# Next Generation Sunshine State Standards (Florida Standards) Mathematics 2016 

## MAFS: Mathematics Standards

## GRADE: K

## Domain: COUNTING AND CARDINALITY

Cluster 1: Know number names and the count sequence.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K.CC.1.1 | Count to 100 by ones and by tens. <br> Cognitive Complexity: Level 1: Recall |
| MAFS.K.CC.1.2 | Count forward beginning from a given number within the known sequence (instead of <br> having to begin at 1). <br> Cognitive Complexity: Level 1: Recall |
| MAFS.K.CC.1.3 | Read and write numerals from 0 to 20. Represent a number of objects with a <br> written numeral 0-20 (with 0 representing a count of no objects). <br> Cognitive Complexity: Level 1: Recall |

Cluster 2: Count to tell the number of objects.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K.CC.2.4 | Understand the relationship between numbers and quantities; connect counting to <br> cardinality. <br> a. When counting objects, say the number names in the standard order, pairing <br> each object with one and only one number name and each number name with <br> one and only one object. |
| b. Understand that the last number name said tells the number of objects |  |
| counted. The number of objects is the same regardless of their arrangement or |  |
| the order in which they were counted. |  |
| c. Understand that each successive number name refers to a quantity that is one |  |
| larger. |  |

## Cluster 3: Compare numbers.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K.CC.3.6 | Identify whether the number of objects in one group is greater than, less than, or equal <br> to the number of objects in another group, e.g., by using matching and counting <br> strategies. |

Mathematics Common Core (MACC) is now Mathematics Florida Standards (MAFS) Next Generation Sunshine State Standards (NGSSS) for Mathematics (MA) is now Mathematics Florida Standards (MAFS)
$\square$
$\square$

|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| :---: | :--- |
| MAFS.K.CC.3.7 | Compare two numbers between 1 and 10 presented as written numerals. |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

## Domain: OPERATIONS AND ALGEBRAIC THINKING

Cluster 1: Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K.OA.1.1 | Represent addition and subtraction with objects, fingers, mental images, drawings, <br> sounds (e.g., claps), acting out situations, verbal explanations, expressions, or <br> equations. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.K.OA.1.2 | Solve addition and subtraction word problems ${ }^{1}$, and add and subtract within 10, <br> e.g., by using objects or drawings to represent the problem ( ${ }^{1}$ Students are not <br> required to independently read the word problems.) <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.K.OA.1.3 | Decompose numbers less than or equal to 10 into pairs in more than one way, e.g., by <br> using objects or drawings, and record each decomposition by a drawing or equation <br> (e.g., $5=2+3$ and $5=4+1$ ). <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.K.OA.1.4 | For any number from 1 to 9, find the number that makes 10 when added to the given <br> number, e.g., by using objects or drawings, and record the answer with a drawing or <br> equation. |
| Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |  |

## Domain: NUMBER AND OPERATIONS IN BASE TEN

Cluster 1: Work with numbers 11-19 to gain foundations for place value.

STANDARD CODE
MAFS.K.NBT.1.1

## STANDARD

Compose and decompose numbers from 11 to 19 into ten ones and some further ones, e.g., by using objects or drawings, and record each composition or decomposition by a drawing or equation (e.g., $18=10+8$ ); understand that these numbers are composed of ten ones and one, two, three, four, five, six, seven, eight, or nine ones.

Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts
$\square$
$\square$
$\square$

## Domain: MEASUREMENT AND DATA

Cluster 1: Describe and compare measurable attributes.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K.MD.1.1 | Describe measurable attributes of objects, such as length or weight. Describe several <br> measurable attributes of a single object. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.K.MD.1.2 | Directly compare two objects with a measurable attribute in common, to see which <br> object has "more of"/"less of" the attribute, and describe the difference. For example, <br> directly compare the heights of two children and describe one child as taller/shorter. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.K.MD.1.a | Express the length of an object as a whole number of length units, by laying <br> multiple copies of a shorter object (the length unit) end to end; understand that <br> the length measurement of an object is the number of same-size length units that <br> span it with no gaps or overlaps. Limit to contexts where the object being <br> measured is spanned by a whole number of length units with no gaps or <br> overlaps. |

Cluster 2: Classify objects and count the number of objects in each category.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K.MD.2.3 | Classify objects into given categories; count the numbers of objects in each category <br> and sort the categories by count. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

## Domain: GEOMETRY

Cluster 1: Identify and describe shapes (squares, circles, triangles, rectangles, hexagons, cubes, cones, cylinders, and spheres).

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K.G.1.1 | Describe objects in the environment using names of shapes, and describe the relative <br> positions of these objects using terms such as above, below, beside, in front of, behind, <br> and next to. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.K.G.1.2 | Correctly name shapes regardless of their orientations or overall size. <br> Cognitive Complexity: Level 1: Recall |
| MAFS.K.G.1.3 | Identify shapes as two-dimensional (lying in a plane, "flat") or three-dimensional <br> ("solid"). <br> Cognitive Complexity: Level 1: Recall |

Mathematics Common Core (MACC) is now Mathematics Florida Standards (MAFS) Next Generation Sunshine State Standards (NGSSS) for Mathematics (MA) is now Mathematics Florida Standards (MAFS)
$\square$
$\square$
$\square$

| Cluster 2: Analyze, compare, create, and compose shapes. |  |
| :---: | :--- |
| STANDARD CODE | STANDARD |
| MAFS.K.G.2.4 | Analyze and compare two- and three-dimensional shapes, in different sizes and <br> orientations, using informal language to describe their similarities, differences, parts <br> (e.g., number of sides and vertices/"corners") and other attributes (e.g., having sides of <br> equal length). <br> Coognitive Complexity: Level 3: Strategic Thinking \& Complex Reasoning |
| MAFS.K.G.2.5 | Model shapes in the world by building shapes from components (e.g., sticks and clay <br> balls) and drawing shapes. <br> Coognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.K.G.2.6 | Compose simple shapes to form larger shapes. For example, "Can you join these two <br> triangles with full sides touching to make a rectangle?" |

$\square$
$\square$

## GRADE: 1

## Domain: OPERATIONS AND ALGEBRAIC THINKING

Cluster 1: Represent and solve problems involving addition and subtraction.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.1.OA.1.1 | Use addition and subtraction within 20 to solve word problems ${ }^{1}$ involving <br> situations of adding to, taking from, putting together, taking apart, and <br> comparing, with unknowns in all positions, e.g., by using objects, drawings, and <br> equations with a symbol for the unknown number to represent the problem <br> 1'Students are not required to independently read the word problems.) |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

## Cluster 2: Understand and apply properties of operations and the relationship between addition and subtraction.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.1.OA.2.3 | Apply properties of operations as strategies to add and subtract. Examples: If $8+3=11$ |
|  | is known, then $3+8=11$ is also known. (Commutative property of addition.) To add $2+$ |
|  | $6+4$, the second two numbers can be added to make a ten, so $2+6+4=2+10=12$. |
|  | (Associative property of addition.) |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.1.OA.2.4 | Understand subtraction as an unknown-addend problem. For example, subtract $10-8$ <br> by finding the number that makes 10 when added to 8. |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

Cluster 3: Add and subtract within 20.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.1.OA.3.5 | Relate counting to addition and subtraction (e.g., by counting on 2 to add 2). |
|  | Cognitive Complexity: Level 1: Recall | | MAFS.1.OA.3.6 | Add and subtract within 20, demonstrating fluency for addition and subtraction within 10 <br> Use strategies such as counting on; making ten (e.g., $8+6=8+2+4=10+4=14) ;$ <br> decomposing a number leading to a ten (e.g., $13-4=13-3-1=10-1=9) ; ~ u s i n g ~$ <br> the relationship between addition and subtraction (e.g., knowing that $8+4=12$, one <br> knows 12 $-8=4) ; ~ a n d ~ c r e a t i n g ~ e q u i v a l e n t ~ b u t ~ e a s i e r ~ o r ~ k n o w n ~ s u m s ~(e . g ., ~ a d d i n g ~$ <br> bno +7 <br> by creating the known equivalent $6+6+1=12+1=13)$. |
| :---: | :--- |

Mathematics Common Core (MACC) is now Mathematics Florida Standards (MAFS)
Next Generation Sunshine State Standards (NGSSS) for Mathematics (MA) is now Mathematics Florida Standards (MAFS)
$\square$
$\square$
$\square$

|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| :---: | :---: |
| Cluster 4: Work with addition and subtraction equations. |  |
| STANDARD CODE | STANDARD |
| MAFS.1.OA.4.7 | Understand the meaning of the equal sign, and determine if equations involving addition and subtraction are true or false. For example, which of the following equations are true and which are false? $6=6,7=8-1,5+2=2+5,4+1=5+2$. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.1.OA.4.8 | Determine the unknown whole number in an addition or subtraction equation relating to three whole numbers. For example, determine the unknown number that makes the equation true in each of the equations $8+?=11,5=[]-3,6+6=[]$. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

## Domain: NUMBER AND OPERATIONS IN BASE TEN

Cluster 1: Extend the counting sequence.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.1.NBT.1.1 | Count to 120, starting at any number less than 120. In this range, read and write <br> numerals and represent a number of objects with a written numeral. <br> Cognitive Complexity: Level 1: Recall |

Cluster 2: Understand place value.

| STANDARD CODE | STANDARD |
| :---: | :---: |
| MAFS.1.NBT.2.2 | Understand that the two digits of a two-digit number represent amounts of tens and ones. <br> a. 10 can be thought of as a bundle of ten ones - called a "ten." <br> b. The numbers from 11 to 19 are composed of a ten and one, two, three, four, five, six, seven, eight, or nine ones. <br> c. The numbers $10,20,30,40,50,60,70,80,90$ refer to one, two, three, four, five, six, seven, eight, or nine tens (and 0 ones). <br> d. Decompose two-digit numbers in multiple ways (e.g., 64 can be decomposed into 6 tens and 4 ones or into 5 tens and 14 ones). <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.1.NBT.2.3 | Compare two two-digit numbers based on meanings of the tens and ones digits, recording the results of comparisons with the symbols >, =, and <. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

Mathematics Common Core (MACC) is now Mathematics Florida Standards (MAFS)
Next Generation Sunshine State Standards (NGSSS) for Mathematics (MA) is now Mathematics Florida Standards (MAFS)
$\square$
$\square$

Cluster 3: Use place value understanding and properties of operations to add and subtract.

## Additional Cluster

- Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.1.NBT.3.4 | Add within 100, including adding a two-digit number and a one-digit number, and adding <br> a two-digit number and a multiple of 10, using concrete models or drawings and <br> strategies based on place value, properties of operations, and/or the relationship <br> between addition and subtraction; relate the strategy to a written method and explain <br> the reasoning used. Understand that in adding two-digit numbers, one adds tens and <br> tens, ones and ones; and sometimes it is necessary to compose a ten. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.1.NBT.3.5 | Given a two-digit number, mentally find 10 more or 10 less than the number, without <br> having to count; explain the reasoning used. |
| MAFS.1.NBT.3.6 | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| (positive or zero differences), using concrete models or drawings and strategies based |  |
| on place value, properties of operations, and/or the relationship between addition and |  |
| subtraction; relate the strategy to a written method and explain the reasoning used. |  |
| Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |  |

## Domain: MEASUREMENT AND DATA

Cluster 1: Measure lengths indirectly and by iterating length units.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.1.MD.1.1 | Order three objects by length; compare the lengths of two objects indirectly by using a <br> third object. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.1.MD.1.2 | Express the length of an object as a whole number of length units, by laying multiple <br> copies of a shorter object (the length unit) end to end; understand that the length <br> measurement of an object is the number of same-size length units that span it with no <br> gaps or overlaps. Limit to contexts where the object being measured is spanned by a <br> whole number of length units with no gaps or overlaps. |
| Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |  |

MAFS.1.MD.1.a $\quad$ Understand how to use a ruler to measure length to the nearest inch.
a. Recognize that the ruler is a tool that can be used to measure the attribute of length.
b. Understand the importance of the zero point and end point and that the length measure is the span between two points.
c. Recognize that the units marked on a ruler have equal length intervals and fit together with no gaps or overlaps. These equal interval distances can be counted to determine the overall length of an object.
$\square$
$\square$

Cluster 2: Work with time and money.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.1.MD.2.3 | Tell and write time in hours and half-hours using analog and digital clocks. |
|  | Cognitive Complexity: Level 1: Recall |

## Cluster 3: Represent and interpret data.

## Supporting Cluster

Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.1.MD.3.4 | Organize, represent, and interpret data with up to three categories; ask and answer <br> questions about the total number of data points, how many in each category, and how <br> many more or less are in one category than in another. |
|  | Cognitive Complexity: Level 3: Strategic Thinking \& Complex Reasoning |

## Domain: GEOMETRY

## Cluster 1: Reason with shapes and their attributes.

## Supporting Cluster

Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.1.G.1.1 | Distinguish between defining attributes (e.g., triangles are closed and three-sided) <br> versus non-defining attributes (e.g., color, orientation, overall size); build and draw <br> shapes to possess defining attributes. |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

Mathematics Common Core (MACC) is now Mathematics Florida Standards (MAFS)
Next Generation Sunshine State Standards (NGSSS) for Mathematics (MA) is now Mathematics Florida Standards (MAFS)
$\square$
$\square$

|  | and compose new shapes from the composite shape. |
| :---: | :--- |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.1.G.1.3 | Partition circles and rectangles into two and four equals shares, describe the shares <br> using the words halves, fourths, and quarters, and use the phrases half of, fourth of, <br> and quarter of. Describe the whole as two of, or four of the shares. Understand for these <br> examples that decomposing into more equal shares creates smaller shares. |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

$\square$

## GRADE: 2

## Domain: OPERATIONS AND ALGEBRAIC THINKING

Cluster 1: Represent and solve problems involving addition and subtraction.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.2.OA.1.1 | Use addition and subtraction within 100 to solve one- and two-step word problems <br> involving situations of adding to, taking from, putting together, taking apart, and <br> comparing, with unknowns in all positions, e.g., by using drawings and equations with a <br> symbol for the unknown number to represent the problem. |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

Cluster 2: Add and subtract within 20.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.2.OA.2.2 | Fluently add and subtract within 20 using mental strategies. By end of Grade 2, know <br> from memory all sums of two one-digit numbers. <br>  <br>  <br> Cognitive Complexity: Level 1: Recall |

Cluster 3: Work with equal groups of objects to gain foundations for multiplication.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.2.OA.3.3 | Determine whether a group of objects (up to 20) has an odd or even number of <br> members, e.g., by pairing objects or counting them by 2s; write an equation to express <br> an even number as a sum of two equal addends. |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.2.OA.3.4 | Use addition to find the total number of objects arranged in rectangular arrays with up to <br> 5 rows and up to 5 columns; write an equation to express the total as a sum of equal <br> addends. |
|  | Cognitive Complexity: Level 1: Recall |

## Domain: NUMBER AND OPERATIONS IN BASE TEN

Cluster 1: Understand place value.
$\square$
$\square$
$\square$

| STANDARD CODE | STANDARD |
| :---: | :---: |
| MAFS.2.NBT.1.1 | Understand that the three digits of a three-digit number represent amounts of hundreds, tens, and ones; e.g., 706 equals 7 hundreds, 0 tens, and 6 ones. Understand the following as special cases: <br> a. 100 can be thought of as a bundle of ten tens - called a "hundred." <br> b. The numbers $100,200,300,400,500,600,700,800,900$ refer to one, two, three, four, five, six, seven, eight, or nine hundreds (and 0 tens and 0 ones). <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.2.NBT.1.2 | Count within 1000; skip-count by 5 s , 10s, and 100s. Cognitive Complexity: Level 1: Recall |
| MAFS.2.NBT.1.3 | Read and write numbers to 1000 using base-ten numerals, number names, and expanded form. <br> Cognitive Complexity: Level 1: Recall |
| MAFS.2.NBT.1.4 | Compare two three-digit numbers based on meanings of the hundreds, tens, and ones digits, using >, =, and < symbols to record the results of comparisons. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

Cluster 2: Use place value understanding and properties of operations to add and subtract.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.2.NBT.2.5 | Fluently add and subtract within 100 using strategies based on place value, properties <br> of operations, and/or the relationship between addition and subtraction. <br> Cognitive Complexity: Level 1: Recall |
| MAFS.2.NBT.2.6 | Add up to four two-digit numbers using strategies based on place value and properties <br> of operations. |
| Cognitive Complexity: Level 1: Recall |  |

$\square$

## Domain: MEASUREMENT AND DATA

Cluster 1: Measure and estimate lengths in standard units.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.2.MD.1.1 | Measure the length of an object to the nearest inch, foot, centimeter, or meter by <br> selecting and using appropriate tools such as rulers, yardsticks, meter sticks, <br> and measuring tapes. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.2.MD.1.2 | Describe the inverse relationship between the size of a unit and number of units <br> needed to measure a given object. Example: Suppose the perimeter of a room is <br> lined with one-foot rulers. Now, suppose we want to line it with yardsticks instead <br> of rulers. Will we need more or fewer yardsticks than rulers to do the job? Explain <br> your answer. |
| Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |  |

Cluster 2: Relate addition and subtraction to length.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.2.MD.2.5 | Use addition and subtraction within 100 to solve word problems involving lengths that <br> are given in the same units, e.g., by using drawings (such as drawings of rulers) and <br> equations with a symbol for the unknown number to represent the problem. |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

Cluster 3: Work with time and money.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.2.MD.3.7 | Tell and write time from analog and digital clocks to the nearest five minutes. |
|  | Cognitive Complexity: Level 1: Recall |
| MAFS.2.MD.3.8 | Solve one- and two-step word problems involving dollar bills (singles, fives, tens, <br> twenties, and hundreds) or coins (quarters, dimes, nickels, and pennies) using $\$$ |

Mathematics Common Core (MACC) is now Mathematics Florida Standards (MAFS)
Next Generation Sunshine State Standards (NGSSS) for Mathematics (MA) is now Mathematics Florida Standards (MAFS)
$\square$
$\square$

| and $\phi$ symbols appropriately. Word problems may involve addition, subtraction, |
| :--- | :--- |
| and equal groups situations ${ }^{1}$. Example: The cash register shows that the total for |
| your purchase is 59¢. You gave the cashier three quarters. How much change |
| should you receive from the cashier? |$|$| a. Identify the value of coins and paper currency. |
| ---: | ---: |
| b.Compute the value of any combination of coins within one dollar. <br> c. <br> Compute the value of any combinations of dollars (e.g., If you have three <br> ten-dollar bills, one five-dollar bill, and two one-dollar bills, how much <br> money do you have?). <br> Relate the value of pennies, nickels, dimes, and quarters to other coins <br> and to the dollar (e.g., There are five nickels in one quarter. There are two <br> nickels in one dime. There are two and a half dimes in one quarter. There <br> are twenty nickels in one dollar). |
| ('See glossary Table 1) |
| Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

Cluster 4: Represent and interpret data.
Major Cluster
Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.2.MD.4.10 | Draw a picture graph and a bar graph (with single-unit scale) to represent a data set <br> with up to four categories. Solve simple put-together, take-apart, and compare problems <br> using information presented in a bar graph. |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

## Domain: GEOMETRY

Cluster 1: Reason with shapes and their attributes.

## Supporting Cluster

- Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.2.G.1.1 | Recognize and draw shapes having specified attributes, such as a given number of <br> angles or a given number of equal faces. Identify triangles, quadrilaterals, pentagons, <br> hexagons, and cubes. |

Mathematics Common Core (MACC) is now Mathematics Florida Standards (MAFS)
Next Generation Sunshine State Standards (NGSSS) for Mathematics (MA) is now Mathematics Florida Standards (MAFS)
$\square$
$\square$

|  | Cognitive Complexity: Level 1: Recall |
| :---: | :--- |
| MAFS.2.G.1.2 | Partition a rectangle into rows and columns of same-size squares and count to find the <br> total number of them. <br> Cognitive Complexity: Level 1: Recall |
| MAFS.2.G.1.3 | Partition circles and rectangles into two, three, or four equal shares, describe the shares <br> using the words halves, thirds, half of, a third of, etc., and describe the whole as two <br> halves, three thirds, four fourths. Recognize that equal shares of identical wholes need <br> not have the same shape. <br> Cognitive Complexity: Level 1: Recall |

$\square$
$\square$ Deleted Standard

## GRADE: 3

## Domain: OPERATIONS AND ALGEBRAIC THINKING

Cluster 1: Represent and solve problems involving multiplication and division.

## Major Cluster

Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.3.OA.1.1 | Interpret products of whole numbers, e.g., interpret $5 \times 7$ as the total number of objects <br> in 5 groups of 7 objects each. For example, describe a context in which a total number <br> of objects can be expressed as $5 \times 7$. <br> Cognitive Complexity: Level 1: Recall |
| MAFS.3.OA.1.2 | Interpret whole-number quotients of whole numbers, e.g., interpret $56 \div 8$ as the <br> number of objects in each share when 56 objects are partitioned equally into 8 shares, <br> or as a number of shares when 56 objects are partitioned into equal shares of 8 objects <br> each. For example, describe a context in which a number of shares or a number of <br> groups can be expressed as $56 \div 8$. |
|  | Cognitive Complexity: Level 1: Recall |

Cluster 2: Understand properties of multiplication and the relationship between multiplication and division.

## Major Cluster

Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.3.OA.2.5 | Apply properties of operations as strategies to multiply and divide. Examples: If $6 \times 4=$ |
|  | 24 is known, then $4 \times 6=24$ is also known. (Commutative property of multiplication.) 3 |
|  | $\times 5 \times 2$ can be found by $3 \times 5=15$, then $15 \times 2=30$, or by $5 \times 2=10$, then $3 \times 10=30$. |
|  | (Associative property of multiplication.) Knowing that $8 \times 5=40$ and $8 \times 2=16$, one can |
|  | find $8 \times 7$ as $8 \times(5+2)=(8 \times 5)+(8 \times 2)=40+16=56$. (Distributive property. $)$ |

## Cluster 1: Extend understanding of fraction equivalence and ordering.

## Major Cluster

Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.4.NF.1.1 | Explain why a fraction a/b is equivalent to a fraction $(\mathrm{n} \times \mathrm{a}) /(\mathrm{n} \times \mathrm{b})$ by using visual <br> fraction models, with attention to how the number and size of the parts differ even <br> though the two fractions themselves are the same size. Use this principle to recognize <br> and generate equivalent fractions. <br> Cognitive Complexity: Level 3: Strategic Thinking \& Complex Reasoning |
| MAFS.4.NF.1.2 | Compare two fractions with different numerators and different denominators, e.g., by <br> creating common denominators or numerators, or by comparing to a benchmark fraction <br> such as 1/2. Recognize that comparisons are valid only when the two fractions refer to <br> the same whole. Record the results of comparisons with symbols $>,=$, or <, and justify <br> the conclusions, e.g., by using a visual fraction model. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

Cluster 2: Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers.

Major Cluster
Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.4.NF.2.3 | Understand a fraction $\mathrm{a} / \mathrm{b}$ with $\mathrm{a}>1$ as a sum of fractions 1/b. |

$\square$
$\square$
$\square$

|  | a. Understand addition and subtraction of fractions as joining and separating parts referring to the same whole. <br> b. Decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each decomposition by an equation. Justify decompositions, e.g., by using a visual fraction model. Examples: $3 / 8=1 / 8+$ $1 / 8+1 / 8 ; 3 / 8=1 / 8+2 / 8 ; 21 / 8=1+1+1 / 8=8 / 8+8 / 8+1 / 8$. <br> c. Add and subtract mixed numbers with like denominators, e.g., by replacing each mixed number with an equivalent fraction, and/or by using properties of operations and the relationship between addition and subtraction. <br> d. Solve word problems involving addition and subtraction of fractions referring to the same whole and having like denominators, e.g., by using visual fraction models and equations to represent the problem. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| :---: | :---: |
| MAFS.4.NF.2.4 | Apply and extend previous understandings of multiplication to multiply a fraction by a whole number. <br> a. Understand a fraction $\mathrm{a} / \mathrm{b}$ as a multiple of $1 / \mathrm{b}$. For example, use a visual fraction model to represent $5 / 4$ as the product $5 \times(1 / 4)$, recording the conclusion by the equation $5 / 4=5 \times(1 / 4)$. <br> b. Understand a multiple of $a / b$ as a multiple of $1 / b$, and use this understanding to multiply a fraction by a whole number. For example, use a visual fraction model to express $3 \times(2 / 5)$ as $6 \times(1 / 5)$, recognizing this product as 6/5. (In general, $n \times(a / b)=(n \times a) / b$.) <br> c. Solve word problems involving multiplication of a fraction by a whole number, e.g., by using visual fraction models and equations to represent the problem. For example, if each person at a party will eat $3 / 8$ of a pound of roast beef, and there will be 5 people at the party, how many pounds of roast beef will be needed? Between what two whole numbers does your answer lie? <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

Cluster 3: Understand decimal notation for fractions, and compare decimal fractions.

$\square$
$\square$

|  | \|having opposite directions or values (e.g., temperature above/below zero, elevation above/below sea level, credits/debits, positive/negative electric charge); use positive and negative numbers to represent quantities in real-world contexts, explaining the meaning of 0 in each situation. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| :---: | :---: |
| MAFS.6.NS.3.6 | Understand a rational number as a point on the number line. Extend number line diagrams and coordinate axes familiar from previous grades to represent points on the line and in the plane with negative number coordinates. <br> a. Recognize opposite signs of numbers as indicating locations on opposite sides of 0 on the number line; recognize that the opposite of the opposite of a number is the number itself, e.g., $-(-3)=3$, and that 0 is its own opposite. <br> b. Understand signs of numbers in ordered pairs as indicating locations in quadrants of the coordinate plane; recognize that when two ordered pairs differ only by signs, the locations of the points are related by reflections across one or both axes. <br> c. Find and position integers and other rational numbers on a horizontal or vertical number line diagram; find and position pairs of integers and other rational numbers on a coordinate plane. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.6.NS.3.7 | Understand ordering and absolute value of rational numbers. <br> a. Interpret statements of inequality as statements about the relative position of two numbers on a number line diagram. For example, interpret $-3>-7$ as a statement that -3 is located to the right of -7 on a number line oriented from left to right. <br> b. Write, interpret, and explain statements of order for rational numbers in realworld contexts. For example, write $-3^{\circ} \mathrm{C}>-7^{\circ} \mathrm{C}$ to express the fact that $-3^{\circ} \mathrm{C}$ is warmer than $-7^{\circ} \mathrm{C}$. <br> c. Understand the absolute value of a rational number as its distance from 0 on the number line; interpret absolute value as magnitude for a positive or negative quantity in a real-world situation. For example, for an account balance of -30 dollars, write $\|-30\|=30$ to describe the size of the debt in dollars. <br> d. Distinguish comparisons of absolute value from statements about order. For example, recognize that an account balance less than -30 dollars represents a debt greater than 30 dollars. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.6.NS.3.8 | Solve real-world and mathematical problems by graphing points in all four quadrants of the coordinate plane. Include use of coordinates and absolute value to find distances between points with the same first coordinate or the same second coordinate. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

## Domain: EXPRESSIONS \& EQUATIONS

Cluster 1: Apply and extend previous understandings of arithmetic to algebraic expressions.

## Domain: RATIOS \& PROPORTIONAL RELATIONSHIPS

Cluster 1: Analyze proportional relationships and use them to solve real-world and mathematical problems.

Major Cluster
Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :---: |
| MAFS.7.RP.1.1 | Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units. For example, if a person walks $1 / 2$ mile in each $1 / 4$ hour, compute the unit rate as the complex fraction $1 / 2 / 1 / 4$ miles per hour, equivalently 2 miles per hour. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.7.RP.1.2 | Recognize and represent proportional relationships between quantities. <br> a. Decide whether two quantities are in a proportional relationship, e.g., by testing for equivalent ratios in a table or graphing on a coordinate plane and observing whether the graph is a straight line through the origin. <br> b. Identify the constant of proportionality (unit rate) in tables, graphs, equations, diagrams, and verbal descriptions of proportional relationships. <br> c. Represent proportional relationships by equations. For example, if total cost $t$ is proportional to the number $n$ of items purchased at a constant price $p$, the relationship between the total cost and the number of items can be expressed as $t=p n$. <br> d. Explain what a point ( $x, y$ ) on the graph of a proportional relationship means in terms of the situation, with special attention to the points $(0,0)$ and $(1, r)$ where $r$ is the unit rate. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.7.RP.1.3 | Use proportional relationships to solve multistep ratio and percent problems. Examples: simple interest, tax, markups and markdowns, gratuities and commissions, fees, percent increase and decrease, percent error. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

## Domain: THE NUMBER SYSTEM

Cluster 1: Apply and extend previous understandings of operations with fractions to add, subtract, multiply, and divide rational numbers.

Major Cluster
Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| MAFS.7.NS.1.1 | Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram. <br> a. Describe situations in which opposite quantities combine to make 0 . For example, a hydrogen atom has 0 charge because its two constituents are oppositely charged. <br> b. Understand $\mathrm{p}+\mathrm{q}$ as the number located a distance $\|\mathrm{q}\|$ from p , in the positive or negative direction depending on whether q is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real-world contexts. <br> c. Understand subtraction of rational numbers as adding the additive inverse, p -$q=p+(-q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts. <br> d. Apply properties of operations as strategies to add and subtract rational numbers. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| :---: | :---: |
| MAFS.7.NS.1.2 | Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers. <br> a. Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as $(-1)(-1)=1$ and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts. <br> b. Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If $p$ and $q$ are integers, then $-(p / q)=(-p) / q=p /(-q)$. Interpret quotients of rational numbers by describing real-world contexts. <br> c. Apply properties of operations as strategies to multiply and divide rational numbers. <br> d. Convert a rational number to a decimal using long division; know that the decimal form of a rational number terminates in 0 s or eventually repeats. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.7.NS.1.3 | Solve real-world and mathematical problems involving the four operations with rational numbers. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

## Domain: EXPRESSIONS \& EQUATIONS

Cluster 1: Use properties of operations to generate equivalent expressions.
Major Cluster
Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

|  | expressions with rational coefficients. |
| :---: | :--- |
|  | Cognitive Complexity: Level 1: Recall |
| MAFS.7.EE.1.2 | Understand that rewriting an expression in different forms in a problem context can <br> shed light on the problem and how the quantities in it are related. For example, a + <br> $0.05 a=1.05 a$ <br>  <br>  <br> Cogneans that "increase by 5\% 5\%" is the same as "multiply by 1.05." |

Cluster 2: Solve real-life and mathematical problems using numerical and algebraic expressions and equations.

Major Cluster
Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :---: |
| MAFS.7.EE.2.3 | Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. For example: If a woman making $\$ 25$ an hour gets a $10 \%$ raise, she will make an additional $1 / 10$ of her salary an hour, or $\$ 2.50$, for a new salary of $\$ 27.50$. If you want to place a towel bar $93 / 4$ inches long in the center of a door that is $271 / 2$ inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation. |
| MAFS.7.EE.2.4 | Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities. <br> a. Solve word problems leading to equations of the form $p x+q=r$ and $p(x+q)=$ $r$, where $p, q$, and $r$ are specific rational numbers. Solve equations of these forms fluently. Compare an algebraic solution to an arithmetic solution, identifying the sequence of the operations used in each approach. For example, the perimeter of a rectangle is 54 cm . Its length is 6 cm . What is its width? <br> b. Solve word problems leading to inequalities of the form $p x+q>r$ or $p x+q<r$, where $p, q$, and $r$ are specific rational numbers. Graph the solution set of the inequality and interpret it in the context of the problem. For example: As a salesperson, you are paid $\$ 50$ per week plus $\$ 3$ per sale. This week you want your pay to be at least $\$ 100$. Write an inequality for the number of sales you need to make, and describe the solutions. |

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.7.SP.2.3 | Informally assess the degree of visual overlap of two numerical data distributions with <br> similar variabilities, measuring the difference between the centers by expressing it as a <br> multiple of a measure of variability. For example, the mean height of players on the <br> basketball team is 10 cm greater than the mean height of players on the soccer team, <br> about twice the variability (mean absolute deviation) on either team; on a dot plot, the <br> separation between the two distributions of heights is noticeable. |
|  | Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |$|$| Use measures of center and measures of variability for numerical data from random |
| :--- |
| samples to draw informal comparative inferences about two populations. For example, |
| decide whether the words in a chapter of a seventh-grade science book are generally |
| longer than the words in a chapter of a fourth-grade science book. |
| MAFS.7.SP.2.4 |

## Cluster 3: Investigate chance processes and develop, use, and evaluate probability models.

## Supporting Cluster

Don't ... Sort clusters from Major to Supporting, and then teach them in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.7.SP.3.5 | Understand that the probability of a chance event is a number between 0 and 1 that <br> expresses the likelihood of the event occurring. Larger numbers indicate greater <br> likelihood. A probability near 0 indicates an unlikely event, a probability around $1 / 2$ |

Mathematics Common Core (MACC) is now Mathematics Florida Standards (MAFS)
Next Generation Sunshine State Standards (NGSSS) for Mathematics (MA) is now Mathematics Florida Standards (MAFS)
$\square$
$\square$

|  | lindicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event. <br> Cognitive Complexity: Level 1: Recall |
| :---: | :---: |
| MAFS.7.SP.3.6 | Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability. For example, when rolling a number cube 600 times, predict that a 3 or 6 would be rolled roughly 200 times, but probably not exactly 200 times. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.7.SP.3.7 | Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy. <br> a. Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events. For example, if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected. <br> b. Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process. For example, find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies? <br> Cognitive Complexity: Level 3: Strategic Thinking \& Complex Reasoning |
| MAFS.7.SP.3.8 | Find probabilities of compound events using organized lists, tables, tree diagrams, and simulation. <br> a. Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs. <br> b. Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., "rolling double sixes"), identify the outcomes in the sample space which compose the event. <br> c. Design and use a simulation to generate frequencies for compound events. For example, use random digits as a simulation tool to approximate the answer to the question: If $40 \%$ of donors have type $A$ blood, what is the probability that it will take at least 4 donors to find one with type $A$ blood? <br> Cognitive Complexity: Level 3: Strategic Thinking \& Complex Reasoning |

## GRADE: K12

| Domain: MATHEMATICAL PRACTICE |  |
| :---: | :---: |
| Cluster 1: Make sense of problems and persevere in solving them. |  |
| STANDARD CODE | STANDARD |
| MAFS.K12.MP.1.1 | Make sense of problems and persevere in solving them. <br> Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects o pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches. |

Cluster 2: Reason abstractly and quantitatively.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K12.MP.2.1 | Reason abstractly and quantitatively. <br> Mathematically proficient students make sense of quantities and their relationships in <br> problem situations. They bring two complementary abilities to bear on problems <br> involving quantitative relationships: the ability to decontextualize-to abstract a given <br> situation and represent it symbolically and manipulate the representing symbols as if <br> they have a life of their own, without necessarily attending to their referents-and the <br> ability to contextualize, to pause as needed during the manipulation process in order to <br> probe into the referents for the symbols involved. Quantitative reasoning entails habits <br> of creating a coherent representation of the problem at hand; considering the units <br> involved; attending to the meaning of quantities, not just how to compute them; and <br> knowing and flexibly using different properties of operations and objects. |

Next Generation Sunshine State Standards (NGSSS) for Mathematics (MA) is now Mathematics Florida Standards (MAFS)
$\square$
$\square$

Cluster 3: Construct viable arguments and critique the reasoning of others.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K12.MP.3.1 | Construct viable arguments and critique the reasoning of others. <br>  <br> Mathematically proficient students understand and use stated assumptions, definitions, <br> and previously established results in constructing arguments. They make conjectures <br> and build a logical progression of statements to explore the truth of their conjectures. <br> They are able to analyze situations by breaking them into cases, and can recognize and <br> use counterexamples. They justify their conclusions, communicate them to others, and <br> respond to the arguments of others. They reason inductively about data, making <br> plausible arguments that take into account the context from which the data arose. <br> Mathematically proficient students are also able to compare the effectiveness of two <br> plausible arguments, distinguish correct logic or reasoning from that which is flawed, <br> and-if there is a flaw in an argument-explain what it is. Elementary students can <br> construct arguments using concrete referents such as objects, drawings, diagrams, and <br> actions. Such arguments can make sense and be correct, even though they are not <br> generalized or made formal until later grades. Later, students learn to determine <br> domains to which an argument applies. Students at all grades can listen or read the <br> arguments of others, decide whether they make sense, and ask useful questions to <br> clarify or improve the arguments. |

## Cluster 4: Model with mathematics.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K12.MP.4.1 | Model with mathematics. <br>  <br>  <br>  <br>  <br>  <br> Mathematically proficient students can apply the mathematics they know to solve <br> problems arising in everyday life, society, and the workplace. In early grades, this might <br> be as simple as writing an addition equation to describe a situation. In middle grades, a <br> student might apply proportional reasoning to plan a school event or analyze a problem <br> in the community. By high school, a student might use geometry to solve a design <br> problem or use a function to describe how one quantity of interest depends on another. <br> Mathematically proficient students who can apply what they know are comfortable <br> making assumptions and approximations to simplify a complicated situation, realizing <br> that these may need revision later. They are able to identify important quantities in a <br> practical situation and map their relationships using such tools as diagrams, two-way <br> tables, graphs, flowcharts and formulas. They can analyze those relationships <br> mathematically to draw conclusions. They routinely interpret their mathematical results <br> in the context of the situation and reflect on whether the results make sense, possibly <br> improving the model if it has not served its purpose. |

Mathematics Common Core (MACC) is now Mathematics Florida Standards (MAFS)
Next Generation Sunshine State Standards (NGSSS) for Mathematics (MA) is now Mathematics Florida Standards (MAFS)
$\square$

| Cluster 5: Use appropriate tools strategically. |  |
| :---: | :--- |
| STANDARD CODE | STANDARD |
| MAFS.K12.MP.5.1 | Use appropriate tools strategically. <br> Mathematically proficient students consider the available tools when solving a <br> mathematical problem. These tools might include pencil and paper, concrete models, a a <br> ruter, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical <br> package, or dynamic geometry software. Proficient students are sufficiently familiar with <br> tools appopriate for their grade or course to make sound decisions about when each of <br> these tools might be helpful, recognizing both the insight to be gained and their <br> limitations. For example, mathematically proficient high school students analyze graphs |
| of functions and solutions generated using a graphing calculator. They detect possible |  |
| errors by strategically using estimation and other mathematical knowledge. When |  |
| making mathematical models, they know that technology can enable them to visualize |  |
| the results of varying assumptions, explore consequences, and compare predictions |  |
| with data. Mathematically proficient students at various grade levels are able to identify |  |
| relevant external mathematical resources, such as digital content located on a website, |  |
| and use them to pose or solve problems. They are able to use technological tools to |  |
| explore and deepen their understanding of concepts. |  |$|$

## Cluster 6: Attend to precision.

| STANDARD CODE | STANDARD |
| :---: | :--- |
| MAFS.K12.MP.6.1 | Attend to precision. |
| Mathematically proficient students try to communicate precisely to others. They try to |  |
| use clear definitions in discussion with others and in their own reasoning. They state the |  |
| meaning of the symbols they choose, including using the equal sign consistently and |  |
| appropriately. They are careful about specifying units of measure, and labeling axes to |  |
| clarify the correspondence with quantities in a problem. They calculate accurately and |  |
| efficiently, express numerical answers with a degree of precision appropriate for the |  |
| problem context. In the elementary grades, students give carefully formulated |  |
| explanations to each other. By the time they reach high school they have learned to |  |
| examine claims and make explicit use of definitions. |  |

## Cluster 7: Look for and make use of structure. <br> STANDARD CODE $\quad$ STANDARD

$\square$

## MAFS.K12.MP.7.1 Look for and make use of structure.

Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see $7 \times 8$ equals the well remembered $7 \times 5$ $+7 \times 3$, in preparation for learning about the distributive property. In the expression $x^{2}+$ $9 x+14$, older students can see the 14 as $2 \times 7$ and the 9 as $2+7$. They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see 5 -$3(x-y)^{2}$ as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers $x$ and $y$.

Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts

## Cluster 8: Look for and express regularity in repeated reasoning.

| STANDARD CODE | STANDARD |
| :--- | :--- |
| MAFS.K12.MP.8.1 | Look for and express regularity in repeated reasoning. <br> Mathematically proficient students notice if calculations are repeated, and look both for <br> general methods and for shortcuts. Upper elementary students might notice when <br> dividing 25 by 11 that they are repeating the same calculations over and over again, <br> and conclude they have a repeating decimal. By paying attention to the calculation of <br> slope as they repeatedly check whether points are on the line through $(1,2)$ with slope <br> 3, middle school students might abstract the equation $(y-2) /(x-1)=3 . N o t i c i n g ~ t h e ~$ <br> regularity in the way terms cancel when expanding $(x-1)(x+1),(x-1)\left(x^{2}+x+1\right)$, and <br> $(x-1)\left(x^{3}+x^{2}+x+1\right)$ might lead them to the general formula for the sum of a geometric <br> series. As they work to solve a problem, mathematically proficient students maintain <br> oversight of the process, while attending to the details. They continually evaluate the <br> reasonableness of their intermediate results. |
|  | Cognitive Complexity: Level 3: Strategic Thinking \& Complex Reasoning |

## GRADE: 912 - CALCULUS

## Standard 1: Limits and Continuity

Develop an understanding of the concept of limit by estimating limits graphically and numerically and evaluating limits analytically. Extend the idea of a limit to one-sided limits and limits at infinity. Use limits to define and understand the concept of continuity, decide whether a function
$\square$
$\square$

## Standard 2: Differential Calculus

Develop an understanding of the derivative as an instantaneous rate of change, using geometrical, numerical, and analytical methods. Use this definition to find derivatives of algebraic and transcendental functions and combinations of these functions (using, for example, sums, composites, and inverses). Find second and higher order derivatives. Understand and use the relationship between differentiability and continuity. Understand and apply the Mean
$\square$

| MAFS.912.C.3.11 | Model rates of change, including related rates problems. <br> Cognitive Complexity: Level 3: Strategic Thinking \& Complex Reasoning |
| MAFS.912.C.3.12 | Solve problems using the Newton-Raphson method. <br> Cognitive Complexity: Level 3: Strategic Thinking \& Complex Reasoning |
| MAFS.912.C.3.2 | Find an equation for the tangent line to a curve at a point and a local linear approximation. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.912.C.3.3 | Decide where functions are decreasing and increasing. Understand the relationship between the increasing and decreasing behavior of $f$ and the sign of f'. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.912.C.3.4 | Find local and absolute maximum and minimum points. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.912.C.3.5 | Find points of inflection of functions. Understand the relationship between the concavity of f and the sign of $\mathrm{f}^{\prime \prime}$. Understand points of inflection as places where concavity changes. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.912.C.3.6 | Use first and second derivatives to help sketch graphs. Compare the corresponding characteristics of the graphs of $\mathrm{f}, \mathrm{f}^{\prime}$, and $\mathrm{f}^{\prime \prime}$. <br> Cognitive Complexity: Level 3: Strategic Thinking \& Complex Reasoning |
| MAFS.912.C.3.7 | Use implicit differentiation to find the derivative of an inverse function. Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.912.C.3.8 | Solve optimization problems. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |
| MAFS.912.C.3.9 | Find average and instantaneous rates of change. Understand the instantaneous rate of change as the limit of the average rate of change. Interpret a derivative as a rate of change in applications, including velocity, speed, and acceleration. <br> Cognitive Complexity: Level 2: Basic Application of Skills \& Concepts |

## Standard 4: Integral Calculus

Understand that integration is used to find areas, and evaluate integrals using rectangular approximations. From this, develop the idea that integration is the inverse operation to differentiation - the Fundamental Theorem of Calculus. Use this result to find definite and indefinite integrals, including using the method of integration by substitution. Apply approximate methods, such as the Trapezoidal Rule, to find definite integrals. Define integrals using Riemann sums, use the Fundamental Theorem of Calculus to find integrals using antiderivatives, and use basic properties of integrals. Integrate by substitution, and find approximate integrals.

| BENCHMARK CODE | BENCHMARK |
| :---: | :--- |
| MAFS.912.C.4.1 | Use rectangle approximations to find approximate values of integrals. |
|  | Cognitive Complexity: Level 1: Recall |
