 04.0 Understand, install and configure computer software.
- 05.0 Understand, install and configure network hardware.
- 06.0 Understand, install and configure network software.
- 07.0 Perform internetworking activities.
- 08.0 Perform network administration and management activities.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:**        **Unix/Linux System Administrator**  
**CIP Number:**         **0511090106**  
**Program Length:**    **18 Credit Hours**  
**SOC Code(s):**        **15-1071**

This certificate program is part of the Networking Services Technology AS/AAS degree program (1511090101/0511090101). At the completion of this program, the student will be able to:

01.0 Demonstrate understanding of networked environments – The student will be able to:

- 01.01 Explain the use of binary numbers to represent instructions and data.
- 01.02 Describe the hardware implications of the use of binary representation of instructions and data.
- 01.03 Convert numbers among decimal, binary, and hexadecimal representation.
- 01.04 Perform binary arithmetic.
- 01.05 Identify several advantages and disadvantages of networked and non-networked environments.
- 01.06 Describe current network environments, such as peer-to-peer and client/server.
- 01.07 Identify and discuss issues (such as security, privacy, redundancy, etc.) related to networked environments.
- 01.08 Identify and discuss issues related to naming conventions for user ids, email, passwords, and network devices.
- 01.09 List and define layers in the OSI and TCP/IP network protocol models.
- 01.10 Identify and describe current relevant IEEE network standards.
- 01.11 Illustrate typical network topologies.
- 01.12 Identify advantages and disadvantages of each topology.
- 01.13 Describe LAN software protocols such as IPX/SPX, TCP/IP, and NetBEUI.
- 01.14 Discuss the nature of IP addresses and MAC addresses, and mapping between protocol addressing schemes.
- 01.15 Identify major emerging technologies (such as ATM, VPN, and voice over IP).
- 01.16 Identify and discuss technical issues related to emerging technologies (such as security, bandwidth capability, and gigabit transmission rates).
- 01.17 Produce effective documentation.

02.0 Demonstrate understanding of data communications – The student will be able to:

- 02.01 Describe the main functions of each relevant current standard setting organization (IEEE, TIA, etc.).
- 02.02 Identify LAN access control methods (CSMA/CD, token passing, etc.).
- 02.03 Identify and describe file transfer protocols and methodologies.

03.0 Understand, install and configure computer hardware – The student will be able to:

- 03.01 Identify and describe distinguishing features of the major hardware platforms.
- 03.02 Describe the functions of major hardware components of a computer system.
- 03.03 Recognize and correctly identify computing hardware components.
- 03.04 Describe emerging hardware technologies and discuss their potential impact.

- 03.05 Implement proper procedures for handling and safeguarding equipment.
- 03.06 Describe procedures for proper disposal of computer components.
- 03.07 Set up and configure systems and peripherals following institutional protocol.
- 03.08 Set up BIOS.
- 03.09 Install and configure storage and I/O device interfaces.
- 03.10 Install and configure multimedia devices and interfaces.
- 03.11 Install and configure network hardware components.
- 03.12 Design and implement test procedure.
- 03.13 Document systems.
- 03.14 Configure systems and establish baseline.
- 03.15 Design and implement work order procedures.
- 03.16 Design and implement systems backups.

04.0 Understand, install and configure computer software – The student will be able to:

- 04.01 Describe the functions and major components (BIOS, task management, etc.) of a computer operating system.
- 04.02 Identify current operating systems and describe their important features.
- 04.03 Use an operating system for activities such as data and file management.
- 04.04 Identify current systems utilities and describe their functions.
- 04.05 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
- 04.06 Use operating systems of different brands and platforms.
- 04.07 Create, use, and maintain system configuration files.
- 04.08 Use software produced by multiple vendors.
- 04.09 Transmit and exchange data in a multiple vendor software environment.
- 04.10 Install and configure a microcomputer operating system, system, and application software.
- 04.11 Describe procedures for uninstalling operating system software.
- 04.12 Install and configure applications software upgrades.
- 04.13 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing, configuring and upgrading typical applications software.
- 04.14 Install and configure client software for connecting to LANs, WANs, and the Internet (network client, WWW browser, terminal emulation, file transfer, etc.).
- 04.15 Install and configure client software for client/server and network-based applications (e-mail, videoconferencing, database, etc.).
- 04.16 Install applications on a server and configure clients for network access.

05.0 Understand, install and configure network hardware – The student will be able to:

- 05.01 Describe the major functions of network server hardware components.
- 05.02 Describe the server hardware requirements.
- 05.03 Describe the hardware needed for hosting a Web site.
- 05.04 Identify a variety of specialized servers (e.g. proxy, e-mail, DHCP, Web, etc.) and describe the hardware requirements.
- 05.05 Describe the major functions of network client hardware components.
- 05.06 Describe client hardware requirements.
- 05.07 Describe the major functions of network connectivity hardware, such as hubs, repeaters, bridges, routers, switches, and gateways.
- 05.08 Describe the hardware needed to connect a LAN to the Internet.

- 05.09 Describe the function of network storage devices and other peripherals (RAID, CD towers, printers, fax machines, scanners, printer/fax/copiers, imaging devices, and document center equipment, etc.).
- 05.10 Describe the requirements for connecting peripherals directly to a network.
- 05.11 Set up and configure a server (including installation of NICs and NIC drivers).
- 05.12 Set up and configure client hardware (including installation of NICs and NIC drivers).

06.0 Understand, install and configure network software – The student will be able to:

- 06.01 Design a directory and security structure.
- 06.02 Configure protocol stacks.
- 06.03 Set up and configure network routing, using appropriate documentation.
- 06.04 Describe management issues and procedures for handling multiple servers on a network.
- 06.05 Install and connect multiple servers (including different platforms).
- 06.06 Install and configure drivers for NICs and network peripherals (including printers).
- 06.07 Install and configure client/server applications (such as e-mail, scheduling, etc) on a server.
- 06.08 Install and configure network-based services such as videoconferencing, integrated voicemail/email/fax, large document storage and retrieval, etc.
- 06.09 Set up a proxy server and a gateway.
- 06.10 Set up a server for remote access.
- 06.11 Document client server application installation and establish baselines.
- 06.12 Monitor client server application and database.
- 06.13 Document and enforce software licensing.

07.0 Perform internetworking activities – The student will be able to:

- 07.01 Describe WAN topologies and MAN topologies.
- 07.02 Differentiate between WAN topologies and LAN topologies.
- 07.03 Compare and contrast routing protocols (e.g., RIP, OSPF).
- 07.04 Explain how the first three layers of the OSI model relate to routing and switching.
- 07.05 Explain each step necessary for connecting a network to the Internet.
- 07.06 Explain the function and purpose of firewalls and firebreaks and their purpose.
- 07.07 Configure access lists to limit traffic and enhance security.
- 07.08 Explain three major security concerns relating to data communications.

08.0 Perform Network administration and management activities – The student will be able to:

- 08.01 Create and manage user accounts based on standard criteria including department, application needs, and permissions.
- 08.02 Establish, document and disseminate user security guidelines.
- 08.03 Create and test account templates and policies.
- 08.04 Document account setup
- 08.05 Grant/deny access to peripherals.
- 08.06 Grant/deny access to logins.
- 08.07 Grant/deny access to file systems.
- 08.08 Perform network monitoring activities to ensure account integrity.
- 08.09 Establish procedures for termination of user accounts.

- 08.10 Document security policies and violations.
- 08.11 Describe current encryption standards -public vs. private key, NSA DES, PGP.
- 08.12 Describe the functions and characteristics of firewalls.
- 08.13 Address security issues raised by the ability to access server remotely.
- 08.14 Discuss the functions of authentication servers, RADIUS, and VPN.
- 08.15 Establish files backup procedures.
- 08.16 Develop and publish backup schedule.
- 08.17 Implement back up procedures.
- 08.18 Test backup by performing restore of sample data.
- 08.19 Document backup.
- 08.20 Monitor backup.
- 08.21 Coordinate off-site storage of backup files.
- 08.22 Establish a baseline for optimal network performance.
- 08.23 Configure time synchronization and troubleshoot inconsistencies.
- 08.24 Use network management tools effectively to integrate and manage network resources.
- 08.25 Explain RMON and SNMP and their use in monitoring a network.
- 08.26 Configure network devices to send SNMP traps or alerts to network management systems.

2012 – 2013

**Florida Department of Education

Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>	

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as Database Security Professionals and E-Commerce Security Professionals in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to work in Internet, intranet, extranet, and enterprise environments; installing, configuring, designing, and managing secure database and E-commerce resources.

### **Program Structure**

This program is a planned sequence of instruction consisting of 63 hours.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

The following industry certifications have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

Cisco Certified Network Associate Security (CCNA® Security) (CISCO011) – 3 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. The standard length of this program is 63 credit hours according to Rule 6A-14.030, F.A.C.

## **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS/AAS degree program includes the following College Credit Certificates:

Database & E-Commerce Security CCC (0511100311) – 18 credit hours

Standards for the above certificate program are contained in separate curriculum frameworks.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of computer hardware.
- 02.0 Demonstrate an understanding of networked environments, hardware, and software.
- 03.0 Install and configure secure network systems software and utilities.
- 04.0 Demonstrate proficiency with Internet structure, organization, and navigation.
- 05.0 Demonstrate an understanding of network access control systems and methodology.
- 06.0 Describe cryptography concepts, standards, and applications.
- 07.0 Perform telecommunications and network security activities.
- 08.0 Demonstrate an understanding of Database Management Systems.
- 09.0 Perform administrative tasks related to database security.
- 10.0 Demonstrate an understanding of E-commerce.
- 11.0 Perform tasks related to e-commerce security.
- 12.0 Perform Web site management activities.
- 13.0 Design and implement physical security measures.
- 14.0 Perform operations and security management practices.
- 15.0 Employ applications and systems development security techniques.
- 16.0 Develop business continuity and disaster recovery plans
- 17.0 Describe ethical issues, pertinent laws, and how to conduct investigations.
- 18.0 Perform general organizational computing workplace competencies.
- 19.0 Perform project planning and management activities.
- 20.0 Perform documentation and technical reference activities.
- 21.0 Demonstrate employability skills.
- 22.0 Demonstrate professional development skills.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** IT Security  
**CIP Numbers:** 1511100306 A.S.  
 0511100306 A.A.S.  
**Program Length:** 63 credit hours  
**SOC Code(s):** 15-1071.01

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

- 01.0 Demonstrate an understanding of computer hardware. – The student will be able to:
- 01.01 Describe multiple numbering systems used to represent instructions and data, including binary, octal, decimal, and hexadecimal.
  - 01.02 Identify the architecture of major hardware platforms.
  - 01.03 Describe the functions of major hardware components of a computer system.
  - 01.04 Discuss the potential impact of emerging hardware technologies.
  - 01.05 Perform preventive maintenance tasks on microcomputer systems.
  - 01.06 Set up and configure computer systems and peripherals.
  - 01.07 Configure the Basic Input/Output System (BIOS) of a computer system.
  - 01.08 Install and configure storage devices, controllers, and network interfaces.
- 02.0 Demonstrate an understanding of networked environments, hardware, and software. – The student will be able to:
- 02.01 Discuss fundamental network concepts such as topology, protocols, architecture, and internetworking
  - 02.02 Define all layers in the Open Systems Interconnect (OSI) and Transmission Control Protocol/Internetworking Protocol (TCP/IP) network protocol models
  - 02.03 Discuss the nature of Internetworking Protocol (IP) addresses and Media Access Control (MAC) addresses, and mapping between protocol addressing schemes
  - 02.04 Describe the functions and hardware requirements for current popular network servers for such services as: Domain Name Service (DNS), Dynamic Host Configuration Protocol (DHCP), e-mail, the World Wide Web (WWW), proxy, etc.)
  - 02.05 Describe the major functions and hardware requirements of network client hardware components
  - 02.06 Describe current link technologies such as twisted-pair, coaxial, fiber optic, and wireless
  - 02.07 Describe the major functions of network connectivity hardware, such as hubs, repeaters, bridges, routers, switches, and gateways
  - 02.08 Describe the function of network storage devices and other peripherals such as a Redundant Arrays of Inexpensive Disks (RAID) and CD-ROM towers
- 03.0 Install and configure secure network systems software and utilities. – The student will be able to:

- 03.01 Install and configure current leading system software, drivers, and service packs.
  - 03.02 Install, configure and set up a proxy server and a gateway.
  - 03.03 Discuss the functions of authentication protocols and Virtual Private Networks (VPNs).
  - 03.04 Configure e-commerce servers and database servers.
  - 03.05 Install and configure mailing list servers, chat servers, and newsgroup servers.
  - 03.06 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
  - 03.07 Install and configure a secure desktop client operating system.
  - 03.08 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing, configuring, and upgrading typical applications software.
  - 03.09 Install and configure client software for network-based applications such as e-mail, Web browsing, terminal emulation, file transfer, group conferencing, database, etc.
  - 03.10 Install and configure current popular network servers for such services as: Domain Name Service (DNS), Dynamic Host Configuration Protocol (DHCP), e-mail, the World Wide Web (WWW), proxy service, etc.).
- 04.0 Demonstrate proficiency with Internet structure, organization, and navigation. – The student will be able to:
- 04.01 Describe Internet structure and administration, including such topics as Requests For Comments (RFCs) and the Domain Name System (DNS).
  - 04.02 Describe common Internet services and port numbers.
  - 04.03 Demonstrate the use of internetworking protocols, including: Hypertext Transfer Protocol (HTTP), File Transfer Protocol (FTP), e-mail protocols such as Simple Mail Transfer Protocol (SMTP) and Post Office Protocol (POP3), Telnet, etc.).
  - 04.04 Differentiate between push and pull technologies.
  - 04.05 Demonstrate the use of typical remote access mechanisms such as Telnet.
  - 04.06 Describe the data format and proprietary nature of commonly used Internet file types.
  - 04.07 Demonstrate use of Internet clients and services such as e-mail, Web browsers, search engines, newsgroups, mailing lists, chat rooms, file transfer clients, etc.
- 05.0 Demonstrate an understanding of network access control systems and methodology. – The student will be able to:
- 05.01 Specify by access control mechanisms what users can do, which resources they can access, and what operations they can perform on a system
  - 05.02 Compare and contrast several access control techniques, including access control lists, discretionary, mandatory, lattice-based, rule-based, and role-based access control
  - 05.03 Administer computer, group, and user accounts
  - 05.04 Manage policies, rights, permissions, and passwords for users and/or groups of users
  - 05.05 Demonstrate an understanding of various access control models including the Bell-LaPadula, Biba, Clark and Wilson, and State Machine Models
  - 05.06 Oversee password and PIN selection, management, and control
  - 05.07 Demonstrate an understanding of alternative methods to identification and authentication, including characteristic-based or biometric techniques, tokens,

- tickets, one-time passwords, and single sign-on techniques
  - 05.08 Implement centralized/remote authentication access controls such as RADIUS and TACACS
  - 05.09 Implement and manage decentralized access controls such as domains and trusts relationships
  - 05.10 Analyze methods of server attack, including brute force, denial of service, spoofing, spamming, sniffers, hackers, and crackers
  - 05.11 Demonstrate an understanding of the different types of intrusions and the different methods of intrusion detection, including data extraction, sampling, recognition and traffic analysis
  - 05.12 Monitor the network using various forms of intrusion detection resources to detect attacks
  - 05.13 Investigate audit trails for signs of network intrusions
  - 05.14 Perform penetration testing to find weaknesses in the access control systems.
- 06.0 Describe cryptography concepts, standards, and applications. – The student will be able to:
- 06.01 Demonstrate an understanding of the encryption/decryption process.
  - 06.02 Demonstrate an understanding of the basic functions involved in key management including creation, distribution, verification, revocation, destruction, storage, recovery, and life span of keys.
  - 06.03 Utilize various forms of cryptography, digital certificates, and digital signatures to achieve confidentiality, integrity, authentication, and non-repudiation in an enterprise data communications network.
  - 06.04 Discuss the creation and use of digital certificates and digital signatures to provide authentication of users and verification of data integrity in network communications.
  - 06.05 Employ cryptographic algorithms such as DES, RSA, MD5 and DSA.
  - 06.06 Identify the strengths and weaknesses of cryptographic algorithms and the effects of key length.
  - 06.07 Implement current popular key distribution methods including manual, Kerberos™, and Internet Security Association and Key Management Protocol (ISAKMP).
  - 06.08 Utilize application and network-based protocols such as Secure Socket Layer (SSL), Secure HyperText Transfer Protocol (SHTTP), and Internetworking Protocol Security (IPSEC).
  - 06.09 Describe the use of hardware components such as smart cards and tokens.
- 07.0 Perform telecommunications and network security activities. – The student will be able to:
- 07.01 Utilize protocol layering models such as the Open Systems Interconnection (OSI) model in analyzing network security threats.
  - 07.02 Evaluate the security implications involved with the various physical media types such as fiber optics, twisted pair, and wireless communications.
  - 07.03 Describe security concerns with using certain network topologies such as star, bus, mesh, and ring.
  - 07.04 Configure authentication protocol services such as RADIUS/TACACS to provide dial-in authentication and security.
  - 07.05 Employ network monitors and packet sniffers to identify security threats.

- 07.06 Implement security measures using hardware and software such as firewalls, routers, switches, gateways, and proxies.
  - 07.07 Discuss the security vulnerabilities of the Transmission Control Protocol/Internetworking Protocol (TCP/IP) protocol stack.
  - 07.08 Configure Network Layer security protocols such as Internetworking Protocol Security (IPSEC).
  - 07.09 Configure Transport Layer security protocols such as Secure Socket Layer (SSL).
  - 07.10 Utilize Secure Multipurpose Internet Mail Extensions (S/MIME), Secure Socket Layer (SSL) and other Application Layer security protocols.
  - 07.11 Perform connection verification and authentication using Challenge Handshake Authentication Protocol (CHAP) and Password Authentication Protocol (PAP).
  - 07.12 Demonstrate an understanding of how wide area network serial line protocols such as Frame relay, X.25, High-level Data Link Control (HDLC), Point-to-Point Protocol (PPP) and Integrated Services Digital Network (ISDN), and Digital Subscriber Line (DSL) work.
  - 07.13 Implement secure data communication techniques such as Virtual Private Networks (VPNs), tunneling, Network Address Translation (NAT), and transmission logging.
  - 07.14 Develop secure e-mail, facsimile, and voice communication procedures to protect against network attacks such as flooding, eavesdropping, sniffing, spamming, etc. and describe appropriate countermeasures.
  - 07.15 Employ alarms and signals to alert network security administrators of intrusions.
- 08.0 Demonstrate an understanding of Database Management Systems. – The student will be able to:
- 08.01 Compare the major types of databases including relational, flat file, distributed and object-oriented databases.
  - 08.02 Describe the concept of relational database concepts including tables, entity-relationships, queries, and normalization.
  - 08.03 Analyze the various components of a database management system.
  - 08.04 Install and configure database server software from leading vendors.
  - 08.05 Perform database administration tasks using the Structured Query Language (SQL).
  - 08.06 Demonstrate an understanding of transactions processing and concurrency control.
  - 08.07 Perform database backup and recovery operations.
  - 08.08 Employ techniques to ensure database integrity and security.
- 09.0 Perform administrative tasks related to database security. – The student will be able to:
- 09.01 Develop database security guidelines.
  - 09.02 Monitor database security systems.
  - 09.03 Manage web database security.
  - 09.04 Verify security compliance.
  - 09.05 Secure backup processes.
  - 09.06 Verify backup processes.
- 10.0 Demonstrate an understanding of e-commerce. – The student will be able to:

- 10.01 Describe e-commerce and its impact on business and society.
  - 10.02 Differentiate between the various e-commerce business models.
  - 10.03 Describe the development of an e-commerce business plan.
  - 10.04 Discuss e-commerce revenue streams and e-commerce market sectors.
  - 10.05 Develop e-commerce marketing plan.
  - 10.06 Discuss the steps necessary to maintain transaction integrity.
  - 10.07 Identify components and procedures necessary to process credit card transactions.
- 11.0 Perform tasks related to e-commerce security. – The student will be able to:
- 11.01 Manage digital certificates.
  - 11.02 Maintain integrity in transaction storage and reporting systems.
  - 11.03 Protect credit card, personal, banking, and "bill to" and "ship to" information in transaction processes.
  - 11.04 Oversee inventory control.
  - 11.05 Maintain email security related to e-commerce.
  - 11.06 Review third-party transaction processing.
  - 11.07 Assist in evaluating e-commerce platform vulnerabilities.
- 12.0 Perform Web site management activities. – The student will be able to:
- 12.01 Describe the process of obtaining an Internet domain name and mapping it to an Internet Protocol (IP) address.
  - 12.02 Compare features of currently available Web site management tools.
  - 12.03 Configure current Web server software such as Apache Web Server and Microsoft Internet Information Server (IIS).
  - 12.04 Use current Web server software to create and maintain a secure Web site.
  - 12.05 Use Web site access tracking and analysis tools to evaluate the security of a Web server.
- 13.0 Design and implement physical security measures. – The student will be able to:
- 13.01 Identify the physical threats to an enterprise's resources that include the employees, facilities, data, equipment, support systems, media, and supplies they utilize.
  - 13.02 Diagnose an enterprise's physical vulnerabilities to threats from natural disasters such as fire, flooding, and power loss.
  - 13.03 Specify possible countermeasures to physically protect an enterprise's resources and sensitive information.
  - 13.04 Develop a list of physical facility requirements to secure the premises.
  - 13.05 Evaluate the applicability of technical controls such as smart cards, access logs, and intrusion detection systems.
- 14.0 Perform operations and security management practices. – The student will be able to:
- 14.01 Perform personnel administrative management operations, including specifying job requirements, background checking, job rotation and termination procedures.
  - 14.02 Implement anti-virus solutions on an enterprise-wide basis.
  - 14.03 Perform backups of critical information.
  - 14.04 Protect the privacy of personal data.

- 14.05 Demonstrate proper handling including marking, handling, storage and destruction of sensitive information and media
  - 14.06 Demonstrate an understanding of different control types, such as directive, preventive, detective, corrective, and recovery controls.
  - 14.07 Determine what resources, including hardware/software, password files, source code, storage and logs, require protection.
  - 14.08 Compare the advantages and disadvantages of internal versus external audits.
  - 14.09 Perform compliance checks on user adherence to security policies.
  - 14.10 Identify different types of monitoring including event, hardware, and illegal software.
  - 14.11 Utilize monitoring tools and techniques such as trend analysis, traffic analysis and reporting mechanisms.
  - 14.12 Implement countermeasures to defend against threats such as fraud, theft, employee sabotage, espionage, terrorism, and hackers.
  - 14.13 Perform penetration testing activities including sniffing, eavesdropping, dumpster diving, and social engineering.
  - 14.14 Understand principles of risk management and asset valuation.
  - 14.15 Monitor server information for defamatory statements and privacy rights infractions.
  - 14.16 Manage software licenses and enforce compliance within the organization.
- 15.0 Employ applications and systems development security techniques. – The student will be able to:
- 15.01 Describe the stages of the system development life cycle.
  - 15.02 Develop and document object-oriented computer programs employing structured programming techniques.
  - 15.03 Analyze the controls that are included within systems and applications software and those used in the development of agents, applets, software, databases, data warehouses and knowledge-based systems.
  - 15.04 Implement features to ensure data and application integrity, security and availability.
  - 15.05 Analyze distributed environment application issues including agents, applets, and objects.
  - 15.06 Analyze local environment application issues including viruses, Trojan horses, logic bombs and worms.
  - 15.07 Analyze key database and data warehousing issues including aggregation, data mining, inference and poly-instantiation
  - 15.08 Develop multilevel security schemes for databases and data warehouses.
  - 15.09 Compare different forms of data/information storage including primary, secondary, real, virtual, random, volatile, and sequential.
  - 15.10 Describe different aspects of application and database security control architectures, including process isolation, hardware segmentation, separation of privilege, layering, abstraction and security kernels.
  - 15.11 Understand the difference between supervisory and user modes of operation.
  - 15.12 Identify various levels of application integrity including network, operating system, database, and file level integrity.
  - 15.13 Define the various types of computer viruses and malicious code and the roles that hackers, crackers, phreaks, and virus writers play in developing and utilizing malicious code.
  - 15.14 Formulate countermeasures to defend against or detect viruses and malicious

- code.
- 15.15 Utilize anti-virus software and develop policies to provide enterprise-wide anti-virus protection.
  - 15.16 Employ countermeasures to defend against attacks such as brute force and replay attacks.
- 16.0 Develop business continuity and disaster recovery plans. – The student will be able to:
- 16.01 Perform a business impact assessment, including components such as an emergency assessment, specifying business success and critical business functions, establishing priorities, and developing alternative means of accomplishing objectives.
  - 16.02 Specify the necessary capabilities of alternative business sites such as cold, warm, hot and mobile sites to be used in the case of a disaster.
  - 16.03 Develop business continuity, disaster containment, and disaster recovery plans for disasters such as floods, fires, power outages, strikes, hardware/software failures, and bombings addressing: protection of physical assets, emergency response, personnel notification, backups and off-site storage, utilities, external communications, and logistics and supplies.
  - 16.04 Describe the process of performing routine scheduled maintenance of fire control systems and building utilities such as power, ventilation, and water.
  - 16.05 Conduct a business continuity project, including scope and planning.
  - 16.06 Develop a training program for personnel regarding business continuity/recovery plans.
- 17.0 Describe ethical issues, pertinent laws, and how to conduct investigations. – The student will be able to:
- 17.01 Understand the major categories and types of laws as to how they relate to E-commerce, including criminal law, civil law and administrative law.
  - 17.02 Develop institutional policies and practices to conform to or supplement existing laws regarding data privacy and intellectual property rights.
  - 17.03 Describe abnormal and suspicious activity as it relates to database and e-commerce security.
  - 17.04 Analyze potential data security threats such as fraud or collusion.
  - 17.05 Develop legal institutional policies and practices to protect against purposeful violations of data integrity.
  - 17.06 Identify the major categories of computer crime and attacks, including military, business, financial, terrorist, grudge and “fun” attacks.
  - 17.07 Develop legal institutional policies and practices to conduct an investigation of purposeful violations of data integrity or existing e-commerce laws, including: the collection and preservation of evidence; confiscation of equipment, software and data; interrogation of suspected violators; and reporting of incidents to the appropriate authorities.
  - 17.08 Discuss major ethical and legal issues related to Internet use.
- 18.0 Perform general organizational computing workplace competencies. – The student will be able to:
- 18.01 Follow oral and written instructions.
  - 18.02 Prepare, outline, and deliver a short oral presentation.

- 18.03 Prepare visual material to support an oral presentation.
  - 18.04 Participate in group discussions as a member and as a leader.
  - 18.05 Interpret appropriate information from graphics, maps, or signs.
  - 18.06 Demonstrate self-motivation and responsibility to complete an assigned task.
  - 18.07 List the steps in problem solving.
  - 18.08 Identify and discuss issues contained within professional codes of conduct.
  - 18.09 Identify and discuss intellectual property rights and licensing issues.
  - 18.10 Identify potential sources of employee/employer or employee/employee conflict and discuss possible approaches to resolve such disagreements.
  - 18.11 Use appropriate courtesy, manners, and dress in the workplace.
  - 18.12 Apply principles and techniques for being a productive, contributing member of a team.
  - 18.13 Identify and use acceptable strategies for resolving conflict in the workplace.
  - 18.14 Apply principles and techniques for working productively with people of diverse cultures and backgrounds.
  - 18.15 Identify techniques for stress management and prevention of job burnout.
  - 18.16 Use appropriate communication skills, telephone etiquette, courtesy, and manners when dealing with individuals lacking a technical background.
- 19.0 Perform project planning and management activities. – The student will be able to:
- 19.01 Apply effective time management skills.
  - 19.02 Describe appropriate measures for planning and managing a large project.
  - 19.03 Define an implementation schedule for a large project.
  - 19.04 Describe appropriate measures for planning and implementing corporate-wide upgrade of hardware and software.
  - 19.05 Identify examples of effective end-user training strategies and techniques.
- 20.0 Perform documentation and technical reference activities. – The student will be able to:
- 20.01 Use technical vocabulary appropriately
  - 20.02 Locate information in printed and online technical references
  - 20.03 Prepare documentation to track: physical inventory, regulation and license compliance, hardware and software modifications and upgrades, security breaches and countermeasures, and the current e-commerce security environment
- 21.0 Demonstrate employability skills. – The student will be able to:
- 21.01 Identify sources of employment opportunities.
  - 21.02 Discuss employer expectations regarding attendance, punctuality, initiative, teamwork, etc.
  - 21.03 Discuss employee rights regarding privacy, discrimination, due process, safety, etc.
  - 21.04 Explain the importance of a written job description.
  - 21.05 Identify methods for securing employment references.
  - 21.06 Compose a letter of application and a resume.
  - 21.07 Complete an employment application.
  - 21.08 Classify behaviors considered appropriate or inappropriate in a job interview situation.
  - 21.09 Demonstrate job interview skills.

- 21.10 Compose a follow-up letter.
- 21.11 Compose a letter of resignation.
  
- 22.0 Demonstrate professional development skills. – The student will be able to:
  - 22.01 Discover corporate strategies and policies.
  - 22.02 Develop and maintain professional contacts.
  - 22.03 Develop mentor relationships.
  - 22.04 Anticipate future industry trends.
  - 22.05 Describe options for continuing education.
  - 22.06 Read industry journals and magazines.
  - 22.07 Attend seminars, workshops, and tradeshow.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Database & E-commerce Security CCC  
**Career Cluster:** Information Technology

<b>CCC</b>	
CIP Number	0511100311
Program Type	College Credit Certificate (CCC)
Program Length	18 credit hours
CTSO	Phi Beta Lambda, BPA (Business Professionals of America)
SOC Codes (all applicable)	15-1071.01
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the IT Security AS/AAS degree program (1511100306/0511100306).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as Database Security Professionals and E-Commerce Security Professionals in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to work in Internet, intranet, extranet, and enterprise environments; installing, configuring, designing, and managing secure database and E-commerce resources.

### **Program Structure**

This program is a planned sequence of instruction consisting of 18 hours.

## **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of computer hardware.
- 02.0 Demonstrate an understanding of networked environments, hardware, and software.
- 03.0 Install and configure secure network systems software and utilities.
- 04.0 Demonstrate proficiency with Internet structure, organization, and navigation.
- 05.0 Demonstrate an understanding of network access control systems and methodology.
- 06.0 Describe cryptography concepts, standards, and applications.
- 07.0 Perform telecommunications and network security activities.
- 08.0 Demonstrate an understanding of Database Management Systems.
- 09.0 Perform administrative tasks related to database security.
- 10.0 Demonstrate an understanding of E-commerce.

- 11.0 Perform tasks related to e-commerce security.
- 12.0 Perform Web site management activities.
- 13.0 Design and implement physical security measures.
- 14.0 Perform operations and security management practices.
- 15.0 Employ applications and systems development security techniques.
- 16.0 Develop business continuity and disaster recovery plans
- 17.0 Describe ethical issues, pertinent laws, and how to conduct investigations.
- 18.0 Perform general organizational computing workplace competencies.
- 19.0 Perform project planning and management activities.
- 20.0 Perform documentation and technical reference activities.
- 21.0 Demonstrate employability skills.
- 22.0 Demonstrate professional development skills.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Database & E-commerce Security CCC  
**CIP Number:** 0511100311  
**Program Length:** 18 credit hours  
**SOC Code(s):** 15-1071.01

This certificate program is part of the IT Security AS/AAS degree program (1511100306/0511100306). At the completion of this program, the student will be able to:

- 01.0 Demonstrate an understanding of computer hardware-The student will be able to:
- 01.01 Describe multiple numbering systems used to represent instructions and data, including binary, octal, decimal, and hexadecimal.
  - 01.02 Identify the architecture of major hardware platforms.
  - 01.03 Describe the functions of major hardware components of a computer system.
  - 01.04 Discuss the potential impact of emerging hardware technologies.
- 02.0 Demonstrate an understanding of networked environments, hardware, and software -  
The student will be able to:
- 02.01 Discuss fundamental network concepts such as topology, protocols, architecture, and internetworking
  - 02.02 Define all layers in the Open Systems Interconnect (OSI) and Transmission Control Protocol/Internetworking Protocol (TCP/IP) network protocol models
  - 02.03 Discuss the nature of Internetworking Protocol (IP) addresses and Media Access Control (MAC) addresses, and mapping between protocol addressing schemes
  - 02.04 Describe the functions and hardware requirements for current popular network servers for such services as: Domain Name Service (DNS), Dynamic Host Configuration Protocol (DHCP), e-mail, the World Wide Web (WWW), proxy, etc.)
  - 02.05 Describe the major functions and hardware requirements of network client hardware components
  - 02.07 Describe the major functions of network connectivity hardware, such as hubs, repeaters, bridges, routers, switches, and gateways
  - 02.08 Describe the function of network storage devices and other peripherals such as a Redundant Arrays of Inexpensive Disks (RAID) and CD-ROM towers
- 03.0 Install and configure secure network systems software and utilities-The student will be able to:
- 03.01 Install and configure current leading system software, drivers, and service packs.
  - 03.03 Discuss the functions of authentication protocols and Virtual Private Networks (VPNs).
  - 03.06 Use system software to perform routine maintenance tasks such as backup, hard drive defragmentation, etc.
  - 03.07 Install and configure a secure desktop client operating system.
  - 03.08 Describe modifications necessary to an operating system (such as modifying parameters, how to handle conflicting interrupts, etc.) when installing,

- configuring, and upgrading typical applications software.
- 03.09 Install and configure client software for network-based applications such as e-mail, Web browsing, terminal emulation, file transfer, group conferencing, database, etc.
  - 03.10 Install and configure current popular network servers for such services as: Domain Name Service (DNS), Dynamic Host Configuration Protocol (DHCP), e-mail, the World Wide Web (WWW), proxy service, etc.).
- 04.0 Demonstrate proficiency with Internet structure, organization, and navigation-The student will be able to:
- 04.01 Describe Internet structure and administration, including such topics as Requests For Comments (RFCs) and the Domain Name System (DNS).
  - 04.02 Describe common Internet services and port numbers.
  - 04.03 Demonstrate the use of internetworking protocols, including: Hypertext Transfer Protocol (HTTP), File Transfer Protocol (FTP), e-mail protocols such as Simple Mail Transfer Protocol (SMTP) and Post Office Protocol (POP3), Telnet, etc.).
  - 04.04 Differentiate between push and pull technologies.
  - 04.05 Demonstrate the use of typical remote access mechanisms such as Telnet.
  - 04.06 Describe the data format and proprietary nature of commonly used Internet file types.
  - 04.07 Demonstrate use of Internet clients and services such as e-mail, Web browsers, search engines, newsgroups, mailing lists, chat rooms, file transfer clients, etc.
- 05.0 Demonstrate an understanding of network access control systems and methodology-The student will be able to:
- 05.01 Specify by access control mechanisms what users can do, which resources they can access, and what operations they can perform on a system
  - 05.02 Compare and contrast several access control techniques, including access control lists, discretionary, mandatory, lattice-based, rule-based, and role-based access control
  - 05.03 Administer computer, group, and user accounts
  - 05.04 Manage policies, rights, permissions, and passwords for users and/or groups of users
  - 05.06 Oversee password and PIN selection, management, and control
  - 05.07 Demonstrate an understanding of alternative methods to identification and authentication, including characteristic-based or biometric techniques, tokens, tickets, one-time passwords, and single sign-on techniques
  - 05.08 Implement centralized/remote authentication access controls such as RADIUS and TACACS
  - 05.09 Implement and manage decentralized access controls such as domains and trusts relationships
  - 05.10 Analyze methods of server attack, including brute force, denial of service, spoofing, spamming, sniffers, hackers, and crackers
  - 05.11 Demonstrate an understanding of the different types of intrusions and the different methods of intrusion detection, including data extraction, sampling, recognition and traffic analysis
  - 05.12 Monitor the network using various forms of intrusion detection resources to detect attacks
  - 05.13 Investigate audit trails for signs of network intrusions

- 05.14 Perform penetration testing to find weaknesses in the access control systems.
- 06.0 Describe cryptography concepts, standards, and applications-The student will be able to:
- 06.01 Demonstrate an understanding of the encryption/decryption process.
  - 06.02 Demonstrate an understanding of the basic functions involved in key management including creation, distribution, verification, revocation, destruction, storage, recovery, and life span of keys.
  - 06.03 Utilize various forms of cryptography, digital certificates, and digital signatures to achieve confidentiality, integrity, authentication, and non-repudiation in an enterprise data communications network.
  - 06.04 Discuss the creation and use of digital certificates and digital signatures to provide authentication of users and verification of data integrity in network communications.
  - 06.05 Employ cryptographic algorithms such as DES, RSA, MD5 and DSA.
  - 06.06 Identify the strengths and weaknesses of cryptographic algorithms and the effects of key length.
  - 06.07 Implement current popular key distribution methods including manual, Kerberos™, and Internet Security Association and Key Management Protocol (ISAKMP).
  - 06.08 Utilize application and network-based protocols such as Secure Socket Layer (SSL), Secure HyperText Transfer Protocol (SHTTP), and Internetworking Protocol Security (IPSEC).
  - 06.09 Describe the use of hardware components such as smart cards and tokens.
- 07.0 Perform telecommunications and network security activities – The student will be able to:
- 07.01 Utilize protocol layering models such as the Open Systems Interconnection (OSI) model in analyzing network security threats.
  - 07.02 Evaluate the security implications involved with the various physical media types such as fiber optics, twisted pair, and wireless communications.
  - 07.03 Describe security concerns with using certain network topologies such as star, bus, mesh, and ring.
  - 07.05 Employ network monitors and packet sniffers to identify security threats.
  - 07.06 Implement security measures using hardware and software such as firewalls, routers, switches, gateways, and proxies.
  - 07.07 Discuss the security vulnerabilities of the Transmission Control Protocol/Internetworking Protocol (TCP/IP) protocol stack.
  - 07.08 Configure Network Layer security protocols such as Internetworking Protocol Security (IPSEC).
  - 07.09 Configure Transport Layer security protocols such as Secure Socket Layer (SSL).
  - 07.10 Utilize Secure Multipurpose Internet Mail Extensions (S/MIME), Secure Socket Layer (SSL) and other Application Layer security protocols.
  - 07.11 Perform connection verification and authentication using Challenge Handshake Authentication Protocol (CHAP) and Password Authentication Protocol (PAP).
  - 07.13 Implement secure data communication techniques such as Virtual Private Networks (VPNs), tunneling, Network Address Translation (NAT), and transmission logging.
  - 07.14 Develop secure e-mail, facsimile, and voice communication procedures to protect against network attacks such as flooding, eavesdropping, sniffing, spamming,

- etc. and describe appropriate countermeasures.
- 07.15 Employ alarms and signals to alert network security administrators of intrusions.
- 08.0 Demonstrate an understanding of Database Management Systems-The student will be able to:
  - 08.01 Compare the major types of databases including relational, flat file, distributed and object-oriented databases.
  - 08.02 Describe the concept of relational database concepts including tables, entity-relationships, queries, and normalization.
  - 08.03 Analyze the various components of a database management system.
  - 08.04 Install and configure database server software from leading vendors.
  - 08.06 Demonstrate an understanding of transactions processing and concurrency control.
  - 08.08 Employ techniques to ensure database integrity and security.
- 09.0 Perform administrative tasks related to database security-The student will be able to:
  - 09.01 Develop database security guidelines.
  - 09.02 Monitor database security systems.
  - 09.03 Manage web database security.
  - 09.04 Verify security compliance.
  - 09.05 Secure backup processes.
  - 09.06 Verify backup processes.
- 10.0 Demonstrate an understanding of e-commerce-The student will be able to:
  - 10.07 Identify components and procedures necessary to process credit card transactions.
- 11.0 Perform tasks related to e-commerce security-The student will be able to:
  - 11.01 Manage digital certificates.
  - 11.02 Maintain integrity in transaction storage and reporting systems.
  - 11.03 Protect credit card, personal, banking, and "bill to" and "ship to" information in transaction processes.
  - 11.05 Maintain email security related to e-commerce.
  - 11.07 Assist in evaluating e-commerce platform vulnerabilities.
- 12.0 Perform Web site management activities-The student will be able to:
  - 12.01 Describe the process of obtaining an Internet domain name and mapping it to an Internet Protocol (IP) address.
  - 12.04 Use current Web server software to create and maintain a secure Web site.
  - 12.05 Use Web site access tracking and analysis tools to evaluate the security of a Web server.
- 13.0 Design and implement physical security measures-The student will be able to:
  - 13.01 Identify the physical threats to an enterprise's resources that include the employees, facilities, data, equipment, support systems, media, and supplies

they utilize.

- 13.02 Diagnose an enterprise's physical vulnerabilities to threats from natural disasters such as fire, flooding, and power loss.
- 13.03 Specify possible countermeasures to physically protect an enterprise's resources and sensitive information.
- 13.04 Develop a list of physical facility requirements to secure the premises.
- 13.05 Evaluate the applicability of technical controls such as smart cards, access logs, and intrusion detection systems.

14.0 Perform operations and security management practices-The student will be able to:

- 14.01 Perform personnel administrative management operations, including specifying job requirements, background checking, job rotation and termination procedures.
- 14.02 Implement anti-virus solutions on an enterprise-wide basis.
- 14.03 Perform backups of critical information.
- 14.04 Protect the privacy of personal data.
- 14.05 Demonstrate proper handling including marking, handling, storage and destruction of sensitive information and media
- 14.06 Demonstrate an understanding of different control types, such as directive, preventive, detective, corrective, and recovery controls.
- 14.07 Determine what resources, including hardware/software, password files, source code, storage and logs, require protection.
- 14.08 Compare the advantages and disadvantages of internal versus external audits.
- 14.09 Perform compliance checks on user adherence to security policies.
- 14.10 Identify different types of monitoring including event, hardware, and illegal software.
- 14.11 Utilize monitoring tools and techniques such as trend analysis, traffic analysis and reporting mechanisms.
- 14.12 Implement countermeasures to defend against threats such as fraud, theft, employee sabotage, espionage, terrorism, and hackers.
- 14.13 Perform penetration testing activities including sniffing, eavesdropping, dumpster diving, and social engineering.
- 14.14 Understand principles of risk management and asset valuation.
- 14.15 Monitor server information for defamatory statements and privacy rights infractions.
- 14.16 Manage software licenses and enforce compliance within the organization.

15.0 Employ applications and systems development security techniques- The student will be able to:

- 15.03 Analyze the controls that are included within systems and applications software and those used in the development of agents, applets, software, databases, data warehouses and knowledge-based systems.
- 15.04 Implement features to ensure data and application integrity, security and availability.
- 15.06 Analyze local environment application issues including viruses, Trojan horses, logic bombs and worms.
- 15.08 Develop multilevel security schemes for databases and data warehouses.
- 15.10 Describe different aspects of application and database security control architectures, including process isolation, hardware segmentation, separation of privilege, layering, abstraction and security kernels.

- 15.13 Define the various types of computer viruses and malicious code and the roles that hackers, crackers, phreaks, and virus writers play in developing and utilizing malicious code.
  - 15.14 Formulate countermeasures to defend against or detect viruses and malicious code.
  - 15.15 Utilize anti-virus software and develop policies to provide enterprise-wide anti-virus protection.
  - 15.16 Employ countermeasures to defend against attacks such as brute force and replay attacks.
- 16.0 Develop business continuity and disaster recovery plans-The student will be able to:
- 16.01 Perform a business impact assessment, including components such as an emergency assessment, specifying business success and critical business functions, establishing priorities, and developing alternative means of accomplishing objectives.
  - 16.02 Specify the necessary capabilities of alternative business sites such as cold, warm, hot and mobile sites to be used in the case of a disaster.
  - 16.03 Develop business continuity, disaster containment, and disaster recovery plans for disasters such as floods, fires, power outages, strikes, hardware/software failures, and bombings addressing: protection of physical assets, emergency response, personnel notification, backups and off-site storage, utilities, external communications, and logistics and supplies.
- 17.0 Describe ethical issues, pertinent laws, and how to conduct investigations-The student will be able to:
- 17.01 Understand the major categories and types of laws as to how they relate to E-commerce, including criminal law, civil law and administrative law.
  - 17.02 Develop institutional policies and practices to conform to or supplement existing laws regarding data privacy and intellectual property rights.
  - 17.03 Describe abnormal and suspicious activity as it relates to database and e-commerce security.
  - 17.04 Analyze potential data security threats such as fraud or collusion.
  - 17.05 Develop legal institutional policies and practices to protect against purposeful violations of data integrity.
  - 17.06 Identify the major categories of computer crime and attacks, including military, business, financial, terrorist, grudge and "fun" attacks.
  - 17.07 Develop legal institutional policies and practices to conduct an investigation of purposeful violations of data integrity or existing e-commerce laws, including: the collection and preservation of evidence; confiscation of equipment, software and data; interrogation of suspected violators; and reporting of incidents to the appropriate authorities.
  - 17.08 Discuss major ethical and legal issues related to Internet use.
- 18.0 Perform general organizational computing workplace competencies-The student will be able to:
- 18.01 Follow oral and written instructions.
  - 18.02 Prepare, outline, and deliver a short oral presentation.
  - 18.05 Interpret appropriate information from graphics, maps, or signs.

- 18.06 Demonstrate self-motivation and responsibility to complete an assigned task.
  - 18.07 List the steps in problem solving.
  - 18.08 Identify and discuss issues contained within professional codes of conduct.
  - 18.09 Identify and discuss intellectual property rights and licensing issues.
  - 18.10 Identify potential sources of employee/employer or employee/employee conflict and discuss possible approaches to resolve such disagreements.
  - 18.16 Use appropriate communication skills, telephone etiquette, courtesy, and manners when dealing with individuals lacking a technical background.
- 19.0 Perform project planning and management activities-The student will be able to:
- 19.01 Apply effective time management skills.
  - 19.04 Describe appropriate measures for planning and implementing corporate-wide upgrade of hardware and software.
- 20.0 Perform documentation and technical reference activities-The student will be able to:
- 20.01 Use technical vocabulary appropriately
  - 20.02 Locate information in printed and online technical references
  - 20.03 Prepare documentation to track: physical inventory, regulation and license compliance, hardware and software modifications and upgrades, security breaches and countermeasures, and the current e-commerce security environment
- 21.0 Demonstrate employability skills-The student will be able to:
- 21.01 Identify sources of employment opportunities.
  - 21.03 Discuss employee rights regarding privacy, discrimination, due process, safety, etc.
- 22.0 Demonstrate professional development skills-The student will be able to:
- 22.04 Anticipate future industry trends.
  - 22.05 Describe options for continuing education.
  - 22.06 Read industry journals and magazines.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Technology Project Management  
**Career Cluster:** Information Technology

	<b>AS</b>	<b>AAS</b>

SOC Codes (all applicable)	15-1099.11	15-1099.11
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>	
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>	
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>	

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as project managers and professionals incorporating IT project management strategies in their business activities in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to balance of business and technology components and allows the student to gain additional skills in the area of Project Management.

### **Program Structure**

This program is a planned sequence of instruction consisting of 63 hours.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

The following industry certifications have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

CompTIA Project+ (COMPT007) – 3 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. The standard length of this program is 63 credit hours according to Rule 6A-14.030, F.A.C.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate proficiency in the use of microcomputers and their peripherals.
- 02.0 Demonstrate proficiency in the use of microcomputer software.
- 03.0 Demonstrate proficiency in the use of microcomputer operating systems software.
- 04.0 Demonstrate proficiency in the use of Web browsers to access Internet services.
- 05.0 Identify, classify and demonstrate IT activities.
- 06.0 Perform accounting activities.
- 07.0 Identify legal and ethical issues relative to the IT environment.
- 08.0 Perform Project Management Activities.
- 09.0 Use various Project Management software applications and languages.
- 10.0 Conduct systems analysis and design.
- 11.0 Perform human resource management activities.
- 12.0 Use various models and strategies for Project Management.
- 13.0 Perform customer service activities for Project Management.
- 14.0 Demonstrate employability skills.
- 15.0 Demonstrate appropriate communication skills.
- 16.0 Demonstrate human relations skills.
- 17.0 Perform decision-making activities.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Technology Project Management  
**CIP Numbers:** 1511100507 A.S.  
 0511100507 A.A.S.  
**Program Length:** 63 credit hours  
**SOC Code(s):** 15-1099.11

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

- 01.0 Proficiency in the use of microcomputers and their peripherals. – The student will be able to:
- 01.01 Identify and explain the main purpose of various microcomputer hardware devices.
  - 01.02 Demonstrate the proper use and maintenance of printers.
  - 01.03 Demonstrate the proper use and maintenance of scanners.
  - 01.04 Demonstrate the proper use and maintenance of CD-RWs.
  - 01.05 Demonstrate the proper use and maintenance of zip drives.
  - 01.06 Demonstrate the proper use and maintenance of DVDs.
  - 01.07 Demonstrate the proper use and maintenance of digital cameras.
  - 01.08 Demonstrate the proper use and maintenance of Web cameras.
  - 01.09 Demonstrate the proper use and maintenance of backup systems.
  - 01.10 Demonstrate the proper use of basic hand tools.
- 02.0 Proficiency in the use of web browsers and access to Internet resources. – The student will be able to:
- 02.01 Explain the history, purpose and use of the World Wide Web.
  - 02.02 Describe proper Internet etiquette and usage.
  - 02.03 Explain how to connect to the Internet.
  - 02.04 Explain the purpose and use of browsers and search engines.
  - 02.05 Use a Web browser to navigate the Web.
  - 02.06 Send electronic messages.
  - 02.07 Explain communication issues specific to email.
  - 02.08 Set up an email account.
  - 02.09 Participate in an email discussion group.
  - 02.10 Explain and use proper Usenet etiquette.
  - 02.11 Explain the guidelines for evaluating information needs before beginning a search.
  - 02.12 Explain issues associated with pornography, free speech, censorship, filtering, and copyright on the Web.
  - 02.13 Describe how to critically evaluate online information content.
  - 02.14 Use bookmarks to create a bibliography.
  - 02.15 Capture images, text, sound, and data from Web pages.
  - 02.16 Work with File Transfer Protocol (FTP) clients.

- 02.17 Identify and use instant messaging software.
- 02.18 Design and publish a simple Web page.

03.0 Proficiency in the use of microcomputer software. – The student will be able to:

- 03.01 Identify and use personal productivity software including word processing, spreadsheet, database, presentation, communication, and appointment scheduling applications
- 03.02 Identify and use Project Management software.
- 03.03 Identify and use e-Mail software.
- 03.04 Identify and use Web page design software.
- 03.05 Identify and use anti-virus software.
- 03.06 Identify and use report writing software.
- 03.07 Identify and use standards and methodology software.
- 03.08 Identify and use auditing software.
- 03.09 Identify and use data modeling software.
- 03.10 Identify and use distance learning software.

04.0 Proficiency in microcomputer operating systems software. – The student will be able to:

- 04.01 Describe the historical development of computer operating systems.
- 04.02 Describe the major hardware and related software of microcomputers.
- 04.03 Describe the various operating systems, including: Windows, Unix, Linux, etc.
- 04.04 Explain system and application architectures.
- 04.05 Describe various disk formats.
- 04.06 Describe the file system functions.
- 04.07 Demonstrate knowledge of data processing concepts.

05.0 Information technology activities. – The student will be able to:

- 05.01 Describe how business operations have changed due to Information Technology.
- 05.02 Classify the Information Technology components.
- 05.03 Describe the use of computing and software for business.
- 05.04 Describe the use of communication and research for business.
- 05.05 Describe the use of Web publishing for business.
- 05.06 Describe the use of digital media for business.
- 05.07 Identify fundamental financial analysis concepts.
- 05.08 Describe financial analysis tools.
- 05.09 Identify the phases of a project.
- 05.10 Demonstrate the need to validate requirements.
- 05.11 Describe change management.
- 05.12 Describe the fundamentals of risk management.
- 05.13 Identify estimating concepts.
- 05.14 Identify and create organizational goals and objectives.
- 05.15 Demonstrate the ability to work collaboratively with other individuals or teams.

06.0 Accounting activities. – The student will be able to:

- 06.01 Record transactions in a general journal
- 06.02 Post entries from a general journal to a general ledger
- 06.03 Prepare an income statement

- 06.04 Prepare an owner's equity statement
- 06.05 Prepare a balance sheet
- 06.06 Journalize and post adjusting entries
- 06.07 Journalize and post closing entries
- 06.08 Prepare a post closing trial balance
- 06.09 Prepare checks and stubs
- 06.10 Endorse checks using special endorsements
- 06.11 Prepare a deposit slip and adjust checkbook
- 06.12 Prepare a bank reconciliation
- 06.13 Maintain petty cash records
- 06.14 Record transactions in special journals
- 06.15 Post journal entries to subsidiary ledgers
- 06.16 Prepare payroll records
- 06.17 Interpret financial statements

07.0 Legal and ethical issues relative to the information technology environment. – The student will be able to:

- 07.01 Discuss the types of works that are protected by intellectual property laws including copyrights, patents, trademarks and trade secrets.
- 07.02 Discuss the basic elements of a contract.
- 07.03 Discuss e-mail litigation, including anti-spam laws.
- 07.04 Discuss e-mail use and ownership.
- 07.05 Describe customer and employee privacy issues and safeguards.
- 07.06 Develop examples of acceptable use policies.
- 07.07 Compare organizational codes of ethics.
- 07.08 Research industry standards and codes of conduct for Information Technology Professionals.
- 07.09 Write a personal code of ethics.

08.0 Project management activities. – The student will be able to:

- 08.01 Recognize the critical importance of processes in managing projects.
- 08.02 Distinguish between project management processes and product-oriented processes.
- 08.03 Sequence the groups of processes, as they would normally occur when managing a complex project.
- 08.04 Identify the components of the process interactions.
- 08.05 Describe the role of project management (PM) within the organization.
- 08.06 Identify the strengths and weaknesses of various project life cycle designs.
- 08.07 Understand the importance of managing project scope.
- 08.08 Compare and contrast project selection methods.
- 08.09 Build a Work Breakdown Structure (WBS), Gantt chart, and Pert Chart and describe the elements of each.
- 08.10 Compare and contrast types of cost estimates.
- 08.11 Examine cost control and earned value analysis.
- 08.12 Examine organizational planning, staff acquisition, and team development.
- 08.13 Examine risk identification, quantification, response development, and response control.
- 08.14 Compare and contrast project tracking and project reporting
- 08.15 Change control and configuration control.

- 08.16 Identify the costs and benefits of subcontracting and outsourcing.
  - 08.17 Apply fundamental financial analysis concepts to project management tasks.
  - 08.18 Use formal cost and schedule control and variance analysis to detect pending problems so the problems can be corrected or workaround strategies can be implemented.
  - 08.19 Track the expenses and costs of a project and compare them to the project plan.
  - 08.20 Explain how financial analysis tools are used in the financial management of a project.
  - 08.21 Explain how a project manager can control and manage projects and contract finances.
- 09.0 Project management software applications and languages. – The student will be able to:
- 09.01 Demonstrate proficiency with accounting software.
  - 09.02 Demonstrate proficiency with auditing software.
  - 09.03 Demonstrate proficiency with customer relations software.
  - 09.04 Demonstrate proficiency with enterprise resource software.
  - 09.05 Demonstrate proficiency with data modeling software.
  - 09.06 Demonstrate proficiency with remote controlling software.
  - 09.07 Demonstrate proficiency with program development software.
- 10.0 Systems analysis and design. – The student will be able to:
- 10.01 Perform a preliminary investigation of a systems project.
  - 10.02 Perform a detailed systems investigation and analysis of the project.
  - 10.03 Design the input and output for the system.
  - 10.04 Design the data files for the system.
  - 10.05 Design the processing flow of the system.
  - 10.06 Design a system to insure that only valid data is accepted and processed, completely and accurately.
  - 10.07 Establish a project plan for the development and implementation of the system.
  - 10.08 Develop the final systems documentation.
  - 10.09 Conduct necessary training and file conversion to properly implement the system.
- 11.0 Human resources management activities. – The student will be able to:
- 11.01 Summarize the history of human resource management.
  - 11.02 Describe the importance of human resources.
  - 11.03 Describe the components of the job requirement and analysis process.
  - 11.04 Describe the important elements of effective human resource planning.
  - 11.05 Discuss the performance appraisal and the uses of the performance appraisal.
  - 11.06 Compare various training options available to organizations
  - 11.07 Describe various ways of compensating employees.
  - 11.08 Summarize the legal regulations of compensation systems
  - 11.09 Explain the importance of maintaining employees.
  - 11.10 Discuss the importance of safety and health laws and standards.
  - 11.11 Describe how to create a safe and healthy work environment.
  - 11.12 Describe labor relations and collective bargaining.

12.0 Use various models and strategies for project management. – The student will be able to:

- 12.01 Understand how to control a project.
- 12.02 Describe effective project closeout procedures.
- 12.03 Identify the goals of project management.
- 12.04 Establish effective communication with stakeholders to increase project efficiency.
- 12.05 Create a project priority matrix to balance priorities.
- 12.06 Evaluate the critical path to reduce project length.
- 12.07 Use Planning Processes: Work Breakdown Structure, Risk Management, Estimating, and Scheduling.
- 12.08 Use Cost Management, Procurement Management, and Project Tracking methods/models/strategies.
- 12.09 Describe closing processes, Project Closeout, Project Closing Activities, and Project Completion Workshops.

13.0 Customer service techniques. – The student will be able to:

- 13.01 Define customer service.
- 13.02 Explain the value of customer service
- 13.03 Discuss solutions to overcoming obstacles in customer service.
- 13.04 Define service culture in organizations.
- 13.05 Describe management's role in customer service formulation.
- 13.06 Describe employee empowerment and its importance in providing good customer service.
- 13.07 Explain the role of communication in customer service.
- 13.08 Describe the basic behavioral styles of customers.
- 13.09 Explain the difference behavioral styles of a challenging customer.
- 13.10 Describe strategies of dealing with challenging customers
- 13.11 Determine strategies for working with various customer behaviors.

14.0 Employability skills. – The student will be able to:

- 14.01 Conduct a job search.
- 14.02 Secure information about a job.
- 14.03 List and obtain documents that may be required when applying for a job and preparing for an interview.
- 14.04 Complete a job application form correctly.
- 14.05 Demonstrate competence in job interview techniques.
- 14.06 Identify or demonstrate appropriate responses to criticism from employer, supervisor, other employee, or customer.
- 14.07 Identify and describe acceptable work habits.
- 14.08 Demonstrate knowledge of how to make appropriate job changes during the course of a career.
- 14.09 Demonstrate acceptable employee health habits.
- 14.10 Demonstrate knowledge of the "Florida Right-To-Know Law" as recorded in Florida Statutes Chapter 442.

15.0 Communications skills. – The student will be able to:

- 15.01 Write logical and clear statements, or phrases, to accurately fill out forms/invoices commonly used in business and industry.
  - 15.02 Read and explain graphs, charts, diagrams, and tables commonly used in this industry/occupation area.
  - 15.03 Read and follow written and oral instructions.
  - 15.04 Answer and ask questions coherently and concisely.
  - 15.05 Read critically by recognizing assumptions and implications and by evaluating ideas.
  - 15.06 Demonstrate appropriate telephone/communication skills
  - 15.07 Conduct oral presentations.
  - 15.08 Observe and interpret verbal and nonverbal behavior.
  - 15.09 Use English language skills in punctuation and grammar.
  - 15.10 Compose and critique business documents, memorandums, business letters, requests, answer requests, claims/adjustments, and letters using correct English grammar and punctuation.
  - 15.11 Communicate through the Internet using e-mail, attachments, net meetings, and video conferencing.
  - 15.12 Summarize the skills involved in being an effective listener.
  - 15.13 Identify barriers to intercultural communication.
  - 15.14 Search the Internet using different search engines.
  - 15.15 Write routine, good and bad news, and goodwill messages.
  - 15.16 Write persuasive messages.
  - 15.17 Communicate information through the Internet and using other electronic devices.
  - 15.18 Find, evaluate and process information.
  - 15.19 Create electronic presentations.
  - 15.20 Create effective business reports and proposals.
  - 15.21 Write professional resumes and complete applications.
  - 15.22 Create effective Web pages.
- 16.0 Human relations skills. – The student will be able to:
- 16.01 Demonstrate appropriate work habits.
  - 16.02 Identify traits that promote good human relations and increase job performance.
  - 16.03 Analyze and develop written solutions to behavior problems affecting job performance.
  - 16.04 Demonstrate ability to work in multicultural and diverse environments.
  - 16.05 Identify opportunities for business development by employing international relationships and human resources.
  - 16.06 Identify the significant events in the human relations movement in U.S. business history.
- 17.0 Decision making activities. – The student will be able to:
- 17.01 List the steps in problem solving.
  - 17.02 Identify relevant variables, tasks, actions, and outcomes.
  - 17.03 Demonstrate the ability to determine the appropriate priority and sequence of tasks.
  - 17.04 Prepare a day's schedule for an employer.
  - 17.05 Choose appropriate action in situations requiring following an organization's chain of command.

- 17.06 Choose appropriate action in situations requiring effective time management.
- 17.07 Identify ways to assign, review, and monitor the completion of others' work.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as an ERP specialist, ERP developer, ERP interface technician, ERP administrator, ERP database specialist, ERP designer, or ERP planner in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to enterprise resource software environments such as SAP, Oracle, PeopleSoft, MAPICS, Great Plains, and others.

### **Program Structure**

This program is a planned sequence of instruction consisting of 63 hours.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

**Cooperative Training:** Cooperative training is appropriate for this program but is not required. Whenever offered, the rules, guidelines, and requirements specified in the Florida Department of Education Cooperative Education Manual apply.

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. The standard length of this program is 63 credit hours according to Rule 6A-14.030, F.A.C.

### **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate an understanding of Enterprise Resource Planning (ERP) and Electronic Business fundamentals
- 02.0 Demonstrate proficiency in developing Electronic Resource Planning (ERP) systems solutions
- 03.0 Demonstrate proficiency in Enterprise Resource Planning (ERP) technical functional requirements
- 04.0 Demonstrate proficiency in Enterprise Resource Planning (ERP) project planning
- 05.0 Demonstrate proficiency in Enterprise Resource Planning (ERP) project coordination
- 06.0 Demonstrate proficiency in developing Enterprise Resource Planning (ERP) customer business function requirements
- 07.0 Demonstrate competence in communications with Enterprise Resource Planning (ERP) customers
- 08.0 Demonstrate proficiency in business and management processes
- 09.0 Demonstrate proficiency with high-level computer programming languages as related to Enterprise Resource Planning (ERP) software
- 10.0 Perform general organizational computing workplace competencies
- 11.0 Demonstrate employability skills
- 12.0 Demonstrate business communication skills
- 13.0 Demonstrate professional development skills

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Enterprise Resource Planning (ERP) Software Specialist  
**CIP Numbers:** 1511100508 A.S.  
 0511100508 A.A.S.  
**Program Length:** 63 credit hours  
**SOC Code(s):** 11-3021

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

- 01.0 Demonstrate an understanding of enterprise resource planning (ERP) and electronic business fundamentals. – The student will be able to:
- 01.01 Identify characteristics of the American enterprise system, electronic business (e-commerce), and ERP systems.
  - 01.02 List the types of large-scale business environments that ERP systems support.
  - 01.03 Understand ERP terminology.
  - 01.04 Describe how ERP uses a collection of software applications to manage the entire organization.
  - 01.05 Describe how ERP systems integrate sales, manufacturing, logistics, accounting and other enterprise business functions.
  - 01.06 Describe how ERP systems share common database and business analysis tools.
  - 01.07 Describe how e-commerce has changed society.
  - 01.08 Differentiate between the various e-commerce and ERP business models.
  - 01.09 Identify e-commerce market sectors.
  - 01.10 List factors that contribute to economic growth and impact supply and demand.
  - 01.11 Identify characteristics of different types of business ownership.
- 02.0 Demonstrate proficiency in developing electronic resource planning (ERP) systems solutions. – The student will be able to:
- 02.01 Research available enterprise solutions.
  - 02.02 Review evaluations of comparable ERP software programs and vendors.
  - 02.03 Compare collected data.
  - 02.04 Participate in demonstrations of ERP software programs.
  - 02.05 Assess hardware requirements.
  - 02.06 Assess software requirements.
  - 02.07 Analyze solution integration activities.
  - 02.08 Establish benchmarking and sizing criteria.
  - 02.09 Assist in identifying overall costs.
  - 02.10 Understand the difference and relationship between ERP and Customer Relation Management (CRM) software.
  - 02.11 List and compare implementation costs.
  - 02.12 List and compare training costs.

03.0 Demonstrate proficiency in enterprise resource planning (ERP) technical functional requirements. – The student will be able to:

- 03.01 Demonstrate understanding of issues related to shared data and integrated databases.
- 03.02 Design relational databases.
- 03.03 Develop relational databases.
- 03.04 Utilize database toolset – GUI.
- 03.05 Exhibit working knowledge of query language.
- 03.06 Develop an application that interfaces with a database.
- 03.07 Create simple interfaces for data conversion between sources and systems.
- 03.08 Design and develop interface between ERP modules and systems.
- 03.09 Develop simple programs using ERP development tools.
- 03.10 Create usable reports with writing tools and languages related to applicable ERP systems.
- 03.11 Identify different operating system architectures.
- 03.12 Identify networking protocols' benefits and limitations.
- 03.13 Document technical modifications to programs and systems.
- 03.14 Exhibit proficiency in the concepts of distributed applications.

04.0 Demonstrate proficiency in enterprise resource planning (ERP) project planning. – The student will be able to:

- 04.01 Describe project planning fundamentals and concepts.
- 04.02 Identify project stakeholders.
- 04.03 Determine stakeholder needs.
- 04.04 Determine stakeholder training requirements.
- 04.05 Identify potential stakeholder conflicts of interest.
- 04.06 Define the scope of a project.
- 04.07 Create project timelines.
- 04.08 Establish rules of communication between project stakeholders.
- 04.09 Create approval plans.
- 04.10 Create conflict resolution plans.
- 04.11 Define and sequence tasks.
- 04.12 Identify technology-related risks.
- 04.13 Establish project hardware and software dependencies.
- 04.14 Identify and assign project resources and materials.
- 04.15 Budget resources.
- 04.16 Identify training needs.
- 04.17 Document project plan.
- 04.18 Construct an implementation schedule for a large project.

05.0 Demonstrate proficiency in enterprise resource planning (ERP) project coordination. – The student will be able to:

- 05.01 Use workflow software tools.
- 05.02 Identify and manage project resources.
- 05.03 Identify and manage project risks.
- 05.04 Collaborate with team members.
- 05.05 Facilitate project changes.
- 05.06 Participate in project implementation activities.

- 05.07 Perform a detailed project analysis.
  - 05.08 Describe the scale and impact of the project on the organization.
  - 05.09 Identify how business process integration will change the relationships between traditional functional departments within the organization.
  - 05.10 Describe any role re-define ment by function within the organization.
  - 05.11 Describe the cost and time parameters of the project an implementation schedule for a large project.
- 06.0 Demonstrate proficiency in developing enterprise resource planning (ERP) customers' business function requirements. – The student will be able to:
- 06.01 Identify, document, and compile stakeholder requirement.
  - 06.02 Define the scope, objectives, and parameters of the project.
  - 06.03 Interview users and analyze their workflow systems and procedures.
  - 06.04 Identify integration points by department and process
  - 06.05 Describe the function and supporting activities for Joint Application Development (JAD) meeting.
  - 06.06 Describe the overall impact the project will have on the organization.
  - 06.07 Assist in identifying potential problem areas.
  - 06.08 Assist with user training.
  - 06.09 Identify solutions and methods to fulfill requirements.
- 07.0 Demonstrate competence in communications with enterprise resource planning (ERP) customers. – The student will be able to:
- 07.01 Summarize and document project overview.
  - 07.02 Create ERP design modules.
  - 07.03 Write program test scripts.
  - 07.04 Present design models.
  - 07.05 Coordinate activities and resources with all relevant departments.
  - 07.06 Schedule meetings.
  - 07.07 Create progress reports.
  - 07.08 Prepare boardroom presentations.
  - 07.09 Deliver and explain procedure to stakeholders.
  - 07.10 Act as a training intermediary for stakeholders.
  - 07.11 Identify and define long-term implications of system changes.
  - 07.12 Explain the difference between outsourcing and in-house support.
  - 07.13 Apply effective customer relations.
  - 07.14 Describe techniques for keeping the customer informed.
  - 07.15 Demonstrate proper follow-up techniques.
- 08.0 Demonstrate proficiency in business and management processes. – The student will be able to:
- 08.01 Identify forms of business and not-for-profit organizations.
  - 08.02 Describe basic functions within the typical business organization.
  - 08.03 Describe various forms of management hierarchies and organizational design.
  - 08.04 Identify the responsibilities and duties of managers by level or function within the organization.
  - 08.05 Contrast the operations and organizational form of small organizations and large enterprises.

- 08.06 Describe the role of Information Technology in modern business management.
  - 08.07 Explain the interrelationships between business processes including marketing, production, finance, human resources.
  - 08.08 Identify software packages that support the business processes used by large enterprises.
  - 08.09 Describe the general accounting process.
  - 08.10 Interpret and use financial reports, budgets, and basic financial analysis techniques.
  - 08.11 Use productivity software to create spreadsheets, documents, reports, schedules, databases, and Internet communication.
  - 08.12 Describe the role of labor in modern business management.
  - 08.13 Describe the functions of human resource management.
  - 08.14 List the basic components of business contracts.
- 09.0 Demonstrate proficiency with high-level computer programming languages as related to enterprise resource planning (ERP) software. – The student will be able to:
- 09.01 Describe the programming languages applicable to ERP software.
  - 09.02 Apply structured programming for a high-level program as related to ERP software.
  - 09.03 Write a program in a high-level language as related to ERP software.
  - 09.04 Identify and define associated system level concepts.
  - 09.05 Describe mid-range and mainframe computer environments that support ERP.
- 10.0 Perform general organizational computing workplace competencies. – The student will be able to:
- 10.01 Follow oral and written instructions.
  - 10.02 Prepare, outline, and deliver a short oral presentation.
  - 10.03 Prepare visual material to support an oral presentation.
  - 10.04 Interpret appropriate information from graphics, maps, or signs.
  - 10.05 Participate in group discussions as a member and as a leader.
  - 10.06 Apply effective time-management skills.
  - 10.07 Demonstrate self-motivation and responsibility to complete an assigned task.
  - 10.08 Identify issues contained within professional codes of conduct.
  - 10.09 Identify software licensing issues.
  - 10.10 Identify privacy issues.
  - 10.11 Identify encryption issues.
  - 10.12 Identify legal liability issues.
  - 10.13 Describe acceptable use policies for computer environment.
  - 10.14 Identify copyright issues.
  - 10.15 Apply principles and techniques for being a productive, contributing member of a team.
  - 10.16 Identify and use acceptable strategies for resolving conflict in the workplace.
  - 10.17 Identify techniques for stress management and prevention of job burnout.
- 11.0 Demonstrate employability skills. – The student will be able to:
- 11.01 Describe different job search methods, including online and traditional.
  - 11.02 Conduct a job search.
  - 11.03 Identify documents, which may be required when applying for a job interview.
  - 11.04 Complete a job application form correctly.
  - 11.05 Demonstrate competence in job interview techniques.

- 11.06 Identify acceptable work habits.
- 11.07 Demonstrate knowledge of the "Florida Right-To-Know Law" as recorded in Florida Statutes Chapter 442.

12.0 Demonstrate business communication skills. – The student will be able to:

- 12.01 Accurately fill out forms and create documents commonly used in business and industry.
- 12.02 Read and understand graphs, charts, diagrams, and tables commonly used in this industry/occupation area.
- 12.03 Read and follow written and oral instructions.
- 12.04 Answer and ask questions coherently and concisely.
- 12.05 Use correct grammar in written and oral communication.
- 12.06 Demonstrate appropriate telephone communication skills.
- 12.07 Demonstrate appropriate verbal skills.
- 12.08 Demonstrate appropriate listening skills.
- 12.09 Demonstrate appropriate business etiquette skills.
- 12.10 Use and follow ethical standards as related to ERP.

13.0 Demonstrate professional development skills. – The student will be able to:

- 13.01 Identify corporate strategies and policies.
- 13.02 Build mentor relationships.
- 13.03 Identify industry trends and developments.
- 13.04 Continue formal education.
- 13.05 Network with industry professionals.
- 13.06 Read industry journals and magazines.
- 13.07 Attend seminars, workshops, and tradeshow.
- 13.08 Obtain industry and field certifications as required for career advancement.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the Computer Information Technology AS/AAS degree program (1511010305/0511010305).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to the creation of maps; creation of geographic data files; manipulation of geographic data; and analysis of geographic data using appropriate software.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this program the student will be able to perform the following:

- 01.0 Perform general computer application activities.
- 02.0 Demonstrate an understanding of geographic coordinate systems.
- 03.0 Perform map creation activities.
- 04.0 Perform GIS data file creation activities.
- 05.0 Perform GIS data file manipulation activities.
- 06.0 Perform GIS analysis activities.
- 07.0 Perform database operations.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Geographic Information System CCC  
**CIP Number:** 0545070213  
**Program Length:** 21 Credit Hours  
**SOC Code(s):** 15-1099.07

This certificate program is part of the Computer Information Technology AS/AAS degree program (1511010305/0511010305). At the completion of this program, the student will be able to:

- 01.0 Perform general computer application activities – The student will be able to:
- 01.01 Select the most efficient method of file organization for a given situation.
  - 01.02 Identify security procedures to maintain integrity of files.
  - 01.03 Create reports using a word processing application.
  - 01.04 Analyze numerical information using a spreadsheet application.
  - 01.05 Create a database for storing information using a database application .
  - 01.06 Communicate using an e-mail program.
  - 01.07 Retrieve information from the Internet.
- 02.0 Demonstrate an understanding of geographic coordinate systems – The student will be able to:
- 02.01 Differentiate between different models for the shape of the earth.
  - 02.02 Describe the characteristics of a global coordinate system.
  - 02.03 Describe the characteristics of a geographic datum.
  - 02.04 Compare and contrast different map projections.
  - 02.05 Detail the characteristic of the Cartesian coordinate system.
  - 02.06 Detail the UTM, UPS and State Plane coordinate systems.
- 03.0 Perform map creation activities – The student will be able to:
- 03.01 Set the appropriate geographic coordinate system for a map in the GIS application.
  - 03.02 Add geographic data layers to a GIS application.
  - 03.03 Manipulate data files that do not align correctly.
  - 03.04 Symbolize each layer appropriately.
  - 03.05 Label map features as needed.
  - 03.06 Add map components such as legends, titles, scale bars, north arrows etc.
  - 03.07 Publish the complete map in paper and electronic formats.
- 04.0 Perform GIS data file creation activities. – The student will be able to:
- 04.01 Subset existing GIS data files to create new files.
  - 04.02 Combine existing, adjacent GIS data files together to create new files.
  - 04.03 Collect coordinate information using a GPS receiver in the correct geographical coordinate system.
  - 04.04 Create new GIS data files using coordinate information.

- 04.05 Register aerial photographs or satellite images to a specific geographical coordinate system.
- 04.06 Create new GIS data files by digitizing on top of registered images.
- 05.0 Perform GIS data file manipulation activities – The student will be able to:
  - 05.01 Create, delete and move GIS files between folders and computers.
  - 05.02 Add metadata to GIS files.
  - 05.03 Set coordinate system information for a GIS file.
  - 05.04 Reproject GIS files to different coordinate systems.
  - 05.05 Add and delete fields to a GIS database.
  - 05.06 Manipulate values of field within the GIS database.
- 06.0 Perform GIS spatial analysis activities – The student will be able to:
  - 06.01 Generalize maps by merging adjacent areas if they contain the same or similar attributes.
  - 06.02 Overlay GIS files that cover the same area to create new files.
  - 06.03 Create buffers around map features.
  - 06.04 Manipulate digital elevation models (DEM's) to create slope, aspect, view shed and hill shade layers.
  - 06.05 Create density maps from point features.
  - 06.06 Interpolate point features to create continuous surfaces.
  - 06.07 Generate spatial statistics on GIS files.
- 07.0 Perform database operations – The student will be able to:
  - 07.01 Build a relational database
  - 07.02 Query, display and format data.
  - 07.03 Save, retrieve and run queries.
  - 07.04 Build and format reports.
  - 07.05 Group and summarize data.
  - 07.06 Insert, update, automatically generate and delete data.
  - 07.07 Control transaction processing.
  - 07.08 Create, confirm, modify and remove tables to store data.
  - 07.09 Apply business rules to ensure data integrity.
  - 07.10 Restrict user access to tables.
  - 07.11 Improve query performance.
  - 07.12 Develop programs in PL/SQL.
  - 07.13 Insert and manipulate data with PL/SQL.

2012 – 2013

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in e-business such as computer specialists, database technicians, security specialists, Web content specialists, developers, technical, systems, and network analysts, Web security specialists, and Internet technical support specialists in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

This program focuses on a balance of business and technology components and allows the student to gain additional skills in one of four areas of specialization: Business, Technology, Software, and Security.

### **Program Structure**

This program is a planned sequence of instruction consisting of 63 hours.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

The following industry certifications have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

Certified Internet Web (CIW) – E-Commerce Designer (PROSO003) – 3 credits  
CompTIA Security+ (COMPT003) – 3 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education

coursework according to SACS. The standard length of this program is 63 credit hours according to Rule 6A-14.030, F.A.C.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS/AAS degree program includes the following College Credit Certificates:

- E-Business Security Technical Certificate (0552120102) – 24 credit hours
- E-Business Software Technical Certificate (0552120103) – 21 credit hours
- E-Business Technical Certificate (0552120101) – 24 credit hours
- E-Business Technology Technical Certificate (0552120104)– 21 credit hours
- E-Business Ventures Technical Certificate (0552120105) – 24 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

### **Standards**

After successfully completing this program, the student will be able to perform the following:

#### **General Skills Core**

- 01.0 Demonstrate comprehension and communication skills
- 02.0 Demonstrate professional development skills
- 03.0 Perform documentation and technical reference activities
- 04.0 Demonstrate employment skills
- 05.0 Perform general organizational workplace competencies
- 06.0 Demonstrate knowledge of legal and ethical issues
- 07.0 Perform project management activities

#### **Technology Core**

- 08.0 Understand issues related to E-Business.
- 09.0 Demonstrate proficiency in the use of web browsers and access to Internet resources
- 10.0 Understand local area networks
- 11.0 Demonstrate proficiency in microcomputer operating systems and software.
- 12.0 Perform Web authoring activities.
- 13.0 Conduct systems analysis and design.
- 14.0 Understand database management systems.

#### **Business Core**

- 15.0 Compare and contrast E-Business with traditional business
- 16.0 Identify, classify and demonstrate management activities for E-Business.
- 17.0 Identify legal and ethical issues for E-business
- 18.0 Accounting and finance activities
- 19.0 Perform marketing activities for E-business

In addition to the above core outcomes, the student will successfully complete the outcomes in at least one of the following specializations:

**Security Specialization**

- 20.0 Design, develop and implement physical, network, host, application, and user security systems for E-business.
- 21.0 Maintain and monitor security policies.

**Software Specialization**

- 20.0 Use various software applications, languages, and protocols for E-business environment.
- 21.0 Develop software applications for e-Business environment
- 22.0 Maintain systems quality and perform testing activities.

**Technology Specialization**

- 20.0 Perform Web Server Management activities
- 21.0 Support E-business applications and product development
- 22.0 Maintain network infrastructure
- 23.0 Design, integrate and deploy E-business systems
- 24.0 Perform technical requirements to support UNIX operating system
- 25.0 Maintain systems quality and perform testing activities.

**Business Specialization**

- 20.0 Perform management activities to support human resources in E-business environment
- 21.0 Perform activities to enhance supply chain management in E-business.
- 22.0 Use various models and strategies for E-business.
- 23.0 Perform customer service techniques for E-business.
- 24.0 Perform selling techniques for E-business.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** E-Business Technology  
**CIP Numbers:** 1552120100 A.S.  
 0552120100 A.A.S.  
**Program Length:** 63 credit hours  
**SOC Code(s):** 15-1099.12

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

**General Skills Core**

01.0 Demonstrate comprehension and communication skills. – The student will be able to:

- 01.01 Read and discuss work from different professional journals related to the course content.
- 01.02 Reflect on what has been learned through reading, recognizing assumptions and implications, and formulate ideas, opinions, and personal responses.
- 01.03 Use reference sources such as books, magazines, and electronic databases to gather and critically evaluate materials.
- 01.04 Write reports, summaries, and descriptive essays.
- 01.05 Write clear and well-organized research papers, integrating a variety of information.
- 01.06 Submit final drafts using correct grammar, punctuation, and spelling.
- 01.07 Prepare, outline and deliver an oral report with appropriate materials to the class
- 01.08 Participate in group discussions as a member and as a leader.
- 01.09 Take notes, organize, summarize, and paraphrase ideas and details.
- 01.10 Read both technical and non technical text accurately.
- 01.11 Follow written and oral technical instructions.
- 01.12 Read and understand graphs, charts, diagrams and tables commonly used in this industry/occupation.
- 01.13 Read trade journals and magazines to stay current in the industry

02.0 Demonstrate professional development skills. – The student will be able to:

- 02.01 Identify corporate strategies and policies.
- 02.02 Maintain professional contact for future projects.
- 02.03 Build mentor relationships.
- 02.04 Anticipate future industry trends.
- 02.05 Continue education.
- 02.06 Review and analyze other industry productions.
- 02.07 Use and experiment with the technology.
- 02.08 Network with local professionals in the industry.
- 02.09 Read industry trade journals and magazines to stay current in the industry.
- 02.10 Attend seminars, workshops, and tradeshow.

03.0 Perform documentation and technical reference activities. – The student will be able to:

- 03.01 Use technical vocabulary appropriately.
- 03.02 Locate information in technical references.
- 03.03 Prepare technical reports.
- 03.04 Describe appropriate documentation procedures and practices.
- 03.05 Produce and maintain system documentation, such as inventory, costs, installed software, and procedures.
- 03.06 Perform documentation and technical reference activities.
- 03.07 Cite correctly Internet-based resources using proper format.
- 03.08 Research industry trends on the Internet.

04.0 Demonstrate employment skills. – The student will be able to:

- 04.01 Identify appropriate attire and grooming for a business office.
- 04.02 Conduct a job search.
- 04.03 Demonstrate job interview skills.
- 04.04 Identify methods for securing an employment references.
- 04.05 Identify and discuss issues contained within professional codes of conduct.
- 04.06 Use appropriate communication skills, courtesy, manners, and dress in the Workplace.
- 04.07 Identify acceptable work habits.
- 04.08 Identify and use acceptable strategies for resolving conflict in the workplace.
- 04.09 Identify and demonstrate appropriate responses to criticism from employers, supervisor, or other employees.
- 04.10 Apply principles and techniques for working productively with people of diverse cultures and backgrounds.
- 04.11 Identify techniques for stress management and prevention of job burn-out.
- 04.12 Use appropriate communication skills, telephone etiquette, courtesy, and manners when dealing with customers.
- 04.13 Demonstrate knowledge of how to make appropriate job changes.

05.0 Perform general organizational workplace competencies. – The student will be able to:

- 05.01 Follow oral and written instructions.
- 05.02 Prepare, outline, and deliver a short oral presentation.
- 05.03 Participate in group discussion as a member and as a leader.
- 05.04 Obtain appropriate information from graphics, maps, or signs.
- 05.05 Prepare visual material to support an oral presentation.
- 05.06 Demonstrate self-motivation and responsibility to complete an assigned task.
- 05.07 List the steps in problem solving.
- 05.08 Choose appropriate action in situations requiring effective time management.
- 05.09 Apply principles and techniques for being a productive, contributing member of a team.
- 05.10 Communicate effectively with individuals lacking a technical background.
- 05.11 Identify clear detailed technical oral instructions.
- 05.12 Identify examples of effective strategies to fulfill end user needs training strategies and techniques.
- 05.13 Encourage and build mutual trust, respect, and cooperation among team members.

- 05.14 Apply techniques for organizing and planning of time and resources to complete an assigned task.
  - 05.15 Assimilate new knowledge into project solutions and decisions.
  - 05.16 Apply active listening techniques in interpersonal communications.
  - 05.17 Identify strategies to improve and maximize productivity in the workplace.
  - 05.18 Employ brainstorming techniques such as brainstorming to generate ideas and suggestions to achieve a task.
  - 05.19 Analyze several alternatives and compare costs and benefits in determining the best solution.
  - 05.20 Demonstrate the ability to use common office applications including word processing, spreadsheets, email, and presentation software.
- 06.0 Demonstrate knowledge of legal and ethical issues. – The student will be able to:
- 06.01 Correctly cite or attribute sources.
  - 06.02 Use copyrighted materials appropriately.
  - 06.03 Discuss the types of works that are protected by intellectual property laws including copyrights, patents, trademarks and trade secrets.
  - 06.04 Discuss the basic elements of a contract.
  - 06.05 Discuss e-mail litigation, including anti-spam laws.
  - 06.06 Discuss e-mail use and ownership.
  - 06.07 Describe customer and employee privacy issues and safeguards.
  - 06.08 Develop examples of acceptable use policies.
  - 06.09 Compare organizational codes of ethics.
  - 06.10 Research industry standards and codes of conduct for professionals.
  - 06.11 Write a personal code of ethics.
  - 06.12 Correctly cite or attribute sources.
  - 06.13 Use copyrighted materials appropriately.
- 07.0 Perform project management activities. – The student will be able to:
- 07.01 Describe the role of project management (PM) within the organization.
  - 07.02 Identify the strengths and weaknesses of various project life cycle design.
  - 07.03 Understand the importance of project scope management.
  - 07.04 Compare and contrast project selection methods.
  - 07.05 Build a Work Breakdown Structure (WBS), Gantt chart, and Pert Chart and describe those different elements.
  - 07.06 Compare and contrast types of cost estimates.
  - 07.07 Examine cost control and earned value analysis.
  - 07.08 Examine organizational planning, staff acquisition, and team development.
  - 07.09 Examine risk identification, quantification, response development, and response control.
  - 07.10 Compare and contrast project tracking and project reporting.
  - 07.11 Understand change control and configuration control.
  - 07.12 Understand subcontracting and outsourcing.
  - 07.13 Discuss and analyze project management case study.

### **Technology Core**

- 08.0 Understand issues related to e-business. – The student will be able to:

- 08.01 Explain the difference between intranet and internet and the role of each in e-Business.
  - 08.02 Explain the history, purpose and use of the World Wide Web and how it has enabled e-Business
  - 08.03 Describe the rise of various e-Business models such as information and content models, broadcast/content aggregations models, interactive models, and content provider models.
  - 08.04 Explain security issues related to electronic payment.
  - 08.05 Explain issues of advertising, marketing and solicitation activities affecting e-business.
- 09.0 Demonstrate proficiency in the use of web browsers and access to internet resources. – The student will be able to:
- 09.01 Explain the history, purpose and use of the World Wide Web
  - 09.02 Describe proper Internet etiquette and usage.
  - 09.03 Explain how to connect to the Internet
  - 09.04 Explain the purpose and use of browsers and search engines
  - 09.05 Understand and use Web browser tools to navigate the Web.
  - 09.06 Demonstrate proficiency in email technologies by using email, setting up email accounts, and explaining communication and privacy issues specific to email.
  - 09.07 Send electronic messages
  - 09.08 Explain communication issues specific to email
  - 09.09 Set up an e-mail account.
  - 09.10 Participate in an email a web-based discussion group.
  - 09.11 Explain and use proper Usenet electronic bulletin board etiquette.
  - 09.12 Explain the guidelines for evaluating information needs before beginning a search an electronic search
  - 09.13 Explain issues associated with pornography, free speech, censorship, filtering, and copyright on the Web.
  - 09.14 Describe how to critically evaluate online information content.
  - 09.15 Use bookmarks to create a bibliography
  - 09.16 Capture images, text, sound, and data from Web pages
  - 09.17 Work with File Transfer Protocol (FTP) clients
  - 09.18 Identify and use instant messaging software
  - 09.19 Design and publish a simple Web page using HTML and other Web page design software tools.
- 10.0 Understand local area networks. – The student will be able to:
- 10.01 Identify and explain the main purpose of various communication hardware devices, communication media, and protocols.
  - 10.02 Describe various network topologies.
  - 10.03 Differentiate between the OSI reference model and the TCP/IP protocol architecture.
  - 10.04 Explain components and functions of all layers in the OSI reference model.
  - 10.05 Explain TCP/IP architecture.
  - 10.06 Differentiate between analog and digital signals.
  - 10.07 Describe various transmission media and how devices such as modems work.
  - 10.08 Explain collision occurrences and detection.
  - 10.09 Describe the function of a bridge and explain how bridges work.

- 10.10 Explain the factors and techniques for data transportation.
  - 10.11 Understand issues in balancing network load, and calculating equipment necessary to handle expected load.
- 11.0 Demonstrate proficiency in microcomputer operating systems and software. – The student will be able to:
- 11.01 Describe the historical development of computer operating software.
  - 11.02 Describe the major hardware and related software of microcomputers.
  - 11.03 Describe the various operating systems, including : Windows, Unix, Novell, etc.
  - 11.04 Explain system and application architectures.
  - 11.05 Describe various disk formats.
  - 11.06 Use various software applications, including word processors, spreadsheets, databases, presentation software, and appointment scheduling applications.
  - 11.07 Identify the major programming languages used in business data processing.
  - 11.08 Locate requested information on a computer output, and recognize incorrect information.
- 12.0 Perform web authoring activities to support e-business. – The student will be able to:
- 12.01 Identify and describe the components of an HTML document.
  - 12.02 Create lists in an HTML document.
  - 12.03 Recognize the various layouts used in Web site design.
  - 12.04 Use storyboarding to design a comprehensive Web site.
  - 12.05 Create links between HTML documents within a Web site and to external HTML documents.
  - 12.06 Link to another computer, to a downloadable file, to a mail program, or to a newsgroup.
  - 12.07 Create tables.
  - 12.08 Add images to Web pages.
  - 12.09 Customize Web page color schemes.
  - 12.10 Create image maps.
  - 12.11 Identify and use Common Gateway Interface scripts.
  - 12.12 Identify elements of HTML fill-in forms.
  - 12.13 Use Server Side Includes (SSI) commands in an HTML document.
  - 12.14 Identify the required components of a Web page that incorporate advanced features.
  - 12.15 Incorporate Server Side Include commands in a functional Web site.
  - 12.16 Describe the various CGI scripting languages used in a Web site.
  - 12.17 Develop Web pages that utilize PERL scripts with CGI.
  - 12.18 Modify and use JavaScript in a Web site.
  - 12.19 Incorporate Java applets in a Web site.
- 13.0 Conduct systems analysis and design. – The student will be able to:
- 13.01 Perform a preliminary investigation of a systems project.
  - 13.02 Perform a detailed systems investigation and analysis of the project.
  - 13.03 Design the input and output for the system.
  - 13.04 Design the data files for the systems.
  - 13.05 Design the processing flow of the system.

- 13.06 Design a system to insure that only valid data is accepted and processed, completely and accurately.
  - 13.07 Establish a project plan for the development and implementation of the systems.
  - 13.08 Program and test the system.
  - 13.09 Develop the final systems documentation.
  - 13.10 Conduct necessary training and file conversion to properly implement the system.
  - 13.11 Understand industry-standard models for developing and maintaining software such as the Capability Maturity Model.
  - 13.12 Be able to use industry-standard tools such as Unified Modeling Language (UML) to model a systems development project.
- 14.0 Understand database management systems. – The student will be able to:
- 14.01 Understand the role of databases and how databases influence E-business decisions.
  - 14.02 List the advantages and disadvantages of using databases.
  - 14.03 Understand the importance of data modeling as an analysis and communication tool.
  - 14.04 Describe the elements of a data model.
  - 14.05 Model the data requirements for sample E-business problems.
  - 14.06 Understand the principles associated with the relational model.
  - 14.07 Understand the relationship between functional dependencies and keys.
  - 14.08 Determine the Normal form of a relation and execute the steps necessary to put the relation into the proper normal form.
  - 14.09 Define and contrast logical and physical keys.
  - 14.10 Understand the advantages and disadvantages of indexes.
  - 14.11 Understand the basic operators of relational algebra as a basis for retrieving data from relational databases.
  - 14.12 Create and use Structured Query Language (SQL) to retrieve data from a database.

### **Business Core**

- 15.0 Compare and contrast e-business with traditional business models. – The student will be able to:
- 15.01 Describe the evolution of e-business, how it changed the marketplace, and the benefits to society.
  - 15.02 Define e-business and its categories.
  - 15.03 Describe how business operations have changed due to e-business.
  - 15.04 Explain the basic business models of electronic marketing.
  - 15.05 Identify critical success factors for electronic marketing.
  - 15.06 Explain the impact of the Internet on customers and markets for businesses.
  - 15.07 Describe consumer buying behavior and organizational buying behavior.
  - 15.08 Explain how service industries conduct business electronically.
  - 15.09 Describe several innovative applications in the service sector.
  - 15.10 Explain how business-to-business commerce is conducted.
  - 15.11 Describe the application and key technologies for business- to-business e-commerce models.
  - 15.12 Describe the relationship between the Internet, intranet and extranet.

- 15.13 Describe the typical electronic payment system.
- 15.14 Identify the various payment options in e-commerce.
- 15.15 Explain the strategic planning issues for e-business
- 15.16 Identify the critical success factors of an e-business project/venture.
- 15.17 Discuss contractual issues and copyright infringement on the Web.
- 15.18 Explain the global economics and its impact e-business.
- 15.19 Describe the major components and impact of Web-based economics

16.0 Identify, classify and demonstrate management activities for e-business. – The student will be able to:

- 16.01 Define the role of the entrepreneur in business-in the United States and across the World.
- 16.02 Describe the entrepreneurial profile.
- 16.03 Discuss the role of the internet in helping small business expand their market opportunities both in the United States and abroad.
- 16.04 Explain the importance of strategic management to business.
- 16.05 Describe the components of a marketing plan and explain the benefits of preparing one.
- 16.06 Describe how to prepare financial statements & use them to manage the business.
- 16.07 Describe effective pricing strategies.
- 16.08 Discuss the links among pricing, image, and competition.
- 16.09 Explain what seed capital is and why it is so important to the entrepreneurial process.
- 16.10 Explain the difference in the three types of capital that small businesses require: Fixed, Working and Growth.
- 16.11 Explain the stages in the location decision.
- 16.12 Describe the location criteria and outline the basic location options for retail and service business.
- 16.13 Explain purchasing, quality control, vendor analysis and managing inventory while using technology to gain a competitive edge.
- 16.14 Explain the challenges involved in the entrepreneur's role as leader and what it takes to be a successful leader.
- 16.15 Learn management succession and risk management strategies in family business together with ethics and social responsibility.
- 16.16 Describe, explain and discuss business's responsibility to employees, customers, investors and the community.
- 16.17 Describe management's historical role in business operations.
- 16.18 Compare and contrast different management philosophies.
- 16.19 Compare and contrast the employees' personal needs with those of the organization.
- 16.20 Describe methods managers can use to deal with management politics.
- 16.21 Describe the nature of management's legal environment for traditional and electronic environments.
- 16.22 Describe the planning process of managers.
- 16.23 Discuss the characteristics and functions of an organization chart.
- 16.24 Describe the act and benefits of delegation.
- 16.25 Summarize the components of job descriptions and specifications.
- 16.26 Define and describe the activities involved in making a job analysis.

- 16.27 Discuss potential problems in evaluating employees and methods to avoid problems.
  - 16.28 Discuss strategies managers may use to build and sustain high morale and motivation.
  - 16.29 Describe methods of direct and indirect compensation.
  - 16.30 Describe various employee relations practices.
  - 16.31 Summarize strategies to improve personal and organizational communication.
  - 16.32 Discuss the role of information systems in the control system.
  - 16.33 Discuss the steps in the basic decision making process.
  - 16.34 Describe several factors that influence decision-making.
  - 16.35 Distinguish among management functions.
  - 16.36 Demonstrate knowledge of the relationship between authority and responsibility to task accomplishment.
  - 16.37 Select the most effective communication systems.
  - 16.38 Identify problems and make an appropriate decision.
- 17.0 Identify legal and ethical issues for e-business. – The student will be able to:
- 17.01 Describe the procedure to obtaining protection under each intellectual property law.
  - 17.02 Describe and recognize material that is defamatory.
  - 17.03 Explain the right of publicity and the right of privacy.
  - 17.04 Explain copyright assignment and the Visual Artists Rights Act.
  - 17.05 Discuss licensing text, photos, films, television clips, characters, and games, Domain name registration, cybersquatting and anti-cybersquatting regulations.
  - 17.06 Describe the importance in choosing a strong trademark.
  - 17.07 Understand basic laws that apply to e-commerce.
  - 17.08 Explain how Article Two of the UCC that applies to the sale of goods involved in E-business.
  - 17.09 Discuss current US laws that regulate e-business, such as the Uniform Computer Information Transactions Act, clickwraps, sales tax, and advertising.
  - 17.10 Explain the meaning of linking, framing and caching.
  - 17.11 Discuss the permission required for linking, revenue-sharing agreements, and liability issues pertaining to linking.
  - 17.12 Discuss e-mail litigation, including anti-spam laws.
  - 17.13 Describe licensing music for use.
  - 17.14 Discuss copyright issues important to ISPs.
  - 17.15 Explain other liability issues for ISPs, such as, defamation, privacy, trademark and patent.
  - 17.16 Discuss when to use trademark protection and trade secret protection for their property.
- 18.0 Accounting and finance activities. – The student will be able to:
- 18.01 Identify and understand accounting and financial concepts.
  - 18.02 Describe and use financial analysis tools.
  - 18.03 Perform standard accounting and bookkeeping functions such as transaction recording, journaling, preparation of standard statements and balance sheets, and check preparation.
  - 18.04 Understand the impact and implications of federal auditing guidelines, such as Sarbanes-Oxley.

- 19.0 Perform marketing activities for e-business. – The student will be able to:
- 19.01 Discuss what marketing is and why it is important to organizations and individuals.
  - 19.02 Describe the key decisions in the development of corporate strategy.
  - 19.03 Recognize the outcomes of consumers' decisions to purchase or not to purchase and how these affect marketing success.
  - 19.04 Define and explain market segmentation, target markets, and product differentiation and positioning.
  - 19.05 Describe the issues involved in product and brand positioning.
  - 19.06 Differentiate between consumer and business products, and discuss the different types of each.
  - 19.07 Describe the way marketing research is used in the new-product development process.
  - 19.08 Identify many of the influences on marketers' pricing decisions.
  - 19.09 Explain how consumers form perceptions of quality and value.
  - 19.10 Explain the functions and key activities of marketing channels.
  - 19.11 Distinguish between direct and indirect marketing channels.
  - 19.12 Explain the key elements of the marketing communications process.
  - 19.13 Describe the key activities in sales management.
  - 19.14 Explain the difference between e-business, e-commerce, and e-marketing.

### **Security Specialization**

- 20.0 Design, develop and implement physical, network, host, application and user security systems for e-business. – The student will be able to:
- 20.01 Explain use and purpose of security policies.
  - 20.02 Conduct a security audit.
  - 20.03 Control access to systems, resources and data.
  - 20.04 Explain and manage system security in common Operating Systems.
  - 20.05 Describe concepts of web servers and their role in the network.
  - 20.06 Plan and implement a web server.
  - 20.07 Identify the various hardware and software requirements for a web server.
  - 20.08 Explain how documents and files are stored on a web server.
  - 20.09 Describe different methods for projecting future traffic on a web server.
  - 20.10 Identify the necessary steps to ensure reliability and response of the server.
  - 20.11 Describe and implement the process for effectively organizing a web site.
  - 20.12 Install, configure, and maintain a Web server.
  - 20.13 Publish a web document so that it is easily located through various search engines on the Internet.
  - 20.14 Set up the web server so that dynamic content can be provided to users of the web site.
  - 20.15 Perform corrective, and preventative maintenance on a web server.
  - 20.16 Analyze server log files to determine trends in web server utilization.
  - 20.17 Discuss Internet services operation and the security risk imposed by them on the network.
  - 20.18 Identify vulnerabilities in World Wide Web protocols and counter-measures for securing them.

- 20.19 Describe the operation of electronic mail and news services protocols and how to effectively secure them.
  - 20.20 Describe the operation of file transfer and printing service protocols and how to effectively secure them.
  - 20.21 Describe the operation of remote access services protocols and how to effectively secure them.
  - 20.22 Describe the operation of real-time conferencing service protocols and how to effectively secure them.
  - 20.23 Properly configure and describe the operation of naming and directory services.
  - 20.24 Describe the operation of authentication and auditing services protocols and how to effectively secure them.
  - 20.25 Describe the operation of administrative services protocols and how to effectively secure them.
  - 20.26 Describe the operation of the IP Security protocol.
  - 20.27 Implement effective measures to secure various service protocols.
- 21.0 Maintain and monitor security policies. – The student will be able to:
- 21.01 Identify basic network security.
  - 21.02 Describe purpose and use of packet sniffing, firewalls and proxies.
  - 21.03 Define web server security.
  - 21.04 Protect against the risks of directory browsing.
  - 21.05 Assess client security issues (including ActiveX, JavaScript, Cookies, etc.)
  - 21.06 Install and configure network security tools
  - 21.07 Explain the strengths, and weaknesses of cryptography as a security tool
  - 21.08 Describe authentication and identification schemes
  - 21.09 Define secure software.
  - 21.10 Describe the use and purpose of encryption.
  - 21.11 Define the advantages of Secure Socket Layer (SSL).
  - 21.12 Define certificate authority.
  - 21.13 Identify basic aspects of intrusion detection and steps to protect the web server from these threats.
  - 21.14 Explain the history of cryptographic methodology.
  - 21.15 Describe cryptographic attack models.
  - 21.16 Describe the secret key and public key encryption methodology.
  - 21.17 Use hashing techniques.
  - 21.18 Use digital signatures in a network environment.
  - 21.19 Explain applied cryptography.
  - 21.20 Use authentication processes in heterogeneous environments.
  - 21.21 Create secure environment through defensive programming.
  - 21.22 Explain the basic elements of Security Testing and Auditing.
  - 21.23 Describe the capabilities of effective signature filter techniques.
  - 21.24 Explain the importance of architectural design detection of intrusions.
  - 21.25 Describe interoperability aspects of various commercial IDS solutions.
  - 21.26 Define and utilize various network based Intrusion Detection Solutions (IDS).
  - 21.27 Detect various exploitation attempts in a network environment.
  - 21.28 Explain intrusion detection and denial of service.
  - 21.29 Describe techniques for gathering intelligence on intrusion detection and the latest tools and techniques used by hackers.
  - 21.30 Define and recognize structured attacks and differentiate from unstructured attacks.

- 21.31 Explain management issues related to intrusion detection.
- 21.32 Implement appropriate security measures following risk analysis.
- 21.33 Implement appropriate security measures to minimize risks from hackers.
- 21.34 Issue and manage digital certificates.

### **Software Specialization**

- 20.0 Use various programming software applications, languages and protocols for e-business environment. – The student will be able to:
  - 20.01 Explain the key network protocols used with the World Wide Web including Transmission Control Protocol (TCP), Internet Protocol (IP), and Hypertext Transfer Protocol (HTTP)
  - 20.02 Explain how applets differ from applications in terms of program form, operating context, and how they are started.
  - 20.03 Describe and use single- and multi-dimensional arrays.
  - 20.04 Create classes that use inheritance aspects of the object-oriented paradigm.
  - 20.05 Explain the use of keywords such as: static, final, abstract, inner classes, interface, etc.
  - 20.06 Describe the error handling constructs.
  - 20.07 Write a program that reads and writes text files.
  - 20.08 Understand the hierarchy of classes designed for aggregate data such as Collections, and use sets and lists.
  - 20.09 Identify deprecated classes, and explain how to migrate.
  - 20.10 Use the jar tool.
  - 20.11 Explain and use event handling in a GUI.
  - 20.12 Use network utilities to monitor network activity, determine IP addresses, and locate Web servers.
  - 20.13 Differentiate between client-side scripting and server-side scripting.
  - 20.14 Manipulate the objects contained in the Document Object Model (DOM).
  - 20.15 Use variables and constants within a script.
  - 20.16 Use variables, constants, and arithmetic operators to create valid arithmetic expressions.
  - 20.17 Dynamically alter the sequence of script execution.
  - 20.18 Use built-in functions as well as create custom functions, subroutines, and procedures within software using scripting languages.
  - 20.19 Create server pages using languages such as Active Server Pages (ASP) or Java Server Pages (JSP).
  - 20.20 Write programs in a language such as java that allows use of objects like Socket, SocketServer, URL and Connection.
  - 20.21 Create and use server-side include files.
  - 20.22 Use a standard object such as Request to process forms and access server variables
  - 20.23 Use a standard object such as Response to control output from the server.
  - 20.24 Create programs that communicate across the Internet using conventions such as Remote Method Invocation.
  - 20.25 Create and use the Global Application File.
  - 20.26 Understand appropriate use of and demonstrate ability to incorporate and utilize cookies in e-Business software.
  - 20.27 Integrate standard object model components with server pages.
  - 20.28 Create web page using data from a database.

- 20.29 Implement programs that use local or remote databases with standard protocols.
- 20.30 Create applications such as Servlets that send HTML pages to Internet clients.
- 20.31 Use a scripting language on the client side of a distributed program.
- 20.32 Create and use reusable objects such as Java Beans appropriately in distributed applications.
- 20.33 Implement levels of security in distributed software applications and applets.
- 20.34 Read simple UML diagrams, and create UML documents that model programs.
- 20.35 Use built-in objects for error handling, file creation, and dictionary access in e-Business software.
- 20.36 Explain protocols designed to allow programming designed to provide network services for applications on small homogenous networks, such as NetBIOS programming
- 20.37 Understand the use of client-side operating system tools such as Windows redirector.
- 20.38 Produce software that can interface with operating system services used to broadcast messages within a domain, such as mailslot networking technology.
- 20.39 Utilize appropriate operating system interfaces to redirect output of one application as input of another through the use of pipe networking technology.
- 20.40 Describe the protocol address families supported by Winsock and create a socket.
- 20.41 Create connection-oriented and connectionless Winsock protocols.
- 20.42 Describe various Winsock I/O models.
- 20.43 Differentiate between options used with sockets and other operating system techniques used to manipulate device parameters of special files, such as ioctl.
- 20.44 Describe various name space models.
- 20.45 Register and query a service.
- 20.46 Use transport service providers and name space service providers.
- 20.47 Explain the history of Extensible Markup Language (XML)
- 20.48 Use the Document Type Definitions that define an XML document structure.
- 20.49 Use schemas for validating an XML document.
- 20.50 Incorporate XML code into web documents, and manipulate the contents of an XML document.
- 20.51 Explain the use and purpose of Xpath and Simple API.
- 20.52 Write SXML documents
- 20.53 Use XSL transformations
- 20.54 Explain Extensible Hypertext Markup Language (XHTML).
- 20.55 Explain emerging trends in XML-related technologies.
- 20.56 Explain and use the different elements that make code easier to read.
- 20.57 Explain and use the different data types available in scripting languages.
- 20.58 Explain and use standard control structures such as repetition, selection, and sequence in the appropriate programming language.
- 20.59 Output data from scripting languages such as PERL to various formats.
- 20.60 Explain the benefits of using subroutines and libraries in code.
- 20.61 Debug code from scripting languages such as PERL.
- 20.62 Explain basic Internet and server-side scripting security issues and common techniques to fix them.
- 20.63 Use a scripting language such as PERL to create and manage form data submitted over the Internet.
- 20.64 Examine the use of shopping carts on the Internet and how scripting languages such as PERL can be use in these applications.

- 20.65 Examine the use of auctions via the Internet and how scripting languages such as PERL can be used.
  - 20.66 Understand industry standard program design techniques.
  - 20.67 Develop the logic for a program using both flowcharting and pseudo code.
  - 20.68 Develop looping and nested looping logic.
  - 20.69 Document programs.
  - 20.70 Develop the logic of: three-level control break program, an extract program, an edit program, a file matching and an update program.
  - 20.71 Interpret a simple table.
- 21.0 Develop software applications for e-business environment. – The student will be able to:
- 21.01 Explain the architecture of a Wireless Application Protocol (WAP) application
  - 21.02 Identify a variety of WAP micro-browsers.
  - 21.03 Configure Web servers to recognize appropriate MIME types.
  - 21.04 Identify a variety of vendor supplied development toolkits and explain the strengths and weakness of each.
  - 21.05 Explain the purpose of a WAP gateway.
  - 21.06 Evaluate various WAP gateway products and describe the strengths and weaknesses of each.
  - 21.07 Create Wireless Markup Language (WML) decks.
  - 21.08 Create client-side scripts using WML Script.
  - 21.09 Incorporate ease of use features into WAP applications.
  - 21.10 Incorporate dynamic content in WAP applications by using ASP.
  - 21.11 Design software applications that are accessible by a variety of wireless and wired devices.
  - 21.12 Explain alternatives to using ASP to create dynamic content for WAP applications.
  - 21.13 Create a strategy to convert existing HTML based web sites to WAP.
  - 21.14 Build a simple email system accessible from wireless devices.
  - 21.15 Explain security issues and options in a WAP application.
  - 21.16 Integrate the push model of information delivery.
  - 21.17 Explain the architecture of Wireless Telephony applications (WTA) and other wireless architectures.
  - 21.18 Use various HTML elements.
  - 21.19 Explain the various database concepts and vocabulary including: tables, columns, rows, data types, primary and foreign keys, relationships, queries, and relational database design techniques.
  - 21.20 Use operating system services such as a personal web server for database development.
  - 21.21 Explain server security and permissions.
  - 21.22 Evaluate the advantages / disadvantages of different server platforms.
  - 21.23 Explain scripting concepts and syntax.
  - 21.24 Connect common databases using standard protocols.
  - 21.25 Display data from a database using a Web interface.
  - 21.26 Write and modify a database record using a Web interface.
  - 21.27 Enable Web security features and tune Web applications.
  - 21.28 Design and implement a basic shopping cart application.

### **Technology Specialization**

- 20.0 Perform web server management activities. – The student will be able to:
  - 20.01 Perform console management in the author and user mode.
  - 20.02 Navigate and create a custom management console.
  - 20.03 Create new user accounts.
  - 20.04 Implement groups into a domain.
  - 20.05 Change the domain mode.
  - 20.06 Manage software settings, scripts, and security settings.
  - 20.07 Manage administrative templates.
  - 20.08 Manage folder redirection.
  - 20.09 Configure and administer network printers.
  
- 21.0 Support e-business applications and product development. – The student will be able to:
  - 21.01 Identify the different components to systems development life cycle and how they are interrelated.
  - 21.02 Identify deliverables for user project and build subprojects within lifecycle components.
  - 21.03 Create physical structure of web-based architecture.
  - 21.04 Create requirements for business request, develop web components necessary to satisfy request and test for acceptance.
  - 21.05 Use web browser and web authoring tools.
  - 21.06 Write required queries to get required answer sets.
  
- 22.0 Maintain network infrastructure. – The student will be able to:
  - 22.01 Analyze the infrastructure for E-business, the Internet, packet-switched networks, several Web markup languages, and popular Internet applications, protocols, and utility programs.
  - 22.02 Identify Web server hardware and discuss performance evaluation.
  - 22.03 Describe security threat countermeasures, including anti-virus software and encryption.
  - 22.04 Identify basic components of electronic payment systems.
  - 22.05 Identify how to create and maintain an effective Web presence and brand.
  - 22.06 Describe various Electronic Data Interchange components.
  - 22.07 Define and explain virtual communities and Web portals.
  - 22.08 Identify challenges of a global business regarding culture, legal and financial impacts, and differing languages.
  - 22.09 Identify the planning stages of the E-Business Project.
  
- 23.0 Design, integrate and deploy e-business systems. – The student will be able to:
  - 23.01 Describe the lifecycle of an E-Business.
  - 23.02 Explain Web site information architecture design principles.
  - 23.03 Identify various E-Business systems development strategies.
  - 23.04 Explain integration with LDAP, Messaging, and Collaboration.
  - 23.05 Identify and describe the use of Meta Directories, Content Syndication, Single Sign-on, and Search Engines.
  - 23.06 Identify various deployment strategies and Middleware.
  - 23.07 Identify various Application Server Systems Architectures.
  - 23.08 Explain Transaction Processing (TP) monitor systems architecture.

- 23.09 Identify various integration solutions.
- 24.0 Perform technical requirements to support UNIX operating system. – The student will be able to:
- 24.01 Explain the history of UNIX
  - 24.02 Explain basic command syntax for approximately 100 common shell commands governing the file-system, printing and process control.
  - 24.03 Identify various UNIX editors and use the vi editor.
  - 24.04 Schedule and reprioritize processes running under UNIX.
  - 24.05 Use commands to get information and communicate with remote users.
  - 24.06 Search for strings of text in files using shell meta-characters.
  - 24.07 Use Awk to generate reports or filter text.
  - 24.08 Use Korn shell scripts to control flow, input, output and jobs.
  - 24.09 Use C shell variables and arrays.
  - 24.10 Troubleshoot various system problems.
- 25.0 Maintain systems quality and perform testing activities. – The student will be able to:
- 25.01 Identify the advantages and disadvantages of client-server computing.
  - 25.02 Establish controls in a client-server framework.
  - 25.03 Explain software testing methodology.
  - 25.04 Describe the planning, executing and controlling of the testing process.
  - 25.05 Perform Graphical User Interface testing.
  - 25.06 Explain the server applications testing processes.
  - 25.07 Explain testing in a networked application environment.
  - 25.08 Incorporate cross-level functional testing within a data-driven framework-based environment.
  - 25.09 Use client-server testing metrics.
  - 25.10 Explain testing integration on the desktop.
  - 25.11 Explain testing for web-based client-server applications.
  - 25.12 Select and use appropriate automated test tools.

### **Business Specialization**

- 20.0 Perform management activities to support human resources in an e-business environment. – The student will be able to:
- 20.01 Describe the history of human resources.
  - 20.02 Summarize the importance of human resources.
  - 20.03 Identify career choice in human resources.
  - 20.04 Describe the components of the job requirement and analysis process.
  - 20.05 Describe the important elements of effective human resource planning.
  - 20.06 Discuss the performance appraisal and the uses of the performance appraisal.
  - 20.07 Compare various training options available to organizations.
  - 20.08 Discuss strategies to improve organizational performance (various types of work teams, suggestion systems, goal setting, job redesign, etc.).
  - 20.09 Describe various ways of compensating employees.
  - 20.10 Summarize the legal regulations of compensation systems.
  - 20.11 Explain the importance of maintaining employees.
  - 20.12 Discuss the importance of safety and health laws and standards.

- 20.13 Describe how to create a safe and healthy work environment.
- 20.14 Describe labor relations and collective bargaining.
- 21.0 Perform activities to enhance supply chain management. – The student will be able to:
  - 21.01 Explain the electronic environment of the supply chain.
  - 21.02 Explain the importance of information in an integrated supply chain.
  - 21.03 Explain the technological applications for supply chain management.
  - 21.04 Discuss how to engineer or reengineer the supply chain for optimal materials planning and handling.
  - 21.05 Explain how relationships are important to the supply chain.
  - 21.06 Explain the importance of suppliers in the supply chain.
  - 21.07 Describe how to resolve conflicts in the supply chain.
  - 21.08 Explain the laws and regulations regarding "order taking", such as the 30-Day rule, shipment representation, delay and cancellation notices, and refunds.
  - 21.09 Describe the components involved in an international supply chain management system.
- 22.0 Use various models and strategies for e-business. – The student will be able to:
  - 22.01 Explain the components, linkages, and evaluation of Business Models and their relationship with e-business.
  - 22.02 Describe the competitive environment and how it can affect an Internet business.
  - 22.03 Describe competitive advantages and how the general manager of an Internet business can use this information.
  - 22.04 The student will be able to describe the current strengths, weaknesses, opportunities, and threats to Internet business given general and specific information.
  - 22.05 Describe the limitations to transactions over the Internet.
  - 22.06 Describe the dynamics and appraisal of a business model.
  - 22.07 Explain value configurations for the Internet.
  - 22.08 Describe the process of valuing and financing an Internet start-up.
  - 22.09 Describe macro environments and the impact on performance.
  - 22.10 Explain the differences between incumbents and new entrants.
- 23.0 Perform customer service techniques for e-business. – The student will be able to:
  - 23.01 Define customer service.
  - 23.02 Explain the advantages and disadvantages of customer service.
  - 23.03 Discuss solutions to overcoming obstacles in customer service.
  - 23.04 Define service culture in organizations.
  - 23.05 Describe management's role in customer service formulation.
  - 23.06 Describe employee empowerment and its importance in providing good customer service.
  - 23.07 Explain the role of communicating in customer service.
  - 23.08 Explain the difference behavioral styles of a challenging customer.
  - 23.09 Describe strategies of dealing with challenging customers.
  - 23.10 Describe the basic behavioral styles of customers.
  - 23.11 Determine strategies for working with various customer behaviors.
- 24.0 Perform selling techniques for e-business. – The student will be able to:

- 24.01 Describe the relationship of personal selling to market-driven economies.
- 24.02 List the four broad strategic areas that make up the consultative-style selling model and the characteristics of each.
- 24.03 Identify career opportunities in the field of selling.
- 24.04 Explain the importance of relationship skills in personal selling.
- 24.05 Explain the importance of projecting a positive self-image.
- 24.06 Discuss communication-style bias and how it influences the relationship process.
- 24.07 Identify reasons why salespeople and customers benefit from thorough product knowledge.
- 24.08 List major sources of product information.
- 24.09 Discuss the evolving role of strategic selling.
- 24.10 Discuss the factors that influence people to make buying decisions.
- 24.11 Explain how to plan a sales presentation.
- 24.12 List criterion for qualifying and organizing prospects.
- 24.13 List guidelines for effective demonstrations.
- 24.14 Outline general strategies for negotiating buyer resistance.
- 24.15 Describe the proper attitude to display toward closing the sale.
- 24.16 List guidelines for closing the sale.
- 24.17 Explain how customer service can stimulate repeat business and referrals.
- 24.18 Describe how to properly handle activities that are part of the customer service program.
- 24.19 Describe the functions of a sales manager.
- 24.20 Explain how to manage time wisely.
- 24.21 List factors that influence the ethical conduct of sales personnel.
- 24.22 List and describe the functions of telemarketing.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** E-Business Technical Certificate  
**Career Cluster:** Information Technology

<b>CCC</b>	
CIP Number	0552120101
Program Type	College Credit Certificate (CCC)
Program Length	24 credit hours
CTSO	Phi Beta Lambda, BPA (Business Professionals of America)
SOC Codes (all applicable)	15-1099.12
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the E-Business Technology AS/AAS degree program (1552120100/0552120100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 07.0 Perform project management activities.
- 08.0 Understand issues related to E-Business.
- 15.0 Compare and contrast E-Business with traditional business.
- 16.0 Identify, classify and demonstrate management activities for E-Business.
- 17.0 Identify legal and ethical issues for E-business.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** E-Business Technical Certificate  
**CIP Number:** 0552120101  
**Program Length:** 24 credit hours  
**SOC Code(s):** 15-1099.12

This certificate program is part of the E-Business Technology AS/AAS degree program (1552120100/0552120100). At the completion of this program, the student will be able to:

07.0 Perform project management activities-The student will be able to:

- 07.01 Describe the role of project management (PM) within the organization.
- 07.02 Identify the strengths and weaknesses of various project life cycle designs.
- 07.03 Understand the importance of project scope management.
- 07.04 Compare and contrast project selection methods.
- 07.05 Build a Work Breakdown Structure (WBS), Gantt chart, and Pert Chart and describe those different elements.
- 07.06 Compare and contrast types of cost estimates.
- 07.07 Examine cost control and earned value analysis.
- 07.08 Examine organizational planning, staff acquisition, and team development.
- 07.09 Examine risk identification, quantification, response development, and response control.
- 07.10 Compare and contrast project tracking and project reporting.
- 07.11 Understand change control and configuration control.
- 07.12 Understand subcontracting and outsourcing.
- 07.13 Discuss and analyze project management case study.

08.0 Understand issue related to E-business-- The student will be able to:

- 08.01 Explain the difference between intranet and internet and the role of each in e-Business.
- 08.02 Explain the history, purpose and use of the World Wide Web and how it has enabled e-Business.
- 08.03 Describe the rise of various e-Business models such as information and content models, broadcast/content aggregations models, interactive models, and content provider models.
- 08.04 Explain security issues related to electronic payment.
- 08.05 Explain issues of advertising, marketing and solicitation activities affecting e-business.

15.0 Compare and contrast E-business with traditional business models--The student will be able to:

- 15.01 Describe the evolution e-business, how it has changed the market place, and the benefits to society.
- 15.02 Define e-business and its categories.
- 15.03 Describe how business operations have changed due to e-business.
- 15.04 Explain the basic business models of electronic marketing.

- 15.05 Identify critical success factors for electronic marketing.
- 15.06 Explain the impact of the Internet on customers and markets for businesses.
- 15.07 Describe consumer buying behavior and organizational buying behavior.
- 15.08 Explain how service industries conduct business electronically.
- 15.09 Describe several innovative applications in the service sector.
- 15.10 Explain how business-to-business commerce is conducted.
- 15.11 Describe the application and key technologies for business-to-business e-commerce models.
- 15.12 Describe the relationship between the Internet, intranet and extranet.
- 15.13 Describe the typical electronic payment system.
- 15.14 Identify the various payment options in e-commerce.
- 15.15 Explain the strategic planning issues for e-business.
- 15.16 Identify the critical success factors of an e-business project/venture.
- 15.17 Discuss contractual issues and copyright infringement on the Web.
- 15.18 Explain the global economics and its impact e-business.
- 15.19 Describe the major components and impact of Web-based economics

16.0 Identify and demonstrate management activities--The student will be able to:

- 16.01 Define the role of the entrepreneur in business-in the United States and across the World.
- 16.02 Describe the entrepreneurial profile.
- 16.03 Discuss the role of the internet in helping small business expand their market opportunities both in the United States and abroad.
- 16.04 Explain the importance of strategic management to a business.
- 16.05 Describe the components of a marketing plan and explain the benefits of preparing one.
- 16.06 Describe how to prepare financial statements & use them to manage the business.
- 16.07 Describe effective pricing strategies.
- 16.08 Discuss the links among pricing, image, and competition.
- 16.09 Explain what seed capital is and why it is so important to the entrepreneurial process.
- 16.10 Explain the difference in the three types of capital small businesses require: Fixed, Working and Growth.
- 16.11 Explain the stages in the location decision.
- 16.12 Describe the location criteria and outline the basic location options for retail and service business.
- 16.13 Explain purchasing, quality control, vender analysis and managing inventory while using technology to gain a competitive edge.
- 16.14 Explain the challenges involved in the entrepreneur's role as leader and what it takes to be a successful leader.
- 16.15 Learn management succession and risk management strategies in family business together with ethics and social responsibility.
- 16.16 Describe, explain and discuss business's responsibility to employees, customers, investors and the community.
- 16.17 Describe management's historical role in business operations.
- 16.18 Compare and contrast different management philosophies.
- 16.19 Compare and contrast the employees' personal needs with those of the organization.
- 16.20 Describe methods managers can use to deal with management politics.

- 16.21 Describe the nature of management's legal environment for traditional and electronic environments.
  - 16.22 Describe the planning process of managers.
  - 16.23 Discuss the characteristics and functions of an organization chart.
  - 16.24 Describe the act and benefits of delegation.
  - 16.25 Summarize the components of job descriptions and specifications.
  - 16.26 Define and describe the activities involved in making a job analysis.
  - 16.27 Discuss potential problems in evaluating employees and methods to avoid problems.
  - 16.28 Discuss strategies managers may use to build and sustain high morale and motivation.
  - 16.29 Describe methods of direct and indirect compensation.
  - 16.30 Describe various employee relations practices.
  - 16.31 Summarize strategies to improve personal and organizational communication.
  - 16.32 Discuss the role of information systems in the control system.
  - 16.33 Discuss the steps in the basic decision making process.
  - 16.34 Describe several factors that influence decision-making.
  - 16.35 Distinguish among management functions.
  - 16.36 Demonstrate knowledge of the relationship between authority and responsibility to task accomplishment.
  - 16.37 Select the most effective communication systems.
  - 16.38 Identify problems and make an appropriate decision.
- 17.0 Identify legal and ethical issues for E-business-- The student will be able to:
- 17.01 Describe the procedure to obtaining protection under each intellectual property law.
  - 17.02 Describe and recognize material that is defamatory.
  - 17.03 Explain the right of publicity and the right of privacy.
  - 17.04 Explain copyright assignment and the Visual Artists Rights Act.
  - 17.05 Discuss licensing text, photos, films, television clips, characters, and games, Domain name registration, cybersquatting and anti-cybersquatting regulations.
  - 17.06 Describe the importance in choosing a strong trademark.
  - 17.07 Understand basic laws that apply to e-commerce.
  - 17.08 Explain how Article Two of the UCC that applies to the sale of goods involved in E-business.
  - 17.09 Discuss current US laws that regulate e-business, such as the Uniform Computer Information Transactions Act, clickwraps, sales tax, and advertising.
  - 17.10 Explain the meaning of linking, framing and caching.
  - 17.11 Discuss the permission required for linking, revenue-sharing agreements, and liability issues pertaining to linking.
  - 17.12 Discuss e-mail litigation, including anti-spam laws.
  - 17.13 Describe licensing music for use.
  - 17.14 Discuss copyright issues important to ISPs.
  - 17.15 Explain other liability issues for ISPs, such as, defamation, privacy, trademark and patent.
  - 17.16 Discuss when to use trademark protection and trade secret protection for their property.

### **Purpose**

This certificate program is part of the E-Business Technology AS/AAS degree program (1552120100/ 0552120100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 20.0 Design, develop and implement physical, network, host, application, and user security systems for E-business.
- 21.0 Maintain and monitor security policies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** E-Business Security Technical Certificate  
**CIP Number:** 0552120102  
**Program Length:** 24 credit hours  
**SOC Code(s):** 15-1071

This certificate program is part of the E-Business Technology AS/AAS degree program (1552120100/ 0552120100). At the completion of this program, the student will be able to:

- 20.0 Design, develop and implement physical, network, host, application and user security systems for e-business -- The student will be able to:
- 20.01 Explain use and purpose of security policies.
  - 20.02 Conduct a security audit.
  - 20.03 Control access to systems, resources and data.
  - 20.04 Explain and manage system security in common Operating Systems.
  - 20.05 Describe concepts of web servers and their role in the network.
  - 20.06 Plan and implement a web server.
  - 20.07 Identify the various hardware and software requirements for a web server.
  - 20.08 Explain how documents and files are stored on a web server.
  - 20.09 Describe different methods for projecting future traffic on a web server.
  - 20.10 Identify the necessary steps to ensure reliability and response of the server.
  - 20.11 Describe and implement the process for effectively organizing a web site.
  - 20.12 Install, configure, and maintain a Web server.
  - 20.13 Publish a web document so that it is easily located through various search engines on the Internet.
  - 20.14 Set up the web server so that dynamic content can be provided to users of the web site.
  - 20.15 Perform corrective, and preventative maintenance on a web server.
  - 20.16 Analyze server log files to determine trends in web server utilization.
  - 20.17 Discuss Internet services operation and the security risk imposed by them on the network.
  - 20.18 Identify vulnerabilities in World Wide Web protocols and counter-measures for securing them.
  - 20.19 Describe the operation of electronic mail and news services protocols and how to effectively secure them.
  - 20.20 Describe the operation of file transfer and printing service protocols and how to effectively secure them.
  - 20.21 Describe the operation of remote access services protocols and how to effectively secure them.
  - 20.22 Describe the operation of real-time conferencing service protocols and how to effectively secure them.
  - 20.23 Properly configure and describe the operation of naming and directory services.
  - 20.24 Describe the operation of authentication and auditing services protocols and how to effectively secure them.
  - 20.25 Describe the operation of administrative services protocols and how to effectively secure them.
  - 20.26 Describe the operation of the IP Security protocol.

20.27 Implement effective measures to secure various service protocols.

21.0 Maintain and monitor security policies--The student will be able to:

- 21.01 Identify basic network security.
- 21.02 Describe purpose and use of packet sniffing, firewalls and proxies.
- 21.03 Define web server security.
- 21.04 Protect against the risks of directory browsing.
- 21.05 Assess client security issues (including ActiveX, JavaScript, Cookies, etc.)
- 21.06 Install and configure network security tools
- 21.07 Explain the strengths, and weaknesses of cryptography as a security tool
- 21.08 Describe authentication and identification schemes
- 21.09 Define secure software.
- 21.10 Describe the use and purpose of encryption.
- 21.11 Define the advantages of Secure Socket Layer (SSL).
- 21.12 Define certificate authority.
- 21.13 Identify basic aspects of intrusion detection and steps to protect the web server from these threats.
- 21.14 Explain the history of cryptographic methodology.
- 21.15 Describe cryptographic attack models.
- 21.16 Describe the secret key and public key encryption methodology.
- 21.17 Use hashing techniques.
- 21.18 Use digital signatures in a network environment.
- 21.19 Explain applied cryptography.
- 21.20 Use authentication processes in heterogeneous environments.
- 21.21 Create secure environment through defensive programming.
- 21.22 Explain the basic elements of Security Testing and Auditing.
- 21.23 Describe the capabilities of effective signature filter techniques.
- 21.24 Explain the importance of architectural design detection of intrusions.
- 21.25 Describe interoperability aspects of various commercial IDS solutions.
- 21.26 Define and utilize various network based Intrusion Detection Solutions (IDS).
- 21.27 Detect various exploitation attempts in a network environment.
- 21.28 Explain intrusion detection and denial of service.
- 21.29 Describe techniques for gathering intelligence on intrusion detection and the latest tools and techniques used by hackers.
- 21.30 Define and recognize structured attacks and differentiate from unstructured attacks.
- 21.31 Explain management issues related to intrusion detection.
- 21.32 Implement appropriate security measures following risk analysis.
- 21.33 Implement appropriate security measures to minimize risks from hackers.
- 21.34 Issue and manage digital certificates.

### **Standards**

After successfully completing this course the student will be able to perform the following:

- 09.0 Perform project management activities
- 13.0 Conduct systems analysis and design.
- 20.0 Use various software applications, languages, and protocols for E-business environment.
- 21.0 Support software products for E-business.
- 22.0 Maintain systems quality and perform testing activities.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: E-Business Software Technical Certificate**  
**CIP Number: 0552120103**  
**Program Length: 21 Credit Hours**  
**SOC Code(s): 15-1099.12**

This certificate program is part of the E-Business Technology AS/AAS degree program (1552120100/ 0552120100). At the completion of this program, the student will be able to:

07.0 Perform project management activities-The student will be able to:

- 07.01 Describe the role of project management (PM) within the organization.
- 07.02 Identify the strengths and weaknesses of various project life cycle designs.
- 07.03 Understand the importance of project scope management.
- 07.04 Compare and contrast project selection methods.
- 07.05 Build a Work Breakdown Structure (WBS), Gantt chart, and Pert Chart and describe those different elements.
- 07.06 Compare and contrast types of cost estimates.
- 07.07 Examine cost control and earned value analysis.
- 07.08 Examine organizational planning, staff acquisition, and team development.
- 07.09 Examine risk identification, quantification, response development, and response control.
- 07.10 Compare and contrast project tracking and project reporting.
- 07.11 Understand change control and configuration control.
- 07.12 Understand subcontracting and outsourcing.
- 07.13 Discuss and analyze project management case study.

13.0 Conduct systems analysis and design --The student will be able to:

- 13.01 Perform a preliminary investigation of a systems project.
- 13.02 Perform a detailed systems investigation and analysis of the project.
- 13.03 Design the input and output for the system.
- 13.04 Design the data files for the systems.
- 13.05 Design the processing flow of the system.
- 13.06 Design a system to insure that only valid data is accepted and processed, completely and accurately.
- 13.07 Establish a project plan for the development and implementation of the systems.
- 13.08 Program and test the system.
- 13.09 Develop the final systems documentation.
- 13.10 Conduct necessary training and file conversion to properly implement the system.
- 13.11 Understand industry-standard models for developing and maintaining software such as the Capability Maturity Model.
- 13.12 Be able to use industry-standard tools such as Unified Modeling Language (UML) to model a systems development project.

20.0 Use various programming software applications, languages and protocols for e-business environment --The student will be able to:

- 20.01 Explain the key network protocols used with the World Wide Web including Transmission Control Protocol (TCP), Internet Protocol (IP), and Hypertext Transfer Protocol (HTTP)
- 20.02 Explain how applets differ from applications in terms of program form, operating context, and how they are started.
- 20.03 Describe and use single- and multi-dimensional arrays.
- 20.04 Create classes that use inheritance aspects of the object-oriented paradigm.
- 20.05 Explain the use of keywords such as: static, final, abstract, inner classes, interface, etc.
- 20.06 Describe the error handling constructs.
- 20.07 Write a program that reads and writes text files.
- 20.08 Understand the hierarchy of classes designed for aggregate data such as Collections, and use sets and lists.
- 20.09 Identify deprecated classes, and explain how to migrate.
- 20.10 Use the jar tool.
- 20.11 Explain and use event handling in a GUI.
- 20.12 Use network utilities to monitor network activity, determine IP addresses, and locate Web servers.
- 20.13 Differentiate between client-side scripting and server-side scripting.
- 20.14 Manipulate the objects contained in the Document Object Model (DOM).
- 20.15 Use variables and constants within a script.
- 20.16 Use variables, constants, and arithmetic operators to create valid arithmetic expressions.
- 20.17 Dynamically alter the sequence of script execution.
- 20.18 Use built-in functions as well as create custom functions, subroutines, and procedures within software using scripting languages.
- 20.19 Create server pages using languages such as Active Server Pages (ASP) or Java Server Pages (JSP).
- 20.20 Write programs in a language such as java that allows use of objects like Socket, SocketServer, URL and Connection.
- 20.21 Create and use server-side include files.
- 20.22 Use a standard object such as Request to process forms and access server variables
- 20.23 Use a standard object such as Response to control output from the server.
- 20.24 Create programs that communicate across the Internet using conventions such as Remote Method Invocation.
- 20.25 Create and use the Global Application File.
- 20.26 Understand appropriate use of and demonstrate ability to incorporate and utilize cookies in e-Business software.
- 20.27 Integrate standard object model components with server pages.
- 20.28 Create web page using data from a database.
- 20.29 Implement programs that use local or remote databases with standard protocols.
- 20.30 Create applications such as Servlets that send HTML pages to Internet clients.
- 20.31 Use a scripting language on the client side of a distributed program.
- 20.32 Create and use reusable objects such as Java Beans appropriately in distributed applications.
- 20.33 Implement levels of security in distributed software applications and applets.
- 20.34 Read simple UML diagrams, and create UML documents that model programs.
- 20.35 Use built-in objects for error handling, file creation, and dictionary access in e-Business software.

- 20.36 Explain protocols designed to allow programming designed to provide network services for applications on small homogenous networks, such as NetBIOS programming
- 20.37 Understand the use of client-side operating system tools such as Windows redirector.
- 20.38 Produce software that can interface with operating system services used to broadcast messages within a domain, such as mailslot networking technology.
- 20.39 Utilize appropriate operating system interfaces to redirect output of one application as input of another through the use of pipe networking technology.
- 20.40 Describe the protocol address families supported by Winsock and create a socket.
- 20.41 Create connection-oriented and connectionless Winsock protocols.
- 20.42 Describe various Winsock I/O models.
- 20.43 Differentiate between options used with sockets and other operating system techniques used to manipulate device parameters of special files, such as ioctl.
- 20.44 Describe various name space models.
- 20.45 Register and query a service.
- 20.46 Use transport service providers and name space service providers.
- 20.47 Explain the history of Extensible Markup Language (XML)
- 20.48 Use the Document Type Definitions that define an XML document structure.
- 20.49 Use schemas for validating an XML document.
- 20.50 Incorporate XML code into web documents, and manipulate the contents of an XML document.
- 20.51 Explain the use and purpose of Xpath and Simple API.
- 20.52 Write SXML documents
- 20.53 Use XSL transformations
- 20.54 Explain Extensible Hypertext Markup Language (XHTML).
- 20.55 Explain emerging trends in XML-related technologies.
- 20.56 Explain and use the different elements that make code easier to read.
- 20.57 Explain and use the different data types available in scripting languages.
- 20.58 Explain and use standard control structures such as repetition, selection, and sequence in the appropriate programming language.
- 20.59 Output data from scripting languages such as PERL to various formats.
- 20.60 Explain the benefits of using subroutines and libraries in code.
- 20.61 Debug code from scripting languages such as PERL.
- 20.62 Explain basic Internet and server-side scripting security issues and common techniques to fix them.
- 20.63 Use a scripting language such as PERL to create and manage form data submitted over the Internet.
- 20.64 Examine the use of shopping carts on the Internet and how scripting languages such as PERL can be use in these applications.
- 20.65 Examine the use of auctions via the Internet and how scripting languages such as PERL can be used.
- 20.66 Understand industry standard program design techniques.
- 20.67 Develop the logic for a program using both flowcharting and pseudo code.
- 20.68 Develop looping and nested looping logic.
- 20.69 Document programs.
- 20.70 Develop the logic of: three-level control break program, an extract program, an edit program, a file matching and an update program.
- 20.71 Interpret a simple table.

21.0 Develop software applications for e-business environment --The student will be able to:

- 21.01 Explain the architecture of a Wireless Application Protocol (WAP) application
- 21.02 Identify a variety of WAP micro-browsers.
- 21.03 Configure Web servers to recognize appropriate MIME types.
- 21.04 Identify a variety of vendor supplied development toolkits and explain the strengths and weakness of each.
- 21.05 Explain the purpose of a WAP gateway.
- 21.06 Evaluate various WAP gateway products and describe the strengths and weaknesses of each.
- 21.07 Create Wireless Markup Language (WML) decks.
- 21.08 Create client-side scripts using WML Script.
- 21.09 Incorporate ease of use features into WAP applications.
- 21.10 Incorporate dynamic content in WAP applications by using ASP.
- 21.11 Design software applications that are accessible by a variety of wireless and wired devices.
- 21.12 Explain alternatives to using ASP to create dynamic content for WAP applications.
- 21.13 Create a strategy to convert existing HTML based web sites to WAP.
- 21.14 Build a simple email system accessible from wireless devices.
- 21.15 Explain security issues and options in a WAP application.
- 21.16 Integrate the push model of information delivery.
- 21.17 Explain the architecture of Wireless Telephony applications (WTA) and other wireless architectures.
- 21.18 Use various HTML elements.
- 21.19 Explain the various database concepts and vocabulary including: tables, columns, rows, data types, primary and foreign keys, relationships, queries, and relational database design techniques.
- 21.20 Use operating system services such as a personal web server for database development.
- 21.21 Explain server security and permissions.
- 21.22 Evaluate the advantages / disadvantages of different server platforms.
- 21.23 Explain scripting concepts and syntax.
- 21.24 Connect common databases using standard protocols.
- 21.25 Display data from a database using a Web interface.
- 21.26 Write and modify a database record using a Web interface.
- 21.27 Enable Web security features and tune Web applications.
- 21.28 Design and implement a basic shopping cart application.

22.0 Maintain systems quality and perform testing activities -- The student will be able to:

- 22.01 Identify the advantages and disadvantages of client-server computing.
- 22.02 Establish controls in a client-server framework.
- 22.03 Explain software testing methodology.
- 22.04 Describe the planning, executing and controlling of the testing process.
- 22.05 Perform Graphical User Interface testing.
- 22.06 Explain the server applications testing processes.
- 22.07 Explain testing in a networked application environment.
- 22.08 Incorporate cross-level functional testing within a data-driven framework-based environment.
- 22.09 Use client-server testing metrics.

- 22.10 Explain testing integration on the desktop.
- 22.11 Explain testing for web-based client-server applications.
- 22.12 Select and use appropriate automated test tools.

### **Purpose**

This certificate program is part of the E-Business Technology AS/AAS degree program (1552120100/0552120100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 07.0 Perform project management activities.
- 09.0 Demonstrate proficiency in the use of web browsers and access to Internet resources.
- 13.0 Conduct systems analysis and design.
- 20.0 Perform Web server management activities.
- 21.0 Support E-Business applications and product development.
- 22.0 Maintain network infrastructure.
- 23.0 Perform technical requirements to support UNIX operating system.
- 24.0 Maintain systems quality and perform testing activities.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** E-Business Technology Technical Certificate  
**CIP Number:** 0552120104  
**Program Length:** 21 credit hours  
**SOC Code(s):** 15-1099.12

This certificate program is part of the E-Business Technology AS/AAS degree program (1552120100/0552120100). At the completion of this program, the student will be able to:

07.0 Perform project management activities-The student will be able to:

- 07.01 Describe the role of project management (PM) within the organization.
- 07.02 Identify the strengths and weaknesses of various project life cycle design.
- 07.03 Understand the importance of project scope management.
- 07.04 Compare and contrast project selection methods.
- 07.05 Build a Work Breakdown Structure (WBS), Gantt chart, and Pert Chart and describe those different elements.
- 07.06 Compare and contrast types of cost estimates.
- 07.07 Examine cost control and earned value analysis.
- 07.08 Examine organizational planning, staff acquisition, and team development.
- 07.09 Examine risk identification, quantification, response development, and response control.
- 07.10 Compare and contrast project tracking and project reporting.
- 07.11 Understand change control and configuration control.
- 07.12 Understand subcontracting and outsourcing.
- 07.13 Discuss and analyze project management case study.

09.0 Demonstrate proficiency in the use of web browsers and access to internet resources--  
The student will be able to:

- 09.01 Explain the history, purpose and use of the World Wide Web
- 09.02 Describe proper Internet etiquette and usage.
- 09.03 Explain how to connect to the Internet
- 09.04 Explain the purpose and use of browsers and search engines
- 09.05 Understand and use Web browser tools to navigate the Web.
- 09.06 Demonstrate proficiency in email technologies by using email, setting up email accounts, and explaining communication and privacy issues specific to email.
- 09.07 Send electronic messages
- 09.08 Explain communication issues specific to email
- 09.09 Set up an e-mail account.
- 09.10 Participate in an email a web-based discussion group.
- 09.11 Explain and use proper Usenet electronic bulletin board etiquette.
- 09.12 Explain the guidelines for evaluating information needs before beginning a search an electronic search
- 09.13 Explain issues associated with pornography, free speech, censorship, filtering, and copyright on the Web.
- 09.14 Describe how to critically evaluate online information content.
- 09.15 Use bookmarks to create a bibliography

- 09.16 Capture images, text, sound, and data from Web pages
- 09.17 Work with File Transfer Protocol (FTP) clients
- 09.18 Identify and use instant messaging software
- 09.19 Design and publish a simple Web page using HTML and other Web page design software tools.

13.0 Conduct systems analysis and design --The student will be able to:

- 13.01 Perform a preliminary investigation of a systems project.
- 13.02 Perform a detailed systems investigation and analysis of the project.
- 13.03 Design the input and output for the system.
- 13.04 Design the data files for the systems.
- 13.05 Design the processing flow of the system.
- 13.06 Design a system to insure that only valid data is accepted and processed, completely and accurately.
- 13.07 Establish a project plan for the development and implementation of the systems.
- 13.08 Program and test the system.
- 13.09 Develop the final systems documentation.
- 13.10 Conduct necessary training and file conversion to properly implement the system.
- 13.11 Understand industry-standard models for developing and maintaining software such as the Capability Maturity Model.
- 13.12 Be able to use industry-standard tools such as Unified Modeling Language (UML) to model a systems development project.

20.0 Perform web server management activities -- The student will be able to:

- 20.01 Perform console management in the author and user mode.
- 20.02 Navigate and create a custom management console.
- 20.03 Create new user accounts.
- 20.04 Implement groups into a domain.
- 20.05 Change the domain mode.
- 20.06 Manage software settings, scripts, and security settings.
- 20.07 Manage administrative templates.
- 20.08 Manage folder redirection.
- 20.09 Configure and administer network printers.

21.0 Support e-business applications and product development -The student will be able to:

- 21.01 Identify the different components to systems development life cycle and how they are interrelated.
- 21.02 Identify deliverables for user project and build subprojects within lifecycle components.
- 21.03 Create physical structure of web-based architecture.
- 21.04 Create requirements for business request, develop web components necessary to satisfy request and test for acceptance.
- 21.05 Use web browser and web authoring tools.
- 21.06 Write required queries to get required answer sets.

22.0 Maintain network infrastructure --The student will be able to:

- 22.01 Analyze the infrastructure for E-business, the Internet, packet-switched networks, several Web markup languages, and popular Internet applications, protocols, and utility programs.
  - 22.02 Identify Web server hardware and discuss performance evaluation.
  - 22.03 Describe security threat countermeasures, including anti-virus software and encryption.
  - 22.04 Identify basic components of electronic payment systems.
  - 22.05 Identify how to create and maintain an effective Web presence and brand.
  - 22.06 Describe various Electronic Data Interchange components.
  - 22.07 Define and explain virtual communities and Web portals.
  - 22.08 Identify challenges of a global business regarding culture, legal and financial impacts, and differing languages.
  - 22.09 Identify the planning stages of the E-Business Project.
- 31.0 Perform technical requirements to support UNIX operating system -The student will be able to:
- 31.01 Explain the history of UNIX
  - 31.02 Explain basic command syntax for approximately 100 common shell commands governing the file-system, printing and process control.
  - 31.03 Identify various UNIX editors and use the vi editor.
  - 31.04 Schedule and reprioritize processes running under UNIX.
  - 31.05 Use commands to get information and communicate with remote users.
  - 31.06 Search for strings of text in files using shell meta-characters.
  - 31.07 Use Awk to generate reports or filter text.
  - 31.08 Use Korn shell scripts to control flow, input, output and jobs.
  - 31.09 Use C shell variables and arrays.
  - 31.10 Troubleshoot various system problems.
- 32.0 Maintain systems quality and perform testing activities -- The student will be able to:
- 32.01 Identify the advantages and disadvantages of client-server computing.
  - 32.02 Establish controls in a client-server framework.
  - 32.03 Explain software testing methodology.
  - 32.04 Describe the planning, executing and controlling of the testing process.
  - 32.05 Perform Graphical User Interface testing.
  - 32.06 Explain the server applications testing processes.
  - 32.07 Explain testing in a networked application environment.
  - 32.08 Incorporate cross-level functional testing within a data-driven framework-based environment.
  - 32.09 Use client-server testing metrics.
  - 32.10 Explain testing integration on the desktop.
  - 32.11 Explain testing for web-based client-server applications.
  - 32.12 Select and use appropriate automated test tools.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** E-Business Ventures Technical Certificate  
**Career Cluster:** Information Technology

<b>CCC</b>	
CIP Number	0552120105
Program Type	College Credit Certificate (CCC)
Program Length	24 credit hours
CTSO	Phi Beta Lambda, BPA (Business Professionals of America)
SOC Codes (all applicable)	15-1099.12
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the E-Business Technology AS/AAS degree program (1552120100/0552120100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Standards**

After successfully completing this course the student will be able to perform the following:

- 11.0 Understand issues related to E-Business.
- 18.0 Compare and contrast E-Business with traditional business.
- 19.0 Identify, classify, and demonstrate management activities for E-Business.
- 20.0 Identify legal and ethical issues for E-business.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: E-Business Ventures Technical Certificate**  
**CIP Number: 0552120105**  
**Program Length: 24 Credit Hours**  
**SOC Code(s): 15-1099.12**

This certificate program is part of the E-Business Technology AS/AAS degree program (1552120100/0552120100). At the completion of this program, the student will be able to:

- 11.0 Understand issues related to e-business-- The student will be able to:
- 11.01 Explain the difference between intranet and internet and the role of each in e-Business.
  - 11.02 Explain the history, purpose and use of the World Wide Web and how it has enabled e-Business
  - 11.03 Describe the rise of various e-Business models such as information and content models, broadcast/content aggregations models, interactive models, and content provider models.
  - 11.04 Explain security issues related to electronic payment.
  - 11.05 Explain issues of advertising, marketing and solicitation activities affecting e-business.
- 18.0 Compare and contrast e-business with traditional business models- The student will be able to:
- 18.01 Describe the evolution of e-business, how it changed the marketplace, and the benefits to society.
  - 18.02 Define e-business and its categories.
  - 18.03 Describe how business operations have changed due to e-business.
  - 18.04 Explain the basic business models of electronic marketing.
  - 18.05 Identify critical success factors for electronic marketing.
  - 18.06 Explain the impact of the Internet on customers and markets for businesses.
  - 18.07 Describe consumer buying behavior and organizational buying behavior.
  - 18.08 Explain how service industries conduct business electronically.
  - 18.09 Describe several innovative applications in the service sector.
  - 18.10 Explain how business-to-business commerce is conducted.
  - 18.11 Describe the application and key technologies for business- to-business e-commerce models.
  - 18.12 Describe the relationship between the Internet, intranet and extranet.
  - 18.13 Describe the typical electronic payment system.
  - 18.14 Identify the various payment options in e-commerce.
  - 18.15 Explain the strategic planning issues for e-business
  - 18.16 Identify the critical success factors of an e-business project/venture.
  - 18.17 Discuss contractual issues and copyright infringement on the Web.
  - 18.18 Explain the global economics and its impact e-business.
  - 18.19 Describe the major components and impact of Web-based economics

- 19.0 Identify, classify and demonstrate management activities for e-business—The student will be able to:
- 19.01 Define the role of the entrepreneur in business-in the United States and across the World.
  - 19.02 Describe the entrepreneurial profile.
  - 19.03 Discuss the role of the internet in helping small business expand their market opportunities both in the United States and abroad.
  - 19.04 Explain the importance of strategic management to business.
  - 19.05 Describe the components of a marketing plan and explain the benefits of preparing one.
  - 19.06 Describe how to prepare financial statements & use them to manage the business.
  - 19.07 Describe effective pricing strategies.
  - 19.08 Discuss the links among pricing, image, and competition.
  - 19.09 Explain what seed capital is and why it is so important to the entrepreneurial process.
  - 19.10 Explain the difference in the three types of capital that small businesses require: Fixed, Working and Growth.
  - 19.11 Explain the stages in the location decision.
  - 19.12 Describe the location criteria and outline the basic location options for retail and service business.
  - 19.13 Explain purchasing, quality control, vender analysis and managing inventory while using technology to gain a competitive edge.
  - 19.14 Explain the challenges involved in the entrepreneur's role as leader and what it takes to be a successful leader.
  - 19.15 Learn management succession and risk management strategies in family business together with ethics and social responsibility.
  - 19.16 Describe, explain and discuss business's responsibility to employees, customers, investors and the community.
  - 19.17 Describe management's historical role in business operations.
  - 19.18 Compare and contrast different management philosophies.
  - 19.19 Compare and contrast the employees' personal needs with those of the organization.
  - 19.20 Describe methods managers can use to deal with management politics.
  - 19.21 Describe the nature of management's legal environment for traditional and electronic environments.
  - 19.22 Describe the planning process of managers.
  - 19.23 Discuss the characteristics and functions of an organization chart.
  - 19.24 Describe the act and benefits of delegation.
  - 19.25 Summarize the components of job descriptions and specifications.
  - 19.26 Define and describe the activities involved in making a job analysis.
  - 19.27 Discuss potential problems in evaluating employees and methods to avoid problems.
  - 19.28 Discuss strategies managers may use to build and sustain high morale and motivation.
  - 19.29 Describe methods of direct and indirect compensation.
  - 19.30 Describe various employee relations practices.
  - 19.31 Summarize strategies to improve personal and organizational communication.
  - 19.32 Discuss the role of information systems in the control system.
  - 19.33 Discuss the steps in the basic decision making process.

- 19.34 Describe several factors that influence decision-making.
- 19.35 Distinguish among management functions.
- 19.36 Demonstrate knowledge of the relationship between authority and responsibility to task accomplishment.
- 19.37 Select the most effective communication systems.
- 19.38 Identify problems and make an appropriate decision.

20.0 Identify legal and ethical issues for e-business -- The student will be able to:

- 20.01 Describe the procedure to obtaining protection under each intellectual property law.
- 20.02 Describe and recognize material that is defamatory.
- 20.03 Explain the right of publicity and the right of privacy.
- 20.04 Explain copyright assignment and the Visual Artists Rights Act.
- 20.05 Discuss licensing text, photos, films, television clips, characters, and games, Domain name registration, cybersquatting and anti-cybersquatting regulations.
- 20.06 Describe the importance in choosing a strong trademark.
- 20.07 Understand basic laws that apply to e-commerce.
- 20.08 Explain how Article Two of the UCC that applies to the sale of goods involved in E-business.
- 20.09 Discuss current US laws that regulate e-business, such as the Uniform Computer Information Transactions Act, clickwraps, sales tax, and advertising.
- 20.10 Explain the meaning of linking, framing and caching.
- 20.11 Discuss the permission required for linking, revenue-sharing agreements, and liability issues pertaining to linking.
- 20.12 Discuss e-mail litigation, including anti-spam laws.
- 20.13 Describe licensing music for use.
- 20.14 Discuss copyright issues important to ISPs.
- 20.15 Explain other liability issues for ISPs, such as, defamation, privacy, trademark and patent.
- 20.16 Discuss when to use trademark protection and trade secret protection for their property.

2012 – 2013

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupationally-specific skills relating to the field of business intelligence analysis.

The content includes but is not limited to in-depth instruction on the activities performed during the life cycle of business intelligence analysis; factors, issues, and constraints relating to the creation of business intelligence reports; requirements for documenting specifications; identifying data sources and retrieval issues and methodologies; report delivery mechanisms; report modification and maintenance; data governance; quality control tests; data and report integrity; and the use of business intelligence tools.

### **Program Structure**

This program is a planned sequence of instruction consisting of 63 credit hours.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda (PBL) and Business Professionals of America (BPA) are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

### **Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. The standard length of this program is 63 credit hours according to Rule 6A-14.030, F.A.C.

## **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Describe the life cycle of business intelligence analysis.
- 02.0 Describe business intelligence analysis.

- 03.0 Describe the implications of business intelligence analysis on an organization's strategic marketing, organizational, and business plans.
- 04.0 Document specifications for and generate standard or custom reports, that summarize business, financial, or economic data for review by executives, managers, clients, and other stakeholders.
- 05.0 Define and differentiate among data constraints, filters, exception threshold, and data organization factors important in the creation of a report.
- 06.0 Locate, acquire, and model the data for analysis and output.
- 07.0 Compare and contrast the various forms for report presentation.
- 08.0 Describe the advantages and disadvantages for various report delivery mechanisms.
- 09.0 Reassess current business intelligence or trend data in support of altered information needs.
- 10.0 Analyze technology trends to identify markets for future product development or to improve sales of existing products.
- 11.0 Conduct or coordinate tests to ensure that intelligence is consistent with defined needs.
- 12.0 Formulate and/or adhere to data governance policies and processes.
- 13.0 Identify and analyze industry or geographic trends with business strategy implications.
- 14.0 Adhere to best practices for change management to ensure data and report integrity and continuity.
- 15.0 Apply quality control standards and measures.
- 16.0 Compare and contrast the attributes and appropriateness of business intelligence tools.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Business Intelligence Specialist  
**CIP Numbers:** 1552130100 A.S.  
 0552130100 A.A.S.  
**Program Length:** 63 Credit Hours  
**SOC Code(s):** 15-1099.10

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

01.0 Describe the life cycle of business intelligence analysis. – The student will be able to:

- 01.01 Describe the activities and goals of the analysis planning and justification phase.
  - 01.01.01 Define the goals of the desired analysis.
  - 01.01.02 Select appropriate analysis strategy according to key performance indicators.
  - 01.01.03 Determine data parameters and metrics.
  - 01.01.04 Determine data requirements.
- 01.02 Describe the activities and goals of the design phase.
  - 01.02.01 Determine appropriate reporting format.
  - 01.02.02 Determine appropriate delivery mechanism.
  - 01.02.03 Define data criteria and constraints.
  - 01.02.04 Delineate report data definitions.
  - 01.02.05 Select appropriate reporting tool/form.
- 01.03 Describe the activities and goals of the development phase.
  - 01.03.01 Identify available data sources and formats.
  - 01.03.02 Acquire data.
  - 01.03.03 Create report.
- 01.04 Describe the activities and goals of the evaluation phase.
  - 01.04.01 Define analytics/metrics suitable for evaluating accuracy and validity of results.
  - 01.04.02 Evaluate report output to assess whether intelligence is consistent with define goals.
  - 01.04.03 Assess report performance and usability.
- 01.05 Describe the activities and goals of the deployment and maintenance phase.
  - 01.05.01 Perform data reconciliation.
  - 01.05.02 Conduct periodic validation of reports with appropriate audiences and end-users.
  - 01.05.03 Track daily/weekly/monthly usage of data/reports.
  - 01.05.04 Determine proper “phasing out” thresholds for existing reports based on usage, data validity, and report reliability.
  - 01.05.05 Determine proper data archiving thresholds.

02.0 Describe business intelligence analysis. – The student will be able to:

- 02.01 Define the role of business intelligence analysis in the decision-making process.

- 02.02 Describe the categories of business intelligence reports.
  - 02.03 Describe the sources of data and information used in the creation of business intelligence reports.
  - 02.04 Explain the role and significance of OLAP, analytics, and data mining to the conduct of business intelligence analysis.
  - 02.05 Describe risks/pitfalls associated with business intelligence analysis (e.g., data validity, integrity, inappropriate analytics/metrics, et al.).
- 03.0 Describe the implications of business intelligence analysis on an organization's strategic marketing, organizational, and business plans. – The student will be able to:
- 03.01 Explain how business intelligence is used in creating, validating, and strengthening an organization's strategic marketing plan.
  - 03.02 Explain how an organization's internal processes, infrastructure, processes, and communication are impacted by the deployment of business intelligence.
  - 03.03 Explain how business intelligence is used to facilitate an organization's decision-making process.
- 04.0 Document specifications for and generate standard or custom reports, that summarize business, financial, or economic data for review by executives, managers, clients, and other stakeholders. – The student will be able to:
- 04.01 Compare attributes and benefits of available data sources.
    - 04.01.01 RDMS
    - 04.01.02 OLAP Cubes
    - 04.01.03 Spreadsheet
    - 04.01.04 XML
    - 04.01.05 CSV
    - 04.01.06 Web service
  - 04.02 Defining report data elements/requirements (metadata).
    - 04.02.01 Dimensions
    - 04.02.02 Type I (As is – current)
    - 04.02.03 Type II (Historical – slowly changing)
    - 04.02.04 Facts
    - 04.02.05 Base
    - 04.02.06 Summaries
    - 04.02.07 Calculated fields
    - 04.02.08 Periodicity
    - 04.02.09 Relationships/JOINS
  - 04.03 Describe how data is to be used and retained (disposition).
    - 04.03.01 Data mining
    - 04.03.02 Filtering
    - 04.03.03 Exception threshold alerts
    - 04.03.04 Aggregating
    - 04.03.05 Snapshot
    - 04.03.06 Dynamic
    - 04.03.07 Historical/archive/disposal
  - 04.04 Determine the form of analysis.
    - 04.04.01 Comparative analysis
    - 04.04.02 Impact analysis
    - 04.04.03 Correlational (affinity) analysis

## 04.04.04 Trending/Forecasting

05.0 Define and differentiate among data constraints, filters, exception threshold, and data organization factors important in the creation of a report. – The student will be able to:

- 05.01 Distinguish between data constraints and filters and their appropriate use.
- 05.02 Describe how each of the following data constraints relates to the creation and/or delivery of a report.
  - 05.02.01 Size of recordset (scope & performance)
  - 05.02.02 Time/period (end points and span)
  - 05.02.03 Range (e.g., # of records)
  - 05.02.04 Data element (e.g., type, size)
  - 05.02.05 Localization (programming & display language)
- 05.03 Describe how each of the following types of filters may be used to refine or enhance a report.
  - 05.03.01 Dimensions (Type I and Type II)
  - 05.03.02 Facts (e.g., base, summaries, calculated fields)
- 05.04 Illustrate how the use of an exception threshold contributes to the operational effectiveness of a report.
  - 05.04.01 Display or action dependent on threshold
  - 05.04.02 Triggers alert or advance warning of approaching static threshold
  - 05.04.03 Highlights results exceeding dynamic threshold
- 05.05 Compare and contrast the following forms of data organization in terms of representation and analysis of data results.
  - 05.05.01 GROUP BY
  - 05.05.02 ORDER BY (SORT)
  - 05.05.03 Concatenation/substring
  - 05.05.04 RANK

06.0 Locate, acquire, and model the data for analysis and output. – The student will be able to:

- 06.01 Identify the types of data that might be used to create business intelligence reports in support of the organization's business and financial strategic goals.
  - 06.01.01 Inventory repositories
  - 06.01.02 Sales data
  - 06.01.03 Customer data
  - 06.01.04 Employee/staffing data
  - 06.01.05 Financial data
- 06.02 Describe the risks and potential areas of concern related to the use of external data.
  - 06.02.01 Integrity/validity of data.
  - 06.02.02 Legality of data availability.
  - 06.02.03 Privacy issues of data acquired.
  - 06.02.04 Confidentiality of acquisition.
- 06.03 Describe potential issues, concerns, and obstacles associated with the use of data sources.
  - 06.03.01 Data form
  - 06.03.02 Data integrity
  - 06.03.03 Normalization

- 06.04 Describe the role and implications of standardization relative to internal and external data sources.
  - 06.04.01 Describe the need for data typing and transformation.
  - 06.04.02 Describe the methods by which transformation may be accomplished.
  
- 07.0 Compare and contrast the various forms for report presentation. – The student will be able to:
  - 07.01 Describe the attributes of a report suitable for creation using a report generator.
  - 07.02 Describe the attributes of a report suitable for presentation in spreadsheet form.
  - 07.03 Describe the attributes of a report suitable for presentation in database form.
  - 07.04 Describe the attributes of a report suitable for presentation in OLAP Cube or hypercube form.
  - 07.05 Describe the attributes of a report suitable for presentation in HTML/Flash.
  - 07.06 Describe the attributes of a report suitable for presentation in graph form.
  - 07.07 Describe the attributes of a report suitable for presentation via a dashboard interface.
  
- 08.0 Describe the advantages and disadvantages for various report delivery mechanisms. – The student will be able to:
  - 08.01 Email
  - 08.02 Web-based
  - 08.03 Mobile device
  - 08.04 Intranet
  - 08.05 Print/PDF
  - 08.06 Oral presentation
  
- 09.0 Reassess current business intelligence or trend data in support of altered information needs. – The student will be able to:
  - 09.01 Identify and relate report design constraints and their relationship to data.
  - 09.02 Evaluate current technology in terms of compatibility and capacity for meeting new or evolving information needs.
  - 09.03 Re-construct report based on alternative parameters.
  - 09.04 Adapt and validate report based on new requirements.
  
- 10.0 Analyze technology trends to identify markets for future product development or to improve sales of existing products. – The student will be able to:
  - 10.01 Evaluate new technologies and products for applicability, capability, and capacity for current and future information needs.
  - 10.02 Create a proposal for introducing new, or adapting existing, business intelligence technology, including pricing, benefits summary, cost/benefit analysis, life cycle implications, and implementation plan.
  
- 11.0 Conduct or coordinate tests to ensure that intelligence is consistent with defined needs. – The student will be able to:
  - 11.01 Reports meet requirements
  - 11.02 Testing metrics for accuracy and validity

- 11.03 Peer review
- 11.04 Performance testing
- 11.05 Performance tuning
  
- 12.0 Formulate and/or adhere to data governance policies and processes. – The student will be able to:
  - 12.01 Understand how information is disseminated to end-users
  - 12.02 Adhere to policies, tool use, and processes related to data governance.
  
- 13.0 Identify and analyze industry or geographic trends with business strategy implications. – The student will be able to:
  - 13.01 Compare and contrast key performance indicators appropriate to the industry
  - 13.02 Define metrics to support analysis of targeted KPIs.
  - 13.03 Understand how the monitoring and analysis of key performance indicators strengthen or support the organization's goals and strategies.
  
- 14.0 Adhere to best practices for change management to ensure data and report integrity and continuity. – The student will be able to:
  - 14.01 Authorization/permissions schema
  - 14.02 Internal controls
  - 14.03 Impact analysis
  - 14.04 Redundancy/archival policy
  - 14.05 Assessing readiness for change
  - 14.06 Communication of changes
  - 14.07 Separation of duties (e.g., design, implementation, testing)
  
- 15.0 Apply quality control standards and measures. – The student will be able to:
  - 15.01 Data quality
  - 15.02 Report quality
  - 15.03 Analytic/metric quality
  - 15.04 Quality assurance checks
  
- 16.0 Compare and contrast the attributes and appropriateness of business intelligence tools. – The student will be able to:
  - 16.01 Compare and contrast enterprise-based/integrated business intelligence tools, including SAS, SAP, and COGNOS.
  - 16.02 Compare and contrast native/client-based tools used in business intelligence analysis, including spreadsheets and SQL-compliant applications.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Cisco Certified Network Associate Certificate  
**Career Cluster:** Information Technology

<b>CCC</b>	
CIP Number	0611020301
Program Type	College Credit Certificate (CCC)
Program Length	12 credit hours
CTSO	Phi Beta Lambda, BPA (Business Professionals of America)
SOC Codes (all applicable)	15-1081
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>

### **Purpose**

This certificate program is part of the Computer Engineering Technology AS/AAS degree program (1615120100/0615120100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to the selection of telecommunications equipment, including the installation and configuration of networks, routers, and switches.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these

occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA is the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate proficiency in network design.
- 02.0 Demonstrate proficiency in hubs, routers, and switches.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Cisco Certified Network Associate Certificate  
**CIP Number:** 0611020301  
**Program Length:** 12 Credit Hours  
**SOC Code(s):** 15-1081

This certificate program is part of the Computer Engineering Technology AS/AAS degree program (1615120100/0615120100). At the completion of this program, the student will be able to:

01.0 Demonstrate proficiency in network design. – The student will be able to:

- 01.01 Explain the OSI model for LAN and WAN communications.
- 01.02 Apply the OSI model to realistic networking situations.
- 01.03 Describe the basic LAN topologies and transport methods.
- 01.04 Explain basic WAN topologies and transport methods.
- 01.05 Describe the various functions of the principle networking standards organizations.
- 01.06 Describe various kinds of network media.
- 01.07 Compare packet and cell implementations and interfaces.
- 01.08 Explain WAN carrier types for point-to-point, T-carriers, SONET, ISDN, and wireless technologies.
- 01.09 Describe the purpose of LAN network transmission equipment, including NICs, repeaters, MAUs, hubs, routers, switches, and gateways.
- 01.10 Explain how LAN network equipment works.
- 01.11 Describe the purpose of WAN network equipment, including multiplexers, channel banks, private networks, modems, access servers, and routers.
- 01.12 Explain how WAN network equipment works.
- 01.13 Design LAN topologies using media and equipment for different kinds of applications.
- 01.14 Design a LAN to connect to a WAN.
- 01.15 Discuss WAN topology options according to pricing, bandwidth needs, and equipment needs.
- 01.16 Explain how video and audio are transported over networks.
- 01.17 Discuss voice, video, and data transmitted works.
- 01.18 Explain how multimedia data transmission works.
- 01.19 Design LANs and WANs for integrated voice, video, and data transmissions.
- 01.20 Describe TCP/IP.
- 01.21 Explain how TCP and IP are implemented on networks.
- 01.22 Explain how UDP is employed with IP.
- 01.23 Describe IP addressing and understand how to use it on LANs and WANs.
- 01.24 Describe the new IP version 6 and understand how to design it into your expanding network.
- 01.25 Discuss and use application protocols in the TCP/IP suite.
- 01.26 Explain WAN Transport Methods – X.25, Frame Relay, ISDN, SMDS, DSL, and SONET.
- 01.27 Explain ATM Technologies – Characteristics, Layered Communications, and Cell structure.

- 01.28 Explain ATM design considerations.
- 01.29 Describe ATM topologies.
- 01.30 Explain ATM backbone networks.
- 01.31 Describe ATM LAN applications.
- 01.32 Describe advantages and disadvantages of Network Protocol Architectures.

02.0 Demonstrate proficiency in hubs, routers, and switches. – The student will be able to:

- 02.01 Identify standalone hubs
- 02.02 Discuss the differences between stackable, modular, and intelligent hubs.
- 02.03 Explain how to install a hub.
- 02.04 Identify how to choose the right hub.
- 02.05 Describe the advantage of segmentation.
- 02.06 Describe segmentation using bridges, switches, and routers.
- 02.07 Name and describe switching methods.
- 02.08 Describe network congestion problems in Ethernet networks.
- 02.09 Describe the benefits of network segmentation with bridges, switches, and routers.
- 02.10 Distinguish between cut-through and store-and-forward LAN switching.
- 02.11 Describe the operation of the Spanning Tree Protocol and its benefits.
- 02.12 Describe the benefits of virtual LANs.
- 02.13 Identify RIP and IGRP routing protocols.
- 02.14 Explain the services of separate and integrated multi-protocol routing.
- 02.15 Identify routing problems.
- 02.16 Identify router features and functions.
- 02.17 Describe the features and functions of gateways.

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate proficiency in computer systems architecture.
- 02.0 Demonstrate proficiency in the use of microcomputer disk operating system services and functions.
- 03.0 Demonstrate proficiency in structured cabling.
- 04.0 Demonstrate proficiency in peripheral equipment.
- 05.0 Demonstrate proficiency in customer site requirements and considerations.
- 06.0 Demonstrate proficiency in the analysis and design of peripheral equipment used in computer systems.
- 07.0 Demonstrate proficiency in computer and network security.
- 08.0 Demonstrate proficiency in hubs, bridges, routers, and switches.
- 09.0 Demonstrate proficiency in communication interfacing.
- 10.0 Demonstrate proficiency in customer relations.
- 11.0 Demonstrate proficiency in computer networking techniques.
- 12.0 Demonstrate proficiency in analysis and design of data communications system.
- 13.0 Demonstrate appropriate math skills.

- 14.0 Demonstrate proficiency in structured cabling.
- 15.0 Demonstrate proficiency in network troubleshooting.
- 16.0 Demonstrate proficiency in network design.
- 17.0 Demonstrate proficiency in wireless devices.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Network Systems Developer  
**CIP Number:** 0611090104  
**Program Length:** 41 Credit Hours  
**SOC Code(s):** 15-1081

This certificate program is part of the Computer Engineering Technology AS/AAS degree program (1615120100/01615120100). At the completion of this program, the student will be able to:

01.0 Demonstrate proficiency in computer systems architecture—The student will be able to:

- 01.01 Draw and explain systems configurations in block detail.
- 01.02 Interpret computer acronyms.
- 01.03 Identify and define priorities and interrupts at system level.
- 01.04 Define and list direct memory access handling systems.
- 01.05 Define functions of advanced memory techniques (e.g. virtual, pipeline, cache).
- 01.06 Troubleshoot a microcomputer system.

02.0 Demonstrate proficiency in the use of microcomputer disk operating system services and functions--The student will be able to:

- 02.01 Describe the historical development of computer operating systems.
- 02.02 Describe the major hardware and related software subsystem of microcomputer DOS (Disk Operating System).
- 02.03 Describe various disk formats.
- 02.04 Describe the extended services of enhanced systems.
- 02.05 Describe design decisions involved in implementing
- 02.06 Input/Output (I/O) interfacing using interrupts.
- 02.07 Program using the extended DOS functions.
- 02.08 Describe the various operating systems, including Windows 95 and 98, NT 4.0, 2000, Linux, Unix, Novell, etc.

03.0 Demonstrate proficiency in computer operating systems—The student will be able to:

- 03.01 Describe types of operating systems.
- 03.02 Understand the history of operating systems.
- 03.03 Explain single-tasking versus multitasking.
- 03.04 Explain single-user versus multi-user operating systems.
- 03.05 Identify current operating systems.
- 03.06 Identify computer hardware.
- 03.07 Identify popular PC processors.
- 03.08 Explain system architectures.
- 03.09 Describe various PC operating systems.
- 03.10 Describe the file system functions.
- 03.11 Explain the DOS/Windows 3.1 file system.
- 03.12 Explain Windows 95/98, NT, and 2000 file systems.
- 03.13 Describe the UNIX file system.

- 03.14 Discuss the Macintosh file system.
  - 03.15 Discuss the installation of an operating system.
  - 03.16 Identify the preparation for installing an operating system.
  - 03.17 Explain how to install MS-DOS, Windows 3.1, Windows 95/98, Windows NT, and Windows 2000.
  - 03.18 Explain how to install UNIX: Linux.
  - 03.19 Explain how to install Mac OS.
  - 03.20 Identify the steps to upgrade an operating system to a newer version.
  - 03.21 Describe the various output, input, and storage devices.
  - 03.22 Explain the various modems and other devices associated with operating systems.
  - 03.23 Describe the network connectivity associated with various operating systems.
  - 03.24 Explain sharing disks and files through server network operating systems.
  - 03.25 Describe accessing and sharing disks and files through client (workstations) network operating systems.
  - 03.26 Identify how to share printing devices through various operating systems.
  - 03.27 Explain network and internet resource servers.
  - 03.28 Describe file system maintenance.
  - 03.29 Explain finding and deleting files on various operating systems.
  - 03.30 Describe how to maintain large and small system disks.
  - 03.31 Identify the process for making backups.
  - 03.32 Explain how to optimize software installations.
  - 03.33 Identify how to tune an operating system.
- 04.0 Demonstrate proficiency in peripheral equipment—The student will be able to:
- 04.01 Install, analyze and troubleshoot interface controllers.
  - 04.02 Install, analyze and troubleshoot display terminals.
  - 04.03 Install, analyze and troubleshoot printer.
  - 04.04 Install, analyze and troubleshoot magnetic tape equipment.
  - 04.05 Install, analyze and troubleshoot disk drive equipment.
  - 04.06 Define environmental requirements for peripherals and media.
- 05.0 Demonstrate proficiency in customer site requirements and considerations--The student will be able to:
- 05.01 Apply effective customer relations.
  - 05.02 Follow installation procedures.
  - 05.03 Calculate and determine power requirements.
  - 05.04 Calculate and determine environmental requirements.
  - 05.05 List and perform preventative maintenance techniques and requirements.
- 06.0 Demonstrate proficiency in the analysis and design of peripheral equipment used in computer systems--The student will be able to:
- 06.01 Describe and analyze circuits used in various functions of video display systems.
  - 06.02 Analyze various types of disk drives and disk drive controllers.
  - 06.03 Analyze various types of printers and plotters and their related interface controllers.
  - 06.04 Describe the use of RAM (Random-Access Memory) and ROM (Read-Only Memory) for font generation in video display systems.

- 06.05 Modulation and interval timing techniques.
  - 06.06 Pointing devices for computer systems.
  - 06.07 Analyze the operation of mechanical and optical pointing devices used in computer systems.
  - 06.08 Describe the functions of the major blocks in a dot matrix printer.
  - 06.09 Analyze the communication process using a standard Centronics parallel interface in a printer.
  - 06.10 Describe the main functional blocks of a roller bed plotter.
  - 06.11 Analyze subsystems including interfaces for use in a roller bed plotter.
  - 06.12 Identify the implications of ESD (Electrostatic Discharge).
- 07.0 Demonstrate proficiency in computer and network security—The student will be able to:
- 07.01 Basic understanding of logon, user, file, system, and network security associated with the appropriate operating system.
  - 07.02 Design a basic security system associated with the appropriate operating system.
  - 07.03 Analyze a basic security system associated with the appropriate operating system.
  - 07.04 Troubleshoot a basic security system associated with the appropriate operating system.
- 08.0 Demonstrate proficiency in hubs, bridges, routers, and switches—The student will be able to:
- 08.01 Identify standalone hubs.
  - 08.02 Discuss the differences between stackable, modular, and intelligent hubs.
  - 08.03 Explain how to install a hub.
  - 08.04 Identify how to choose the right hub.
  - 08.05 Describe the advantage of segmentation.
  - 08.06 Describe segmentation using bridges, switches, and routers.
  - 08.07 Name and describe switching methods.
  - 08.08 Describe network congestion problems in Ethernet networks.
  - 08.09 Describe the benefits of network segmentation with bridges, switches, and routers.
  - 08.10 Distinguish between cut-through and store-and-forward LAN switching.
  - 08.11 Describe the operation of the Spanning Tree Protocol and its benefits.
  - 08.12 Describe the benefits of virtual LANs.
  - 08.13 Identify RIP and IGRP routing protocols.
  - 08.14 Explain the services of separate and integrated multiprotocol routing.
  - 08.15 Identify routing problems.
  - 08.16 Identify router features and functions.
  - 08.17 Describe the features and functions of gateways.
- 09.0 Demonstrate proficiency in communication interfacing--The student will be able to:
- 09.01 Identify and define serial, parallel, USB, and FireWire interface standards.
  - 09.02 Identify, define and configure sync and async devices.
  - 09.03 Demonstrate the use of interface devices.
  - 09.04 Identify and define networking levels.
  - 09.05 Identify and define protocols.

- 09.06 Identify and define multi-user systems.
- 09.07 Troubleshoot and repair network systems.
- 09.08 Demonstrate the use of a protocol analyzer.
  
- 10.0 Demonstrate proficiency in customer relations--The student will be able to:
  - 10.01 Describe effective listening techniques.
  - 10.02 Describe techniques for instilling customer confidence.
  - 10.03 Describe techniques for keeping the customer informed.
  - 10.04 Demonstrate proper follow-up techniques.
  
- 11.0 Demonstrate proficiency in customer networking techniques—The student will be able to:
  - 11.01 Identify and define computer networking techniques.
  - 11.02 Design a system using hardware and software communication protocols.
  - 11.03 Apply management techniques for network software.
  
- 12.0 Demonstrate proficiency in analysis and design of data communication systems--The student will be able to:
  - 12.01 Describe the different types of digital data communications systems.
  - 12.02 Describe data formats and transmission rates in serial data communications systems.
  - 12.03 Identify and define available options for integration of a display terminal in a data communication system.
  - 12.04 Identify and define communication signals and protocol for MODEM (Modulator Demodulator) links.
  - 12.05 Apply error detection and correction in digital communication systems.
  - 12.06 Define communication protocols.
  - 12.07 Design and apply multiplexing techniques for computer.
  
- 13.0 Demonstrate appropriate math skills--The student will be able to:
  - 13.01 Add, subtract, multiply and divide using fractions, decimals, and whole numbers.
  - 13.02 Perform Algebraic formulations.
  
- 14.0 Demonstrate proficiency in structured cabling--The student will be able to:
  - 14.01 Identify and define data cabling.
  - 14.02 Describe the cabling standards.
  - 14.03 Identify and describe the correct cabling.
  - 14.04 Describe the various constraints of cable systems and infrastructures.
  - 14.05 Describe the various components of a cabling system.
  - 14.06 Identify and demonstrate the tools utilized in cabling.
  - 14.07 Describe the different network media and connectors utilized in structure cabling.
  - 14.08 Analyze and design a structure wiring cabling system.
  - 14.09 Demonstrate a successful structured wiring installation.
  - 14.10 Describe and demonstrate testing, as well as troubleshooting techniques in structured cabling.
  - 14.11 Develop a structure wiring proposal.

- 15.0 Demonstrate proficiency in network troubleshooting--The student will be able to:
- 15.01 Explain LAN standards and the OSI model.
  - 15.02 Describe the proper method of documenting a network.
  - 15.03 Identify cable, power line, analog interface, and digital interface testing tools.
  - 15.04 Identify protocol analyzers.
  - 15.05 Identify the troubleshooting techniques for various cabling systems.
  - 15.06 Identify how to troubleshoot Token Ring networks.
  - 15.07 Identify how to troubleshoot Ethernet networks.
  - 15.08 Identify how to troubleshoot FDDI networks.
- 16.0 Demonstrate proficiency in network design—The student will be able to:
- 16.01 Explain the OSI model for LAN and WAN communications.
  - 16.02 Apply the OSI model to realistic networking situations.
  - 16.03 Describe the basic LAN topologies and transport methods.
  - 16.04 Explain basic WAN topologies and transport methods.
  - 16.05 Describe the various functions of the principle networking standards organizations.
  - 16.06 Describe various kinds of network media.
  - 16.07 Compare packet and cell implementations and interfaces.
  - 16.08 Explain WAN carrier types for point-to-point, T-carriers, SONET, ISDN, and wireless technologies.
  - 16.09 Describe the purpose of LAN network transmission equipment, including NICs, repeaters, MAUs, hubs, routers, brouters, switches, and gateways.
  - 16.10 Explain how LAN network equipment works.
  - 16.11 Describe the purpose of WAN network equipment, including multiplexers, channel banks, private networks, modems, access servers, and routers.
  - 16.12 Explain how WAN network equipment works.
  - 16.13 Design LAN topologies using media and equipment for different kinds of applications.
  - 16.14 Design a LAN to connect to a WAN.
  - 16.15 Discuss WAN topology options according to pricing, bandwidth needs, and equipment needs.
  - 16.16 Explain how video and audio are transported over networks.
  - 16.17 Discuss voice, video, and data integration issues.
  - 16.18 Explain how multimedia data transmission works.
  - 16.19 Design LANs and WANs for integrated voice, video, and data transmissions.
  - 16.20 Describe TCP/IP.
  - 16.21 Explain how TCP and IP are implemented on networks.
  - 16.22 Explain how UDP is employed with IP.
  - 16.23 Describe IP addressing and understand how to use it on LANs and WANs.
  - 16.24 Describe the new IP version 6 and understand how to design it into your expanding network.
  - 16.25 Discuss and use application protocols in the TCP/IP suite.
  - 16.26 Explain WAN Transport Methods – X.25, Frame Relay, ISDN, SMDS, DSL, SONET.
  - 16.27 Explain ATM Technologies – Characteristics, Layered Communications, Cell structure.
  - 16.28 Explain ATM design considerations.

- 16.29 Describe ATM topologies.
- 16.30 Explain ATM backbone networks.
- 16.31 Describe ATM LAN applications.
- 16.32 Network Protocol Architectures: Advantages and Disadvantages.

17.0 Demonstrate proficiency in wireless devices –The student will be able to:

- 17.01 Describe at least three wireless media such as: radio wave, microwave, and infrared.
- 17.02 Describe cellular wireless point-to-point and multipoint topology strategies.
- 17.03 Identify the types of wireless networks and the uses of each.
- 17.04 Describe the types of signal transmission used in mobile computing such as: packet-radio communication, cellular networks, and satellite stations.

2012 – 2013

### **Purpose**

This certificate program is part of the Computer Engineering Technology AS/AAS degree program (1615120100/0615120100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to computer systems architecture and analysis and design of computer systems. This college credit certificate focuses on broad, transferable skills and stresses understanding and demonstration of the following elements of the computer engineering industry; technical and product skills, underlying principles of technology, and safety.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA is the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate proficiency in computer systems architecture.
- 02.0 Demonstrate proficiency in the use of microcomputer disk operating system services and functions.
- 03.0 Demonstrate proficiency in computer operating systems.
- 04.0 Demonstrate proficiency in peripheral equipment.
- 05.0 Demonstrate proficiency in customer site requirements and considerations.
- 06.0 Demonstrate proficiency in the analysis and design of peripheral equipment used in computer systems.
- 07.0 Demonstrate proficiency in computer and network security.
- 08.0 Demonstrate proficiency in hubs, bridges, routers, and switches.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Computer Specialist  
**CIP Number:** 0611100604  
**Program Length:** 27 credit hours  
**SOC Code(s):** 15-1071

This certificate program is part of the Computer Engineering AS/AAS degree program (1615120100/0615120100). At the completion of this program, the student will be able to:

- 01.0 Demonstrate proficiency in computer systems architecture. – The student will be able to:
- 01.01 Draw and explain systems configurations in block detail.
  - 01.02 Interpret computer acronyms.
  - 01.03 Identify and define priorities and interrupts at system level.
  - 01.04 Define and list direct memory access handling systems.
  - 01.05 Define functions of advanced memory techniques (e.g. virtual, pipeline, cache).
  - 01.06 Troubleshoot a microcomputer system.
- 02.0 Demonstrate proficiency in the use of microcomputer disk operating system services and functions. – The student will be able to:
- 02.01 Describe the historical development of computer operating systems.
  - 02.02 Describe the major hardware and related software subsystem of microcomputer DOS (Disk Operating System).
  - 02.03 Describe various disk formats.
  - 02.04 Describe the extended services of enhanced systems.
  - 02.05 Describe design decisions involved in implementing Input/Output (I/O) interfacing using interrupts.
  - 02.06 Program using the extended DOS functions.
  - 02.07 Describe the various operating systems, including Windows 95 and 98, NT 4.0, 2000, Linux, Unix, Novell, etc.
- 03.0 Demonstrate proficiency in computer operating systems. – The student will be able to:
- 03.01 Describe types of operating systems.
  - 03.02 Understand the history of operating systems.
  - 03.03 Explain single-tasking versus multitasking.
  - 03.04 Explain single-user versus multi-user operating systems.
  - 03.05 Identify current operating systems.
  - 03.06 Identify computer hardware.
  - 03.07 Identify popular PC processors.
  - 03.08 Explain system architectures.
  - 03.09 Describe various PC operating systems.
  - 03.10 Describe the file system functions.
  - 03.11 Explain the DOS/Windows 3.1 file system.
  - 03.12 Explain Windows 95/98, NT, and 2000 file systems.
  - 03.13 Describe the UNIX file system.
  - 03.14 Discuss the Macintosh file system.

- 03.15 Discuss the installation of an operating system.
  - 03.16 Identify the preparation for installing an operating system.
  - 03.17 Explain how to install MS-DOS, Windows 3.1, Windows 95/98, Windows NT, and Windows 2000.
  - 03.18 Explain how to install UNIX: Linux.
  - 03.19 Explain how to install Mac OS.
  - 03.20 Identify the steps to upgrade an operating system to a newer version.
  - 03.21 Describe the various output, input, and storage devices.
  - 03.22 Explain the various modems and other devices associated with operating systems.
  - 03.23 Describe the network connectivity associated with various operating systems.
  - 03.24 Explain sharing disks and files through server network operating systems.
  - 03.25 Describe accessing and sharing disks and files through client (workstations) network operating systems.
  - 03.26 Identify how to share printing devices through various operating systems.
  - 03.27 Explain network and internet resource servers.
  - 03.28 Describe file system maintenance.
  - 03.29 Explain finding and deleting files on various operating systems.
  - 03.30 Describe how to maintain large and small system disks.
  - 03.31 Identify the process for making backups.
  - 03.32 Explain how to optimize software installations.
  - 03.33 Identify how to tune an operating system.
- 04.0 Demonstrate proficiency in peripheral equipment. – The student will be able to:
- 04.01 Install, analyze and troubleshoot interface controllers.
  - 04.02 Install, analyze and troubleshoot display terminals.
  - 04.03 Install, analyze and troubleshoot printer.
  - 04.04 Install, analyze and troubleshoot magnetic tape equipment.
  - 04.05 Install, analyze and troubleshoot disk drive equipment.
  - 04.06 Define environmental requirements for peripherals and media.
- 05.0 Demonstrate proficiency in customer site requirements and considerations. – The student will be able to:
- 05.01 Apply effective customer relations.
  - 05.02 Follow installation procedures.
  - 05.03 Calculate and determine power requirements.
  - 05.04 Calculate and determine environmental requirements.
  - 05.05 List and perform preventative maintenance techniques and requirements.
- 06.0 Demonstrate proficiency in the analysis and design of peripheral equipment used in computer systems. – The student will be able to:
- 06.01 Describe and analyze circuits used in various functions of video display systems.
  - 06.02 Analyze various types of disk drives and disk drive controllers.
  - 06.03 Analyze various types of printers and plotters and their related interface controllers.
  - 06.04 Describe the use of RAM (Random-Access Memory) and ROM (Read-Only Memory) for font generation in video display systems.
  - 06.05 Modulation and interval timing techniques.

- 06.06 Pointing devices for computer systems.
  - 06.07 Analyze the operation of mechanical and optical pointing devices used in computer systems.
  - 06.08 Describe the functions of the major blocks in a dot matrix printer.
  - 06.09 Analyze the communication process using a standard Centronics parallel interface in a printer.
  - 06.10 Describe the main functional blocks of a roller bed plotter.
  - 06.11 Analyze subsystems including interfaces for use in a roller bed plotter.
  - 06.12 Identify the implications of ESD (Electrostatic Discharge).
- 07.0 Demonstrate proficiency in computer and network security. – The student will be able to:
- 07.01 Basic understanding of logon, user, file, system, and network security associated with the appropriate operating system.
  - 07.02 Design a basic security system associated with the appropriate operating system.
  - 07.03 Analyze a basic security system associated with the appropriate operating system.
  - 07.04 Troubleshoot a basic security system associated with the appropriate operating system.
- 08.0 Demonstrate proficiency in hubs, bridges, routers, and switches. – The student will be able to:
- 08.01 Identify standalone hubs.
  - 08.02 Discuss the differences between stackable, modular, and intelligent hubs.
  - 08.03 Explain how to install a hub.
  - 08.04 Identify how to choose the right hub.
  - 08.05 Describe the advantage of segmentation.
  - 08.06 Describe segmentation using bridges, switches, and routers.
  - 08.07 Name and describe switching methods.
  - 08.08 Describe network congestion problems in Ethernet networks.
  - 08.09 Describe the benefits of network segmentation with bridges, switches, and routers.
  - 08.10 Distinguish between cut-through and store-and-forward LAN switching.
  - 08.11 Describe the operation of the Spanning Tree Protocol and its benefits.
  - 08.12 Describe the benefits of virtual LANs.
  - 08.13 Identify RIP and IGRP routing protocols.
  - 08.14 Explain the services of separate and integrated multiprotocol routing.
  - 08.15 Identify routing problems.
  - 08.16 Identify router features and functions.
  - 08.17 Describe the features and functions of gateways.

### **Purpose**

This certificate program is part of the Computer Engineering Technology AS/AAS degree program (1615120100/0615120100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

This program prepares individuals to design, install, configure, and troubleshoot wireless and IP Telephony networks. Graduates of this technical program will be prepared to enter advanced training and education in specialized IP Communications related fields.

The content includes but is not limited to RF Fundamentals, use of circuit diagrams and schematics, soldering, Wireless Site Surveying, Wireless Security, Design of Converged and Integrated Services Networks, Fundamentals of Voice over IP, Voice Gateway Protocols, and Introduction to Routing and Switching.

## **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate proficiency in computer systems architecture.
- 02.0 Demonstrate proficiency in communication interfacing.
- 03.0 Demonstrate proficiency in customer relations.
- 04.0 Demonstrate proficiency in computer networking techniques.
- 05.0 Demonstrate proficiency in analysis and design of data communications systems.
- 06.0 Demonstrate appropriate communication skills.
- 07.0 Demonstrate employability skills.
- 08.0 Demonstrate proficiency in RF Math Calculations.
- 09.0 Demonstrate proficiency in planning and deploying Wireless LANs.
- 10.0 Demonstrate proficiency in Conducting Site Surveying

- 11.0 Demonstrate proficiency in implementing Wireless LAN security.
- 12.0 Demonstrate proficiency in configuring IP Telephony servers.
- 13.0 Demonstrate proficiency in interconnecting network devices.
- 14.0 Demonstrate proficiency in configuring and troubleshooting Voice Gateways.
- 15.0 Demonstrate proficiency in configuring Quality of Service for Integrated Services Networks

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Wireless and IP Communications Technician  
**CIP Number:** 0615030505  
**Program Length:** 15 credit hours  
**SOC Code(s):** 15-1081

This certificate program is part of the Computer Engineering Technology AS/AAS degree program (1615120100/0615120100). At the completion of this program, the student will be able to:

- 01.0 Demonstrate proficiency in computer systems architecture--The student will be able to:
- 01.01 Draw and explain systems configurations in block detail.
  - 01.02 Interpret computer acronyms.
  - 01.03 Identify and define priorities and interrupts at system level.
  - 01.04 Define and list direct memory access handling systems.
  - 01.05 Define functions of advanced memory techniques (e.g. virtual, pipeline, cache).
  - 01.06 Troubleshoot a microcomputer system.
- 02.0 Demonstrate proficiency in communication interfacing--The student will be able to:
- 02.01 Identify and define serial and parallel interface standards.
  - 02.02 Identify, define and configure sync and async devices.
  - 02.03 Demonstrate the use of interface devices.
  - 02.04 Identify and define networking levels.
  - 02.05 Identify and define protocols.
  - 02.06 Troubleshoot and repair network systems.
  - 02.07 Identify and define multi-user systems.
- 03.0 Demonstrate proficiency in customer relations--The student will be able to:
- 03.01 Describe effective listening techniques.
  - 03.02 Describe techniques for instilling customer confidence.
  - 03.03 Describe techniques for keeping the customer informed.
  - 03.04 Demonstrate proper follow-up techniques.
- 04.0 Demonstrate proficiency in computer networking techniques--The student will be able to:
- 04.01 Identify and define computer networking techniques.
  - 04.02 Design a system using hardware and software communication protocols.
  - 04.03 Apply management techniques for network software.
- 05.0 Demonstrate proficiency in analysis and design of data communications systems--The student will be able to:
- 05.01 Describe the different types of digital data communications systems.
  - 05.02 Describe data formats and transmission rates in serial data communications systems.

- 05.03 Design the connections and programming for a UART (Universal Asynchronous/Synchronous Receiver Transmitter) in a microprocessor-based system.
  - 05.04 Identify and define available options for integration of a display terminal in a data communication system.
  - 05.05 Identify and define communication signals and protocol for MODEM (Modulator Demodulator) links.
  - 05.06 Apply digital modulation techniques including PAM (Pulse-Amplitude Modulation), PCM (Pulse-Code Modulation), PWM (Pulse-Width Modulation) and delta modulation.
  - 05.07 Analyze and design circuits for generation and detection of digital modulation.
  - 05.08 Apply error detection and correction in digital communication systems.
  - 05.09 Define communication protocols.
  - 05.10 Design and apply multiplexing techniques for computer.
- 06.0 Demonstrate appropriate communication skills—The student will be able to:
- 06.01 Write logical and understandable statements, or phrases, to accurately fill out forms/invoices commonly used in business and industry.
  - 06.02 Read and understand graphs, charts, diagrams, and tables commonly used in this industry/occupation area.
  - 06.03 Read and follow written and oral instructions.
  - 06.04 Answer and ask questions coherently and concisely.
  - 06.05 Read critically by recognizing assumptions and implications and by evaluating ideas.
  - 06.06 Demonstrate appropriate telephone/communication skills.
- 07.0 Demonstrate proficiency in RF math calculations-- The student will be able to:
- 07.01 Convert between milliwatts and dBm.
  - 07.02 Use power calculations to calculate change in power.
  - 07.03 Explain the concepts of polarization, gain, beam width and free-space path loss.
  - 07.04 Identify the basic attributes, purposes, and functions of antenna types.
  - 07.05 Identify and apply the concepts that make up the functionality of spread spectrum technology.
  - 07.06 Recognize concepts associated with wireless LAN service sets.
  - 07.07 Calculate the Fresnel Zone radius.
  - 07.08 Investigate the relationship between range and signal strength.
- 08.0 Demonstrate proficiency in planning and deploying wireless LANs--The student will be able to:
- 08.01 Set up a wireless client.
  - 08.02 Understand the concept of an SSID.
  - 08.03 Understand the nature of an ad hoc wireless network.
  - 08.04 Use Windows XP to manage a wireless connection.
  - 08.05 Explain the purpose of the HyperTerminal program.
  - 08.06 Identify the equipment necessary to connect locally to an access point for configuration via HyperTerminal.
  - 08.07 Describe the basic commands used to display the access point's configuration and interface information, and to configure an IP address.

- 08.08 Identify the purpose of infrastructure devices and how to install, configure, and manage them.
  - 08.09 Identify the purpose of LAN client devices and how to install, configure and manage them.
  - 08.10 Identify, understand, correct, or compensate for wireless LAN implementation challenges.
  - 08.11 Explain the trade-off between range and throughput.
  - 08.12 Analyze direct sequence spread spectrum behavior in a co-located channel environment.
  - 08.13 Examine co-channel interference using different access points.
- 09.0 Demonstrate proficiency in conducting site surveying -- The student will be able to:
- 09.01 Identify and understand the importance and process of conducting a thorough site survey.
  - 09.02 Identify and understand the importance of the necessary tasks to do an RF site survey.
  - 09.03 Identify the necessary equipment needed to perform a site survey.
  - 09.04 Assess the performance of an ad hoc wireless network by calculating throughput.
  - 09.05 Assess the performance of an infrastructure wireless network by calculating throughput.
  - 09.06 Identify and discuss the design elements for creating an extended service set.
  - 09.07 Differentiate between layer-two and layer-three roaming.
  - 09.08 Discuss the configuration of mobile IP as it pertains to wireless communication.
  - 09.09 Conduct a feasibility-study/return-on-investment study for deploying wireless solutions in a production environment.
  - 09.10 Baseline the performance of the wireless network and plan for future growth.
- 10.0 Demonstrate proficiency in implementing wireless LAN security - The student will be able to:
- 10.01 Identify the strengths, weaknesses, and appropriate uses of wireless LAN security techniques.
  - 10.02 Describe the types of wireless attacks, and explain how to identify and prevent them.
  - 10.03 Create and apply a MAC filter.
  - 10.04 Configure open authentication with Wired-Equivalent Privacy.
  - 10.05 Configure Service Set Identification in more secured manner.
  - 10.06 Analyze the impact of spoofed MAC addresses on the security of a wireless network.
  - 10.07 Create and apply IP filters.
  - 10.08 Configure the Temporal Key Integrity Protocol.
  - 10.09 Describe the problem of rouge access points and identify techniques of locating rouge access points.
  - 10.10 Demonstrate proficiency in using wireless protocols analyzer.
  - 10.11 Implement and configure WiFi Protected Access (WPA) and WPA version 2.
  - 10.12 Configure Secure Shell sessions as a way to remotely manage access points and wireless bridges.
  - 10.13 Implement and configure 802.1x authentication standards.
  - 10.14 Implement and configure wireless encryption.

- 11.0 Demonstrate proficiency in configuring IP telephony servers -- The student will be able to:
- 11.01 Differentiate between packet-switched voice networks and circuit-switched voice networks.
  - 11.02 Explain the role of Ethernet telephony servers in call admission.
  - 11.03 Install and configure telephony servers such as Cisco call manager, and Linux Trixbox.
  - 11.04 Configure IP phones to successfully register with telephony servers.
  - 11.05 Explain the call routing login used by telephony servers.
  - 11.06 Configure individualized routing using Partitions and call search spaces.
  - 11.07 Configure the basic functions of IP phones such as: call park, call forwarding, and call pickup.
  - 11.08 Configure telephony servers with basic functions such as: call conferencing, meet-me extensions, and digital receptionist.
  - 11.09 Explain and differentiate among the following compression algorithms: G.711, G.729, G.226, and iLBC.
  - 11.10 Configure Device pools, Regions and Locations.
  - 11.11 Troubleshoot IP Telephony servers by analyzing log files.
  - 11.12 Troubleshoot the performance of an IP telephony network by analyzing the output of a protocol analyzer.
  - 11.13 Install, configure, and register soft phones such as Cisco IP Communicator, and X-lite to register with IP telephony servers.
- 12.0 Demonstrate proficiency in interconnecting network devices--The student will be able to:
- 12.01 Identify the equipment needed in building packet-switched voice networks.
  - 12.02 Explain the role of each of the devices needed to build a packet-switched voice network.
  - 12.03 Configure Ethernet switches with voice VLANs.
  - 12.04 Configure switches with power-over Ethernet.
  - 12.05 Configure wireless access points with voice VLANs.
  - 12.06 Identify the different types of cables needed to interconnect networking devices.
  - 12.07 Explain the difference between collision domains and broadcast domains.
  - 12.08 Configure VLAN trunking.
  - 12.09 Analyze a switch's MAC address table.
  - 12.10 Analyze a router's routing table
  - 12.11 Analyze an access point's association table.
  - 12.12 Troubleshoot the connection between networking devices using network management applications such as Kiwi Syslog.
- 13.0 Demonstrate proficiency in configuring and troubleshooting voice gateways--The student will be able to:
- 13.01 Explain the role of voice gateways in packet-switched voice networks.
  - 13.02 Explain the process of registering voice gateways with an IP telephony server.
  - 13.03 Install and configure an H.323 voice gateway.
  - 13.04 Install and configure a SIP voice gateway.
  - 13.05 Install and configure an MGCP voice gateway.
  - 13.06 Recognize different voice network modules and voice interfaces in voice gateways.

- 13.07 Configure a voice gateway with VoIP and POTS dial peers.
  - 13.08 Configure a voice gateway with routing protocols such as RIP and EIGRP.
  - 13.09 Troubleshoot the performance of a voice gateway by utilizing debug and show commands.
  - 13.10 Explain the role of voice gateways in connecting packet-switched voice networks to circuit-switched voice networks.
- 14.0 Demonstrate proficiency in configuring quality of service for integrated services networks--The student will be able to:
- 14.01 Explain latency, packet loss, and jitter.
  - 14.02 Identify sources of delay.
  - 14.03 Identify techniques for implementing quality of service over low speed links.
  - 14.04 Configure Differentiated services to support a VoIP call.
  - 14.05 Configure Ethernet switches with class of service
  - 14.06 Explain the classification, tagging and queuing of IP packets.
  - 14.07 Implement and configure Cisco Auto quality of service.
  - 14.08 Identify and troubleshoot quality-of-service related problems in a packet-switched voice network.
- 15.0 Demonstrate employability skills--The student will be able to:
- 15.01 Conduct a job search.
  - 15.02 Secure information about a job.
  - 15.03 Identify documents that may be required when applying for a job.
  - 15.04 Complete a job application form correctly.
  - 15.05 Demonstrate competence in job interview techniques.
  - 15.06 Demonstrate knowledge of how to make appropriate decisions.
  - 15.07 Demonstrate appropriate work/behavioral habits.
  - 15.08 Demonstrate acceptable employee personal hygiene and health.
  - 15.09 Demonstrate knowledge of the "Florida Right-To-Know Law" as recorded in Florida Statutes Chapter 442.

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as computer engineering technicians and in related occupations in electronics in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to computer systems architecture, software, communications, programming and analysis and design of computer systems.

Electronic Technology and/or Electronic Engineering Technology (CORE) are prerequisites for entry into this electronic specialization program. The CORE program prepares individuals to assemble, install, operate, maintain, troubleshoot and repair electronic equipment used in industry. In addition, it also includes content related to the design, theory, and analysis of electronic systems and applications.

### **Program Structure**

This program is a planned sequence of instruction consisting of 68 hours.

## **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and Business Professionals of America are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

To be transferable statewide between institutions, this program must have been reviewed, and a "transfer value" assigned the curriculum content by the appropriate Statewide Course Numbering System discipline committee. This does not preclude institutions from developing specific articulation agreements with each other.

The following PSAV programs have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

- Network Support Services (B078000) – 9 credits
- Network Systems Administration (B079300) – 9 credits
- PC Support Services (B070400) – 6 credits
- Wireless Telecommunications (I470305) – 9 credits

The following industry certifications have been approved by the Florida State Board of Education for statewide articulation credit into this degree program.

- Cisco Certified Internet Expert Routing and Switching (CCIE® Routing and Switching) (CISCO018) – 3 credits

Cisco Certified Network Associate Security (CCNA® Security) (CISCO011) – 3 credits  
Cisco Certified Network Professional (CISCO005) – 12 credits  
CompTIA A+ (COMPT001) – 6 credits  
CompTIA Convergence+ (COMPT003) – 3 credits  
CompTIA Network+ (COMPT006) – 3 credits  
MCIT Professional - Server Administrator (MICRO034) – 6 credits  
Microsoft Certified Desktop Support Technician (MICRO006) – 3 credits  
Microsoft Certified Systems Engineer – 2003 (MICRO013) – 3 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Program Length**

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. The standard length of this program is 68 credit hours according to Rule 6A-14.030, F.A.C.

### **Certificate Programs**

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.). This AS/AAS degree program includes the following College Credit Certificates:

Cisco Certified Network Associate (0611020301) – 12 credit hours  
Computer Specialist (0611100604) – 27 credit hours  
Microcomputer Repairer/Installer (0647010402) – 15 credit hours  
Network Systems Developer (0611090104) – 41 credit hours  
Wireless and IP Communications Technician (0615030505) – 15 credit hours

Standards for the above certificate programs are contained in separate curriculum frameworks.

### **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate proficiency in computer systems architecture.
- 02.0 Demonstrate proficiency in software fundamentals.
- 03.0 Demonstrate proficiency in communication interfacing.
- 04.0 Demonstrate proficiency in peripheral equipment.
- 05.0 Demonstrate proficiency in customer site requirements and considerations.
- 06.0 Demonstrate proficiency in customer relations.
- 07.0 Demonstrate proficiency with high-level computer programming languages.
- 08.0 Demonstrate proficiency in computer networking techniques.
- 09.0 Demonstrate proficiency in the use of microcomputer disk operating system services and functions.
- 10.0 Demonstrate proficiency in analysis and design of data communications systems.

- 11.0 Demonstrate proficiency in the analysis and design of peripheral equipment used in computer systems.
- 12.0 Demonstrate appropriate communication skills.
- 13.0 Demonstrate appropriate math skills.
- 14.0 Demonstrate appropriate understanding of basic science.
- 15.0 Demonstrate employability skills.
- 16.0 Demonstrate an understanding of entrepreneurship.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Computer Engineering Technology  
**CIP Numbers:** 1615120100 A.S.  
 0615120100 A.A.S.  
**Program Length:** 68 credit hours  
**SOC Code(s):** 15-1099.02

The AS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS, and it must be transferable according to Rule 6A-14.030 (2), F.A.C. The AAS degree requires the inclusion of a minimum of 15 credits of general education coursework according to SACS. At the completion of this program, the student will be able to:

01.0 Demonstrate proficiency in computer systems architecture. – The student will be able to:

- 01.01 Draw and explain systems configurations in block detail.
- 01.02 Interpret computer acronyms.
- 01.03 Identify and define priorities and interrupts at system level.
- 01.04 Define and list direct memory access handling systems.
- 01.05 Define functions of advanced memory techniques (e.g. virtual, pipeline, cache).
- 01.06 Troubleshoot a microcomputer system.

02.0 Demonstrate proficiency in software fundamentals. – The student will be able to:

- 02.01 Load and run operating system software.
- 02.02 Load and run diagnostic software and utilities.
- 02.03 Construct flow charts.
- 02.04 Analyze flow charts.
- 02.05 Identify and define computer languages and their uses.
- 02.06 Write a simple computer program in BASIC.
- 02.07 Read a PROM.
- 02.08 Erase and program an EPROM.
- 02.09 Analyze firmware concepts.
- 02.10 Troubleshoot firmware using defined hardware.
- 02.11 Analyze firmware writing concepts.

03.0 Demonstrate proficiency in communication interfacing. – The student will be able to:

- 03.01 Identify and define serial and parallel interface standards.
- 03.02 Identify, define and configure sync and async devices.
- 03.03 Demonstrate the use of interface devices.
- 03.04 Identify and define networking levels.
- 03.05 Identify and define protocols.
- 03.06 Troubleshoot and repair network systems.
- 03.07 Identify and define multi-user systems.

04.0 Demonstrate proficiency in peripheral equipment. – The student will be able to:

- 04.01 Install, analyze and troubleshoot interface controllers.

- 04.02 Install, analyze and troubleshoot display terminals.
  - 04.03 Install, analyze and troubleshoot printer.
  - 04.04 Install, analyze and troubleshoot magnetic tape equipment.
  - 04.05 Install, analyze and troubleshoot disk drive equipment.
  - 04.06 Define environmental requirements for peripherals and media.
- 05.0 Demonstrate proficiency in customer site requirements and considerations. – The student will be able to:
- 05.01 Apply effective customer relations.
  - 05.02 Follow installation procedures.
  - 05.03 Calculate and determine power requirements.
  - 05.04 Calculate and determine environmental requirements.
  - 05.05 List and perform preventative maintenance techniques and requirements.
- 06.0 Demonstrate proficiency in customer relations. – The student will be able to:
- 06.01 Describe effective listening techniques.
  - 06.02 Describe techniques for instilling customer confidence.
  - 06.03 Describe techniques for keeping the customer informed.
  - 06.04 Demonstrate proper follow-up techniques.
- 07.0 Demonstrate proficiency with high-level computer programming languages. – The student will be able to:
- 07.01 Write a technical program in a high-level programming language (e.g. Fortran, Cobol, Basic, C) and associated system level concepts.
  - 07.02 Identify and define associated system level concepts.
  - 07.03 Apply structured programming such as loop structures, sorting techniques, data structures and arithmetic operations.
- 08.0 Demonstrate proficiency in computer networking techniques. – The student will be able to:
- 08.01 Identify and define computer networking techniques.
  - 08.02 Design a system using hardware and software communication protocols.
  - 08.03 Apply management techniques for network software.
- 09.0 Demonstrate proficiency in the use of microcomputer disk operating system services and functions. – The student will be able to:
- 09.01 Describe the historical development of computer operating systems.
  - 09.02 Describe the major hardware and related software subsystems of microcomputer DOS (Disk Operating System).
  - 09.03 Describe various disk formats.
  - 09.04 Program using assembly language to access the ROM-BIOS (Read-Only Memory-Basic Input/Output System) feature for peripheral control and serial communications.
  - 09.05 Describe the extended services of enhanced systems.
  - 09.06 Describe design decisions involved in implementing Input/Output (I/O) interfacing using interrupts.

- 09.07 Program using assembly language to implement I/O device interfacing using interrupts.
  - 09.08 Program using the extended DOS functions.
  - 09.09 Analyze and design software systems using ROM-BIOS, DOS functions and interrupts for use in a multiplexed analog to digital system.
  - 09.10 Analyze and design software systems using ROM-BIOS functions and interrupts for use in a synchronous digital data system.
- 10.0 Demonstrate proficiency in analysis and design of data communications systems. – The student will be able to:
- 10.01 Describe the different types of digital data communications systems.
  - 10.02 Describe data formats and transmission rates in serial data communications systems.
  - 10.03 Design the connections and programming for a UART (Universal Asynchronous/Synchronous Receiver Transmitter) in a microprocessor-based system.
  - 10.04 Identify and define available options for integration of a display terminal in a data communication system.
  - 10.05 Identify and define communication signals and protocol for MODEM (Modulator Demodulator) links.
  - 10.06 Apply digital modulation techniques including PAM (Pulse-Amplitude Modulation), PCM (Pulse-Code Modulation), PWM (Pulse-Width Modulation) and delta modulation.
  - 10.07 Analyze and design circuits for generation and detection of digital modulation.
  - 10.08 Apply error detection and correction in digital communication systems.
  - 10.09 Define communication protocols.
  - 10.10 Design and apply multiplexing techniques for computer.
- 11.0 Demonstrate proficiency in the analysis and design of peripheral equipment used in computer systems. – The student will be able to:
- 11.01 Design and analyze circuits used in various functions of video display systems.
  - 11.02 Analyze various types of disk drives and disk drive controllers.
  - 11.03 Analyze various types of printers and plotters and their related interface controllers.
  - 11.04 Analyze and design circuits for sweep generation and synchronization in a CRT (Cathode-Ray Tube) display.
  - 11.05 Describe the use of RAM (Random-Access Memory) and ROM (Read-Only Memory) for font generation in video display systems.
  - 11.06 Design the serial communication interface in a video.
  - 11.07 Modulation and interval timing techniques.
  - 11.08 Pointing devices for computer systems.
  - 11.09 Analyze the operation of mechanical and optical pointing devices used in computer systems.
  - 11.10 Describe the functions of the major blocks in a dot matrix printer.
  - 11.11 Analyze and design circuits to communicate using a standard Centronics parallel interface in a printer.
  - 11.12 Describe the main functional blocks of a roller bed plotter.
  - 11.13 Analyze and design subsystems including interfaces for use in a roller bed plotter.

- 12.0 Demonstrate appropriate communication skills. – The student will be able to:
- 12.01 Write logical and understandable statements, or phrases, to accurately fill out forms/invoices commonly used in business and industry.
  - 12.02 Read and understand graphs, charts, diagrams, and tables commonly used in this industry/occupation area.
  - 12.03 Read and follow written and oral instructions.
  - 12.04 Answer and ask questions coherently and concisely.
  - 12.05 Read critically by recognizing assumptions and implications and by evaluating ideas.
  - 12.06 Demonstrate appropriate telephone/communication skills.
- 13.0 Demonstrate appropriate math skills. – The student will be able to:
- 13.01 Solve problems for volume, weight, area, circumference and perimeter measurements for rectangles, squares, and cylinders.
  - 13.02 Measure tolerance(s) on horizontal and vertical surfaces using millimeters, centimeters, feet and inches.
  - 13.03 Add, subtract, multiply and divide using fractions, decimals, and whole numbers.
  - 13.04 Determine the correct purchase price, to include sales tax for a materials list containing a minimum of six items.
  - 13.05 Demonstrate an understanding of federal, state and local taxes and their computation.
- 14.0 Demonstrate appropriate understanding of basic science. – The student will be able to:
- 14.01 Understand molecular action as a result of temperature extremes, chemical reaction, and moisture content.
  - 14.02 Draw conclusions or make inferences from data.
  - 14.03 Identify health related problems which may result from exposure to work related chemicals and hazardous materials, and know the proper precautions required for handling such materials.
  - 14.04 Understand pressure measurement in terms of P.S.I., inches of mercury, and K.P.A.
- 15.0 Demonstrate employability skills. – The student will be able to:
- 15.01 Conduct a job search.
  - 15.02 Secure information about a job.
  - 15.03 Identify documents which may be required when applying for a job interview.
  - 15.04 Complete a job application form correctly.
  - 15.05 Demonstrate competence in job interview techniques.
  - 15.06 Identify or demonstrate appropriate responses to criticism from employer, supervisor or other employees.
  - 15.07 Identify acceptable work habits.
  - 15.08 Demonstrate knowledge of how to make appropriate job changes.
  - 15.09 Demonstrate acceptable employee health habits.
  - 15.10 Demonstrate a knowledge of the "Florida Right-To-Know Law" as recorded in Florida Statutes Chapter 442.

16.0 Demonstrate an understanding of entrepreneurship. – The student will be able to:

- 16.01 Identify characteristics of the American enterprise system.
- 16.02 Define inflation and deflation.
- 16.03 Illustrate the basic economic questions facing any society.
- 16.04 Determine the results of a change in demand or a change in supply.
- 16.05 List factors which contribute to economic growth.
- 16.06 Identify characteristics of different types of business ownership.
- 16.07 Choose appropriate action in a situation requiring application of business ethics.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

### **Purpose**

This certificate program is part of the Computer Engineering Technology AS/AAS degree program (1615120100/0615120100).

A College Credit Certificate consists of a program of instruction of less than sixty (60) credits of college-level courses, which is part of an AS or AAS degree program and prepares students for entry into employment (Rule 6A-14.030, F.A.C.).

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to the study of computer systems architecture.

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and BPA are the appropriate career and technical student organization for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their postsecondary service provider. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

### **Articulation**

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this course the student will be able to perform the following:

- 01.0 Demonstrate proficiency in computer systems architecture.
- 02.0 Demonstrate proficiency in the use of microcomputer disk operating system services and functions.
- 03.0 Demonstrate proficiency in computer operating systems.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Microcomputer Repairer/Installer  
**CIP Number:** 0647010402  
**Program Length:** 15 credit hours  
**SOC Code(s):** 15-1041

This certificate program is part of the Computer Engineering Technology AS/AAS degree program (1615120100/0615120100). At the completion of this program, the student will be able to:

01.0 Demonstrate proficiency in computer systems architecture—The student will be able to:

- 01.01 Draw and explain systems configurations in block detail.
- 01.02 Interpret computer acronyms.
- 01.03 Identify and define priorities and interrupts at system level.
- 01.04 Define and list direct memory access handling systems.
- 01.05 Define functions of advanced memory techniques (e.g. virtual, pipeline, cache).
- 01.06 Troubleshoot a microcomputer system.

02.0 Demonstrate proficiency in the use of microcomputer disk operating system services and functions--The student will be able to:

- 02.01 Describe the historical development of computer operating systems.
- 02.02 Describe the major hardware and related software subsystem of microcomputer DOS (Disk Operating System).
- 02.03 Describe various disk formats.
- 02.04 Describe the extended services of enhanced systems.
- 02.05 Describe design decisions involved in implementing Input/Output (I/O) interfacing using interrupts.
- 02.06 Program using the extended DOS functions.
- 02.07 Describe the various operating systems, including Windows 95 and 98, NT 4.0, 2000, Linux, Unix, Novell, etc.

03.0 Demonstrate proficiency in computer operating systems—The student will be able to:

- 03.01 Describe types of operating systems.
- 03.02 Understand the history of operating systems.
- 03.03 Explain single-tasking versus multitasking.
- 03.04 Explain single-user versus multi-user operating systems.
- 03.05 Identify current operating systems.
- 03.06 Identify computer hardware.
- 03.07 Identify popular PC processors.
- 03.08 Explain system architectures.
- 03.09 Describe various PC operating systems.
- 03.10 Describe the file system functions.
- 03.11 Explain the DOS/Windows 3.1 file system.
- 03.12 Explain Windows 95/98, NT, and 2000 file systems.
- 03.13 Describe the UNIX file system.

- 03.14 Discuss the Macintosh file system.
- 03.15 Discuss the installation of an operating system.
- 03.16 Identify the preparation for installing an operating system.
- 03.17 Explain how to install MS-DOS, Windows 3.1, Windows 95/98, Windows NT, and Windows 2000.
- 03.18 Explain how to install UNIX: Linux.
- 03.19 Explain how to install Mac OS.
- 03.20 Identify the steps to upgrade an operating system to a newer version.
- 03.21 Describe the various output, input, and storage devices.
- 03.22 Explain the various modems and other devices associated with operating systems.
- 03.23 Describe the network connectivity associated with various operating systems.
- 03.24 Explain sharing disks and files through server network operating systems.
- 03.25 Describe accessing and sharing disks and files through client (workstations) network operating systems.
- 03.26 Identify how to share printing devices through various operating systems.
- 03.27 Explain network and internet resource servers.
- 03.28 Describe file system maintenance.
- 03.29 Explain finding and deleting files on various operating systems.
- 03.30 Describe how to maintain large and small system disks.
- 03.31 Identify the process for making backups.
- 03.32 Explain how to optimize software installations.
- 03.33 Identify how to tune an operating system.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers such as a Web Developer Assistant, Database

Specialist, Junior Application Developer, and Web Application Developer in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to foundation in the area of designing and developing interactive, database-driven Web-based applications using an enterprise level Relational Database Management System (RDBMS) software such as Oracle, Microsoft SQL Server, or MySQL and a Web/database connectivity middleware technology such as PHP, ColdFusion, ASP.NET, or Java.

### **Program Structure**

This program is a planned sequence of instruction consisting of four occupational completion points.

When offered at the post secondary adult career and technical level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3)(b), F.S.

The following table illustrates the program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	CTS0011	Web Developer Assistant	200	15-1099.04
B	CTS0012	Database Specialist	200	15-1099.04
C	CTS0013	Junior Application Developer	400	15-1099.04
D	CTS0014	Web Application Developer	400	15-1099.04

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

#### **Program Implementation**

This program framework is designed to accommodate the use of software from various vendors. It is expected that the instructor will select and focus instruction on a single vendor's RDBMS software together with a single middleware computer language (e.g. Oracle/Java, MS SQL Server/ASP.NET, MySQL/PHP or other combination).

In some cases it may be beneficial to teach OCP C and OCP D concurrently when the language chosen does not have core components traditionally taught separately from Web components (e.g. ColdFusion and PHP).

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and Business Professionals of America (BPA) are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

### **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. A complete list of Essential Skills and links to instructional resources in support of these Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

### **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 11.0, Language 11.0, and Reading 11.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.) Exemptions from state, national or industry licensure are

limited to the certifications listed at <http://www.fldoe.org/workforce/dwdframe/rtf/basicskills-License-exempt.rtf>.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular Occupational Completion Point (OCP) or a Modified Occupational Completion Point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

### **Articulation**

This program (B079200) has two statewide articulation agreements approved by the Florida State Board of Education:

1. Computer Programming and Analysis AS/AAS (1511020100/0511020100) – 12 credits
2. Internet Services Technology AS/AAS (1511080102/0511080102) – 9 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate proficiency navigating the Internet, the WWW and other TCP/IP-based networks.
- 02.0 Demonstrate proficiency using HTML and XHTML to create Web content.
- 03.0 Demonstrate proficiency using Cascading Style Sheets (CSS) to format Web pages.
- 04.0 Demonstrate proficiency using basic client-side scripting to control the content and the behavior of HTML and XHTML documents.
- 05.0 Develop an awareness of the general definition, history and main features of the Relational Database Model.
- 06.0 Compare the Relational Database Model with the Hierarchical Database Model.
- 07.0 Develop an awareness of the most popular RDBMS software products currently available and the main features of each product.
- 08.0 Develop skills related to the process of determining an organization's current and future data storage needs as they relate to the organization of a database.
- 09.0 Develop an understanding of database terminology related to conceptual database models and physical databases.
- 10.0 Design Entity Relationship Models (ERMS) that accurately reflect the information needs of an organization.
- 11.0 Verify the ERM design by applying the rules of normalization (e. g. first, second and third normal form).
- 12.0 Create relational database tables based on ERMS using RDBMS software.
- 13.0 Test relational database designs by adding sample data to the database tables, verifying that data integrity is maintained and business rules are enforced.
- 14.0 Demonstrate proficiency writing and executing SQL (Structured Query Language) SELECT statements to retrieve data using a SQL language interface and reporting tool.
- 15.0 Demonstrate proficiency manipulating data by using Data Manipulation Language (DML) statements and transaction control statements.
- 16.0 Demonstrate proficiency creating, altering and deleting database objects using SQL Data Definition Language (DDL) statements (e. g. tables, constraints, views synonyms, indexes, sequences).
- 17.0 Demonstrate an understanding of basic database security concepts.
- 18.0 Demonstrate the ability to develop data-centric programs to manipulate data using a language that extends SQL (such as PL/SQL).
- 19.0 Demonstrate the ability to create, execute and maintain database program units including stored procedures and database triggers.
- 20.0 Demonstrate an understanding of basic concepts related to the development of software.
- 21.0 Demonstrate an understanding of the key features of a Web/database connectivity middleware computer programming language.
- 22.0 Write, compile (if applicable), and execute simple programs utilizing fundamental programming constructs.
- 23.0 Write programs that utilize arrays and other data structures (e.g., vectors, lists, structures, etc.).
- 24.0 Design and develop programs structured on an Object Oriented model.
- 25.0 Incorporate error handling in programs.
- 26.0 Write programs that write data to files and read data from files.
- 27.0 Demonstrate a basic understanding of the role of web/database connectivity middleware in the development of dynamic web content.
- 28.0 Develop basic web applications.
- 29.0 Develop database-driven web applications.
- 30.0 Develop web applications that incorporate session tracking.
- 31.0 Implement web application security techniques.

- 32.0 Demonstrate the use of an architectural model to design web applications.
- 33.0 Demonstrate the ability to create and consume XML-based web services.
- 34.0 Demonstrate language arts knowledge and skills.
- 35.0 Demonstrate mathematics knowledge and skills.
- 36.0 Demonstrate science knowledge and skills.
- 37.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 38.0 Solve problems using critical thinking skills, creativity and innovation.
- 39.0 Use information technology tools.
- 40.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.
- 41.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- 42.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 43.0 Describe the importance of professional ethics and legal responsibilities.
- 44.0 Explain the importance of employability skill and entrepreneurship skills.
- 45.0 Demonstrate personal money-management concepts, procedures, and strategies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title:** Web Programming Services  
**PSAV Number:** B079200

**Course Number:** CTS0011  
**Occupational Completion Point – A**  
**Web Developer Assistant – 200 Hours – SOC Code 15-1099.04**

- 01.0 Demonstrate proficiency navigating the internet, the www, and other TCP/IP-based networks. – The student will be able to:
- 01.01 Identify and describe Web terminology.
  - 01.02 Describe the history of the Internet.
  - 01.03 Describe the difference between a client and a server.
  - 01.04 Describe the difference between the Internet, the WWW, and private intranets.
  - 01.05 Describe the different methods by which information may be accessed on the Internet or on an intranet (e.g., HTTP, FTP).
  - 01.06 Locate information on the Internet using a Web browser.
  - 01.07 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 01.08 Identify and use Internet search engines and directories to locate information.
  - 01.09 Describe the syntax, usage, and construction of Uniform Resource Locaters (URLs).
  - 01.10 Demonstrative proficiency in using an FTP client to transfer and manage files and directories.
- 02.0 Demonstrate proficiency using HTML and XHTML to create web content. – The student will be able to:
- 02.01 Use storyboarding techniques for designing a Web site (e.g., linear, hierarchical).
  - 02.02 Identify elements of a Web page.
  - 02.03 Create Web pages using HTML and XHTML tags that create basic elements (e.g., links, lists, formatted text, tables).
  - 02.04 Create Web pages that utilize tables to achieve complex layout.
  - 02.05 Add graphic content to Web pages.
  - 02.06 Develop, integrate, and apply the use of frames in Web site design.
  - 02.07 Create Web pages that utilize client-side image maps.
  - 02.08 Develop, integrate, and apply the use of forms in Web site design.
  - 02.09 Optimize Web content for desirable search engine placement.
  - 02.10 Demonstrate an understanding of browser compatibility issues by designing pages that comply with the current Web Content Accessibility Guidelines issued by the World Wide Web Consortium (W3C).
  - 02.11 Demonstrate an understanding of Web accessibility issues by developing pages that meet Bobby standards.
  - 02.12 Explain basic XML syntax and how XHTML conforms to the XML standard.
  - 02.13 Use a WYSIWYG editor to develop and manage a Web site.

- 02.14 Use markup validation tools to test HTML and XHTML documents for well-formedness and make all corrections necessary to ensure compliance with W3C standards.
- 02.15 Analyze and modify HTML and XHTML source code developed by others.
- 03.0 Demonstrate proficiency using cascading style sheets (CSS) to format web pages. – The student will be able to:
- 03.01 Explain the advantages and disadvantages of using Cascading Style Sheets (CSS) to format Web pages.
- 03.02 Describe the difference between linked, embedded, imported and inline styles and explain how styles are inherited.
- 03.03 Utilize CSS properties within Web pages to control page layout, fonts, colors, backgrounds, and other presentation effects.
- 04.0 Demonstrate proficiency using basic client-side scripting to control the content and the behavior of HTML and XHTML documents. – The student will be able to:
- 04.01 Describe the difference between server-side and client-side processing.
- 04.02 Describe the term “scripting language” and explain how scripting languages differ from compiled languages.
- 04.03 Code a simple script within a Web page.
- 04.04 Declare, assign values to, and utilize variables within a script.
- 04.05 Code and utilize functions of various types including ones that use parameters and return values.
- 04.06 Utilize mathematical, assignment, comparison and logical operators within script code.
- 04.07 Utilize conditional statements and looping structures within script code.
- 04.08 Define and access arrays and array elements within a script.
- 04.09 Code scripts that make use of event handlers.
- 04.10 Code scripts that perform validation on HTML/XHTML form elements.
- 34.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 34.01 Locate, comprehend and evaluate key elements of oral and written information. AF 2.4
- 34.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF 2.5
- 34.03 Present information formally and informally for specific purposes and audiences. AF 2.9
- 35.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF 3.0
- 35.01 Demonstrate knowledge of arithmetic operations. AF 3.2
- 35.02 Analyze and apply data and measurements to solve problems and interpret documents. AF 3.4
- 35.03 Construct charts/tables/graphs using functions and data. AF 3.5
- 36.0 Demonstrate science knowledge and skills. – The student will be able to: AF 4.0
- 36.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF 4.1

- 36.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF 4.3

**Course Number: CTS0012**

**Occupational Completion Point – B**

**Database Specialist – 200 Hours – SOC Code 15-1099.04**

- 05.0 Develop an awareness of the general definition, history and main features of the relational database model. – The student will be able to:
- 05.01 Briefly discuss the history of the development of the Relational Database Model.
  - 05.02 Identify the advantages of the Relational Database Model related to data integrity, data independence from application code, and ease of data retrieval.
- 06.0 Compare the relational database model with the hierarchical database model. – The student will be able to:
- 06.01 Discuss the basic concepts of the Hierarchical Database Model.
  - 06.02 Identify the limitations of the Hierarchical Database Model, including problems related to data redundancy and interdependence with application code.
- 07.0 Develop an awareness of the most popular RDBMS software products currently available and the main features of each product. – The student will be able to:
- 07.01 List several shared-file database products and the advantages and disadvantages of their use.
  - 07.02 List several client/server database products and the advantages and disadvantages of their use.
  - 07.03 List factors that might determine the selection of a particular database product for a particular application.
- 08.0 Develop skills related to the process of determining an organization's current and future data storage needs as they relate to the organization of a database. – The student will be able to:
- 08.01 Analyze existing databases, paper-based databases, and business processes used to collect and utilize data.
  - 08.02 Conduct interviews with database users and management in order to determine an organization's data management requirements and business rules.
  - 08.03 Compile a list of the fundamental data requirements of an organization that can function as the starting point for the design of a new database.
- 09.0 Develop an understanding of database terminology related to conceptual database models and physical databases. – The student will be able to:
- 09.01 Define terms used to describe an Entity Relationship Model.
  - 09.02 Define terms used to describe physical database values (e. g., null, not null, empty string, etc.).
  - 09.03 Define terms related to the structure of a physical database.

- 09.04 Define terms related to the relationships of physical database structures.
- 09.05 Define terms related to general, physical (including data types, length, etc.), and logical field specification elements.
- 10.0 Design basic entity relationship models (ERMS) that accurately reflect the information needs of an organization. – The student will be able to:
  - 10.01 Discuss the advantages and goals of conceptual modeling.
  - 10.02 Determine the entities and attributes required to construct a particular ERM.
  - 10.03 Determine the attribute or attributes that uniquely identify entities.
  - 10.04 Determine the degree of the relationships (e.g., one-to-one, one-to-many, and many-to-many) and the optionality of relationships between the entities.
  - 10.05 Resolve many-to-many relationships that can be resolved through the use of hidden entities.
  - 10.06 Construct ERM diagrams that reflect the entities, attributes and relationships required to produce a conceptual model of a database.
  - 10.07 Design ERMS that correctly model the dimension of time as required by transactions and/or the maintenance of historical data.
  - 10.08 Design ERMS that correctly model network structures such as a Bill of Material.
  - 10.09 Design ERMS that correctly model hierarchical structures.
- 11.0 Verify the ERM design by applying the rules of normalization (e. g. First, second and third normal form). – The student will be able to:
  - 11.01 Discuss the principles, advantages, and purpose of database normalization.
  - 11.02 Following the first normal form, verify that all attributes of an entity in an ERM are single-valued.
  - 11.03 Following the second normal form, verify that all attributes of an entity in an ERM are dependent on the attribute(s) that uniquely identify the entity.
  - 11.04 Following the third normal form, verify that no attribute that is not the unique identifier is dependent on any other attribute that is also not the unique identifier.
- 12.0 Create relational database tables based on ERMS using RDBMS software. – The student will be able to:
  - 12.01 Create and configure the tables required to physically represent the entities depicted in an ERM.
  - 12.02 Create, properly name, and configure the table columns to physically represent the attributes of an entity.
  - 12.03 Map the relationships depicted in an ERM through the use of primary keys, foreign keys, and intersection (or linking) tables.
  - 12.04 Apply necessary constraints by configuring column specifications.
  - 12.05 Determine which columns are suitable for indexing and configure the proper type of index.
- 13.0 Test relational database designs by adding sample data to the database tables, verifying that data integrity is maintained and business rules are enforced. – The student will be able to:
  - 13.01 Gather sample data and use an RDMS management tool to enter data into database tables.

- 13.02 Evaluate the database confirming that all required information is properly represented and business rules are enforced.
  - 13.03 Evaluate the database assuring that no data redundancy exists in the database.
  - 13.04 Evaluate the database assuring that no data is derivable from other data.
  - 13.05 Discuss and defend the database design.
- 14.0 Demonstrate proficiency writing and executing SQL (structured query language) select statements to retrieve data using a SQL language interface and reporting tool. – The student will be able to:
- 14.01 Demonstrate proficiency customizing, configuring and using a SQL language interface and reporting tool.
  - 14.02 Code and execute basic select statements that return a varying number of columns.
  - 14.03 Code and execute select statements that limit the rows returned using a where clause with comparison and logical operators.
  - 14.04 Code and execute select statements that sort data based on single and multiple columns using an order by clause.
  - 14.05 Demonstrate the use of column aliases.
  - 14.06 Use arithmetic operators in select statements to create expressions on numeric and date data.
  - 14.07 Use concatenation operators in select statements to link columns and/or literal strings.
  - 14.08 Use the distinct keyword in select statements to eliminate duplicate rows.
  - 14.09 Use single rows functions in select statements in order to manipulate data values.
  - 14.10 Use conversion functions in select statements in order to explicitly convert from one data type to another data type.
  - 14.11 Code and execute select statements to access data from multiple tables using equality, non-equality and outer joins.
  - 14.12 Code and execute select statements that perform self-joins.
  - 14.13 Code and execute select statements that incorporate single-row and multiple-row subqueries.
  - 14.14 Execute SQL statements that utilize group functions to aggregate data.
- 15.0 Demonstrate proficiency manipulating data by using data manipulation language (DML) statements and transaction control statements. – The student will be able to:
- 15.01 Code and execute DML statements to insert rows of data into an existing table.
  - 15.02 Code and execute DML statements to modify and remove existing rows in a table.
  - 15.03 Describe a database transaction and identify types of statement and conditions that will implicitly end a transaction.
  - 15.04 Code and execute transaction control statements to explicitly end or rollback a transaction.
- 16.0 Demonstrate proficiency creating, altering and deleting database objects using sql data definition language (DDL) statements. – The student will be able to:
- 16.01 Describe the concept of database schema and access database objects that exist in different schemas.

- 16.02 Describe the primary types of database objects including tables, views, sequences, synonyms and indexes.
- 16.03 Code and execute DDL statement to create tables assigning proper data types and applying constraints.
- 16.04 Code and execute DDL statements to create, drop, and rename database objects.
- 17.0 Demonstrate an understanding of basic database security concepts. – The student will be able to:
- 17.01 Explain and describe the basic concepts of database system level security and database object level security.
- 17.02 Code and execute DCL (Data Control Language) statements to create users, grant privileges and revoke privileges on database objects.
- 18.0 Demonstrate the ability to develop data-centric programs to manipulate data using a language that extends SQL (such as PL/SQL). – The student will be able to:
- 18.01 Explain the benefits of using a language that extends SQL in order to achieve more sophisticated processing of data.
- 18.02 Properly name, declare and initialize variables and constants using the data types specified by the language.
- 18.03 Code and execute executable statements using proper syntax.
- 18.04 Use functions provided by the language that extend SQL including functions that convert data types.
- 18.05 Embed SQL select statements, DML statements and transaction control statements in blocks of code.
- 18.06 Use constructs such as if statements and loops to control program flow.
- 18.07 Utilize complex data types provided by the language as required.
- 18.08 Trap and handle exceptions.
- 19.0 Demonstrate the ability to create, execute and maintain database program units including stored procedures and database triggers. – The student will be able to:
- 19.01 Explain the uses and benefits of database stored procedures and triggers.
- 19.02 Create, execute and maintain database-stored procedures.
- 19.03 Create, execute and maintain database triggers.
- 37.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 37.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
- 37.02 Locate, organize and reference written information from various sources. CM 3.0
- 37.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
- 37.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
- 37.05 Apply active listening skills to obtain and clarify information. CM 7.0
- 37.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
- 37.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0

- 38.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 38.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
  - 38.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
  - 38.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
  - 38.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 39.0 Use information technology tools. – The student will be able to:
- 39.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
  - 39.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
  - 39.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
  - 39.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 40.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:
- 40.01 Describe the nature and types of business organizations. SY 1.0
  - 40.02 Explain the effect of key organizational systems on performance and quality.
  - 40.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
  - 40.04 Explain the impact of the global economy on business organizations.
- 43.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 43.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
  - 43.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR1.1
  - 43.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR1.2
  - 43.04 Interpret and explain written organizational policies and procedures. ELR 2.0

**Course Number: CTS0013****Occupational Completion Point – C****Junior Application Developer – 400 Hours – SOC Code 15-1099.04**

- 20.0 Demonstrate an understanding of basic concepts related to the development of software. – The student will be able to:
- 20.01 Demonstrate an understanding of computer hardware, a computer operating system, and software, as well as how these elements relate to each other.

- 20.02 Describe the basic differences between standard GUI (Graphical User Interface), text-based, and browser-based application interfaces.
  - 20.03 Define an algorithm and explain how it relates to developing a computer program.
  - 20.04 Explain how computers store numeric and character data.
  - 20.05 Compare and contrast computer machine language and various high-level languages.
- 21.0 Demonstrate an understanding of the key features of a web/database connectivity middleware computer programming language. – The student will be able to:
- 21.01 Briefly describe the history of the development of a programming language.
  - 21.02 Compare and contrast the advantages, disadvantages and key features of various Web/database connectivity middleware products and languages.
  - 21.03 Use product documentation and Internet resources as research tools to obtain detailed information about a Web/database connectivity middleware product.
- 22.0 Write, compile (if applicable), and execute simple programs utilizing fundamental programming constructs. – The student will be able to:
- 22.01 Install and configure software tools for coding and managing programs (e.g., IDE or text editor).
  - 22.02 Code and execute a basic program using proper formatting and syntax.
  - 22.03 Include comments to embed explanatory information in a program.
  - 22.04 Properly declare, assign values, and utilize variables and constants of various data types.
  - 22.05 Build expressions using variables, literals and operators.
  - 22.06 Code, call and utilize different types of methods (or functions), including those that use parameters and return values.
  - 22.07 Display information using methods that print to the screen.
  - 22.08 Use mathematical, assignment, comparison and logical operators to manipulate values and perform comparisons in program code.
  - 22.09 Use conditional and nested conditional statements in program code.
  - 22.10 Use for and while looping structures in program code.
  - 22.11 Use nested loops that incorporate break/continue statements and labeled break/continues statements.
  - 22.12 Use advanced conditional constructs such as switch statements.
  - 22.13 Utilize debugging tools and techniques to locate the source of errors in program code.
- 23.0 Write programs that utilize arrays and other data structures (e.g., vectors, lists, structures etc.). – The student will be able to:
- 23.01 Create single and multidimensional arrays and other data structures particular to the language.
  - 23.02 Assign values to arrays and other data structures particular to the language.
  - 23.03 Access elements using associated methods both sequentially and randomly.
- 24.0 Design and develop programs structured on an object-oriented model. – The student will be able to:

- 24.01 Demonstrate an understanding of objects, how objects implement abstraction and encapsulation, and how objects interact with each other through messaging.
  - 24.02 Declare classes from which objects can be instantiated that include constructors, instance variables (or attributes) and instance methods.
  - 24.03 Instantiate objects from classes and call the instance methods in an object's class.
  - 24.04 Explain the difference between primitive data types and object data types.
  - 24.05 Derive new classes utilizing the concept of inheritance.
  - 24.06 Design and code classes that contain static variables (or attributes) and static methods.
  - 24.07 Utilize access modifiers to control access to variables and methods.
  - 24.08 Design and code classes that utilize advanced Object Oriented concepts such as polymorphism, abstract classes and interfaces.
  - 24.09 Develop a model for a simple application constructed from objects using a notational language such as UML.
- 25.0 Incorporate error handling in programs. – The student will be able to:
- 25.01 Identify common runtime errors and their basic causes.
  - 25.02 Identify code blocks having the potential of producing a runtime error.
  - 25.03 Incorporate error-handling code into programs to effectively catch and handle error conditions.
- 26.0 Write programs that write data to files and read data from files. – The student will be able to:
- 26.01 Demonstrate an understanding of file input and output, the use of streams and I/O errors.
  - 26.02 Describe the difference between text files and binary files.
  - 26.03 Code classes designed to write to and read from text files.
  - 26.04 Code classes designed to write to and read from binary files.
- 41.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 41.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
  - 41.02 Explain emergency procedures to follow in response to workplace accidents.
  - 41.03 Create a disaster and/or emergency response plan. SHE 2.0
- 42.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 42.01 Employ leadership skills to accomplish organizational goals and objectives. LT 1.0
  - 42.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT 3.0
  - 42.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
  - 42.04 Employ mentoring skills to inspire and teach others. LT 5.0

- 44.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 44.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
  - 44.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
  - 44.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
  - 44.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
  - 44.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
  - 44.06 Identify and exhibit traits for retaining employment. ECD 7.0
  - 44.07 Identify opportunities and research requirements for career advancement. ECD 8.0
  - 44.08 Research the benefits of ongoing professional development. ECD 9.0
  - 44.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0
- 45.0 Demonstrate personal money-management concepts, procedures, and strategies. – The student will be able to:
- 45.01 Identify and describe the services and legal responsibilities of financial institutions. FL 2.0
  - 45.02 Describe the effect of money management on personal and career goals. FL 3.0
  - 45.03 Develop a personal budget and financial goals. FL3.1
  - 45.04 Complete financial instruments for making deposits and withdrawals. FL3.2
  - 45.05 Maintain financial records. FL3.3
  - 45.06 Read and reconcile financial statements. FL3.4
  - 45.07 Research, compare and contrast investment opportunities.

**Course Number: CTS0014****Occupational Completion Point – D****Web Application Developer – 400 Hours – SOC Code 15-1099.04**

- 27.0 Demonstrate a basic understanding of the role of web/database connectivity middleware in the development of dynamic web content. – The student will be able to:
- 27.01 Describe the difference between static Web content and Web applications.
  - 27.02 Describe the function of a Web server and how it processes static Web pages and dynamic Web pages.
  - 27.03 Describe the characteristics of the HTTP protocol demonstrating an understanding of HTTP requests and HTTP responses.
  - 27.04 Compare and contrast competing technologies and languages used to produce dynamic Web content.
- 28.0 Develop basic web applications. – The student will be able to:
- 28.01 Write dynamic code embedded within HTML/XHTML code utilizing fundamental elements such as variables, looping structures, conditional processing, data structures, etc.
  - 28.02 Properly document code using comments and other standard methods.
  - 28.03 Write code to validate and process HTML/XHTML form elements.

- 28.04 Incorporate error-handling techniques, including custom error pages, into a basic Web application.
  - 28.05 Effectively troubleshoot Web application code by properly evaluating error messages generated by the language environment and the Web server.
- 29.0 Develop database-driven web applications. – The student will be able to:
- 29.01 Obtain and install database drivers.
  - 29.02 Establish a connection with a database.
  - 29.03 Write applications that incorporate SQL code to return and display a result set.
  - 29.04 Write applications that insert, update, and delete data in the database.
  - 29.05 Write applications that implement data drill-down interfaces and display returned data using “next-n” records pagination.
  - 29.06 Effectively troubleshoot Web application code by properly evaluating error messages generated by the database driver.
- 30.0 Develop web applications that incorporate session tracking. – The student will be able to:
- 30.01 Describe the term “stateless” as it applies to the HTTP protocol and explain why session tracking is necessary.
  - 30.02 List several common types of Web applications that require the use of session tracking.
  - 30.03 Describe how sessions are tracked using cookies and URL rewriting.
  - 30.04 Write code that can write, read, manipulate and delete cookies.
  - 30.05 Create Web applications that utilize cookies for session tracking.
  - 30.06 Create Web applications that utilize URL rewriting for session tracking.
- 31.0 Implement web application security techniques. - The student will be able to:
- 31.01 Describe basic concepts related to the SSL (Secure Sockets Layer) protocol.
  - 31.02 Describe the process of authentication in providing a secure connection.
  - 31.03 Identify common certificate authorities that issue digital secure certificates.
  - 31.04 Write a Web application the uses form-based login authentication in combination with session tracking to restrict access.
- 32.0 Demonstrate the use of an architectural model to design web applications. – The student will be able to:
- 32.01 Identify and define the three logical tiers of a Web application: the presentation layer or view, the control layer, and the application logic layer.
  - 32.02 Describe the benefits of the use of an architectural model in providing structure for a Web application.
  - 32.03 Design and develop an application using an architectural model.
- 33.0 Demonstrate the ability to create and consume XML-based web services. – The student will be able to:
- 33.01 Define XML (Extensible Markup Language) and discuss its uses and benefits.
  - 33.02 Write well-formed and valid XML markup.
  - 33.03 Identify rendering and transformation techniques for XML.

- 33.04 Define the term “Web Service” and describe the use and benefits of XML-based Web Services.
- 33.05 Write a Web application that consumes an XML-based Web Service.
- 33.06 Create a basic XML-based Web Service.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Computer Systems Technology 1  
**Program Type:** Career Preparatory  
**Career Cluster:** Information Technology

PSAV	
Program Number	J500100
CIP Number	0647010404
Grade Level	30, 31
Standard Length	900 hours
Teacher Certification	COMP SVC @7 G ELECTRONIC @7 G BUS MACH @7 G INFO TECH 7G
CTSO	SkillsUSA, Inc.
SOC Codes	15-1041, 49-2011
Facility Code	212 <a href="http://www.fldoe.org/edfacil/sref.asp">http://www.fldoe.org/edfacil/sref.asp</a> (State Requirements for Educational Facilities)
Targeted Occupation List	<a href="http://www.labormarketinfo.com/wec/TargetOccupationList.htm">http://www.labormarketinfo.com/wec/TargetOccupationList.htm</a>
Perkins Technical Skill Attainment Inventory	<a href="http://www.fldoe.org/workforce/perkins/perkins_resources.asp">http://www.fldoe.org/workforce/perkins/perkins_resources.asp</a>
Industry Certifications	<a href="http://www.fldoe.org/workforce/fcpea/default.asp">http://www.fldoe.org/workforce/fcpea/default.asp</a>
Statewide Articulation	<a href="http://www.fldoe.org/workforce/dwdframe/artic_frame.asp">http://www.fldoe.org/workforce/dwdframe/artic_frame.asp</a>
Basic Skills Level	Mathematics: 10 Language: 9 Reading: 9

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to communication, leadership skills, human relations and employability skills; and safe, efficient work practices, installation, configuration, operation, and maintenance of computer/network systems. Content also includes preparation for industry-level certifications, network connectivity, LAN/WAN fundamentals, PC hardware/software, and advanced operating systems.

### **Program Structure**

This program is a planned sequence of instruction consisting of three occupational completion points and is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3)(b), F.S.

The following table illustrates the program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	EEV0501	End User Support Technician	450	15-1041
B	EEV0502	PC Electronics Installer	150	49-2011
C	EEV0503	Computer Support Specialist	300	15-1041

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

#### **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA), Business Professionals of America (BPA), and SkillsUSA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

#### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fl DOE.org/workforce/programs/doc/coopm.doc>.

## **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. A complete list of Essential Skills and links to instructional resources in support of these Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

## **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 10.0, Language 9.0, and Reading 9.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.) Exemptions from state, national or industry licensure are limited to the certifications listed at <http://www.fldoe.org/workforce/dwdframe/rtf/basicskills-License-exempt.rtf>.

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is

expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular Occupational Completion Point (OCP) or a Modified Occupational Completion Point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

### **Articulation**

This program (J500100), in combination with Computer Systems Technology 2 (J500200), has a statewide articulation agreement approved by the Articulation Coordinating Committee:

1. Computer Engineering Technology AS/AAS (1615120100/0615120100) – 9 credits (For PSAV programs including the 4-course Cisco Networking Academy, this program articulates an additional 12 credits.)

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate proficiency in software/hardware fundamentals.
- 02.0 Demonstrate proficiency in customer relations.
- 03.0 Demonstrate appropriate communication skills.
- 04.0 Demonstrate employability skills.
- 05.0 Demonstrate proficiency in basic laboratory practices.
- 06.0 Demonstrate proficiency in electronic fundamentals.
- 07.0 Demonstrate appropriate understanding of basic math.
- 08.0 Demonstrate appropriate understanding of basic science.
- 09.0 Demonstrate proficiency in computer systems.
- 10.0 Demonstrate proficiency in peripheral equipment.
- 11.0 Demonstrate language arts knowledge and skills.
- 12.0 Demonstrate mathematics knowledge and skills.
- 13.0 Demonstrate science knowledge and skills.
- 14.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 15.0 Solve problems using critical thinking skills, creativity and innovation.
- 16.0 Use information technology tools.
- 17.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.

- 18.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- 19.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 20.0 Describe the importance of professional ethics and legal responsibilities.
- 21.0 Explain the importance of employability skill and entrepreneurship skills.
- 22.0 Demonstrate personal money-management concepts, procedures, and strategies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: Computer Systems Technology 1**  
**PSAV Number: J500100**

**Course Number: EEV0501**

**Occupational Completion Point: A**

**End User Support Technician – 450 Hours – SOC Code SOC 15-1041**

01.0 Demonstrate proficiency in software/hardware fundamentals. – The student will be able to:

- 01.01 Apply OS commands, syntax usage and parameters.
- 01.02 Demonstrate knowledge of OS file systems.
- 01.03 Demonstrate basic command-line/GUI OS navigation
- 01.04 Demonstrate basic operation and usage of common applications.
- 01.05 Demonstrate operation and usage of fundamental OS utilities
- 01.06 Demonstrate operation and usage of virus protection software.
- 01.07 Demonstrate operation and usage of browser software and the internet.
- 01.08 Locate and install device drivers.
- 01.09 Understand compression technologies.
- 01.10 Identify PC/server front panel controls, indicators, rear case connectors and indicators.
- 01.11 Demonstrate an understanding of the boot process.

02.0 Demonstrate proficiency in customer relations. – The student will be able to:

- 02.01 Describe and demonstrate appropriate personal hygiene and professional attire.
- 02.02 Describe and demonstrate effective listening techniques.
- 02.03 Describe and apply techniques for instilling customer confidence and satisfaction.
- 02.04 Describe and apply techniques for keeping the customer informed.
- 02.05 Describe and apply effective follow-up techniques.
- 02.06 Demonstrate discretion in interacting with customers in field and business environments.
- 02.07 Demonstrate an understanding of basic conflict resolution.

03.0 Demonstrate appropriate communication skills. – The student will be able to:

- 03.01 Write logical and understandable statements, or phrases, to accurately fill out forms and invoices commonly used in business and industry.
- 03.02 Read and use graphs, charts, diagrams, tables, parts manuals, and information sources commonly used in this industry/occupational area.
- 03.03 Read and follow written and oral instructions.
- 03.04 Answer and ask questions coherently and concisely.
- 03.05 Read critically by recognizing assumptions and implications and by evaluating ideas.
- 03.06 Demonstrate appropriate telephone/communication skills.

04.0 Demonstrate employability skills. – The student will be able to:

- 04.01 Prepare a resume.
  - 04.02 Conduct a job search.
  - 04.03 Secure information about a job.
  - 04.04 Identify and provide documents, which may be required when interviewing for a job.
  - 04.05 Complete a job application form correctly and completely.
  - 04.06 Demonstrate competence in job interview techniques.
  - 04.07 Identify and demonstrate appropriate responses to criticism from employer, supervisor or other employees.
  - 04.08 Identify and demonstrate acceptable work habits.
  - 04.09 Demonstrate knowledge of how to make job changes appropriately.
  - 04.10 Demonstrate knowledge of employee health issues.
  - 04.11 Demonstrate efficient organizational skills.
  - 04.12 Demonstrate knowledge of the "Right-To-Know Law" as recorded in (29 CFR-1910.1200).
- 05.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 05.01 Locate, comprehend and evaluate key elements of oral and written information. AF2.4
  - 05.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF2.5
  - 05.03 Present information formally and informally for specific purposes and audiences. AF2.9
- 06.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF3.0
- 06.01 Demonstrate knowledge of arithmetic operations. AF3.2
  - 06.02 Analyze and apply data and measurements to solve problems and interpret documents. AF3.4
  - 06.03 Construct charts/tables/graphs using functions and data. AF3.5
- 07.0 Demonstrate science knowledge and skills. – The student will be able to: AF4.0
- 07.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF4.1
  - 07.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF4.3
- 08.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 08.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
  - 08.02 Locate, organize and reference written information from various sources. CM 3.0
  - 08.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
  - 08.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
  - 08.05 Apply active listening skills to obtain and clarify information. CM 7.0
  - 08.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
  - 08.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0

- 09.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 09.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS1.0
  - 09.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
  - 09.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
  - 09.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 10.0 Use information technology tools. – The student will be able to:
- 10.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
  - 10.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
  - 10.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
  - 10.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 11.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:
- 11.01 Describe the nature and types of business organizations. SY 1.0
  - 11.02 Explain the effect of key organizational systems on performance and quality.
  - 11.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
  - 11.04 Explain the impact of the global economy on business organizations.
- 12.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 12.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
  - 12.02 Explain emergency procedures to follow in response to workplace accidents.
  - 12.03 Create a disaster and/or emergency response plan. SHE 2.0
- 13.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 13.01 Employ leadership skills to accomplish organizational goals and objectives. LT 1.0
  - 13.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT 3.0
  - 13.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
  - 13.04 Employ mentoring skills to inspire and teach others. LT 5.0

- 14.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 14.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
  - 14.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR 1.1
  - 14.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR 1.2
  - 14.04 Interpret and explain written organizational policies and procedures. ELR 2.0
- 15.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 15.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
  - 15.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
  - 15.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
  - 15.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
  - 15.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
  - 15.06 Identify and exhibit traits for retaining employment. ECD 7.0
  - 15.07 Identify opportunities and research requirements for career advancement. ECD 8.0
  - 15.08 Research the benefits of ongoing professional development. ECD 9.0
  - 15.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0
- 16.0 Demonstrate personal money-management concepts, procedures, and strategies. – The student will be able to:
- 16.01 Identify and describe the services and legal responsibilities of financial institutions. FL 2.0
  - 16.02 Describe the effect of money management on personal and career goals. FL 3.0
  - 16.03 Develop a personal budget and financial goals. FL3.1
  - 16.04 Complete financial instruments for making deposits and withdrawals. FL3.2
  - 16.05 Maintain financial records. FL3.3
  - 16.06 Read and reconcile financial statements. FL3.4
  - 19.01 Research, compare and contrast investment opportunities.

**Course Number: EEV0502****Occupational Completion Point: B****PC Electronics Installer – 150 Hours – SOC Code 49-2011**

- 17.0 Demonstrate proficiency in basic laboratory practices. – The student will be able to:
- 17.01 Apply proper Occupational Safety Health Administration (OSHA) safety standards.
  - 17.02 Make electrical/voice/data connections.
  - 17.03 Identify and use hand tools properly.
  - 17.04 Identify and use power tools properly.

- 17.05 Demonstrate acceptable soldering and desoldering and rework and repair techniques.
- 17.06 Demonstrate electrostatic discharge (ESD) safety procedures.
- 18.0 Demonstrate proficiency in electronic fundamentals. – The student will be able to:
  - 18.01 Solve problems utilizing metric prefixes.
  - 18.02 Identify sources of electricity.
  - 18.03 Define voltage, current, resistance, power and energy.
  - 18.04 Apply Ohm's law and power formulas.
  - 18.05 Read and interpret color codes and symbols to identify electrical/electronic components and values.
  - 18.06 Measure properties of a circuit using appropriate test equipment.
  - 18.07 Identify properties of an AC signal.
  - 18.08 Identify AC sources.
  - 18.09 Analyze and measure AC voltages using appropriate test equipment.
- 19.0 Demonstrate appropriate understanding of basic math. – The student will be able to:
  - 19.01 Solve problems for volume, weight, area and circumference and perimeter measurements for rectangles, square and cylinders.
  - 19.02 Measure tolerance(s) on horizontal and vertical surfaces using millimeters, centimeters, and feet and inches.
  - 19.03 Add, subtract, multiply and divide using fractions, decimals and whole numbers.
  - 19.04 Determine the correct purchase price, to include sales tax for a materials list containing a minimum of six items.
  - 19.05 Demonstrate an understanding of federal, state and local taxes and their computation.
- 20.0 Demonstrate appropriate understanding of basic science. – The student will be able to:
  - 20.01 Demonstrate an understanding of the effects of temperature extremes and moisture content in regards to computer/network equipment.
  - 20.02 Demonstrate an understanding of the impact and effects of electrostatic discharge (ESD), power surges, grounding, and lightning strikes.
  - 20.03 Apply the scientific method to draw conclusions or make inferences from data.
  - 20.04 Demonstrate deductive reasoning techniques when troubleshooting.
  - 20.05 Demonstrate an understanding of the effects of heat load and ventilation in regards to computer/network equipment.
  - 20.06 Identify safety and health related issues, including exposure to work related chemicals and hazardous materials, and demonstrate the appropriate precautionary measures.
  - 20.07 Demonstrate an understanding of environmental impact and regulations in regards to the appropriate disposal of computer/network equipment.

**Course Number: EEV0503**

**Occupational Completion Point: C**

**Computer Support Specialist – 300 Hours – SOC Code 15-1041**

- 21.0 Demonstrate proficiency in computer systems. – The student will be able to:

- 21.01 Interpret and understand computer system diagrams and technical literature.
  - 21.02 Perform personal computer system tear-down, cleaning and inspection.
  - 21.03 Upgrade and troubleshoot a variety of motherboards.
  - 21.04 Demonstrate knowledge of bus systems and processor architecture.
  - 21.05 Understand and troubleshoot memory systems.
  - 21.06 Understand, troubleshoot and replace power supply systems.
  - 21.07 Troubleshoot a microcomputer system.
  - 21.08 Demonstrate system upgrading techniques.
  - 21.09 Identify form factors: power supplies, motherboards, cases
  - 21.10 Demonstrate proficiency in setup, configuring, upgrade and troubleshooting of laptop and mobile data devices.
  - 21.11 Apply troubleshooting techniques using operating systems utilities.
  - 21.12 Demonstrate the use of diagnostic software.
  - 21.13 Install configure and troubleshooting operating systems.
  - 21.14 Install configure and troubleshooting commonly used business applications.
- 22.0 Demonstrate proficiency in peripheral equipment. – The student will be able to:
- 22.01 Demonstrate an understanding of input/output devices.
  - 22.02 Demonstrate proficiency installing and troubleshooting serial, parallel, USB, and IEEE 1394 devices.
  - 22.03 Demonstrate proficiency installing, configuring, and troubleshooting video display technology eg projectors, monitors, LCD panels, data displays.
  - 22.04 Demonstrate proficiency installing, configuring, and troubleshooting, telecommunications, network, and wireless devices.
  - 22.05 Demonstrate proficiency installing, configuring, and troubleshooting, multimedia hardware and software.
  - 22.06 Troubleshoot, installing hard drives and CD-R\RW\DVD.
  - 22.07 Demonstrate proficiency installing, configuring and troubleshooting tape and other mass data storage devices.
  - 22.08 Demonstrate proficiency installing, configuring, and troubleshooting printers.
  - 22.09 Demonstrate professional connector assembly procedures.
  - 22.10 Demonstrate proficiency in updating devices drivers.

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Computer Systems Technology 2  
**Program Type:** Career Preparatory  
**Career Cluster:** Information Technology

PSAV	
Program Number	J500200

Basic Skills Level	Mathematics: 10 Language: 9 Reading: 9

### **Purpose**

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to communication, leadership skills, human relations and employability skills; and safe, efficient work practices, installation, configuration, operation, and

maintenance of computer/network systems. Content also includes preparation for industry-level certifications, network connectivity, LAN/WAN fundamentals, PC hardware/software, and advanced operating systems.

### **Program Structure**

This program is a planned sequence of instruction consisting of two occupational completion points and is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3)(b), F.S.

The following table illustrates the program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	EEV0506	Field Service Technician	300	15-1071
B	EEV0508	Digital Electronics Technician	450	15-1071

### **Laboratory Activities**

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### **Special Notes**

#### **Career and Technical Student Organization (CTSO)**

Future Business Leaders of America (FBLA), Business Professionals of America (BPA), and SkillsUSA are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

#### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

#### **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be

able to demonstrate these skills in the context of this program. A complete list of Essential Skills and links to instructional resources in support of these Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

### **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 10.0, Language 9.0, and Reading 9.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.) Exemptions from state, national or industry licensure are limited to the certifications listed at <http://www.fldoe.org/workforce/dwdframe/rtf/basicskills-License-exempt.rtf>.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular Occupational Completion Point (OCP) or a Modified Occupational Completion Point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the

student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

### **Articulation**

This program (J500200), in combination with Computer Systems Technology 1 (J500100), has a statewide articulation agreement approved by the Articulation Coordinating Committee:

1. Computer Engineering Technology AS/AAS (1615120100/0615120100) – 9 credits (For PSAV programs including the 4-course Cisco Networking Academy, this program articulates an additional 12 credits.)

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

### **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate proficiency in network fundamentals
- 02.0 Demonstrate proficiency in network equipment and physical site requirements and considerations.
- 03.0 Demonstrate proficiency in advanced computer concepts
- 04.0 Demonstrate proficiency in advanced operating systems
- 05.0 Demonstrate an understanding of entrepreneurship.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: Computer Systems Technology 2**  
**PSAV Number: J500200**

**Course Number: EEV0506**  
**Occupational Completion Point: A**  
**Field Service Technician – 300 Hours – SOC Code 15-1071**

01.0 Demonstrate Proficiency In Network Fundamentals. – The student will be able to:

- 01.01 Install, connect and maintain network clients and peripherals to various network operating systems.
- 01.02 Demonstrate use of file systems commands and utilities on a network server.
- 01.03 Demonstrate setup configuring and sharing of user security, file, printer and network resources.
- 01.04 Demonstrate setup configuring and troubleshooting network applications on the server.
- 01.05 Demonstrate setup configuring and troubleshoot backup operation on server/clients.
- 01.06 Demonstrate proficiency in performing help desk support for a network environment.
- 01.07 Connect, configure, and troubleshoot devices for network connectivity.
- 01.08 Perform basic network system maintenance.
- 01.09 Describe use and system maintenance of a LAN, WAN and telecommunications system.
- 01.10 Perform procedures related to administration of a secure network.
- 01.11 Demonstrate knowledge of the Internet/Intranet/Extranet system.
- 01.12 Demonstrate proficiency installing, configuring and troubleshooting network protocols.
- 01.13 Demonstrate knowledge of telecommunications services and standards.
- 01.14 Install, configure and troubleshoot browsers software.

02.0 Demonstrate proficiency in network equipment and physical site requirements and considerations. – The student will be able to:

- 02.01 Demonstrate knowledge of data communication test equipment.
- 02.02 Demonstrate knowledge of telecommunication wiring systems.
- 02.03 Demonstrate knowledge of cable and LAN topology.
- 02.04 Demonstrate knowledge of broadband devices, hubs, switches and routers.
- 02.05 Calculate and determine and UPS requirements for an PC/network environment
- 02.06 Determine adequate and protected AC requirements for PC/LANs.
- 02.07 Calculate and determine physical requirements of a networking environment.
- 02.08 Install, configure and troubleshoot LAN cable systems (twisted pair, coax, or fiber).
- 02.09 Configure and troubleshoot patch bay and network equipment.

**Course Number: EEV0508**  
**Occupational Completion Point: B**  
**Digital Electronics Technician – 450 Hours – SOC Code 15-1071**

03.0 Demonstrate proficiency in advanced computer concepts. – The student will be able to:

- 03.01 Demonstrate knowledge of the OSI protocol model and the TCP/IP protocol.
- 03.02 Demonstrate use of utilities in troubleshooting a TCP/IP network
- 03.03 Demonstrate knowledge of TCP/IP application protocols and services, DNS, DHCP, FTP, HTTP, and LDAP
- 03.04 Demonstrate knowledge of simple proxy and firewall services.
- 03.05 Install, configure and troubleshoot the TCP/IP protocol service on a variety of operating systems.
- 03.06 Demonstrate knowledge of VLANs.
- 03.07 Install, configure and troubleshoot simple peer to peer networks.
- 03.08 Demonstrate knowledge of logon and logoff scripts.
- 03.09 Demonstrate knowledge of VPN and dial-up remote connectivity
- 03.10 Install and configure remote control software used in Help Desk operations.

04.0 Demonstrate proficiency in advanced operating systems. – The student will be able to:

- 04.01 Demonstrate knowledge of directory services in advanced operating systems.
- 04.02 Demonstrate knowledge of secure file systems used in an advance operating system.
- 04.03 Demonstrate knowledge of secure file, printer, and resource sharing in advanced operating systems.
- 04.04 Configure and troubleshoot access issues with secure file systems and secure file and resource sharing using advanced operating systems.
- 04.05 Install, configure advanced operating systems.
- 04.06 Troubleshoot boot, configuration, registry, and application problems typical in advanced operating systems.
- 04.07 Configure and troubleshoot network connectivity, protocols, network based printing.
- 04.08 Configure peer web-services, FTP, and telnet applications on advanced operating systems.
- 04.09 Schedule various preventative maintenance tasks for automatic execution in advanced operating systems.
- 04.10 Demonstrate knowledge of advance storage concepts, disk spanning, striping, mirroring, and striping with parity.
- 04.11 Configure advance storage methods using advanced operating systems.
- 04.12 Implement, monitor and troubleshoot security in advanced operating systems.

05.0 Demonstrate an understanding of entrepreneurship. – The student will be able to:

- 05.01 Identify characteristics of the American Enterprise System.
- 05.02 Define inflation and deflation.
- 05.03 Illustrate the basic economic questions facing any society.
- 05.04 Determine the results and change in demand or a change in supply.
- 05.05 List factors, which contribute to economic growth.
- 05.06 Identify characteristics of different types of business ownership.
- 05.07 Choose appropriate action in a situation requiring application of business ethics.

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in digital media, new media, and multimedia positions in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to practical experiences in Web page design, interactive presentation development, testing and production. Specialized skills in multimedia presentations such as video editing, audio features, and simple animation and authoring software are used to produce a variety of interactive multimedia presentations.

### Program Structure

This program is a planned sequence of instruction consisting of two occupational completion points.

When offered at the post secondary adult career and technical level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3)(b), F.S.

The following table illustrates the program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	OTA0040*	Information Technology Assistant	150	27-1014
	GRA0005	Multimedia Production Assistant	150	
B	GRA0006	Multimedia Junior Designer	450	27-1014

\* Note: OTA0040 is a core.

### Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

### Special Notes

## **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and Business Professionals of America (BPA) are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

## **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

## **Essential Skills**

Essential skills identified by the Division of Career and Adult Education have been integrated into the standards and benchmarks of this program. These skills represent the general knowledge and skills considered by industry to be essential for success in careers across all career clusters. Students preparing for a career served by this program at any level should be able to demonstrate these skills in the context of this program. A complete list of Essential Skills and links to instructional resources in support of these Essential Skills are published on the CTE Essential Skills page of the FL-DOE website ([http://www.fldoe.org/workforce/dwdframe/essential\\_skills.asp](http://www.fldoe.org/workforce/dwdframe/essential_skills.asp)).

## **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 10.0, Language 10.0, and Reading 10.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.) Exemptions from state, national or industry licensure are limited to the certifications listed at <http://www.fldoe.org/workforce/dwdframe/rtf/basicskills-License-exempt.rtf>.

## **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education.

Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular Occupational Completion Point (OCP) or a Modified Occupational Completion Point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

## **Articulation**

This program (Y600100), in combination with the Multimedia Design Technology 2 program (Y600200) has a statewide articulation agreement approved by the Articulation Coordinating Committee:

1. Graphics Technology AS/AAS (1611080300/0611080300) – 9 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fldoe.org/workforce/dwdframe/artic\\_frame.asp](http://www.fldoe.org/workforce/dwdframe/artic_frame.asp).

## **Standards**

After successfully completing this program, the student will be able to perform the following:

### **Keyboarding and Business Skills competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. Apply ergonomic principles applicable to the configuration of computer workstations.
- 02.0 Demonstrate comprehension and communication skills.
- 03.0 Use technology to apply and enhance communication skills in technical reading, writing.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles. Demonstrate initiative, courtesy, loyalty, honesty, cooperation and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc.
- 08.0 Demonstrate personal and interpersonal skills appropriate for the workplace.
- 09.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance.

**AND**

**Computer and Business Skills competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. Apply ergonomic principles applicable to the configuration of computer workstations.
- 02.0 Demonstrate comprehension and communication skills.
- 03.0 Use Technology to apply and enhance communications skills in technical reading, writing.
- 04.0 Practice quality performance in the learning environment and the workplace.
- 05.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 06.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 07.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.
- 08.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc.
- 09.0 Demonstrate human relations/interpersonal skills appropriate for the workplace.
- 10.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance.
- 11.0 Perform e-mail activities.
- 12.0 Demonstrate operating systems.
- 13.0 Develop an awareness of emerging technologies.

**OR**

**Computing for College and Careers competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance and enhance personal performance in relation to the workplace. Apply ergonomic principles applicable to the configuration of computer workstations.
- 02.0 Demonstrate comprehension and communication skills.
- 03.0 Use technology to apply and enhance communication skills in technical reading, writing.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles.
- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal and professional ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc.
- 10.0 Demonstrate personal and interpersonal skills and attributes appropriate for the workplace.
- 11.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance.
- 12.0 Perform e-mail activities.
- 13.0 Demonstrate operating systems.
- 14.0 Develop an awareness of emerging technologies.

**OR**

**Introduction to IT Competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance.
- 02.0 Demonstrate Comprehension and communication skills.
- 03.0 Use technology to enhance the effectiveness of communication skills.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles.
- 05.0 Practice quality performance in the learning environment and the workplace.
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals.

- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace.
- 11.0 Participate in work-based learning experiences.
- 12.0 Perform e-mail activities.
- 13.0 Demonstrate knowledge of different operating systems.
- 14.0 Demonstrate proficiency navigating the internet, intranet, and the WWW.
- 15.0 Demonstrate proficiency using HTML commands.
- 16.0 Demonstrate proficiency in page design applicable to the WWW.
- 17.0 Demonstrate proficiency using specialized web design software.
- 18.0 Develop an awareness of the information technology industry.
- 19.0 Develop an awareness of microprocessors and digital computers.
- 20.0 Develop an awareness of programming languages.
- 21.0 Develop an awareness of emerging technologies.
- 22.0 Demonstrate an understanding of the seven layers of the Open Systems Interface (OSI) model.
- 23.0 Demonstrate proficiency using common software applications.
- 24.0 Demonstrate proficiency using specialized software applications.

### **Program Standards**

- 25.0 Demonstrate knowledge of presentation production issues.
- 26.0 Demonstrate proficiency in using presentation software and equipment.
- 27.0 Demonstrate proficiency in Web page design applicable to the WWW.
- 28.0 Demonstrate an understanding of HTML commands.
- 29.0 Demonstrate proficiency in using a WYSIWG editor, Web design, or Web animation for Web page design.
- 02.0 Demonstrate language arts knowledge and skills.
- 02.0 Demonstrate mathematics knowledge and skills.
- 02.0 Demonstrate science knowledge and skills.
- 02.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas.
- 02.0 Solve problems using critical thinking skills, creativity and innovation.
- 02.0 Use information technology tools.
- 02.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment.
- 02.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance.
- 02.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives.
- 02.0 Describe the importance of professional ethics and legal responsibilities.
- 02.0 Explain the importance of employability skill and entrepreneurship skills.
- 02.0 Demonstrate personal money-management concepts, procedures, and strategies.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: Multimedia Design Technology 1**  
**PSAV Number: Y600100**

**Course Number: OTA0040**  
**Occupational Completion Point – A**  
**Multimedia Production Assistant – 150 Hours – SOC Code 27-1014**

**Keyboarding and Business Skills competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. Apply ergonomic principles applicable to the configuration of computer workstations. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Demonstrate basic file management skills.
- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 02.01 Read and comprehend technical and non-technical reading assignments related to course content including trade journals, books, magazines and electronic sources.
  - 02.02 Write clear and well-organized research papers, integrating a variety of information.
  - 02.03 Prepare and deliver an oral report with appropriate materials to the class
  - 02.04 Participate in large group discussions as a member and/or a leader.
  - 02.05 Take notes, organize, summarize, and paraphrase ideas and details.
  - 02.06 Accurately follow written and oral instructions.
  - 02.07 Interpret data on graphs, charts, diagrams, and tables commonly used in this industry/occupation.
- 03.0 Use technology to apply and enhance communication skills in technical reading, writing. – The student will be able to:
- 03.01 Select and use word processing software and accompanying features to enhance written business communications.
  - 03.02 Use the writing process to create/edit business documents appropriate to the subject matter, purpose, and audience.
  - 03.03 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/employee roles. Demonstrate initiative,

- courtesy, loyalty, honesty, cooperation and punctuality as a team member. – The student will be able to:
- 04.01 Explore, design, implement, and evaluate organizational structures and cultures for managing project teams.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
- 05.01 Assess personal, peer, and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 06.01 Demonstrate an awareness of quality service and the personal and professional standards required to establish an effective service-based culture in the workplace, business, or learning environment.
  - 06.02 Identify, analyze, and implement managerial skills necessary for maintaining a high quality work environment, goals, and strategic planning in business settings.
  - 06.03 Follow accepted rules, regulations, policies, procedures, processes, and workplace safety.
- 07.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc. – The student will be able to:
- 07.01 Analyze personal skills and aptitudes in comparison with various business related job and career options.
  - 07.02 Use career resources to develop an information base that reflects local and global business related occupations and opportunities for continuing education and workplace experience.
  - 07.03 Demonstrate job-seeking skills required for entry-level employment (e.g., resume, application, interview, follow up.)
  - 07.04 Design, initiate, refine, and implement a plan to facilitate personal growth and skill development related to anticipated job requirements and career expectations.

- 08.0 Demonstrate personal and interpersonal skills appropriate for the workplace. – The student will be able to:
- 08.01 Accept constructive criticism.
  - 08.02 Apply appropriate strategies to manage and resolve conflict in work situations.
  - 08.03 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, and respect for self and others, professional dress, etc.).
- 09.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 09.01 Perform business tasks (e.g., filing and records management, scheduling, reprographics, mail handling, etc.).
  - 09.02 Demonstrate knowledge of ethical behavior in a business environment (e.g., confidentiality of information, employee right to know, hiring practices, plagiarism, copyright violations, sexual harassment, mission statement, code of ethics, etc.).

**AND**

**Computer and Business Skills competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. Apply ergonomic principles applicable to the configuration of computer workstations. – The student will be able to:
- 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Demonstrate basic file management skills.
  - 01.06 Troubleshoot problems with computer software, hardware, peripherals, and other office equipment.
  - 01.07 Describe ethical issues and problems associated with computers and information systems.
  - 01.08 Apply ergonomic principles applicable to the configuration of computer workstations.
- 02.0 Use technology to apply and enhance communication skills in technical reading, writing, speaking, listening, and viewing. – The student will be able to:
- 02.01 Take notes, organize, summarize, and paraphrase ideas and details.
  - 02.02 Accurately follow written and oral instructions.
  - 02.03 Interpret data on graphs, charts, diagrams, and tables commonly used in this industry/occupation.
- 03.0 Use technology to apply and enhance communication skills in technical reading, writing. – The student will be able to:

- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communications.
  - 03.02 Use computer networks (e.g., Internet, on-line databases, e-mail) to facilitate collaborative or individual learning and communication.
  - 03.03 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
- 04.01 Assess personal, peer, and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving and decision-making skills).
  - 04.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 05.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 05.01 Demonstrate an awareness of quality service and the personal and professional standards required to establish an effective service-based culture in the workplace, business, or learning environment.
  - 05.02 Identify, analyze and implement managerial skills necessary for maintaining a high quality work environment, goals, and strategic planning in business settings.
  - 05.03 Follow accepted rules, regulations, policies, procedures, processes, and workplace safety.
- 06.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace and to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 06.01 Analyze, interpret, compile and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 06.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 06.03 Select and use the correct mathematical processes and tools to solve complex problem settings that are typical of business settings and use formulas when appropriate.
- 07.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 07.01 Assess, analyze, and reassess individual talents, aptitudes, interests, and personal characteristics as they relate to potential future careers in business environments.

- 07.02 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
- 07.03 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 08.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. Experience work-based learning through job shadowing, mentoring, e-coaching, etc. – The student will be able to:
  - 08.01 Analyze personal skills and aptitudes in comparison with various business related job and career options.
  - 08.02 Use career resources to develop an information base that reflects local and global business related occupations and opportunities for continuing education and workplace experience.
  - 08.03 Demonstrate job-seeking skills required for entry-level employment (e.g., resume, application, interview, follow-up).
  - 08.04 Design and initiate a plan to facilitate growth and skill development related to anticipated job requirements and career expectations.
  - 08.05 Refine and implement a plan to facilitate personal growth and skill development related to anticipated job requirements and career expectations.
  - 08.06 Demonstrate an awareness of specific job requirements and career paths (e.g., requirements, characteristics needed) in business environments.
  - 08.07 Demonstrate an awareness of the potential impact of local and global trends on career plans and life goals.
  - 08.08 Build mentor relationships with local professionals in the industry.
- 09.0 Demonstrate personal and interpersonal skills appropriate for the workplace. – The student will be able to:
  - 09.01 Accept constructive criticism.
  - 09.02 Apply appropriate strategies to manage and resolve conflict in work situations.
  - 09.03 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, and respect for self and others, professional dress, etc.).
- 10.0 Perform office functions and responsibilities to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 10.01 Demonstrate knowledge of ethical behavior in a business environment (e.g., confidentiality of information, employee right to know, hiring practices, plagiarism, copyright violations, sexual harassment, mission statement, code of ethics, etc.).
- 10.0 Perform e-mail activities. – The student will be able to:
  - 10.02 Describe e-mail capabilities and functions.
  - 10.03 Use the Internet to perform e-mail activities.
- 11.0 Demonstrate operating systems. – The student will be able to:
  - 11.01 Identify operating system file naming conventions.

- 11.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
- 11.03 Demonstrate a working knowledge of standard file formats.
- 11.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).

12.0 Develop an awareness of emerging technologies. – The student will be able to:

- 12.01 Compare and contrast various methods of evaluation for emerging technologies.
- 12.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
- 12.03 Compare and contrast emerging technologies (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).

OR

**Computing for College and Careers competencies:**

01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:

- 01.01 Develop keyboarding skills to enter and manipulate text and data.
- 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
- 01.03 Identify and describe communications and networking systems used in workplace environments.
- 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
- 01.05 Demonstrate basic computer file management skills.
- 01.06 Troubleshoot problems with computer hardware peripherals and other office equipment.
- 01.07 Describe ethical issues and problems associated with computers and information systems.
- 01.08 Apply ergonomic principles applicable to the configuration of computer workstations.

02.0 Demonstrate comprehension and communication skills. – The student will be able to:

- 02.01 Read and comprehend technical and non-technical reading assignments related to course content including trade journals, books, magazines and electronic sources.
- 02.02 Write clear and well-organized research papers, integrating a variety of information.
- 02.03 Prepare and deliver an oral report with appropriate materials to the class
- 02.04 Participate in large group discussions as a member and/or a leader.
- 02.05 Take notes, organize, summarize, and paraphrase ideas and details.
- 02.06 Accurately follow written and oral instructions.
- 02.07 Interpret data on graphs, charts, diagrams, and tables commonly used in this industry/occupation.

- 03.0 Use technology to enhance the effectiveness of communication skills. – The student will be able to:
- 03.01 Select and use word processing software and accompanying features to enhance written business communications.
  - 03.02 Use the writing process to create and edit business documents appropriate to the subject matter, purpose, and audience.
  - 03.03 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
  - 03.04 Use computer networks (e.g., Internet, on-line databases, e-mail) to facilitate collaborative or individual learning and communication.
  - 03.05 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
- 04.01 Explore, design, implement, and evaluate organizational structures and cultures for managing project teams.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
- 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).
- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 06.01 Demonstrate an awareness of quality service and the personal and professional standards required to establish an effective service-based culture in the workplace, business, or learning environment.
  - 06.02 Identify, analyze, and implement managerial skills necessary for maintaining a high quality work environment, goals, and strategic planning in business settings.
  - 06.03 Follow accepted rules, regulations, policies, procedures, processes, and workplace safety.

- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 08.01 Assess, analyze, and reassess individual talents, aptitudes, interests, and personal characteristics as they relate to potential future careers in business environments.
  - 08.02 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
  - 08.03 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:
- 09.01 Analyze personal skills and aptitudes in comparison with various business related job and career options.
  - 09.02 Use career resources to develop an information base that reflects local and global business related occupations and opportunities for continuing education and workplace experience.
  - 09.03 Demonstrate job-seeking skills required for entry-level employment (e.g., resume, application, interview, and follow-up).
  - 09.04 Design and initiate a plan to facilitate growth and skill development related to anticipated job requirements and career expectations.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to anticipated job requirements and career expectations.
  - 09.06 Demonstrate an awareness of specific job requirements and career paths (e.g., requirements, characteristics needed) in business environments.
  - 09.07 Demonstrate an awareness of the potential impact of local and global trends on career plans and life goals.
  - 09.08 Build mentor relationships with local professionals in the industry.
- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
- 10.01 Accept constructive criticism.
  - 10.02 Apply appropriate strategies to manage and resolve conflicts in work situations.

- 10.03 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
- 11.0 Perform functions and responsibilities to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 11.01 Demonstrate knowledge of ethical behavior in a business environment (e.g., confidentiality of information, employee right to know, hiring practices, plagiarism, copyright violations, sexual harassment, mission statement, code of ethics, etc.).
- 12.0 Perform e-mail activities. – The student will be able to:
  - 12.01 Describe e-mail capabilities and functions.
  - 12.02 Use the Internet to perform e-mail activities.
- 13.0 Demonstrate operating systems. – The student will be able to:
  - 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
- 14.0 Develop an awareness of emerging technologies. – The student will be able to:
  - 14.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 14.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 14.03 Compare and contrast emerging technologies (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).

**Introduction to Information Technology competencies:**

- 01.0 Demonstrate knowledge, skill, and application of information systems to accomplish job objectives and enhance workplace performance. – The student will be able to:
  - 01.01 Develop keyboarding skills to enter and manipulate text and data.
  - 01.02 Describe and use current and emerging computer technology and software to perform personal and business related tasks.
  - 01.03 Identify and describe communications and networking systems used in workplace environments.
  - 01.04 Use reference materials such as on-line help, vendor bulletin boards, tutorials, and manuals available for application software.
  - 01.05 Troubleshoot problems with computer hardware peripherals and other office equipment.
  - 01.06 Describe ethical issues and problems associated with computers and information systems.

- 02.0 Demonstrate comprehension and communication skills. – The student will be able to:
- 01.01 Use listening, speaking, telecommunication and nonverbal skills and strategies to communicate effectively with supervisors, co-workers, and customers.
  - 01.02 Organize ideas and communicate oral and written messages appropriate for information technology environments.
  - 01.03 Collaborate with individuals and teams to complete tasks and solve information technology problems.
  - 01.04 Identify, define, and discuss professional information technology terminology appropriate for internal and external communications in an information technology environment.
  - 01.05 Apply the writing process to the creation of appropriate documents following designated business formats.
  - 01.06 Demonstrate an awareness of project management concepts and tools (e.g., timelines, deadlines, resource allocation, time management, delegation of tasks, collaboration, etc.).
- 03.0 Use technology to enhance the effectiveness of communication skills. – The student will be able to:
- 03.01 Use database, spreadsheet, presentation software, scheduling, and integrated software packages to enhance communication.
  - 03.02 Respond to and utilize information derived from multiple sources (e.g., written documents, instructions, e-mail, voice mail) to solve business problems and complete business tasks.
- 04.0 Develop an awareness of management functions and organizational structures as they relate to today's workplace and employer/ employee roles. – The student will be able to:
- 04.01 Explore, design, implement, and evaluate organizational structures and cultures.
  - 04.02 Explore and demonstrate an awareness of current trends in business and the employee's role in maintaining productive business environments in today's global workplace.
  - 04.03 Collaborate with individuals and teams to complete tasks and solve business-related problems and demonstrate initiative, courtesy, loyalty, honesty, cooperation, and punctuality as a team member.
- 05.0 Practice quality performance in the learning environment and the workplace. – The student will be able to:
- 05.01 Assess personal, peer and group performance and identify and implement strategies for improvement (e.g., organizational skills, note taking/outlining, advance organizers, reasoning skills, problem-solving skills, and decision-making skills).
  - 05.02 Develop criteria for assessing products and processes that incorporate effective business practices (e.g., time management, productivity, total quality management).

- 06.0 Incorporate appropriate leadership and supervision techniques, customer service strategies, and standards of personal ethics to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 06.01 Demonstrate awareness of the following workplace essentials: Quality customer service; business ethics; confidentiality of information; copyright violations; accepted workplace rules, regulations, policies, procedures, processes, and workplace safety, and appropriate attire and grooming.
- 07.0 Apply mathematical operations and processes as well as financial planning strategies to commonly occurring situations in the workplace to accomplish job objectives and enhance workplace performance. – The student will be able to:
- 07.01 Analyze, interpret, compile, and demonstrate the ability to present/communicate data in understandable and measurable terms using common statistical procedures.
  - 07.02 Use common standards of measurement including the metric system in solving work-related or business problems (e.g., length, weight, currency, time).
  - 07.03 Select and use the correct mathematical processes and tools to solve complex problem situations that are typical of business settings and use formulas when appropriate.
- 08.0 Assess personal strengths and weaknesses as they relate to job objectives, career exploration, personal development, and life goals. – The student will be able to:
- 08.01 Use personal assessment tools to identify personal strengths and weaknesses related to learning and work environments.
  - 08.02 Analyze job and career requirements and relate career interests to opportunities in the global economy.
- 09.0 Incorporate knowledge gained from individual assessment and job/career exploration to design an individual career plan that reflects the transition from school to work, lifelong learning, and personal and professional goals. – The student will be able to:
- 09.01 Research, compare, and contrast information technology career clusters (e.g., characteristics needed, skills required, education required, industry certifications, advantages and disadvantages of information technology careers, the need for information technology workers, etc.).
  - 09.02 Describe the variety of occupations and professions within the world of information technology including those where information technology is either in a primary focus or in a supportive role.
  - 09.03 Describe job requirements for the variety of occupations and professions within the global world of information technology.
  - 09.04 Analyze personal skills and aptitudes in comparison with information technology career opportunities.
  - 09.05 Refine and implement a plan to facilitate personal growth and skill development related to information technology career opportunities.
  - 09.06 Develop and maintain an electronic career portfolio, to include, but not limited to the Resume and Letter of Application.

- 10.0 Demonstrate human relations/interpersonal skills appropriate for the workplace. – The student will be able to:
  - 10.01 Accept constructive criticism.
  - 10.02 Demonstrate personal and interpersonal skills appropriate for the workplace (e.g., responsibility, dependability, punctuality, integrity, positive attitude, initiative, respect for self and others, professional dress, etc.).
  
- 11.0 Participate in work-based learning experiences. – The student will be able to:
  - 11.01 Participate in work-based learning experiences in an information technology environment.
  - 11.02 Discuss the use of technology in an information technology environment.
  
- 12.0 Perform e-mail activities. – The student will be able to:
  - 12.01 Describe e-mail capabilities and functions.
  - 12.02 Identify components of an e-mail message.
  - 12.03 Identify the components of an e-mail address.
  - 12.04 Identify when to use different e-mail options.
  - 12.05 Attach a file to an e-mail message.
  - 12.06 Forward an e-mail message.
  - 12.07 Use an address book.
  - 12.08 Reply to an e-mail message.
  - 12.09 Use the Internet to perform e-mail activities.
  - 12.10 Identify the appropriate use of e-mail and demonstrate related e-mail etiquette.
  - 12.11 Identify when to include information from an original e-mail message in a response.
  - 12.12 Identify common problems associated with widespread use of e-mail.
  
- 13.0 Demonstrate knowledge of different operating systems. – The student will be able to:
  - 13.01 Identify operating system file naming conventions.
  - 13.02 Demonstrate proficiency with file management and structure (e.g., folder creation, file creation, backup, copy, delete, open, save).
  - 13.03 Demonstrate a working knowledge of standard file formats.
  - 13.04 Explain the history and purpose of various operating systems (e.g., DOS, Windows, Mac, and Unix/Linux).
  
- 14.0 Demonstrate proficiency navigating the Internet, intranet, and the WWW. – The student will be able to:
  - 14.01 Identify and describe Web terminology.
  - 14.02 Demonstrate proficiency in using the basic features of GUI browsers (e.g., setting bookmarks, basic configurations, e-mail configurations, address book).
  - 14.03 Define Universal Resource Locators (URLs) and associated protocols (e.g., .com, .org, .edu, .gov, .net, .mil).
  - 14.04 Describe and observe Internet/Intranet ethics and copyright laws and regulatory control.
  - 14.05 Trace the evolution of the Internet from its inception to the present and into the future.

- 14.06 Demonstrate proficiency using search engines (e.g., Yahoo!, Google, Northern Light, Lycos, Excite, etc.).
  - 14.07 Demonstrate proficiency using various web tools (e.g., downloading of files, transfer of files, telnet, PDF, etc.).
  - 14.08 Identify effective Boolean search strategies.
- 15.0 Demonstrate proficiency using HTML commands. – The student will be able to:
- 15.01 Identify elements of a Web page.
  - 15.02 Describe individual Web page layouts and content (e.g., writing for the Web, Web structure).
  - 15.03 Define basic HTML terminology.
  - 15.04 Analyze HTML source code developed by others.
  - 15.05 Create Web pages using basic HTML tags (e.g., links, lists, character styles, text alignment, tables).
  - 15.06 Use storyboarding techniques for subsequent Web pages (e.g., linear, hierarchical).
  - 15.07 Edit and test HTML documents for accuracy and validity.
  - 15.08 Use basic functions of WYSIWYG editors.
  - 15.09 Use basic functions of HTML, DHTML, and XML editors and converters.
  - 15.10 Enhance web pages through the addition of images and graphics including animation.
- 16.0 Demonstrate proficiency in page design applicable to the WWW. – The student will be able to:
- 16.01 Develop an awareness of acceptable Web page design, including index pages in relation to the rest of the Web site.
  - 16.02 Describe and apply color theory as it applies to Web page design (e.g., background and text color).
  - 16.03 Access and digitize graphics through various resources (e.g., scanner, digital cameras, on-line graphics, clipart, CD-ROMs).
  - 16.04 Use image design software to create and edit images.
  - 16.05 Demonstrate proficiency in publishing to the Internet.
  - 16.06 Demonstrate proficiency in adding downloadable forms to web pages.
  - 16.07 Explain the need for web-based applications.
- 17.0 Demonstrate proficiency using specialized web design software. – The student will be able to:
- 17.01 Compare and contrast various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
  - 17.02 Demonstrate proficiency using use of various specialized web design software (e.g., Flash, Shockwave, GoLive, Director, etc.).
- 18.0 Develop an awareness of the information technology industry. – The student will be able to:
- 18.01 Explain how information technology impacts the operation and management of business and society.
  - 18.02 Explain the emergence of e-commerce and e-government and the potential

- impact on business and society.
- 18.03 Explain the emergence of a paperless society.
- 19.0 Develop an awareness of microprocessors and digital computers. – The student will be able to:
- 19.01 Describe the evolution of the digital computer.
  - 19.02 Explain the general architecture of a microcomputer system.
  - 19.03 Explain the evolution of microprocessors.
  - 19.04 Explain software hierarchy and its impact on microprocessors.
  - 19.05 Explain the need for and use of peripherals.
  - 19.06 Demonstrate proficiency using peripherals.
  - 19.07 Identify the basic concepts of computer maintenance and upgrades.
  - 19.08 Differentiate between diagnosing and troubleshooting.
- 20.0 Develop an awareness of programming languages. – The student will be able to:
- 20.01 Explain the history of programming languages.
  - 20.02 Explain the need for and use of compilers.
  - 20.03 Explain how compilers work.
  - 20.04 Identify the three types of programming design approaches (e.g., top-down, structured, and object-oriented).
- 21.0 Develop an awareness of emerging technologies. – The student will be able to:
- 21.01 Compare and contrast various methods of evaluation for emerging technologies.
  - 21.02 Demonstrate knowledge of the process of planning upgrades and changeovers.
  - 21.03 Compare and contrast emerging technologies and describe how they impact business in the global marketplace (e.g., wireless, wireless web, cell phones, portables/handhelds, smart appliances, home networks, peer-to-peer, etc.).
- 22.0 Demonstrate an understanding of the seven layers of the open systems interface (OSI) model. – The student will be able to:
- 22.01 Identify how types of networks and how they work.
  - 22.02 Identify the role of servers and clients on a network.
  - 22.03 Identify benefits and risks of networked computing.
  - 22.04 Identify the relationship between computer networks and other communications networks (i.e. telephone systems).
  - 22.05 Identify Intranets, Extranets and how they relate to the Internet.
  - 22.06 Demonstrate basic understanding of network administration.
  - 22.07 Describe the evolution of OSI from its inception to the present and into the future.
  - 22.08 Explain the interrelations of the seven layers of the Open Systems Interface (OSI) as it relates to hardware and software.
- 23.0 Demonstrate proficiency using common software applications. – The student will be able to:
- 23.01 Compare and contrast the appropriate use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music,

- etc.).
- 23.02 Demonstrate proficiency in the use of various software applications (e.g., word processing, desktop publishing, graphics design, web browser, e-mail, presentation, database, scheduling, financial management, Java applet, music, etc.).
- 24.0 Demonstrate proficiency using specialized software applications. – The student will be able to:
- 24.01 Compare and contrast the appropriate use of specialized software applications (e.g., (OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation process control, materials management, etc.).
- 24.02 Demonstrate awareness of specialized software applications (e.g., OLTP, Computer Aided Design, Computer Aided Manufacturing, 3D animation, process control, materials management, etc.)
- 24.03 Demonstrate the ability to incorporate digital sound.

**Course Number: GRA0005****Occupational Completion Point – A****Multimedia Production Assistant – 150 Hours – SOC Code 27-1014**

- 25.0 Demonstrate knowledge of presentation production issues. – The student will be able to:
- 25.01 Identify characteristics of various types of presentations (informing, selling, teaching, entertaining)
- 25.02 Identify presentation materials (e.g.. handouts, seminar notebooks, business cards, coupons, etc.) and presentation marketing mediums (ex. print media such as newspaper, magazines; TV; movies; computer presentations; interactive CD ROM; kiosks, and Web pages, etc.)
- 25.03 Identify design characteristics (fonts, size and styles, backgrounds, etc.) that are suited for each type of presentation format and material.
- 25.04 Demonstrate knowledge of copyright laws including copyright statute, disclaimers, and filing procedures.
- 25.05 Research and identify skills needed for career positions in multimedia
- 25.06 Demonstrate an understanding of graphic and other file formats (e.g., EPS, TIFF, JPEG, ASCII, MPEG, MIDI, AVI, WAV, etc.) and knowledge of image size when scanning and saving files for use in different presentation types (Web, computer, print, etc.)
- 25.07 Demonstrate knowledge of presentation vocabulary/terms.
- 26.0 Demonstrate proficiency in using presentation software and equipment. – The student will be able to:
- 26.01 Produce a presentation that includes music, animation, and digital photography and present it using a projection system.
- 30.0 Demonstrate language arts knowledge and skills. – The student will be able to: AF 2.0
- 30.01 Locate, comprehend and evaluate key elements of oral and written information. AF 2.4
- 30.02 Draft, revise, and edit written documents using correct grammar, punctuation and vocabulary. AF 2.5

- 30.03 Present information formally and informally for specific purposes and audiences. AF 2.9
- 31.0 Demonstrate mathematics knowledge and skills. – The student will be able to: AF 3.0
- 31.01 Demonstrate knowledge of arithmetic operations. AF 3.2
- 31.02 Analyze and apply data and measurements to solve problems and interpret documents. AF 3.4
- 31.03 Construct charts/tables/graphs using functions and data. AF 3.5
- 32.0 Demonstrate science knowledge and skills. – The student will be able to: AF 4.0
- 32.01 Discuss the role of creativity in constructing scientific questions, methods and explanations. AF 4.1
- 32.02 Formulate scientifically investigable questions, construct investigations, collect and evaluate data, and develop scientific recommendations based on findings. AF 4.3

**Course Number: GRA0006****Occupational Completion Point – B****Multimedia Junior Designer – 450 Hours – SOC Code 27-1014**

- 27.0 Demonstrate proficiency in web page design applicable to the WWW. – The student will be able to:
- 27.01 Determine the objectives and the audience for Web pages.
- 27.02 Identify design strategies to reach and keep an audience
- 27.03 Use storyboarding to plan a Web site.
- 27.04 Create styles and other design elements (e.g. backgrounds, colors, fonts, buttons, etc.)
- 28.0 Demonstrate an understanding of HTML commands. – The student will be able to:
- 28.01 Compare WYSIWG editors to non-WYSIWG coding.
- 28.02 Interpret HTML coding on an existing Web page.
- 28.03 Use HTML commands to write a Web page.
- 29.0 Demonstrate proficiency in using a WYSIWG editor, web design, or web animation software for web page design. – The student will be able to:
- 29.01 Create Web pages for publication.
- 29.02 Apply style sheets for consistent Web site design.
- 29.03 Format text for Web pages (e.g., font families, sizes)
- 29.04 Create and edit images, photographs for Web pages using digital imaging software (e.g. ImageReady in Photoshop).
- 29.05 Insert created buttons into a Web page and test for accuracy
- 29.06 Create navigational links.
- 29.07 Insert audio files into a Web page.
- 29.08 Create, edit and integrate video files into a Web page.
- 29.09 Create, edit and integrate animation files into a Web page.
- 29.10 Create Meta commands and key words for search engines.
- 29.11 Optimize page size for effective downloading to browsers.

- 29.12 Create and incorporate a form in a Web page.
- 29.13 Edit and test links for accuracy and validity.
- 29.14 Optimize images to make them “Web ready”.
- 29.15 Demonstrate knowledge of image formats related to photos and graphics on the Internet (e.g. Graphic formats (Tiff & EPS), Web formats (JPEG, GIF, PNG), etc.
- 29.16 Demonstrate an understanding of photograph compression factors such as transmission speed, color reduction, and browser support.
- 29.17 Save and export a photograph to the Web in the format best for image quality and file size.
- 29.18 Demonstrate knowledge of the terms and vocabulary used with the animation process, animation software, and types of animation (e.g. 2D vs. 3D, Cel and Keyframe animation).
- 33.0 Use oral and written communication skills in creating, expressing and interpreting information and ideas. – The student will be able to:
- 33.01 Select and employ appropriate communication concepts and strategies to enhance oral and written communication in the workplace. CM 1.0
- 33.02 Locate, organize and reference written information from various sources. CM 3.0
- 33.03 Design, develop and deliver formal and informal presentations using appropriate media to engage and inform diverse audiences. CM 5.0
- 33.04 Interpret verbal and nonverbal cues/behaviors that enhance communication. CM 6.0
- 33.05 Apply active listening skills to obtain and clarify information. CM 7.0
- 33.06 Develop and interpret tables and charts to support written and oral communications. CM 8.0
- 33.07 Exhibit public relations skills that aid in achieving customer satisfaction. CM 10.0
- 34.0 Solve problems using critical thinking skills, creativity and innovation. – The student will be able to:
- 34.01 Employ critical thinking skills independently and in teams to solve problems and make decisions. PS 1.0
- 34.02 Employ critical thinking and interpersonal skills to resolve conflicts. PS 2.0
- 34.03 Identify and document workplace performance goals and monitor progress toward those goals. PS 3.0
- 34.04 Conduct technical research to gather information necessary for decision-making. PS 4.0
- 35.0 Use information technology tools. – The student will be able to:
- 35.01 Use personal information management (PIM) applications to increase workplace efficiency. IT 1.0
- 35.02 Employ technological tools to expedite workflow including word processing, databases, reports, spreadsheets, multimedia presentations, electronic calendar, contacts, email, and internet applications. IT 2.0
- 35.03 Employ computer operations applications to access, create, manage, integrate, and store information. IT 3.0
- 35.04 Employ collaborative/groupware applications to facilitate group work. IT 4.0
- 36.0 Describe the roles within teams, work units, departments, organizations, inter-organizational systems, and the larger environment. – The student will be able to:

- 36.01 Describe the nature and types of business organizations. SY 1.0
- 36.02 Explain the effect of key organizational systems on performance and quality.
- 36.03 List and describe quality control systems and/or practices common to the workplace. SY 2.0
- 36.04 Explain the impact of the global economy on business organizations.
- 37.0 Demonstrate the importance of health, safety, and environmental management systems in organizations and their importance to organizational performance and regulatory compliance. – The student will be able to:
- 37.01 Describe personal and jobsite safety rules and regulations that maintain safe and healthy work environments. SHE 1.0
- 37.02 Explain emergency procedures to follow in response to workplace accidents.
- 37.03 Create a disaster and/or emergency response plan. SHE 2.0
- 38.0 Demonstrate leadership and teamwork skills needed to accomplish team goals and objectives. – The student will be able to:
- 38.01 Employ leadership skills to accomplish organizational goals and objectives. LT 1.0
- 38.02 Establish and maintain effective working relationships with others in order to accomplish objectives and tasks. LT 3.0
- 38.03 Conduct and participate in meetings to accomplish work tasks. LT 4.0
- 38.04 Employ mentoring skills to inspire and teach others. LT 5.0
- 39.0 Describe the importance of professional ethics and legal responsibilities. – The student will be able to:
- 39.01 Evaluate and justify decisions based on ethical reasoning. ELR 1.0
- 39.02 Evaluate alternative responses to workplace situations based on personal, professional, ethical, legal responsibilities, and employer policies. ELR 1.1
- 39.03 Identify and explain personal and long-term consequences of unethical or illegal behaviors in the workplace. ELR 1.2
- 39.04 Interpret and explain written organizational policies and procedures. ELR 2.0
- 40.0 Explain the importance of employability skill and entrepreneurship skills. – The student will be able to:
- 40.01 Identify and demonstrate positive work behaviors needed to be employable. ECD 1.0
- 40.02 Develop personal career plan that includes goals, objectives, and strategies. ECD 2.0
- 40.03 Examine licensing, certification, and industry credentialing requirements. ECD 3.0
- 40.04 Maintain a career portfolio to document knowledge, skills, and experience. ECD 5.0
- 40.05 Evaluate and compare employment opportunities that match career goals. ECD 6.0
- 40.06 Identify and exhibit traits for retaining employment. ECD 7.0
- 40.07 Identify opportunities and research requirements for career advancement. ECD 8.0
- 40.08 Research the benefits of ongoing professional development. ECD 9.0
- 40.09 Examine and describe entrepreneurship opportunities as a career planning option. ECD 10.0
- 41.0 Demonstrate personal money-management concepts, procedures, and strategies. – The student will be able to:

- |       |  |        |
|-------|--|--------|
| 41.01 | Identify and describe the services and legal responsibilities of financial institutions. | FL 2.0 |
| 41.02 | Describe the effect of money management on personal and career goals.                    | FL 3.0 |
| 41.03 | Develop a personal budget and financial goals.   | FL 3.1 |
| 41.04 | Complete financial instruments for making deposits and withdrawals.                      | FL 3.2 |
| 41.05 | Maintain financial records.  | FL 3.3 |
| 41.06 | Read and reconcile financial statements.   | FL 3.4 |
| 41.07 | Research, compare and contrast investment opportunities.                                 |        |

2012 – 2013

**Florida Department of Education  
Curriculum Framework**

**Program Title:** Multimedia Design Technology 2  
**Program Type:** Career Preparatory  
**Career Cluster:** Information Technology

PSAV	
Basic Skills Level	Mathematics: 10 Language: 10 Reading: 10

### Purpose

This program offers a sequence of courses that provides coherent and rigorous content aligned with challenging academic standards and relevant technical knowledge and skills needed to prepare for further education and careers in digital media, new media, and multimedia positions in the Information Technology career cluster; provides technical skill proficiency, and includes competency-based applied learning that contributes to the academic knowledge, higher-order reasoning and problem-solving skills, work attitudes, general employability skills, technical skills, and occupation-specific skills, and knowledge of all aspects of the Information Technology career cluster.

The content includes but is not limited to practical experiences in Web page design, interactive presentation development, testing and production. Specialized skills in multimedia presentations such as video editing, audio features, and simple animation and authoring software are used to produce a variety of interactive multimedia presentations.

### Program Structure

This program is a planned sequence of instruction consisting of three occupational completion points.

When offered at the post secondary adult career and technical level, this program is comprised of courses which have been assigned course numbers in the SCNS (Statewide Course Numbering System) in accordance with Section 1007.24 (1), F.S. Career and Technical credit shall be awarded to the student on a transcript in accordance with Section 1001.44(3)(b), F.S.

The following table illustrates the program structure:

OCP	Course Number	Course Title	Course Length	SOC Code
A	GRA0007	Multimedia Designer	150	27-1014
B	GRA0008	Multimedia Producer	300	27-1014
C	GRA0009	Multimedia Specialist	150	27-1014

\* Note: *Multimedia Design Technology 1* should be completed prior to enrolling in this program.

### Laboratory Activities

Laboratory activities are an integral part of this program. These activities include instruction in the use of safety procedures, tools, equipment, materials, and processes related to these occupations. Equipment and supplies should be provided to enhance hands-on experiences for students.

## **Special Notes**

### **Career and Technical Student Organization (CTSO)**

Phi Beta Lambda and Business Professionals of America (BPA) are the appropriate career and technical student organizations for providing leadership training and reinforcing specific career and technical skills. Career and Technical Student Organizations provide activities for students as an integral part of the instruction offered. The activities of such organizations are defined as part of the curriculum in accordance with Rule 6A-6.065, F.A.C.

### **Cooperative Training – OJT**

On-the-job training is appropriate but not required for this program. Whenever offered, the rules, guidelines, and requirements specified in the OJT framework apply.

There is a **Cooperative Education Manual** available on-line that has guidelines for students, teachers, employers, parents and other administrators and sample training agreements. It can be accessed on the DOE website at <http://www.fldoe.org/workforce/programs/doc/coopm.doc>.

### **Basic Skills**

In PSAV programs offered for 450 hours or more, in accordance with Rule 6A-10.040, F.A.C., the minimum basic skills grade levels required for postsecondary adult career and technical students to complete this program are: Mathematics 10.0, Language 10.0, and Reading 10.0. These grade level numbers correspond to a grade equivalent score obtained on a state designated basic skills examination.

Adult students with disabilities, as defined in Section 1004.02(7), Florida Statutes, may be exempted from meeting the Basic Skills requirements (Rule 6A-10.040). Students served in exceptional student education (except gifted) as defined in s. 1003.01(3)(a), F.S., may also be exempted from meeting the Basic Skills requirement. Each school district and Florida College must adopt a policy addressing procedures for exempting eligible students with disabilities from the Basic Skills requirement as permitted in Section 1004.91(3), F.S.

Students who possess a college degree at the Associate of Applied Science level or higher; who have completed or are exempt from the college entry-level examination; or who have passed a state, national, or industry licensure exam are exempt from meeting the Basic Skills requirement (Rule 6A-10.040, F.A.C.) Exemptions from state, national or industry licensure are limited to the certifications listed at <http://www.fldoe.org/workforce/dwdframe/rtf/basicskills-License-exempt.rtf>.

### **Accommodations**

Federal and state legislation requires the provision of accommodations for students with disabilities as identified on the secondary student's IEP or 504 plan or postsecondary student's accommodations' plan to meet individual needs and ensure equal access. Postsecondary students with disabilities must self-identify, present documentation, request accommodations if needed, and develop a plan with their counselor and/or instructors. Accommodations received in postsecondary education may differ from those received in secondary education. Accommodations change the way the student is instructed. Students with disabilities may need accommodations in such areas as instructional methods and materials, assignments and

assessments, time demands and schedules, learning environment, assistive technology and special communication systems. Documentation of the accommodations requested and provided should be maintained in a confidential file.

In addition to accommodations, some secondary students with disabilities (students with an Individual Educational Plan (IEP) served in Exceptional Student Education or ESE) will need modifications to meet their needs. Modifications change the outcomes or what the student is expected to learn, e.g., modifying the curriculum of a secondary career and technical education course. Note postsecondary curriculum cannot be modified.

Some secondary students with disabilities (ESE) may need additional time (i.e., longer than the regular school year), to master the student performance standards associated with a regular Occupational Completion Point (OCP) or a Modified Occupational Completion Point (MOCP). If needed, a student may enroll in the same career and technical course more than once. Documentation should be included in the IEP that clearly indicates that it is anticipated that the student may need an additional year to complete an OCP/MOCP. The student should work on different competencies and new applications of competencies each year toward completion of the OCP/MOCP. After achieving the competencies identified for the year, the student earns credit for the course. It is important to ensure that credits earned by students are reported accurately. The district's information system must be designed to accept multiple credits for the same course number (for eligible students with disabilities).

### **Articulation**

This program (Y600200), in combination with the Multimedia Design Technology 1 program (Y600100) has a statewide articulation agreement approved by the Articulation Coordinating Committee:

1. Graphics Technology AS/AAS (1611080300/0611080300) – 9 credits

For details on articulation agreements which correlate to programs and industry certifications refer to [http://www.fl DOE.org/workforce/dwdframe/artic\\_frame.asp](http://www.fl DOE.org/workforce/dwdframe/artic_frame.asp).

### **Standards**

After successfully completing this program, the student will be able to perform the following:

- 01.0 Demonstrate proficiency in using presentation software and equipment
- 02.0 Demonstrate proficiency using video editing software and equipment.
- 03.0 Demonstrate Proficiency in using presentation software and equipment.
- 04.0 Develop proficiency in using authoring software.
- 05.0 Participate in work-based learning experiences.
- 06.0 Apply job readiness, career planning and job seeking skills to obtain personal and professional goals.

2012 – 2013

**Florida Department of Education  
Student Performance Standards**

**Program Title: Multimedia Design Technology 2**  
**PSAV Number: Y600200**

**Course Number: GRA0007**  
**Occupational Completion Point – A**  
**Multimedia Designer – 150 Hours – SOC Code 27-1014**

- 01.0 Demonstrate proficiency in using presentation software and equipment. – The student will be able to:
- 01.01 Using presentation software, create a multimedia presentation that incorporates shot and edited video, animation, music, narration and adheres to good design principles, use of transitions, and effective message conveyance.
  - 01.02 Demonstrate knowledge of the roles and responsibilities of a multimedia production team (e.g. project manager, creative or design director, content experts, writers, graphic designers, animators, sound designers, videographer, interface designers/programmers, etc.)
  - 01.03 Collaborate with team members to plan, edit, evaluate, and present a multimedia presentation.
- 02.0 Demonstrate proficiency using video editing software and equipment. – The student will be able to:
- 02.01 Demonstrate knowledge of video and sound editing vocabulary, terms, and acronyms.
  - 02.02 Demonstrate knowledge of non-linear editing software (NLEs) and compare the strengths and weaknesses of these programs.
  - 02.03 Identify components of non-linear video editing equipment
  - 02.04 Set-up non-linear video editing equipment
  - 02.05 Compare offline to “real time” video editing
  - 02.06 Use storyboarding to plan a short nonlinear video project that includes existing video footage with a title, transitions, background sound, voice-over, animation, and rolling credits.
  - 02.07 Create and edit a movie using video editing software that includes existing video footage with a title, transitions, background sound, voice-over, and rolling credits and output to video.
  - 02.08 Collaborate with team members to create a short movie utilizing good lighting and sound: plan, shoot, and edit video footage as a team.
  - 02.09 Using a video editor, create animated GIFs.
  - 02.10 Collaborate with team members to plan, edit, and shoot video footage utilizing advanced video editing techniques and output to video.
  - 02.11 Discuss the use of batch processing and project trimming
  - 02.12 Plan, create, edit and present a short nonlinear QuickTime movie with title, transitions, sub and virtual clips, sound, background music, voice-over, and credits.

**Course Number: GRA0008**  
**Occupational Completion Point – B**  
**Multimedia Producer – 300 Hours – SOC Code 27-1014**

03.0 Demonstrate proficiency in using presentation software and equipment. – The student will be able to:

03.01 Create a self-running presentation with synchronized audio, convert presentation slides into streaming ASF files for use on the Web.

04.0 Develop proficiency in using authoring software. – The student will be able to:

04.01 Plan interactive projects for use in a kiosk, CD, DVD, E-merchandizing, computer-based presentation or training or corporate presentation

04.02 Use authoring software to create an interactive project for use in a kiosk, CD, DVD, merchandizing application, computer-based training or corporate presentation.

04.03 Have the created interactive project evaluated and tested by users and make modifications to improve the project.

04.04 Collaborate with team members to plan, edit, evaluate, and present a multimedia interactive presentation or product.

05.0 Participate in work-based learning experiences. – The student will be able to:

05.01 Participate in work-based learning experiences in a multimedia environment.

**Course Number: GRA0009**  
**Occupational Completion Point – C**  
**Multimedia Specialist – 150 Hours – SOC Code 27-1014**

06.0 Apply job readiness, career planning and job seeking skills to obtain personal and professional goals. – The student will be able to:

06.01 Create a digital resume

06.02 Create a digital portfolio

06.03 Market multimedia production skills for employment
